④ **Maintaining and increasing federal operating assistance** for our nation's transit systems, including its large systems over one million in population, now $802 million.

⑤ **Retention of *Section 13(c)* collective bargaining and job rights,** with guarantees that they apply to all capital, operating and specialized transit grants including demonstration and privatization projects.

⑥ **Limitations on UMTA's privatization mandate** and regulations to ensure that the choice of public and/or private transit is a local decision determined free from federal regulations or guidelines.

⑦ **Opposition to mandatory, random and other drug and alcohol testing** as a condition of federal transit grants.

⑧ **Retention of federal/local share ratios** at current 80% federal - 20% state and local levels.

⑨ **Retention of general fund support** for capital transit grants under *Section 3* discretionary program.

⑩ **Changes in federal tax law** to eliminate unfair taxation of employer-provided transit passes.

Mr. Chairman and Members of the Committee: My name is Robert A. Molofsky and I serve as Legislative Director of the Amalgamated Transit Union, AFL-CIO, CLC. It is my pleasure to appear here on behalf of International President Jim La Sala to reaffirm our commitment to a strong federal mass transit program; to comment on the Administration's transportation proposals; and of course, to outline our own policy recommendations for inclusion in a new federal highway/mass transit reauthorization bill designed to transport us into the 21st century.

The ATU represents some 160,000 public transit workers in the United States and Canada. Most of these are employed as bus drivers, maintenance and clerical personnel in the urban mass transit and over-the-road bus industries.

We and my fellow panelists, appear here today with the full support of the AFL-CIO and its recently formed Transportation Trades Department, composed of affiliated organizations representing transit, rail, airline, trucking and other transportation workers; and we also concur in the views to be expressed by the representatives of the Transport Workers Union appearing along with us today.

In support of this statement, we have attached hereto the Mass Transit and Privatization resolutions unanimously adopted at our 49th annual convention, held in Anaheim, California, September 9, 1989. Also attached are copies of the recently adopted AFL-CIO resolutions on national mass transportation policy, including those of the Transportation Trades Department within the AFL-CIO.

It is certainly beyond question that our nation's changing transportation needs require an expanded federal program with significant funding increases to not only repair and maintain existing operations, but to respond to our changing urban, suburban and rural transportation needs as well. Expanded requirements to meet the needs of the elderly and persons with disabilities under the Americans with Disabilities Act further justify these increases.

Increased federal investment in mass transportation services will also enable us to respond to our growing traffic congestion, air quality and energy conservation problems, while an expanded investment in our transportation infrastructure and service operations will strengthen the foundations for increasing industrial competitiveness and improving our urban and rural areas' responses to social and other related concerns.

For decades, our Union has worked with your Committee, the transit industry, the federal Department of Transportation and other transportation advocates at the state and federal level to

ensure a sound national mass transportation program. As outlined below, we believe a well-structured national transportation policy must include an equally well defined and enforced national transportation labor policy protective of important employee rights. This is especially so in an industry as labor intensive as mass transit services.

COMMENTS ON DEPARTMENT OF TRANSPORTATION'S PROPOSALS

Inasmuch as the initial focus on new directions in mass transportation policy will center around Secretary of Transportation Samuel Skinner's proposed transportation legislation released in February, 1990, we preface our summary of important issues and policy recommendations with some brief comments regarding this approach.

Unfortunately, despite the Administration's best efforts, its proposals as applied to urban mass transportation programs fall well short of meeting the nation's compelling mass transportation needs and seek to perpetuate the failed policies of the 80's.

By opposing any real increases in the level of federal capital funding; seeking steep reductions in federal transit operating assistance subsidies, especially for cities over 1 million in population; reducing general revenue funding for transit projects; cutting the federal/local share ratios; and by maintaining so-called competitive bid or privatization requirements in such a manner as to remove local decision making regarding the selection of public and/or private providers, the proposal fails to move the transit program forward in the proper direction.

In the privatization area particularly, we believe now is the time for this Committee to give careful consideration to UMTA's policies and programs which, since 1984 have imposed increasingly harsh burdens on federal transit grant recipients with limited benefits and often adverse results. As discussed below, we believe the Committee should assure federal neutrality over the grant recipient's choices of public/private providers based upon locally established plans programs and cost analyses, implemented without UMTA's interference or control.

Especially disturbing is the Administration's reliance on increased state and local governments matching contributions to the diminished federal resources at a time when these governments are already suffering under strained budgets, taxing constraints and limited resources. The ATU, of course, supports maintaining the present federal/state local ratios for mass transit programs and opposes any program restructuring which would favor highway projects over transit.

In the area of transit employee labor protections, a primary focus of this Union for over 26 years, we recognize that the

Administration's proposal seeks no change in the substance of the Section 13(c) employee protection provisions. However, through a combination of unjustified program changes, the Department seeks to reserve for itself the right to waive the application of these vital protections to a wide-range of specialized transit grants funded under the Act, including demonstration and privatization projects, and those serving the elderly and disabled.

We remain unyielding in our request that these vital employee protection arrangements be retained and made applicable to all parts of the federal transit grant program, including transit projects funded with funds released under the federal highway program. This has been the Committees' and Congress' position for over 25 years and we find no justification to modify their application today. Indeed, their retention and uniform application have served as the basis for an extraordinary labor/industry partnership in meeting our country's changing transportation needs over three decades. The legislative history to the recently enacted Americans with Disabilities Act of 1990, specifically confirms Congress' intent that these labor protections apply to the expanded specialized services under the ADA. (See 136 Con. Rec. S. 9692, (daily ed. July 13, 1990); 136 Con. Rec. H. 4625 (daily ed. July 12, 1990)

Similarly, we find no justification nor support for proposals to weaken existing Davis-Bacon and "Buy America" requirements.

We also continue to be in serious disagreement with the Administration's proposals for new federal legislation mandating both random and other drug and alcohol testing within the urban mass transit industry. We share the desire to promote the safety of the riding public which should be of paramount concern to all involved in the transportation industry. Indeed, we believe our own commitment to safety is second to none, and we are proud of the leadership ATU locals have shown in negotiating testing and treatment programs which have effectively addressed substance abuse problems in the workplace.

For over twenty years, this Union and its locals have supported and negotiated programs designed to keep the work place free of drug or alcohol impaired workers, who in our review should be removed from service until they can be properly treated and rehabilitated.

Long before federal efforts began to impose mandatory testing requirements, the ATU pioneered in the development of negotiated "employee assistance programs" (EAP's) which stress rehabilitation, education, and re-employment as effective alternatives to unilateral employer testing and termination. These programs have served to establish and maintain a highly trained, safe and disciplined work force.

The Urban Mass Transportation Administrations's own 1987 "Safety Review Task Force," in calling urban transit one of the safest transportation modes, cited the industry's exemplary record of a 15 percent decline in accidents and no increase in passenger fatalities over the five-year period under review. Indeed, in issuing their original drug testing regulations UMTA was unable to cite any specific evidence to support the existence of a drug abuse problem in the urban transit industries warranting a new national effort. In fact, UMTA noted that "[no] data exists to prove the presence of a drug or alcohol abuse problem among mass transit personnel" (53 Fed. Reg. 25, 913).

Therefore, in light of the industry's long standing commitment to safety, we fail to understand the necessity to legislate a massive new federal program of extraordinary expense to the parties affected. To justify such an intrusion into the privacy of the hundreds of thousands of employees leading drug-free lives who would be adversely effected by this legislation, at least some factual showing of a serious substance abuse problem beyond present voluntary efforts by the parties to control must be demonstrated.

To assist in the Committee's deliberations, we now provide a summary discussion of those major policy recommendations and provisions the ATU believes must be considered as the Congress develops a reinvigorated national transportation program to effectively respond to our new transportation needs.

## MAJOR ATU ISSUES AND RECOMMENDATIONS

As amplified below, the ATU places the highest priority on the following eight issues for evaluation as part of a Mass Transit Reauthorization bill.

1. **Passage of a new five-year highway/mass transportation re-authorization bill by September, 1991, modeled substantially after the expiring Surface Transportation and Assistance Act of 1987.**

2. **Increased federal funding approaching $6 billion per year to support our nation's transit systems serving our urban, suburban and rural areas, with funding for both capital and operating assistance, derived from both general revenue and gas tax revenues.**

   Recent studies have indicated our presently unmet national mass transportation needs may require as much as $11 billion annually to make up for prior short falls and to meet future needs.

   Funding for these expanded programs should be derived from general revenues as well as significant increases in the transit dedicated portion of the federal motor

fuels tax and available for both operating and capital expenses.

With respect to the Administrations' so-called "flexibility program," the ATU would support provisions allowing highway funds to be transferred for eligible transit projects subject to those conditions regularly applied to Section 3 and 9 transit grants. The ATU will, however, oppose making transit funding available for highway projects without appropriate transit funding levels guaranteed.

3. **Raising the federal gas tax up to seven cents per gallon with revenues dedicated to mass transit programs.**

We support proposals to increase the existing federal highway user gas tax earmarked for public transportation within the Highway Trust Fund account under condition that such revenue is used to supplement and not substitute for the general revenue funding portions of the federal transportation program.

4. **Increasing federal operating assistance for all sizes of transit systems to ensure adequate maintenance and effective operation of the transit capital investment.**

5. **Retention and uniform application to all transit grants of the Section 13(c) transit employee labor protections provisions, providing important collective bargaining and job right guarantees to transit industry workers to prevent adverse employee impacts under the federal transit grant program.**

The retention and application of the rights guaranteed under Section 13(c) of the UMTA Act, as amended, has, since 1964, served as a key component and condition of ATU support for the federal transit grant program. The history of Section 13(c) employee protection program demonstrates that transit labor working in partnership with our nation's transit providers can respond to our changing transportation needs in a manner which provides necessary protections to those workers while servicing the riding publics' demand for high quality, safe, efficient and responsive transportation. It is absolutely essential, therefore, that any new federal legislation ensure the continuation of these labor protections and their application to the entire transit grant program.

We have submitted to the Committee several proposals to ensure continued Section 13(c) coverage for the demonstration, privatization and other specialized transit service grants including those providing service

for elderly persons and individuals with disabilities. We note, at this time, that several provisions in the Administration's proposals, including Sections 438 and 428, raise some questions regarding the continued applicability of these protections for those grant projects. As stated earlier, these protections have uniformly applied to such service programs and no reasoned justification has been presented for modifying their application.

In addition, we could not accept any so-called "flexibility proposals," including the urban and rural programs provisions and/or metropolitan rural incentive bonus programs outlined in the Administration's bill, without assurances that these labor protections will apply to mass transportation projects funded under these arrangements. The Committee is referred to Section 142 of the current Federal Highway legislation which provides such coverage for transportation projects funded under the Highway program. (Section 23 U.S.C. 142.2)

Finally, we again note, that while the Section 13(c) labor protection program has at times been subject to criticism by the Administration and others as a burdensome provision which leads to inefficiencies in the provision of transit services, no neutral body which has examined such issues has found these vital labor employee protections create unreasonable or costly burdens on transit authorities seeking assistance.

Indeed, over the 15 month period ending March, 1990, the ATU was involved in over 458 transit grant applications involving the processing of Section 13(c) protective arrangements. Over 86 percent (397) of those cases were processed within one month of our receipt of the grant applications. These projects involved both capital and operating assistance, para-transit, special transit technology, privatization components, alternative fuel arrangements, entrepreneurial and suburban mobility initiatives. The ATU's average processing time between referral by DOL and request for certification was only 13 days.

Clearly, this record demonstrates our commitment to achieving a fair measure of equitable protection for our members while ensuring a timely distribution of much needed grant assistance.

We do not believe that it is wise or necessary to modify in any way the current statutory framework which has allowed this program to respond to changing transportation needs while protecting the collective

bargaining and job rights of the industry's employees. Proposals to limit the scope of negotiations or the parties' choice of response to privatization issues raised by specific grants are not needed nor justified. When Congress first initiated these protections it emphasized that the arrangements would be the product of negotiations among the affected parties.

6. **Limitations on UMTA's privatization mandates and regulations to ensure that the choice of public and/or private transit providers is a local decision determined free from federal regulations, guidelines, mandates or other controls.**

Over the last six years, despite repeated Congressional statements directing UMTA to remain neutral over the choice of public/private transit providers, the Agency through its interpretations of Sections 3(e), 8(c), 8(e), and 9(f) of the Act has established a preference for involving the private sector in public transit services. (See UMTA privatization circular C. 7005, 1985)

During this period, the Agency has imposed increasingly burdensome grant requirements to assure maximum participation in the federal grant program by private service providers. Through the appeals made under its guidelines and circulars, it has also exercised direct reviewing authority over local decision making with regard to the selection of public/private providers.

In addition, the privatization guidelines have operated to skew the selection process in favor of private bidders by requiring transit grant applicants to use the discredited "fully allocated cost methodology" when analyzing the costs of using public and/or private transit services. (See "The Emperor's New Clothes: Transit Privatization and Public Policy", (1989) by the Economic Policy Institute; recent correspondence by KPMG Peat Marwick similarly criticizing the fully allocated cost requirements.)

We have long opposed these policies and believe such decisions should be made at the state and local level with private sector participation in public transportation a community based decision to be employed only when it can be complimentary to the existing public transit network and only then where there can be a partnership of public/private grant providers protective of employee interests and the riding public.

The existing policies, however, have clearly been counter-productive to effective public transit operations.

This view has been supported by the September, 1989, EPI study. Among their findings, the EPI researchers found, that using federal transportation funds to compel communities to "privatize" their mass transit systems, while producing profits for private contractors caused a deterioration of urban transit services. Indeed, although the stated goals of these policies are to reduce the public cost of providing transit services, these experts found no evidence that the policy has actually saved money, either for the communities affected or the federal government. In fact, they found it probably increased the cost of mass transit by implementing a less efficient use of public resources. A summary of this report is attached.

Recent experiences in Miami, Florida, New Orleans, and Denver have further substantiated these findings. In Miami and New Orleans, for example, the regional transit authorities were compelled to cancel their privatization experiments after the first of a three-year program because of substantial cost increases, ridership losses, revenue declines, service and maintenance problems and high employee turn-over.

In a correspondence describing the substantial losses incurred by Denver's Regional Transportation System after one-year of its three year privatization experiment, the national accounting firm KPMG Peat Marwick criticized the use of the fully allocated cost analysis for decision making stating:

> "Incremental cost analysis yield hard "out-of-pocket" estimates of savings that are useful in real world decision making. Fully allocated cost analysis is based on theoretical, longer-term cost estimates that assume that management has complete flexibility in its staffing decisions and capital investment in response to the quantity of service provided. In fact such flexibility does not exist.
>
> The letter further stated that:
>
> "Based on the considerations raised above it is our conclusion that management decisions regarding the real "out-of-pocket" savings to be derived from privatization should be based on an incremental analysis. Incremental cost analysis address measurable savings achieved within the short-term (3 - 5 years) context of the current privatization contracts. Fully allocated cost comparisons infer that long term theoretical savings in

> administrative costs actually occur in the short term, an outcome that has not been demonstrated. (Emphasis added, full text attached.)

In light of these experiences with UMTA's privatization program and the pitfalls of the required fully allocated cost procedures, we believe the Committee should seek the elimination of these requirements and secure a modification of UMTA privatization procedures by specifically affirming UMTA's neutrality as to the nature of the local transit planning or decision making processes, the analytical accounting methods used for evaluating public/private transit services choices, and the ultimate decisions made with respect to public or private providers. Only a vigorous restatement of this neutrality principle incorporated in a policy directive to the Department of Transportation will be adequate to reaffirm a program commitment to community based decision making on this issue.

We are prepared to discuss our detailed suggestions for modifying UMTA's existing privatization/competitive policies with the Committee.

7. **Opposition to mandatory random and other drug and alcohol testing as a condition of the federal transit grant program.**

Over 80 percent of the employers in the urban mass transit industry are now engaged in testing transit workers through negotiated programs achieved through the collective bargaining process and/or company established plans. Indeed, the Committee has not received nor has UMTA presented any evidence indicating a need to legislate additional testing at this time. UMTA's own safety review task force found the industry to be remarkably safe with a declining rate of accidents and fatalities at a time when the perception of drug use in society has been on the increase. These combined programs have ensured that the transit industry has attained the highest safety standard of any transportation mode in the United States. We see no need for federal mandates in this area.

Imposition of random or other mandatory testing would significantly interfere with important employee privacy guarantees protected under the U. S. Constitution and separately under state constitutions and statutes. It would also result in costly and unnecessary testing providing little, if any, real benefit. Also, imposing these testing requirements as a Federal grant conditions may affect certain states eligibility for Federal funds, i.e. Alaska, California, Connecticut, Florida, Hawaii and Massachusetts, and other states based on their constitutional privacy protection guarantees. We are,

of course, prepared to discuss this complicated issue in detail with the Committee.

8. **Revisions to the federal tax code designed to eliminate the taxation of employer subsidized transit passes and other federal laws which act as disincentives to transit use.**

Current rules require such passes to be taxed as ordinary income to the extent their value exceeds $15. Yet free parking often exceeding $200-400 per month is not subject to such taxing. This represents an inequitable and unwise disincentive to transit use which should be changed. We support pending proposals to modify the current taxation rules in this area.

In closing, let me again express our appreciation for the opportunity to present our views. We look forward to working with this Committee and the Congress as it finalizes its reauthorization proposals. We are, of course, prepared to respond to any questions you may have and provide additional information you may require.

**GENERAL RESOLUTIONS SUBMITTED TO THE
49th CONVENTION OF THE AMALGAMATED TRANIST UNION
ANAHEIM, CALIFORNIA - SEPTEMBER 18-22, 1989**

**RESOLUTION A**

Submitted by Amalgamated Transit Union

**Mass Transit Policy**

WHEREAS, a strong, dynamic and well funded federal mass transportation program, operated in partnership with state and local governments is essential to advancing our country's economic growth and prosperity, improving its air quality, and providing mobility for all citizens; and

WHEREAS, effective mass transportation services enables us as a nation to respond to our growing traffic congestion and energy conservation problems, while expanded investment in our transportation infrastructure provides the underpinning for increasing industrial competitiveness and improving our urban and rural areas responses to social and other related concerns; and

WHEREAS, to achieve these national goals we must reverse the radical and destructive mass transportation policies of the Reagan Administration implemented over the last eight years which have resulted in significant reductions exceeding 50% in federal transit funding; and

WHEREAS, the U.S. Congress and the Federal Department of Transportation are seeking to define a new national transportation policy for the 1990's and beyond through a consensus among a broad coalition of both business and labor leaders, legislators and public officials, environmentalists and other representatives of society who benefit from improved transportation; and

WHEREAS, this consensus must be based on recognizing the mutual needs of all who provide as well as benefit from transportation services, and thereby reject the policies pursued by the Reagan Administration designed to undermine collective bargaining job rights and employee protection guarantees to transit workers; and

WHEREAS, we are opposed to a federal transit policy advocating an increased competitive environment and the periodic rebidding of transit services, which has the effect of only encouraging the transfer of jobs and services from union to nonunion, low waged rated companies, thereby undercutting the living standards and economic security of thousands of workers throughout the industry; and

WHEREAS, a newly defined federal mass transportation policy should encompass legislation ending long standing efforts within the U.S. Transportation and Labor Departments to weaken the collective bargaining and negotiation rights of workers in the transit industry, especially in such areas as job preservation guarantees, first opportunity of employment in new jobs and restrictions upon subcontracting of bargaining unit work; and

WHEREAS, these and other rights guaranteed to transit industry workers for over twenty five years under Section 13(C) of the original Urban Mass Transportation Act must remain at the heart of the consensus among labor and industry representatives and other organizations as they fashion their new transportation policies; and

WHEREAS, the basis for strengthening the existing federal urban mass transportation program should remain the structure recently reaffirmed under Title III of the Surface Transportation and Uniform Relocation Assistance Act of 1987 (H.R. 2), known as the Federal Mass Transportation Act of 1987; and

WHEREAS, a sound national transportation policy should have as its goal to increase transit ridership by at least 50% in the 1990's and to keep fares at reasonable levels so as to provide a safe efficient reliable means of mobility for the millions of Americans who are dependent upon mass transportation; and

WHEREAS, the Congress in reauthorizing the federal program in 1987 reaffirmed the allocation of one-cent of the federal motor fuel tax for mass transportation services, but held total authorized program levels through fiscal year 1990 to approximately $4 billion when annual industry needs actually exceed $6 billion annually;

THEREFORE BE IT RESOLVED, that the ATU participate in designing a strengthened National Transportation policy for the 1990's and support Federal legislation designed to increase funding for both operating and capital assistance in legislation essentially comparable to the 1987 Federal Mass Transportation Act, including at least $6 billion dollars annually in federal subsidies; and

BE IT FURTHER RESOLVED, that the ATU express support for proposals to increase existing Federal highway user fees, i.e., federal gasoline taxes earmarked for public transportation and placed in the Mass Transportation Account of the Highway Trust Fund, with the condition that such revenues should be used to supplement and not substitute for the general revenue funding portions of the federal transportation program; and

FURTHER BE IT RESOLVED, that the ATU inform Congress that any program of expanded federal aid for mass transit must be premised on the continuation of collective bargaining rights and the preservation of a free collective bargaining process on all

mandatory subjects of bargaining, based on the right to strike or the use of arbitration to settle unresolved disputes; and

FURTHER BE IT RESOLVED, that the ATU undertake appropriate legislative and political efforts to insure that the policies and procedures for administration of the Section 13(C) employee protection provisions under the Federal Urban Mass Transportation Act in effect prior to the unwarranted changes either implemented or proposed by the Reagan and Bush Administrations be reaffirmed in the interest of affected employees; and that Congress reject and set aside any proposals for adverse changes in Section 13(c) policies and procedures; and

FURTHER BE IT RESOLVED, that the ATU inform Congress that the labor protection provisions of the Urban Mass Transportation Act should not be transferred to the Department of Transportation, but must remain the exclusive responsibility of the Department of Labor; and

FURTHER BE IT RESOLVED, that the ATU undertake efforts to insure that the Congress maintain provisions guaranteeing that labor standards including the payment of prevailing wages to all workers engaged in the construction or operation of mass transportation facilities involving federal financial assistance, and that such standards also guarantee to rail and transit workers the first opportunities of employment arising from federal transit funding; and

FINALLY, BE IT RESOLVED, that the ATU insure that new authorizing legislation include provisions to recognize that decisions about private sector participation in transportation including decisions to employ competitive bidding, privatization or subcontracting with private operators, if warranted, should be made at the state and/or local level free from any federally imposed standards, guidelines, policies or grant conditions; and that private sector involvement in public transportation remain a local decision to be employed only when such service is complementary to the existing public transit network and only where there can be a partnership of public and private providers protective of employee interests and the riding public.

**RESOLUTION B**

Submitted by Amalgamated Transit Union

**Privatization of Public Mass Transportation Services**

WHEREAS, the governments of the United States and Canada, reflecting a worldwide conservative anti-labor trend are instituting policies and programs to "privatize" essential public services, including public mass transit operations; and

WHEREAS, these anti-labor privatization policies and competitive service solutions place in jeopardy thousands of ATU members' jobs and livelihood; and

WHEREAS, in Canada, certain segments of the transit industry are pressuring city governments and transit systems to increase the level of privatization of public mass transportation services; and

WHEREAS, The U.S. Department of Transportation through a series of Urban Mass Transportation Administration policies and guidelines is compelling transit grant recipients to competitively bid or privatize new and/or existing transit services as a condition for the receipt of federal transit aid; and

WHEREAS, the U.S. Department of Transportation through its privatization initiatives is intruding into the local transit planning and decision making process, as to the choice of public or private providers of mass transit services, thereby violating the long standing federal policy of neutrality as to the choice of service providers; and

WHEREAS, such privatization initiatives will only lead to the dismantling and fragmentation of regional transit services, which are better suited to providing high quality, safe and effective service while meeting the public's broad based community transit needs; and

WHEREAS, the U.S. Department of Transportation through its privatization program is advocating the use of private operators paying cut-rate wages and benefits under the misguided belief that such operators can produce long term savings while maintaining reasonable service; and

WHEREAS, the alleged cost savings from privatization are overstated, and often non-existent when the full cost of service is taken into account, including the continuation of high quality maintenance, safety and service standards, contract administration and other overhead costs; and

WHEREAS, using private firms to deliver public transit

services often results in higher cost and reduced quality and efficiency of services, accompanied by an unresponsiveness to public service needs and inadequate public control mechanisms and;

WHEREAS, historically the private sector has failed in its mission to provide long term quality service;

THEREFORE BE IT RESOLVED, that the ATU oppose Congressional and U.S. Department of Transportation efforts to condition, delay or prioritize transit grants to applicants based on the extent or amount of service provided by private transit operators; and

FURTHER BE IT RESOLVED, that the ATU oppose Canadian transit industry and government policies favoring increased privatization of public mass transit services; and

FURTHER BE IT RESOLVED, that the ATU support the negotiation of collective bargaining provisions limiting the right of transit agencies to contract work to private non-union operators, in a manner which causes job losses and otherwise interferes with existing collective bargaining rights and obligations; and

FURTHER BE IT RESOLVED, that ATU locals work with their local transit planning and decision makers to ensure that decisions involving the integration of private operators in the provision of public transit services are designed to meet local transit needs in a manner which protects our members' jobs and collective bargaining rights; and

FURTHER BE IT RESOLVED, that the ATU distribute the recently completed EPI privatization study entitled "The Emperor's New Clothes: Transit Privatization and Public Policy" to all local unions with any additional information necessary for use in combatting federal and state legislation or local policy initiatives to privatize, or to competitively bid public transit services; and

FURTHER BE IT RESOLVED, that the ATU will launch a national campaign to work with its local unions, state and regional conference boards to develop the necessary information, tactics, publicity campaigns, lobbying, educational/conference/workshop activities, coalitions, and legislation to use in opposition to privatization and/or competitive bidding proposals involving public transit services.

AFL-CIO

# RESOLUTIONS

Numbers 1 to 222

Eighteenth Convention

1989

## Resolution No. 18
## Transportation
## (E.C. Report, Pages 186-191)

The nation's transportation system is an inter-related web essential to the health of the economy and the nation's security. Each element of the national system—subways, urban and intercity buses, airplanes, trucks, railroads, maritime—contributes to the effectiveness of the whole, fulfilling a broad national purpose. Fostering and maintaining this system depends both upon the private and public sectors since no single mode of transport or sector of society can do the job alone. Nor should it.

Transportation is not a service which can be left to private enterprise alone and unchecked market forces. Government has a vital role in funding as well as establishing and enforcing rules and standards to assure there is enough and the right kind of transport, that workers are protected, that there is wide access to transportation services, and that the public interest is protected through reasonable overall regulation and control. Considerations of national security, clean air, safety and the welfare of consumers—to name a few—are considerations which cannot be left to chance, or solely to the private sector and the marketplace.

The AFL-CIO supports the development of a national transportation policy. The development of such new national policy should involve worker representatives in the industry so that it benefits the lives and interest of all American consumers and workers and strengthens America's position in world trade.

### Maritime

For more than a decade, the maritime industry suffered greatly from willful government inaction.

The AFL-CIO believes that the time has come to revitalize all segments of the maritime industry. Positive action must be undertaken to insure that the nation's economic and security interests are not jeopardized further through an inadequate merchant fleet and shipbuilding capability. The deficiencies in strategic sealift must be corrected and steps taken to implement a policy of industry renewal. The Congress must advance legislation which will enhance existing support programs or lead to the development of new initiatives that will permit the U.S. fleet to compete in the decade ahead. The following measures are basic for the broadest possible industry recovery:

- Federal agencies responsible for the overseas movement of government cargo must maximize the use of U.S.-flag vessels at rates that fully compensate for services rendered.

- To prevent further encroachment by foreign shipping interests the Administration representatives to the Uruguay round of GATT negotiations should reject any proposals to include maritime services in any final agreement on services.
- The U.S. should encourage development of bilateral maritime agreements that would insure adequate levels of commercial cargoes for American-flag carriers. Endorsement of the existing international cargo sharing arrangement contained within the United Nations Conference on Trade and Development Code of Conduct for Liner Conferences would provide immediate relief to American-flag operators.
- A cabinet level maritime liaison charged with responsibility for monitoring compliance by various government agencies of a Presidential sealift policy should be created. This office would coordinate inter-agency activity in furtherance of the goal of insuring maintenance of a domestic sealift capability. Vessel construction programs that will permit maintenance of a shipyard mobility base supported by an infrastructure of marine industrial operations should be enacted. Vessels constructed under any "build and charter" program should be made available for operation at rates that would promote active participation by American-flag carriers.
- The Administration should rescind regulations which have allowed foreign-flag cruise ships to undercut domestic cruise fleets. Where necessary, legislation should be developed to ensure that foreign-flag carriers that rely upon the American tourist trade for their survival are subject to the same requirements as American cruise vessels.
- We advocate funding programs for the construction and operation of American-flag vessels in the nation's foreign commerce.
- A "Buy American" program for U.S. financial aid to foreign nations that would limit abuses of the cash transfer program should be developed. It also would insure that American producers of manufactured goods and agricultural products benefit from our nation's generosity. The program would also enhance domestic flag shipping operations.
- Reactivation of the Title XI ship loan guarantee program is necessary for ship operators to secure financial backing necessary for the construction of new tonnage in domestic shipyards.
- Government recognition of the important economic and military sealift benefits derived from a U.S.-flag fleet engaged exclusively in domestic shipping operations must be underscored. To enhance maintenance of this fleet, the Administration must broaden its support for Jones Act operations beyond existing services. In this regard, we call for extension of domestic cabotage requirements to all marine operations performed within the nation's 200 mile Exclusive Economic Zone.
- The Federal Maritime Commission should be encouraged to utilize its strengthened investigatory authority to examine complaints of unfair shipping practices by foreign nations. The FMC also should be assured cooperation by the Administration that it will be permitted to take a positive action against nations that maintain barriers to U.S.-flag operations.
- For over a decade the nation has benefited directly from the energy

888

resources of Alaska's North Slope coastal plain. The current Alaska oil export restrictions expire in September 1990 and timely action is essential to insure these energy resources are reserved for domestic purposes.

No single solution exists that will restore the maritime industry's ability to fulfill its legislatively mandated dual role of maintaining a commercial presence worldwide while insuring the availability of strategic sealift. Timely implementation of these recommendations, however, will spur the investment necessary for a comprehensive industry revival.

### Trucking

The continuing deregulation of the interstate trucking industry has led to the following adverse consequences:

1. High level of bankruptcies—over 100 large (class 1 & 2 ICC) regulated motor carriers of general freight have terminated operations since July 1, 1980—the date of enactment of the Motor Carrier Act of 1980.

2. High unemployment—at least 130,000 trucking industry workers have lost their jobs since July 1, 1980.

3. Decline in safety on the highways for truck drivers and the motoring public.

4. Large shippers continue to profit from their exercise of market power at the expense of motor carriers, employees and the traveling public—with no evidence that the lower trucking rates enjoyed by large shippers are passed onto the public in the form of lower prices to consumers.

We firmly believe that the adverse impact of trucking deregulation will accelerate unless Congress and the Administration take proper and reasonable steps to ease the adjustment process.

We support strict enforcement of all safety related laws and regulations by federal and state governments with meaningful and realistic penalties to deter violations. Staffing and funding for truck safety enforcement must be increased at both the federal and state levels. All motor carriers must receive "satisfactory" safety ratings from the U.S. Department of Transportation in order to haul goods in interstate commerce. Shippers must bear responsibility for the acts of motor carriers they utilize to transport their products.

Employees who have lost their jobs because of trucking deregulation should be able to receive adjustment assistance or labor protection provisions administered by the U.S. Department of Labor.

In addition, all employees, including owner-operators on lease to I.C.C. regulated motor carriers, must have the right to organize and bargain collectively. The so-called independent contractor exemption to the nation's labor laws must be ended.

In the past, public policy has been made without adequate and reliable information. The Congress should require that the Interstate Commerce Commission mandate that all interstate motor carriers file annual financial and operating reports. Moreover, the U.S. Department of Transportation should be required to develop and maintain comprehensive accident and safety statistics.

We urge that the Hazardous National Transportation Act be strengthened to better protect transportation workers as well as the general public. We believe too much emphasis is being placed on the role of the truck driver in the quest for truck safety and not enough attention is being focused on the safety responsibilities of the motor carriers and the shippers, particularly the large shippers.

In light of the devastating effects of the deregulation of interstate transportation, we oppose efforts to extend deregulation to the intrastate level. There should be a full-scale reexamination of federal labor policy for all transportation industry employees. Finally, truck drivers and related personnel working for airlines should not be covered under the Railway Labor Act.

### Railroads

The U.S. needs a balanced transportation network which includes a fully-functioning rail system for the convenient and economical movement of goods and people. Industry deregulation and budget cuts have eliminated many jobs in the rail industry and are likely to cause more job and income losses in the future.

To avoid regulations, which already have been cut down excessively, many short lines have been spun off to small, often family-run, operators. Because these moves dismantle rail networks, render service less reliable, push down wages, and undermine fundamentally important regulations, the AFL-CIO calls for legislation to control and limit such spinoffs.

The AFL-CIO supports the President's Commission on railroad retirement. We are pleased that this question is getting the attention it deserves and we look forward to recommendations of the Commission to insure the continued existence of the railroad retirement system.

The AFL-CIO calls on Congress for: continued governmental support of AMTRAK to assure passengers continued rail service; support of AMTRAK workers and its unions in their determination to achieve pay equity with other rail workers; and examination of the counterproductive tactics of management which are detrimental to this important service.

### Mass Transit

The AFL-CIO supports a strengthened National Transportation policy for the 1990s and supports federal legislation designed to increase mass transit funding for both operating and capital assistance.

We call for legislation comparable to the 1987 Mass Transportation Act including at least $6 billion annually to assist local communities and transit authorities in the purchase and upgrade of equipment and facilities. Special emphasis should be placed on "Buy American" programs which would help reverse the decade-long decline of our public transportation equipment manufacturing industry.

Any program of expanded federal aid for mass transit must be premised on the continuation of collective bargaining rights and the preservation of a free collective bargaining process on all mandatory subjects of bargain-

ing, based on the right to strike or use of arbitration to settle unresolved disputes.

Appropriate legislative and political efforts ought to insure that the policies and procedures for administration of the Section 13(c) employee protection provisions under the Federal Urban Mass Transportation Act in effect prior to the unwarranted changes either implemented or proposed by the Reagan and Bush Administrations be reaffirmed in the interest of affected employees, and that Congress reject and set aside any proposals for adverse changes in Section 13(c) policies and procedures.

The labor protection provisions of the Urban Mass Transportation Act should not be transferred to the Department of Transportation, but must remain the exclusive responsibility of the Department of Labor.

The Congress should maintain provisions guaranteeing that labor standards include the payment of prevailing wages to all workers engaged in the construction or operation of mass transportation facilities involving federal financial assistance, and that such standards also guarantee to rail and transit workers the first opportunities of employment arising from federal transit funding.

Authorized legislation should include provisions to recognize that decisions about the terms and conditions for private sector participation in transportation, including decisions to employ competitive bidding, privatization or subcontracting with private operators, if warranted, should be made at the state and/or local level free from any federally imposed standards, guidelines, policies or grant conditions; and that private sector involvement in public transportation remain a local decision to be employed only when such service is complementary to the existing public transit network and only where there can be a partnership of public and private providers protective of employee interests and the riding public.

The AFL-CIO opposes efforts to condition, delay, or prioritize transit grants to applicants based on the extent or amount of service provided by private transit operators.

### Airlines

The AFL-CIO believes that Congress should investigate the repeated misuse of the bankruptcy laws, such as that occurring in the Eastern proceeding. The AFL-CIO supports legislation that would enable creditors, including unions and employees, to go after assets that were previously transferred by a debtor, such as Eastern, to a parent company and related subsidiaries.

Concerns about safety and the jobs of American workers were heightened when the Department of Transportation (DOT) issued a Final Rule, effective December 1988, that would allow U.S. airlines to contract out airline aircraft maintenance, repair and overhaul work to foreign repair stations. The DOT's Federal Aviation Administration is currently understaffed and has neither the manpower nor resources to monitor maintenance performed abroad. The AFL-CIO supports legislation to reverse the DOT's action.

The Administration has continued to forestall attempts to impose labor protective provisions (LPPs) to moderate hardships inflicted upon workers as a result of mergers. Although the House and Senate approved LPP legislation in the 100th Congress, the effort to send such legislation to the White House failed in 1988 when the LPP provisions were dropped from a Department of Transportation's Appropriations Conference Report. Now, authority to consider imposition of LPPs in airline merger cases has been transferred from the DOT to the Justice Department. The AFL-CIO continues to support imposition of LPPs in airline merger cases either by the Justice Department or, if necessary, through legislation.

Referred to the Committee on Resolutions.

AFL-CIO

TRANSPORTATION TRADES DEPARTMENT

Resolutuion No. 15
Mass Transit

WHEREAS, An increased Federal commitment to support and expand our nation's mass transportation system is necessary to respond to our country's developing mass transportation needs; be it

RESOLVED, That the Transportation Trades Department, AFL-CIO, initiate and support legislative efforts to increase Federal financial commitment with a dedicated tax to our nation's mass transit programs, insure the continuation of employee protective guarantees in such legislation, and seek limitations on present Federal policies fostering the privatization of public mass transit services.

## Study Finds Reagan/Bush Policy Forcing Privatization of Transit Systems Results in Deterioration of Service and Often Higher Costs

*Washington, DC* -- A new study released today by the Economic Policy Institute finds that the Reagan and Bush Administrations' policy of using federal transportation funds to force communities to "privatize" their mass transit systems, while producing profits for private contractors, is causing the deterioration of urban transportation services and hindering the freedom of choice of local public officials in their efforts to reduce traffic congestion, save energy, reduce pollution, and promote economic development. Although the stated goal of this new transit "privatization" policy is to reduce public costs of providing transit services, the study finds no evidence that the Reagan-Bush privatization policy has actually saved money either for the communities affected or for the federal government. In fact, the authors find that it is probably *increasing* the costs of mass transit by instituting a less efficient use of public resources.

Since 1984 the official transportation policy of both the Reagan and Bush Administrations has sought to encourage "privatization" of local public transit systems. Communities seeking federal funding for mass transit are now required to demonstrate that they are actively encouraging private firms to take over part or all of the provision of transportation services.

The report, ***The Emperor's New Clothes: Transit Privatization and Public Policy***, released today by the Economic Policy Institute, finds that for the past five years, the funding decisions of the Department of Transportation's Urban Mass Transportation Administration (UMTA) have been guided by an ideological belief in the virtues of privatization which is "so strong that UMTA opts for private contracting even when it is *prima facie* more expensive than public provision." The authors, transportation policy experts Elliott Sclar, K.H. Schaeffer and Robert Brandwein, conclude

[more]

that "federally ordered privatization, initiated in Washington and forced on local and state governments is not in the best interests of either the nation's commuters or its taxpayers."

The three authors of the EPI study have all studied and published widely about transportation systems and transportation policy. Elliott D. Sclar is an economist who is currently Professor of Urban Planning at Columbia University. K.H. Schaeffer is a consultant specializing in transportation and cost problems and was formerly on the staff of the U.S. Transportation Systems Center, the Mitre Corporation, and SRI International. Robert Brandwein is an economist with Policy and Management Associates of Boston and has been a consultant to several urban transportation systems, including the Chicago and Boston transportation authorities.

Their study quotes from UMTA policy documents to show that the Reagan and Bush Administrations, in adopting the goal of privatization in transportation policy, have attempted a far reaching policy change: they are attempting to use the power of the federal purse to force the balance of direct transport service provision away from local public agencies and towards private, for-profit operators. The study examines history to show that the new policy represents a fundamental change from the pragmatic approach which, since the earliest days of the Republic, has guided the choice between public and private transportation systems. They conclude that UMTA's privatization policy has undermined the historic goal of ensuring a healthy and functioning transportation infrastructure and has replaced it with the goal of reducing the public funds devoted to public transit.

Sclar, Schaeffer, and Brandwein also question the fundamental premise on which the Reagan-Bush transit policy is based: the claim that privatization saves money. While advocates of privatization base this assertion on the textbook model of a large number of small private firms competing to offer better service at a lower price, the authors of the EPI study show that, in the real world, most of the successful private operators are large, multi-product firms, not smaller local competitors.

The study demonstrates that once a local or state transportation authority has signed a contract with one of these private firms the

[more]

relationship becomes one of contractual monopoly rather than intense competition. It describes several instances of contractors failing to live up to the terms of their contract and using political influence to renew contracts without competition and to reinforce their position with the contracting authority.

When contracting is examined against these real world dynamics, the authors conclude, the market for contracted services operates less like textbook competition and more like textbook monopoly or oligopoly, in which prices are driven as much by relative bargaining power and political considerations as by underlying production cost. Contrary to the claim that privatization will lessen the political factor in operating urban transportation systems, they cite developing experience which suggests the opposite is true.

The study warns that if a public authority is forced to produce cost reductions through contracting to private companies, the goal is likely to be achieved through a reduction of public services or the deterioration of the capital equipment available for future service. The authors point out that when a public authority operates a public transit system, its managers and workers feel a direct pressure to provide good service from their customers who are the riders and citizens, but when a private firm operates a route on a transportation system, its customers are not the riders but the public authority with which they have signed the contract and the politicians who can shape it. The study finds that responsiveness to public complaints or making investments aimed at increasing ridership make no sense to a private firm dedicated to reducing the cost of minimal compliance with the contract.

Sclar, Schaeffer, and Brandwein note that virtually all advocates of privatization envision cost savings and efficiency improvements to be gained by reducing labor costs. "If contractors using low paid (non-union) workers can provide service on routes now being staffed by better paid (often unionized) public employees, won't it be more cost-effective for the entire system?" the privatization advocates argue. The authors of the EPI study take up this question and find that the workers provided by private contractors are indeed usually paid less than public employees. As a result, they find, contractors are usually unable to attract experienced

[more]

workers: lower paid private workers tend to be less dedicated to public service and less reliable; and because both wages and benefits are less attractive, turnover tends to be higher. As a result, the study finds reducing labor costs through contracting tends to impact the overall functioning of transit systems in the following ways:

- absenteeism and unreliability of performance raises costs for back-up employees or else reduces the quality of service, thus eroding ridership;
- maintenance costs tend to rise or service suffers as maintenance is done badly or deferred;
- costs of supervision increase and coordination functions become more and more complex;
- accident rates tend to increase, resulting in human, financial, and commercial costs to the transit system and to the overall community;
- since workers are not public employees, they cannot be transferred to other routes not covered by the private contract, decreasing the flexibility of the system and reducing the community's ability to respond to emergency situations;
- the overall economic health of the community suffers through the erosion of the efficiency of the community's transportation system.

The EPI authors cite a recent study by Don Pickrell which found that between 1970 and 1980 wage increases accounted for only 25 percent of the total increase in public transit deficit. The Pickrell study also shows that decreasing labor productivity accounted for 18 percent of deficit increases, but the EPI authors note that since the technology employed in public transit has not improved much since the 1920s, there have been no technological improvements in transit to offset the higher wages which employees need to keep pace with living costs as they perform essentially the same job. They also note that expansion of most transit systems to accommodate increased peak hour travel (a desirable public objective) requires a larger expansion of the work force than the resulting increase in transit miles. Thus, they find that measurement of worker productivity (transit miles per employee hour) has been reduced as an inevitable result of a sensible transportation policy designed to increase ridership, reduce

[more]

pollution and congestion and save energy.

Note: the other factors Pickrell found to be causing transit deficits to rise:

- Decrease in real fares (adjusted for inflation) were responsible for 28 percent of the deficit increase;
- Increased transit mileage accounted for 16 percent;
- Increases in energy costs caused 12 percent of deficit increases.

The findings presented in ***The Emperor's New Clothes*** are sure to be of interest to officials of the Bush Administration, especially Secretary of Transportation Samuel K. Skinner. The Department of Transportation under Skinner has generally continued the Reagan Administration policy of using UMTA funds to push privatization on states and cities, but Skinner is now hard at work developing a new National Transportation Policy which the Bush Administration plans to release sometime in early 1990. If Skinner proceeds with plans to solicit recommendations from cities and states and from public transit riders, local community, business and labor organizations, he is likely to hear present policy challenged by leaders of many of these groups citing the analysis and findings presented in the Economic Policy Institute report.

The Urban Mass Transit Administration has financed many empirical studies with the goal of demonstrating that privatization saves money. *The Emperor's New Clothes* examines the most detailed and widely-quoted of these, *Public Transit Service Contracting* by Teal, Giuliano, and Morlok (1986) which is based on a nationwide survey of transportation contraction by public services. They find that most of the study's comparisons between private contractors and public agencies of similar size involve too few numbers of cases to yield generalizable results. In the one category with enough cases examined -- systems with 25 or fewer vehicles -- the study shows that private contractors had no cost savings over public agencies.

The authors of the EPI study cite other methodological flaws which they claim characterize the entire UMTA approach to comparing costs of public and private systems:

- They find that the UMTA studies attempts to compare public systems' "fully allocated" costs for a given route, which includes a share of the

costs of planning, programming, financing, marketing, monitoring, and coordinating the entire transportation network, with private bids reflecting only the costs of providing one route;

- They compare the allocated cost of running a public system to the initial bid by a private contractor, even though it is a common practice for companies to underbid to get the first contract and capture the market while eventually passing on to the public the real cost of actual private operation;
- UMTA's analysis also never considers the cost savings that accrue to the private contractors from equipment furnished by the public agency sponsors.

**Study cites negative impacts of new policy in several communities.**

The EPI study describes several cases in which UMTA rules placed a higher priority on increasing private operation than on efficiently using public money. In these cases UMTA pressure either forced community or state agencies into contracts which they later regretted or in which UMTA influence was resisted only by the insistence of a strong public administrator who saw the bad deal with private contractors before it became a signed contract.

1. Santa Barbara

The EPI report quotes Gary Gleason, General Manager of the Santa Barbara MTD, who described how he had to resist pressure from UMTA (and from private contractors protesting through UMTA channels) to give a contract to a private firm for 20 percent of the city transit system even though he estimated that the proposed contract would result in an additional cost of $600,000 over and above the cost of running the system publicly.

2. New Orleans

The authors report that in early February 1988, the Regional Transit Authority (RTA) of New Orleans, in order to conform to UMTA's policy of privatization, awarded a three-year contract to a consortium of Greyhound Lines, Inc. (of Texas), and Airport Rhodes, Inc. (of Louisiana), for $3,922,364 to provide 56,045 hours of service along five of its routes in and around New Orleans.

Consistent with UMTA policy, the decision was made on the basis of

comparing RTA's fully allocated costs with the bid prices of the various proposers. Even though the Greyhound consortium bid on the basis of only its incremental cost, the EPI authors present an analysis which demonstrates that in fact the Greyhound price was higher than the fully allocated costs of the former service. The authors conclude that the only savings to Louisiana taxpayers in this UMTA demonstration comes at higher cost to U.S. taxpayers, who end up footing the bill for the UMTA grants that subsidize the project and make it appear as a "savings."

3. Sonoma County, California

Among the troubling examples cited by the EPI report is the case of the Sonoma County Transit (SCT), in which it is alleged that UMTA policies were susceptible to political pressure which resulted in eliminating the low cost bidder from competition. Using competitive bidding, SCT had sought to award a new three-year contract to a public provider, the Golden Gate Bridge and Transit District (GGBTD). GGBTD offered to provide the three-year service for a cost of $5.5 million. This bid favorably compared to that of the lowest private bidder, American Transit Corporation's (ATC) bid of $5.9 million. Nevertheless, in response to a protest from the California Bus Association, a lobbying and political arm of the private operators, UMTA forced SCT to award the new contract to ATC, and not to the public operator.

4. Colorado

In May 1988, the State of Colorado passed a law requiring the Denver Regional Transportation District (RTD) to privatize at least 20 percent of its bus service as of March 31, 1989. This is the first time in which an attempt is being made to go beyond privatization of new or revamped service, to apply the policy to existing service. The law's preamble makes quite clear that the legislators relied on UMTA's research. It states that "public transportation service should be provide at the lowest possible cost [and]... private transportation providers have been effectively used under competitive contracts to provide transportation services at lower cost and with lower annual cost increases.

After examining the restrictions this new law places on the Denver system, the EPI report concludes that it will have the following negative effects:

- because of its exclusive focus on reducing costs the bill moves away from the broader view of the potential of mass transportation to serve as a tool of urban or environmental policy;

- RTD will have to significantly increase its contract supervision and

auditing capability. With no additional funding provided, that change can only come at the expense of existing operations;

- If the performance of the transit system has to hinge on the coordination of multiple independent private contractors, each under its own pressures from breakdowns and other problems, absenteeism, etc., it seems inevitable that the efficiency of the entire system must diminish;

- Lower driver and mechanic wages, however, have an implicit cost in greater turnover and increased absenteeism, higher training costs, and less system reliability and safety. That, in turn, means that transit riders no longer receive the same product. Decreased reliability at the time that we are trying to increase ridership appears to be a wrong-headed policy.

- The biggest enigma created by the law is the provision that allows qualified firms not in need of subsidy to operate anywhere in the district, exempted from taxes and public utility regulations. The impact of this provision is unknown, but havoc and destructive competition is more likely to result than an effective metropolitan wide transit service.

The authors' comments on the Colorado law represent a capsule summary of their entire criticism of transit privatization:

> "The basic problem with the Colorado law is its heavy-handed ideological approach to a complex public policy issue. Some purchasing of transportation from private providers by the larger public agencies has always made sense, and has occurred in most larger agencies. But the agency should have the right to exercise a responsible make/buy decision. Agencies should not have an important economic decision dictated by arbitrary ideological and political considerations. Contracting might be thought of as we think of aspirins: two can cure a headache, but the whole bottle will kill you."

*From ATU In Transit, March-April, 1991:*

## Colorado Legislature Rejects Added Privatization After Study Reveals Initial Experiment Cost Taxpayers $9.1 Million

Denver's privatization experiment in which 20 percent of its transit system was contracted out to private companies has proven more costly to taxpayers than the public system, and the Colorado legislature has rejected proposals to expand the experiment. The decision, however, comes in the wake of an attempt by the system to play with the numbers

A November audit of the experiment which estimated the loss at $3.7 million was quickly revised in December to make the loss seem to be only $1 million.

### Revised at Urging of Privatization Proponent

In a subsequent study by the Economic Policy Institute, author Elliott D. Sclar, Ph.D., puts the actual figure at $9.1 million.

He also reveals that between the *first* "final report" and the "*revised* final report" auditor Peat Marwick employed a questionable "fully allocated cost accounting method" and speculated on future cost reductions to predict dubious future "savings" rather than the *loss* reported in the *first* report.

Peat Marwick also conceded that the revised final report resulted from the criticism of Wendel Cox, a nationally-recognized proponent of privatization.

In testimony before the Colorado Senate Transportation Committee, Sclar asserted that the revised final report "is factually incorrect when it asserts 'that the results...clearly demonstrate that...private contractors have... provided comparable bus service ...at a substantially reduced cost.'"

### Hidden Costs

Sclar also urged that future evaluations of the experiment consider the hidden costs incurred when private out-of-state companies provide public transportation with poorly-paid workers.

Sclar pointed out that a family of three subsisting on the salaries paid by the private company would qualify for food stamps, and that the state would incur a $2,400 yearly health risk per individual.

Sclar also urged the state to consider the $200,000 loss that the contractors swallowed on the experiment, as well as the wisdom of depressing the wages of workers in state while paying high fees to out-of-state concerns.

Local 1001 and the International won the fight against a proposal that would increase privatization there by an added 20%.

Mr. Jack McCroskey
Chairman, Board of Directors
Regional Transportation District
1600 Blake Street
Denver, Colorado 80202

Dear Mr. McCroskey:

Performance Audit of Privatization of RTD Services

At our presentation to the RTD Board of Directors at its meeting of January 29, 1991, you requested that KPMG Peat Marwick provide additional comment on the appropriateness of fully-allocated and incremental cost analyses in comparing the cost of transit service by public versus private sector providers. In this letter we expand on our statements before the Board and our revised Final Report.

The Case for Fully-Allocated Cost Analysis

UMTA's Private Enterprise Policy (Federal Register, Vol. 49, No. 205) requires that privatization cost analyses be performed on a fully-allocated basis. The argument for such analyses is the theory that in the long-term all costs are directly related to the quantity of service provided. Simply stated, fully-allocated analysis assumes that for each "x" percent reduction in service, an equivalent "x" percent theoretical reduction in cost will occur. In our cost model, we achieved this by associating with each line item in the RTD budget a "driving variable" related to the quantity of service provided. These driving variables included buses operated in the peak period, peak and off-peak platform hours, and vehicle-miles, by type of vehicle.

Much of argument in favor of fully-allocated cost projections evolved in the context of analyzing major public transportation investments (e.g., new fixed guideway services). It was UMTA's observation that when major expansion of transit service was being addressed, planners tended to understate the growth in administrative and capital rehabilitation and replacement costs. UMTA had observed many examples of significant growth in administrative staffing as new rail transit systems were implemented. Further, many of these new transit system, now approaching 20 years of service, are now

experiencing the need for significant renewal of vehicles and fixed plant.

There are convincing arguments that such a fully-allocated approach is not appropriate in the context of contraction of transit service, as in the case of privatization. In this context, many of the underlying administrative functions and investment in fixed assets are already in place. Many of administrative functions are not directly related to the quantity of service provided. Reductions in service level, therefore, may not be associated with proportionate reductions in administrative cost.

UMTA guidelines (quite properly, we believe) do allow for the exclusion of certain capital-oriented costs not directly associated with the provision of transit service. In RTD's case, this included costs in the transit planning and development function. In addition, UMTA has acknowledged that, in an effort to "level the playing field", certain operating functions (and associated costs) may be excluded from the analysis if the contractors are not responsible for provision of such functions. In RTD's case, there were many administrative and operational functions that RTD continued to provide regardless of who provided the transit service. In our contract with RTD to develop the cost model used in this analysis, these were referred to as "retained functions". Such costs were not included in our cost comparisons.

The Case for Incremental Cost Analysis

Incremental cost analysis recognizes that certain cost components are not, in fact, directly related to the quantity of service provided, at least in the short-term. In particular, many administrative functions simply have not be observed to decline proportionate to the extent of privatization. Further, capital investment in vehicles, maintenance facilities, and other fixed plant are a "sunk cost" and, as such, are not affected by privatization decisions.

With regard to administrative costs, our estimate of incremental cost savings was based on an analysis of the reduction in RTD's "Category 1" administrative costs (excluding the "retained" functions) from the 1989 (pre-privatization levels) to the levels in the 1990 amended budget and the 1991 recommended budget. It is our understanding that historically RTD has achieved its amended budgets, which are prepared based on third quarter financial results. Further, we understand that both the 1990 amended budget and the 1991 recommended budget reflect the implications of RTD's voluntary separation program for salaried employees. Our analysis indicated that achieved reductions in 1990 and projected (and likely to be achieved) reductions in 1991 in Category 1 costs are much smaller than the theoretical fully-allocated reductions based on the quantity of service privatized. This is despite the aggressive actions by the RTD Board and management to contain such costs, including the voluntary separation program.

Beyond the limitations in the theory of the cost analysis, there are other compelling, practical reasons for avoiding a longer-term perspective when considering contracted transit services. RTD's contracts with private providers are relatively short-term in nature, with a three-year base term and two one-year options, to be pursued at RTD's initiative. It is unclear whether prices in future proposals (either after the term of the current contracts or in response to further privatization initiatives imposed by General Assembly) will be as favorable to RTD as those currently in place. Our analysis, which indicates that the contractors were operating at a loss through June 30, 1990, suggests that prices may be higher in future proposals. It may very well be that accurate long-term estimates of savings resulting from privatization may not be possible to compute because of the uncertainty in the proposed prices of the contractors. Beyond actual cost experience, the contractors price is in response to the competitive environment and proprietary goals regarding positioning in the market place. Neither of these factors is predictable.

Conclusions

Incremental cost analyses yield hard "out-of-pocket" estimates of savings that are useful in real world decision-making. Fully-allocated cost analyses are based on theoretical, longer-term cost estimates that assume that management has complete flexibility in its staffing decisions and capital investment in response to the quantity of service provided. In fact, such flexibility does not exist. Fully-allocated analyses do not address the real world staffing decisions by management in response to governance board policy and local, state, and federal legislative and regulatory mandates. Further, fully-allocated analyses do not consider capital investment as a "sunk cost", unaffected by relatively short-term privatization decisions by management.

Based on the considerations raised above, it is our conclusion that management decisions regarding the real "out-of-pocket" savings to be derived from privatization should be based on an incremental analysis. Incremental cost analysis address measurable savings, achieved within the short-term (three to five year) context of the current privatization contracts. Fully-allocated cost comparisons infer that long-term theoretical savings in administrative costs actually occur in the short-term, an outcome that has not been demonstrated.

We recommend that, in the short-term context of its current (and potential future) contracts with private providers, RTD continue to estimate the savings resulting from privatization on the basis of incremental costs.

. . . . .

If you have any further questions concerning this matter, please feel free to contact the undersigned or Raymond Ellis at 703-442-0030.

Very truly yours,

Robert L. Peskin, Manager

# Billboards Along Interstate and Federal-aid Primary Highways: Why No Reliable Estimates of Their Number Exist

Bruce K. Mulock
Specialist in Business/Government Relations
Economics Division

## SUMMARY

This report examines the question of how many billboards currently exist along side the Nation's major highways. More specifically, this report discusses the data limitations and other problems associated with developing an estimate of the current number of billboards situated in proximity to Interstate and Federal-aid Primary Highways.

Notwithstanding data limitations and other problems, however, information from the Federal Highway Administration — coupled with the judgments of knowledgeable industry sources — suggest that an estimate of roughly 425,000 to 450,000 billboards may be reasonable.

## BACKGROUND

For the sake of clarity, it may be helpful to define several industry terms. Billboards are a part of what has historically been termed "outdoor advertising."[1] The outdoor industry has three principal categories of structures: poster panels, painted bulletins, and one-of-a-kind spectaculars. "Posters" are what most people think of when they talk about a typical highway billboard. Posters come in several sizes. The standard size is about 300 square feet or approximately 12' X 24'.[2] "Painted bulletins" are considerably larger, measuring 642 square feet or approximately 14' by 48'. Such signs are individually designed and painted. Signs in the third category are called "Spectaculars."

---

[1] Increasingly in recent years, outdoor advertising has come to be viewed as part of a more comprehensive segment of the advertising industry termed "out-of-home media." In addition to the kinds of structures listed above, out-of-home media includes such things as freestanding displays in shopping malls and ads on trash containers as well as a host of transit-associated advertising.

[2] There are also several (considerably) smaller-sized posters available in some markets, but they are most often used for pedestrian traffic or secondary roads.

CRS

*CRS Reports are prepared for Members and committees of Congress*

Spectaculars are custom-built displays. They are typically much larger that painted bulletins and they often use extensive lighting and intricate designs.

## ESTIMATED NUMBER OF BILLBOARDS

How many billboards are there in the United States on the country's Interstate and Federal-aid primary highways? Neither industry nor government data provide a reliable answer to this question. In the private sector, data collection associated with the outdoor advertising industry is fragmented, and the types of data collected are for purposes unrelated to answering this question; thus, such data are generally not helpful in developing a reliable estimate. Similarly, statistics developed by the 50 States and compiled by the Federal Government do not address the question. As a result, it appears that no accurate inventory exists as to the total universe of billboards in the United States or to the number of billboards on any particular type of highway.

The problems of data collection within the industry are, perhaps, best illustrated by examining the operations of the Traffic Audit Bureau for Media Measurement (TAB), the principal firm in the United States which verifies circulation figures for companies that pay to advertise on billboards. [3] TAB, by its own estimates, audits 60 to 65 percent of bulletins in major markets. Overall, it has data on some 210,000 posters and 50,000 painted bulletins. The data, however, is categorized in terms of "poster or bulletin" and "illuminated or not illuminated." They have no reason to collect and, therefore, do not collect data which would indicate the kinds of highways (e.g., interstate, primary Federal-aid) on which the signs are located. A spokesman for TAB said that such data exists only to the extent that in some markets some people could look at TAB's records and say, for example, that a particular sign is located on Highway 21, which is a Federal-aid highway.

Aggregate national figures concerning billboards are compiled by the Federal Highway Administration (FHWA), based on numbers reported by the 50 States (as well as the District of Columbia and Puerto Rico). The interests of the State highway departments and FHWA in billboard-related data, however, is strictly limited: fulfilling their responsibilities as mandated by the Highway Beautification Act. Under the Act, they are only required to maintain statistics on "nonconforming" and "illegal" signs. Determining the number of signs that conform with the Act (as well as the number of "grandfathered nonconforming signs") is not part of their regular data collection process.

Further, it must be noted that the quality of the data FHWA does collect is, according to several sources, suspect. The General Accounting Office (GAO), for one, expressed concerns about the agency's data. In a 1985 report on the

---

[3] The current TAB is a restructured organization resulting from the merging in early 1990 of the Traffic Audit Bureau and the Out-of-Home Measurement Bureau. Prior to the merger, TAB was for many years the industry auditing service for the so-called big boards; the Out-of-Home Measurement Bureau, an auditing service of more recent origin, focused on the smaller "8-sheet boards."

effectiveness of the outdoor advertising control program, GAO said it "relied on these FHWA data because they are the only available comprehensive figures on the status of outdoor advertising control. As previously mentioned, however, we are concerned about the reliability of FHWA data. . . ."[4]

To reiterate, no conclusive figure exists as to the total number of billboards on Interstate and Federal-aid primary highways; nevertheless, available data from FHWA — coupled with the judgments of knowledgeable industry sources — supports an estimate that there are a minimum of 425,000 to 450,000 such signs. Table 1 shows the number of signs by various categories for selected years from 1966 through 1988. Assuming the number of "CONFORMING & NC GRAND" (i.e., "conforming" and "non-conforming grandfathered") increased during 1987 and 1988 at the same rate (6.18 percent) that it did between 1985 and 1986 (the last two years for which data was collected in this category), the figure for 1988 would be 289,227. When this figure is added to the 138,011 in the "NONCONFORMING TO BE REMOVED" and "ILLEGAL" categorie, the estimated total number of signs for 1988 would be 427,238.

TABLE 1. CONFORMING, NONCONFORMING AND ILLEGAL SIGNS

| Fiscal Year | (a) Conforming & Nonconforming Grandfathered | (b) Nonconforming To Be Removed | (c) Illegal | (b & c) Nonconforming To Be Removed And Illegal | (d) Total |
|---|---|---|---|---|---|
| 1966 | 260,659 | | | 839,361 | 1,100,020 |
| 1979 | | 186,720 | 92,839 | 279,579 | |
| 1980 | 195,873 | 149,825 | 64,509 | 214,334 | 410,207 |
| 1981 | | 138,122 | 54,330 | 192,452 | |
| 1982 | | 128,558 | 50,032 | 178,590 | |
| 1983 | | 123,827 | 47,752 | 171,579 | |
| 1984 | | 120,636 | 47,204 | 167,840 | |
| 1985 | 241,608 | 115,488 | 43,753 | 159,241 | 400,849 |
| 1986 | 256,539 | 109,183 | 36,340 | 145,523 | 402,062 |
| 1987 | **272,393** | 104,984 | 33,431 | 138,415 | **410,808** |
| 1988 | **289,227** | 104,674 | 33,337 | 138,011 | **427,238** |

Note: Bolded figures are projected estimates based on an assumed growth of 6.18 percent for 1987 and 1988 in number of "Conforming & NC Grand" signs. The 6.18 percent change represents the increase in the number of "Conforming & NC Grand" signs from 1985 to 1986 (1986 being the most recent year for which data is available). The projected figures for 1987 and 1988 assume that the rates of increase for those years held constant at 6.18 percent. Also note:

- Conforming and Nonconforming Grandfathered Signs are not subject to removal;

[4] U.S. General Accounting Office. *The Outdoor Advertising Control Program Needs to Be Reassessed*. Report to the Congress by the Comptroller General of the United States. GAO/RCED-85-34, January 3, 1985. p. 14.

- Nonconforming Grandfathered Signs are subject to the maintenance and continuance rules for conforming signs;
- Nonconforming Signs are subject to removal with payment of just compensation;
- Illegal Signs are subject to removal without payment of just compensation.

RTD

STATEMENT OF ALAN F. PEGG,
MANAGER, SOUTHERN CALIFORNIA
RAPID TRANSIT DISTRICT

# THE SOUTHERN CALIFORNIA RAPID TRANSIT DISTRICT'S TESTIMONY BEFORE THE UNITED STATES HOUSE OF REPRESENTATIVES SUBCOMMITTEE ON SURFACE TRANSPORTATION APRIL 10, 1991

Chairman Mineta, Congressman Shuster, Members of the Subcommittee, it is truly a pleasure to testify before you today. The Reauthorization of the Surface Transportation Assistance Act provides the Congress with the opportunity to set the agenda for transit for the next five years. The Surface Transportation Subcommittee and the entire Public Works and Transportation Committee have shown through the recent proposal on transportation funding levels, that you are committed to improving the transportation system of this country with mass transit as a major entity in that improvement.

The SCRTD is one of the largest transit operators in the country. The District provides vital transit service to 1.4 million daily riders residing in 87 cities with a peak fleet of nearly 2,000 buses. A recent UMTA report shows that not only do our buses operate more miles per day than any other system in the country, but our passengers receive more service for the fare than any other system.

The District also operates 54 light rail vehicles on Los Angeles' new Metro Blue Line which opened in July 1990. The Blue Line's success is demonstration by daily ridership of 25,000 passengers. The SCRTD will also operate the Metro Red line subway when it opens in mid-1994.

The SCRTD leads the country in the development of alternatively fueled public transit vehicles. The District operates one-half of the nation's alternatively fueled bus fleet and is the only operator to successfully place alternately fueled buses in revenue service and achieve standards comparable to diesel. By the end of 1990, more than 70 alternatively fueled vehicles will be placed in revenue service. The District also manages the largest alternative fuels research and facility for transit in the world.

Recent world events demonstrate the importance of transit in reducing this country's dependency on foreign oil. The Persian Gulf Crisis reminded us of our dependency on foreign oil and the fragile political tightrope we walk between mobility and stagnation. Every driver who switches to transit saves an average of 200 gallons of gasoline each year. Transit is assisting in reducing our dependency.

Our challenge is great. We must develop a national transportation system that will attract new ridership. In Los Angeles County the SCRTD is moving 1.4 million people a day on our buses and 25,000 a day on the Metro Blue Line. The start up of the Metro Green and Red Lines in 1993-94 will assist Los Angeles in meeting this challenge. Many more steps will need to be taken before a national system is in place that provides the public with a complete intermodal system. Mass transit will be the backbone of this system.

**OPERATING ASSISTANCE**

As the transit industry has grown over the past ten years, it has struggled to meet ever increasing demands with a shrinking commitment in federal investment.

In 1980, federal operating assistance made up 47.3% of the SCRTD's total operating assistance subsidy. Today only 15.6% of our operating assistance comes from the federal government. (Please see Attachment 1). The federal government, however, remains a vital funding partner in the provision of local transit services.

If Section Nine operating assistance were eliminated the SCRTD would be forced to take one of two actions. Our first option would be to cut service by approximately 16 percent. This action would result in a loss of service to over 200,000 daily riders.

Our second option would be to raise fares. A 5 cent fare increase will generate approximately $10 million. To make up a loss of $48 million in federal government funds would require a fare increase of 50 cents.

An important factor to keep in mind is that with this fare increase, the SCRTD would lose 5 percent (approximately 21,000,000 passengers) of its total annual ridership of 412,000,000.

At the same time that we saw a steady decline in the federal governments investment, the voters of Los Angeles County have passed two sales tax increases over the past decade to pay for transit improvements. In the past year, Los Angeles County voters increased their investment by over 70 percent with the passing of Proposition C a half cent increase in the local sales tax dedicated to transit.

Reauthorization must contain a guaranteed continuation of operating assistance to the urban areas over 1 million people. These are the areas where the battles of congestion, clean air and accessibility will be hardest fought. Federal assistance is absolutely essential if we are to win this battle.

CLEAN AIR

The importance of federal investment in mass transit was highlighted by the passage of the 1990 Clean Air Act amendments by the 101st Congress. The Act posed stiff challenges for mass transit, but challenges that can be met if the proper tools are provided.

Every member of the Subcommittee has received a copy of a study conducted by the SCRTD on the cost impacts of alternative fuels. This survey encompassed 18 of the nations largest transit districts, who collectively operate 22,000 of the 39,000 buses that will be impacted by the Clean Air Act. A copy of the survey is attached for your additional review (Please see Attachment 2).

Governmental policy guidance, as it pertains to meeting clean air regulations for the development of an energy-independence strategy, sometimes appears contradictory in that the least-cost approach of achieving clean air may or may not involve the use of alternative fuels. Alternative fuel development can be used to achieve energy independence for this country as well as achieving improved environmental goals. Moreover, the total cost of implementing any of these technologies must include:

- the cost of providing necessary infrastructure
- the cost of rolling stock
- the added cost of alternative fuels
- the added cost of maintenance
- the additional fleet cost, should alternatively fueled vehicles prove less durable than diesel powered buses over the long haul.

All of the alternative technologies are more expensive than the present cost of operating a diesel fleet. We have some data on experimental reformulated diesel fuels and their effects on emissions. I do not believe that their use by themselves will meet the diesel emission standards. Our dilemma is that we feel that the growth of mass transit is very much a part of the clean air solution, and there are obviously things that we can do through these various technologies which promote clean air and the use of alternate fuels. Each of these strategies comes with a price tag that is significant. Nowhere is there financial assistance available to our industry to offset these costs.

As a public transportation agency, we recover approximately 40 percent of our costs through the farebox. A significant number of our patrons are financially impacted by fare increases and we are the safety net transportation resource for the disadvantaged. It is difficult to imagine the disadvantaged paying for the introduction of all this new technology since they are the least able to do so. The many infrastructure demands that we all face are competing for available funds. How we find the funds to accomplish all of these goals is going to determine how fast we can meet them.

The SCRTD is one of the most technically sophisticated operators in the country and is faced with the dilemma of allocating scarce resources to meet clean air mandates. In the Los Angeles area, the Air Quality Management Plan will move Los Angeles towards alternate fuels and electric development across the board by the year 2000. Less sophisticated larger and smaller properties will be faced with a much greater challenge. The SCRTD, however, will continue to explore various options including public/private sector partnerships.

In short, alternate fuels <u>can</u> be made to work in a transit environment if the goal is energy independence. This will be achieved at a significant financial cost to develop the infrastructure and to defray the additional operating expenses associated with these technologies.

If operators are to meet the goals of the Clean Air Act as mandated by Congress, then I would strongly urge that language be approved in the Reauthorization Act that would make additional federal funds available to offset the incremental cost of meeting the new Clean Air Standards. While we cannot quantify those additional costs today for all transit operators, we at SCRTD know with a growing certainty that they will be significant. And we know too, from past experience that placing that additional burden on the farebox will do precisely what we don't want to do --- drive the public from mass transit back to their cars and thereby add to the pollution problem the Clean Air Act is designed to solve.

**<u>AMERICANS WITH DISABILITIES ACT</u>**

The 101st Congress also saw passage of the Americans with Disabilities Act which will of necessity severely impact mass transit. How severely we cannot say until the Department of Transportation releases its final regulations, but we can provide the Subcommittee with some insight to what we at SCRTD perceive the impact to be.

The SCRTD currently operates a fleet of 2500 buses that is 98% accessible. We will be 100% accessible by the end of 1992. Even though the SCRTD has been in the forefront of providing accessibility to all transit riders, we will be severely impacted by the implementation of the ADA. The following is a breakdown of the financial impacts the ADA will have on the SCRTD:

- o Start up one time cost
  - ADA Transit Improvement Program
    $ 7,450,000 to 10,800,000
- o Annual On-Going Costs
  - Current Program
    $ 3,320,000
  - ADA TIP Additional Cost
    $ 3,125,000 to 4,100,000
  - Paratransit Operating Cost (Channeled away from SCRTD)
    $35,000,000 to 100,000,000
  - Total Annual On-Going Budget
    **$38,945,000 to $107,420,000**

Again I would stress that these are only estimated costs that cannot be finalized until DOT releases its final rules and regulations regarding implementation of the ADA.

Please note that these cost reflect those that would impact the SCRTD. Many of our sister transit agencies will face a much graver financial impact as they modify older rail facilities to meet the new accessibility standards.

If operators are to meet the goals of the Americans with Disabilities Act as mandated by Congress, then I would strongly urge that language be approved in the Reauthorization Act that would make additional federal funds available to offset the incremental cost of meeting the new Accessibility Standards. While we cannot quantify those additional costs today for all transit operators, we at SCRTD know that they will be significant. And we know too, from past experience that placing that additional burden on the farebox will do precisely what we don't want to do --- drive the transit dependent public from mass transit.

**FLEXIBILITY**

We understand that the above costs exceed the available dollars. Several ideas have been advanced as to how we may stretch the existing federal dollars and provide a source of additional financing. First and foremost, the concept of permitting local transportation entities to switch federal highway funds to transit has great promise for the urban areas that are not yet in compliance with the emission mandates of the Clean Air Act. However, we feel that it would be imprudent to jeopardize existing funding levels. Flexibility, therefore, should begin after operators receive their Section Nine Operating assistance and Section Three discretionary dollars. These funds are vitally needed to permit operators to meet the daily demands of providing service. Flexibility would have the potential to provide the additional funds needed to meet the Clean Air and ADA Mandates.

**CONCLUSION**

The 1990s provide the country with an opportunity to put mass transit back on course and on an **even playing field** with the highway program. This can only be done by reversing the disparity between funding for the highway program and mass transit. (Please see Attachment 3)

The proposal put forward by this committee is a step in the right direction. Mass transit is faced with many challenges over the next decade. They are challenges that we as an industry feel we can master if given the proper resources to do so.

I appreciate the opportunity to present our position before you today and for your continued leadership during the reauthorization period.

[1]*Total estimated cost for national fleet of 39,000 buses. Fleet replacement normally scheduled over 12 years; the Clean Air Act may accelerate replacement in some areas.*

[2]*Costs extrapolated to 1 billion miles for national fleet; data collected pre-Persian Gulf Crisis.*

[3]*Regional differences (municipal codes, environmental regulations and land acquisition requirements/prices) caused wide variances in survey results; therefore, no national conclusions were drawn for facility costs.*

[4]*Existing fuel storage systems at SCRTD will have to be either replaced or modified to meet new federal regulations for underground fuel storage tanks at a cost of $1.0 million per fuel storage system, or approximately $12.0 million for the SCRTD's 12 operating divisions.*

[5]*Added cost to construct a new methanol fueling facility at SCRTD.*

[6]*A new CNG fueling station for a large fleet operation (up to 250 buses).*

RTD

COST IMPACTS OF THE 1990 CLEAN AIR ACT

ON THE U.S. PUBLIC TRANSIT INDUSTRY

## SURVEY METHODOLOGY

Eighteen of the nation's largest public transit properties responded to the SCRTD's survey. These properties represent a total of 20,645 owned buses.

The survey made inquiries into three alternate fuels/low emissions related cost categories: 1) fleet costs, 2) fuel costs, and 3) facility costs.

These estimates were then extrapolated to represent all Metropolitan Standard Areas (MSAs) with populations greater than 750,000 and a national fleet of 39,000 buses traveling an estimated 1.0 billion miles per year.

Vehicle durability and overall maintenance costs were not included since adequate data are not yet available for this purpose.

RTD

# COST IMPACTS OF THE 1990 CLEAN AIR ACT ON THE U.S. PUBLIC TRANSIT INDUSTRY

## BACKGROUND

In the summer of 1990, the Southern California Rapid Transit District (SCRTD) conducted a survey of U.S. public transit properties to quantify estimated costs to convert from diesel buses to alternate fuel/low emissions buses.

The survey also evaluated the cost to purchase and operate an alternate fuel/low emission transit bus fleet. In addition to fuel and fleet costs, transit properties were asked to estimate the costs of constructing or upgrading alternate fuel fueling facilities. Code interpretations, land costs, and lack of specific design guidance resulted in a wide range of cost estimates; therefore, survey findings for this category are generalized.

The cost estimates identified in this survey are based on limited testing of new, R&D technologies. There is no mature or completely tested heavy-duty clean air transit bus technology currently available. With the exception of the SCRTD, which is operating various buses with all current technologies and has built methanol and compressed natural gas (CNG) refueling facilities, the survey results represent the best available cost estimates by various transit properties to convert their fleets based on their individual situation and local market availability of methanol, CNG and low sulfur diesel fuel. As the transit industry's experience with the new technologies increases, normal market pressure for lower costs and increased durability are anticipated.

This survey provides policymakers with the best available fleet data and cost estimates (as of summer 1990) to evaluate the impacts of the Clean Air Act on the U.S. public transit industry. The survey's findings demonstrate the urgent need for Congress to authorize and appropriate funds to comply with the federal mandates of the Act.

RTD

COST IMPACTS OF THE 1990 CLEAN AIR ACT

ON THE U.S. PUBLIC TRANSIT INDUSTRY

## DESCRIPTION OF FLEET COSTS

Transit fleet costs are usually associated with a 12-year bus life and replacement cycle. This means that the typical annual cash flow to replace a transit bus fleet could be the cost to replace 1/12 of the owned fleet each year. Under the clean air regulations that SCRTD operates under, these costs would be accelerated as we are obligated to achieve a goal of 100 percent conversion to low emission buses by the year 2000. As such, it will be necessary to increase bus capital spending to replace a given fleet in less than 12 years here at SCRTD. Local laws and conditions will affect these schedules on a national basis.

Based on the results of the survey, the estimated cost to replace a bus for each technology (1990 prices) would be: $190,000 for diesel, $238,000 for methanol, $254,000 for CNG and $204,000 for particulate traps. The total estimated costs for a national fleet of 39,000 buses would be $7.4 billion for diesel, $9.3 billion for methanol, $9.9 billion for CNG and $8.0 billion for particulate traps.

Based on SCRTD's experience with such technology, the estimated cost range for each alternate fuel bus is slightly lower than the survey except for particulate traps. Therefore, the following ranges of prices are estimated: a) methanol - the range is between $215,000 and $230,000 per bus, b) CNG - the range is between $230,000 and $240,000 per bus, and c) particulate traps - the range is between $200,000 and $211,000 per bus.

RTD

COST IMPACTS OF THE 1990 CLEAN AIR ACT

ON THE U.S. PUBLIC TRANSIT INDUSTRY

## DESCRIPTION OF FUEL COSTS

Fuel cost data in this report were collected before the Persian Gulf Crisis. They represent annual operating budget expenditures at the SCRTD. When extrapolated to an estimated 1.0 billion miles for the national fleet, the survey results yield a total estimated fuel cost of $185 million for diesel, $536 million for methanol, $240 million for CNG and $228 million for particulate traps. These estimates will be refined as more experience is gained and may also be influenced by market conditions and public policy decisions.

RTD

COST IMPACTS OF THE 1990 CLEAN AIR ACT

ON THE U.S. PUBLIC TRANSIT INDUSTRY

## DESCRIPTION OF FACILITY COSTS

The survey estimates for new fueling facilities vary widely depending on municipal codes, environmental regulations and land acquisition requirements and prices. No national conclusions were drawn due to the variance of the survey results and the regional nature of the situation. However, new federal regulations for underground fuel storage tanks will require significant expenditure of capital funds over the next eight years for all transit properties.

Existing fuel storage systems at SCRTD will have to be either replaced or modified to meet these new fuel tank regulations. These costs are estimated to be $1.0 million per system or approximately $12.0 million for the SCRTD's 12 operating divisions. It should be noted that when the fuel storage and dispensing systems have been upgraded to be in full compliance with the new regulations, they will be essentially compatible with methanol with minor modifications.

The cost increment to construct a new methanol fueling facility ranges between five and fifteen percent added cost over the same size diesel fuel facility or approximately $1.05 to $1.15 million per new methanol facility at SCRTD. The cost differential covers additional vapor recovery piping and upgraded material required in portions of the methanol systems. Based on experience at the SCRTD to date, other required facility changes relating to the use of methanol are minor.

The use of CNG fuel in transit buses requires a completely new fuel storage and dispensing system. The costs for a new CNG fueling station for a large fleet operation (up to 250 buses) will be in the range of $1.5 to $3.5 million, depending on the fueling time requirements of the transit property (fast fuel is costly and slow fuel is relatively inexpensive).

Although the changes to the maintenance facility areas at SCRTD test divisions have been minor relative to CNG fueling, it is possible that regulatory agencies may require significant changes and improvement to ventilation and fire safety systems, a should a large number of buses be converted to CNG.

RTD

DESCRIPTION OF FACILITY COSTS ....continued

This will be of major significance in colder climates where refueling and maintenance activities are typically performed indoors. These expenditures would be in areas such as explosion proof fixtures and special ventilation systems.

The use of CNG fuel will not obviate the need to expand capital funds for other underground tank improvements. This is due to the fact that a number of other products are stored in underground tanks at transit operating facilities including motor oil, transmission oil, antifreeze, waste oil, and waste fuel. A portion of the estimated $12.0 million for fuel station improvements at SCRTD is for soil clean up that would be required even if the facilities were closed. This cost will obviously vary depending on code regulations, work environment and specific conditions encountered at each location.

RTD

COST IMPACTS OF THE 1990 CLEAN AIR ACT

ON THE U.S. PUBLIC TRANSIT INDUSTRY

## OTHER POTENTIAL COSTS

It was noted earlier that the cost figures in this study do not reflect durability of equipment, "weight penalties" or losses in passenger capacity associated with operating transit buses on alternate fuels.

Life cycle cost durability information related to vehicle life cannot be made at this time due to relatively low mileage on test fleets. It is estimated that another 3-5 years operational experience is needed before data on engine overhaul requirements, etc., can be determined with accuracy. As more experience is gained, engine durability forecasts will be attempted based on tear down measurements, oil analysis results and detailed investigations of engine failures.

A 1990-technology methanol bus weighs approximately 1600 lbs. more than a comparably equipped standard diesel bus while a CNG bus weighs approximately 2,800 lbs. more than the standard diesel bus. These buses have the same range as a diesel counterpart. However, the impact of added weight of the various alternate fuel transit bus technologies is being assessed. It is known that this weight increase adversely affects brake service, tire and transmission life and reduces passenger carrying capacities due to axle load limitations. Federal and state laws limit the total operating weight of a vehicle; therefore, if the weight of fuel increases, the passenger capacity must be reduced by a like weight value. A CNG fleet could require the purchase of up to 10 percent more vehicles in order to achieve passenger carrying capacity equal to a diesel fleet.

The vehicle weight increase associated with CNG will stress the importance of testing liquified natural gas (LNG) technology. This option is being explored by The Metropolitan Transit Authority of Harris County in Houston, Texas. LNG refueling rates and bus weight are attractive as compared to CNG so that a cost comparison between the two systems will eventually be necessary since achieving a fast fuel CNG capability is very expensive as well as the previously mentioned operational problems associated with weight.

RTD

OTHER POTENTIAL COSTS ....continued

During the final edits of this report, the Clean Air Act of 1990 was passed. The 1995 issue of having all rebuilt engines brought up to the new emission standards was not addressed, but will add significant costs to implementation of the act by the transit industry. Current experiments with retrofit technology - methanol/Avocet, CNG and particulate traps are just beginning, with cost to retrofit vehicles in the $20,000 to $40,000 per bus range. No durability or life cycle data yet exists.

# ALTERNATE FUELS/LOW EMISSIONS TECHNOLOGY COST ANALYSIS WORK SHEET

SOUTHERN CALIFORNIA
RAPID TRANSIT DISTRICT

ALTERNATE FUELS SECTION

JULY 1990

RTD

COMPANY:_____

NAME:_____

TITLE:_____

PHONE:_____

# ALTERNATE FUELS/LOW EMISSIONS TECHNOLOGY
# COST ANALYSIS WORK SHEET

## Introduction

The attached work sheet is designed to assist in deriving the range of cost incurred by purchasing and operating buses that utilize clean fuels, including; "clean diesel" (particulate trap technology), methanol and compressed natural gas. The work sheet also addresses the costs to convert existing capital stock to the above clean fuels.

The work sheet provides a methodology and includes certain cost factors, based on the Southern California Rapid Transit District's experience. However, much of the actual cost information will be specific to the individual operator's situation and is therefore left for each operator to address. These variations include regional differences in fuel costs, cold weather fueling requirements and availability of land for fueling and tank storage.

The total cost for an operator to comply with the provisions of the Clean Air Act will depend upon the operator's fleet replacement needs, as well as the final provisions of the legislation concerning the phase-in schedule and requirements concerning conversion of the existing fleet. The work sheet package includes tables to derive a very rough total cost range. These cost estimates will require fine tuning by the operator once the final provisions of the Clean Air Act are known.

## Instructions

1. Steps 1 through 20 (pages 1-5) of the Alternative Fuels/Low Emissions Technologies Work Sheet are self explanatory.

2. Table A, "Clean Emissions Impact on Transit Buses" summarizes the results of the calculations in Steps 1 through 20 of the work sheet. The numbers and letters in parentheses reference the location within the work sheet where the information is derived.

3. Tables B-E are rough estimates of the total cost of replacing and operating a fleet utilizing each respective fuel type; Table B is baseline diesel, Table C is diesel with a particulate trap, Table D is compressed natural gas and Table E is Methanol.

4. Complete the title sheet, including a phone number for a contact person.

## Questions

If you have any questions regarding the questionnaire, please contact Vince Pellegrin, at (213) 972-5844, or David Meyers, at (213) 972-5866, in SCRTD's Alternative Fuels Section.

**ALTERNATE FUELS/LOW EMISSIONS TECHNOLOGIES**
**WORK SHEET**

1. Please estimate the cost to build an average size fueling facility for your fleet operating on each of the following fuels.

   a. Diesel _____

   b. Methanol _____

   c. Compressed Natural Gas (CNG) _____

   d. Propane _____

   e. Other _____

2. How many bus fueling facilities do you operate? _____

3. What is the underground storage capacity (gallons) of your average diesel fueling facility?

   _____

4. What is your average diesel bus mileage between refuelings?

   _____

5. Please estimate the initial purchase price for buses at your property using each of the following technologies.

   a. Diesel _____

   b. Diesel w/Particulate Trap _____

   c. Methanol _____

   d. Compressed Natural Gas (CNG) _____

   e. Propane _____

   f. Methanol w/Ignition Improver _____

   g. Other _____

**FUELS/LOW EMISSIONS TECHNOLOGIES**
**WORK SHEET**

6. Please estimate your total costs to convert an existing diesel bus to each of the following technologies. Include costs for both material and labor.

   a. Diesel w/Particulate Trap _____

   b. Methanol _____

   c. Compressed Natural Gas (CNG) _____

   d. Propane _____

   e. Methanol w/Ignition Improver _____

   f. Other _____

7. Please estimate the price each of the following fuels would cost you per gallon [per therm (100,000 Btu) for CNG). Include the cost of delivery.

   a. Diesel _____

   b. Low Sulfur Diesel (<500 ppm) _____

   c. Methanol _____

   d. Compressed Natural Gas (CNG) _____

   e. Propane _____

   f. Other _____

8. Please estimate the impacts on the overall maintenance costs to your bus fleet (Decrease, Same, Slight Increase, Large Increase) operating each of the following technologies compared to the maintenance of your existing diesel fleet.

   a. Diesel w/Particulate Trap _____

   b. Methanol _____

   c. Methanol w/Ignition Improver _____

   d. Compressed Natural Gas (CNG) _____

   e. Propane _____

   f. Other _____

**FUELS/LOW EMISSIONS TECHNOLOGIES**
**WORK SHEET**

9. Please estimate the cost impacts on the overall durability of your bus fleet (Increase, Same, Slight Decrease, Large Decrease) operating on each of the following technologies compared to the durability of your existing fleet.

   a. Diesel w/Particulate Trap _____

   b. Methanol _____

   c. Methanol w/Ignition Improver _____

   d. Compressed Natural Gas (CNG) _____

   e. Propane _____

   f. Other _____

10. How much do you spend on tires and brakes per year? _____

11. How many buses are in your fleet (Include spares)?_____

12. How many total miles does your fleet accumulate per year?

    _____

13. What is your fleet average diesel bus fuel economy (mpg)?

    _____

14. What is the on-board diesel storage capacity (gallons) of your bus?

    _____

15. What is the tare weight of your diesel bus (Include full load of fuel)?

    _____

**ALTERNATE FUELS/LOW EMISSIONS TECHNOLOGIES**
**WORK SHEET**

16. How many passengers does one of your diesel buses carry? (Include standees.)

_____

17. Calculate bus weights for each of the following technologies (numbers in parentheses denote references within the work sheet to be used in the blanks).

a. Diesel = _____ (15) lb.

b. Particulate Trap = _____ (15) lb. + 350 lb. = _____ lb.

c. CNG = _____ (15) lb. + (18 X _____ (14)) lb. = _____ lb.

d. Methanol = _____ (15) lb. + (10.7 X _____ (14)) lb. = _____ lb.

18. Calculate bus passenger loading for each of the following technologies using the appropriate numbers shown.

a. Diesel = _____ (16) passengers

b. Part. Trap = _____ (16) - [(_____ (17b) - _____ (17a))/150] = _____

c. CNG = _____ (16) - [(_____ (17c) - _____ (17a))/150] = _____

d. Methanol = _____ (16) - [(_____ (17d) - _____ (17a))/150] = _____

19. Calculate brake/tire wear increase over diesel bus wear rate for each of the following technologies using the appropriate numbers shown. (Multiply results by 100).

a. Diesel = Base

b. Part. Trap = (_____ (17b) - _____ (17a))/_____ (17a) = _____% increase

c. CNG = (_____ (17c) - _____ (17a))/_____ (17a) = _____% increase

**ALTERNATE FUELS/LOW EMISSIONS TECHNOLOGIES**
**WORK SHEET**

19. (Continued)

d. Methanol = (_____(17d) - _____(17a))/_____(17a) = _____% increase

20. Calculate fuel consumption rates for each of the following technologies using the appropriate numbers shown.

a. Diesel = _____(7a) / _____(13) = _____ $ per mile

b. Low S Diesel = _____(7b) / _____(13) = _____ $ per mile

c. Part. Trap = _____(20b) X 1.1 = _____ $ per mile

d. Methanol = _____(7c) /(_____(13)/2.5) = _____ $ per mile

e. CNG = _____(7d) X 1.3/(_____(13)) +.03 = _____ $ per mile

f. Methanol w/Ignit. Imp.=(.97 X _____(7c) +.49)/(_____(13)/2.5)

= _____ $ per mile

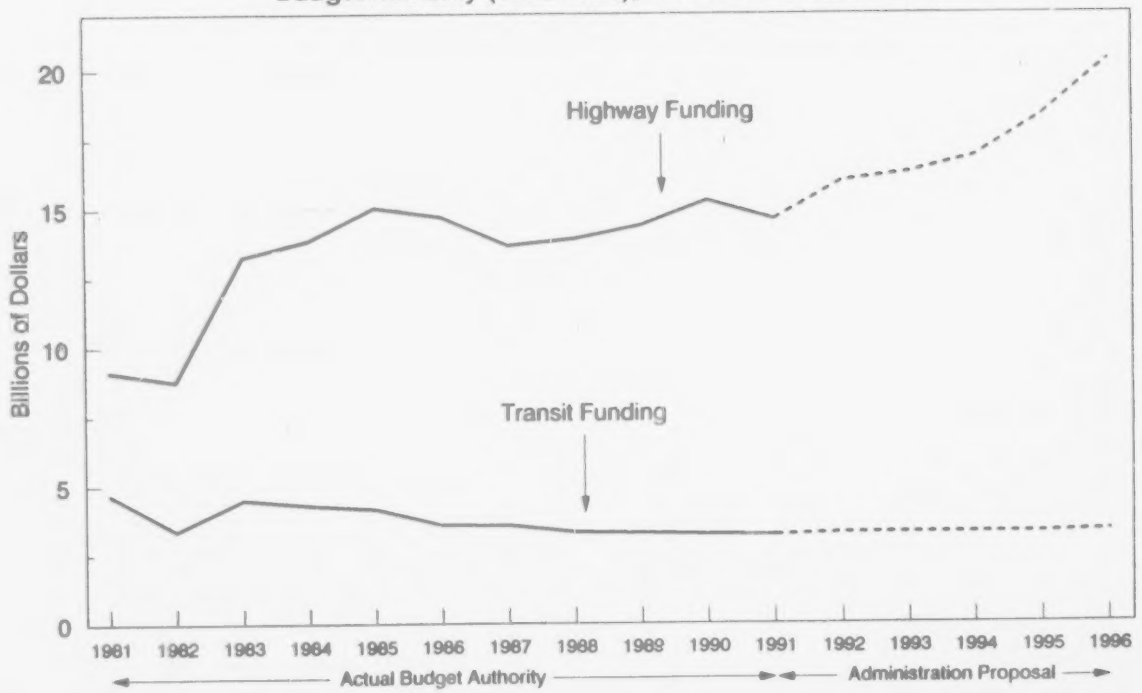
The Divergence of Federal Transit and Highway Funding, Actual Budget Authority (1981-1991) and Administration Proposed Budget Authority (1992-1996), Billions of Dollars



STATEMENT OF SUSAN PERRY

SENIOR VICE PRESIDENT - GOVERNMENT RELATIONS

AMERICAN BUS ASSOCIATION

ON

REAUTHORIZATION OF THE HIGHWAY, MASS TRANSIT AND HIGHWAY SAFETY PROGRAMS

BEFORE THE

SUBCOMMITTEE ON SURFACE TRANSPORTATION

OF THE

COMMITTEE ON PUBLIC WORKS AND TRANSPORTATION

U.S. HOUSE OF REPRESENTATIVES

WEDNESDAY, APRIL 10, 1991

2167 RAYBURN HOUSE OFFICE BUILDING

WASHINGTON, D.C.

American Bus Association
1015 15th Street, N.W.
Washington, D.C. 20005
(202) 842-1645

**STATEMENT OF SUSAN PERRY**
**SENIOR VICE PRESIDENT - GOVERNMENT RELATIONS**
**AMERICAN BUS ASSOCIATION**
**APRIL 10, 1991**

Mr. Chairman and Members of the Subcommittee:

My name is Susan Perry. I am the Senior Vice President-Government Relations of the American Bus Association (ABA). It is a pleasure to be here to present the views of the Association on this year's reauthorization of the highway and transit programs.

ABA is the national trade association of the intercity bus industry. We have several thousand members, some 700 of whom are bus operators engaged in intercity regular route, charter and tour, transit and commuter, and airport bus service. (The rest of our members represent the travel and tourism industry visited by the bus and its passengers, and the manufacturers and suppliers serving the industry.)

I appreciate your affording us this opportunity to discuss with you concern and interests of ours as you develop the Surface Transportation Assistance Act of 1991.

Intercity bus is the only system of low cost intercity public transportation in this country and it is the intercity transportation network for rural America. A report done by Robert

R. Nathan Associates, Inc. in 1989 entitled, Federal Subsidies for Passenger Transportation, 1960-88: Winners, Losers, and Implications for the Future, pointed this out. Quoting from the report, "The intercity bus industry, despite the difficulties it has faced competing with the highly subsidized modes of passenger transportation, has continued to provide a critical transportation service to many Americans who have few--if any--alternatives." With your permission, I would like to submit for the record a chart from the report detailing demographic distributions of intercity passenger miles by transportation mode.

Despite this critical role that we play as the primary carrier of the old, the young, the poor, and those in rural America--all of whom could be classified as transportation disadvantaged--federal transportation programs have ignored us while heavily subsidizing competing modes. Only 0.3 percent of the federal transportation assistance over the 28 years covered in the Nathan report has been received by the intercity bus industry while air passenger transportation received 49.3 percent, and intercity rail passenger transportation received 11.6 percent. This imbalance, or unlevel playing field, has been a major cause of the steady decline in intercity bus service over the last several decades. Again, according to the Nathan study, in 1960 intercity bus served more than 20,000 points in the United States; in 1988, we served better than 10,000, and now we are serving fewer than 10,000.

45-155 O—91——31

We believe that there is a clear need for a comprehensive system of low cost, intercity public transportation, and that need is growing. If the bus industry is to meet that need, it will have to be in partnership with federal and state governments which acknowledge that intercity bus service is a critical element of the country's transportation infrastructure. This year's surface transportation legislation is an opportunity to forge that partnership through provisions that encourage a more productive industry with attractive facilities fully integrated with other modes.

Much is being said currently about the benefits of intermodalism. Members of the executive branch of the government and of this committee have been particularly vocal on the subject. Given its flexibility, the intercity bus is uniquely suited to achieving the benefits of intermodalism. We provide public transportation on highways, but are capable of connecting to all other modes at airports, train stations, and transit centers. Intercity buses can serve as universal connectors linking highway public transportation with transit systems, airplanes, and trains.

We have several specific recommendations to achieve the twin objectives of enhanced intermodalism and a strong low cost rural transportation system. The Administration has included similar recommendations in its proposal. In addition, we have some

recommendations from the industry that we believe need to be included in this legislation.

The first of these is the inclusion of intermodal transportation centers as eligible projects for funding in the highway program. Multipurpose facilities could be located in the right-of-way adjacent to an interstate access ramp. They could include a park and ride lot and a terminal housing both intercity and local transit service. These centers facilitate intermodal connections to the fullest, make both transit and intercity services more attractive, and encourage more productive use of the highways. As I said in testimony to this subcommittee last spring, the private bus industry would pay rent to use the facility, thus affording it some income, and receive in return a new, safe, and clean facility to use. We would be paying our own way to use a facility that we do not have available construction capital to build.

Second, we recommend the inclusion of projects to enhance and support intercity bus service as eligible projects in any rural highway program. States should have the flexibility to use their rural highway money to fund projects to support intercity bus operations. Intercity buses serve, as I said earlier, just under 10,000 communities while air and rail combined serve fewer than 1,000. If the statewide intermodal planning process recognizes

intercity bus projects as high priority, they should be able to fund them under the rural highway program.

Our third recommendation is the inclusion in the transit program of projects that facilitate the coordination and connection of intercity bus services with transit services. Language exists in the Urban Mass Transportation Act; it needs to be extended and clarified.

Fourth, we recommend (again, as we did last spring) the provision of a federal standard of 45 feet for maximum intercity bus lengths. This enhances productivity by giving us almost a 20 percent increase in seating capacity and one-third more cargo space. Also, the provision would correct an anomaly in existing law: the same standards are provided for truck and bus weights and widths, but length applies only to trucks. Buses are left with a hodgepodge of state limitations that in effect limit them to a length of 40 feet while truck trailers, according to federal law, may be as long as 48 feet. Since we are engaged in interstate commerce, this lack of uniformity makes it difficult if not impossible to carry on our business.

Based on prototypes that have been redesigned and engineered from the ground up and built, we know that a 45 foot bus can meet all federal size, weight, and safety standards. We have recently

provided subcommittee staff with a paper containing detailed information on the 45 foot prototype bus.

Having touched on the subject of uniformity, let me say that we agree with the Administration's proposals for uniformity among the states in the matters of operating authority, registration, and fuel tax, and we would like to be included along with motor carriers of property in any such provisions that you enact.

Finally, Chairman, my last three points:

We urge the provision of a 90 percent federal share for the development of high occupancy vehicle (HOV) lanes as an incentive for this cost effective transportation management tool to reduce urban congestion. Intercity buses face congestion getting in and out of every urban area in the country and see HOV lanes as the best and most cost effective way of alleviating this problem.

On the UMTAct side of the reauthorization, we have two rather simple recommendations--simple because they require no action whatsoever. The language in various sections of the act which requires involvement of the private sector "to the maximum extent feasible" in the planning and implementation of transit service should be retained as is. No changes are necessary. It is this language that allows the private sector, which at one time provided

all of the public transportation in the country, to participate with the public sector in providing some of that transportation. We and others have spoken of the benefits of this, mainly those that result from competitively bid contracts being awarded, so I will not elaborate at this time.

The last item we would like you to consider is another "do nothing" one, and that involves UMTA's charter bus regulation. The regulation, which basically says that if an unsubsidized operator is ready and willing to do charter bus service, it should not be done using federally financed equipment and facilities, has been in effect since 1987 and it is working. Along with the exceptions to the rule that are allowed and the cooperation between transit agencies and charter bus companies that has prevailed, the few problems that have occurred have been resolved. Mr. Chairman, this one is not broke, please do not fix it.

Thank you very much for your attention. I will be pleased to answer any questions that you might have.

TESTIMONY OF THE

AMERICAN PUBLIC TRANSIT ASSOCIATION

BEFORE THE

SUBCOMMITTEE ON SURFACE TRANSPORTATION

OF THE

HOUSE COMMITTEE ON

PUBLIC WORKS AND TRANSPORTATION

APRIL 10, 1991

STATEMENT BY

VICKIE SHAFFER

MEMBER, APTA LEGISLATIVE COMMITTEE AND

SMALL OPERATIONS STEERING COMMITTEE

GENERAL MANAGER, TRI-STATE TRANSIT AUTHORITY

HUNTINGTON, WEST VIRGINIA

MR. CHAIRMAN AND SUBCOMMITTEE MEMBERS, MY NAME IS VICKIE SHAFFER. I AM THE GENERAL MANAGER OF THE TRI-STATE TRANSIT AUTHORITY IN HUNTINGTON, WEST VIRGINIA. I SERVE ON APTA'S LEGISLATIVE COMMITTEE AND ITS SMALL OPERATIONS STEERING COMMITTEE. I AM ALSO A STATE DELEGATE FOR THE COMMUNITY TRANSPORTATION ASSOCIATION OF AMERICA (CTAA).

PUBLIC TRANSIT IS VITAL SERVICE AND AN IMPORTANT PUBLIC POLICY ISSUE IN SMALL URBAN COMMUNITIES AND IN RURAL AMERICA. I AM HERE TODAY TO PRESENT THAT SIDE OF THE STORY.

LET ME PRAISE MY CONGRESSMAN, NICK JOE RAHALL FROM WEST VIRGINIA, FOR INTRODUCING H.R. 1079, THE MOBILITY ASSISTANCE ACT OF 1991. MR. RAHALL'S BILL ADOPTS MANY OF THE RECOMMENDATIONS OF THE COMMUNITY TRANSPORTATION ASSOCIATION OF AMERICA AND GOES TO THE HEART OF THE ISSUES MOST IMPORTANT TO TRANSIT SERVICE IN SMALL URBAN AND RURAL AMERICA. I SUPPORT BOTH H.R. 1079 AND THE GOALS OF THE APTA REAUTHORIZATION PROPOSALS. IN CONTRAST TO THE ADMINISTRATION'S PROPOSAL, BOTH APTA AND CTAA WOULD RESTORE MASS TRANSIT TO ITS PROPER PRIORITY IN YOUR PLANS TO REINVEST IN THE AMERICAN INFRASTRUCTURE.

SIX POINTS ARE IMPORTANT TO SMALL OPERATORS.

ONE. SECTION 9 AND SECTION 18 FUNDING FOR CAPITAL AND OPERATING ASSISTANCE TO SMALL URBAN AND RURAL TRANSIT SYSTEMS MUST BE INCREASED. AT THE VERY LEAST, THE HISTORIC CUTS IN MASS TRANSIT FUNDING MUST BE RESTORED TO ENSURE THAT SERVICE IS NOT LOST.

WE MUST REINVEST IN OUR INFRASTRUCTURE. WE MUST REACH OUT TO RURAL AMERICA AND PROVIDE TRANSPORTATION WHERE NONE EXISTS TODAY. MASS TRANSIT IS OUR BEST HOPE FOR ENSURING THAT THESE FOLKS HAVE JOBS, ADEQUATE MEDICAL CARE, AND PARTICIPATION IN THE SOCIAL FABRIC OF THEIR RURAL COMMUNITIES. IN SMALL URBAN AND RURAL AMERICA, WE'RE NOT FIGHTING CONGESTION. WE'RE FIGHTING ISOLATION.

TWO. OPERATING ASSISTANCE. LARGE AND SMALL OPERATORS DO NOT EXIST WITHOUT IT. ALL THE CAPITAL INVESTMENT OVER THE YEARS IS USELESS IF THE TRAINS AND BUSES ARE PARKED. OPERATING ASSISTANCE IS YOUR CAPITAL INVESTMENT INSURANCE POLICY.

AT TTA, FEDERAL OPERATING ASSISTANCE MEETS ONE-QUARTER OF OUR OPERATING EXPENSES. WE ESTIMATE THAT THE ADMINISTRATION'S PROPOSAL WOULD REDUCE OPERATING ASSISTANCE TO 4 PERCENT OR LESS OF OUR BUDGET. TTA WOULD NOT SURVIVE FOR LONG.

THREE. FLEXIBILITY. WE'RE WORRIED ABOUT THIS FLEXIBILITY BUSINESS.

IT MAY HAVE A ROLE IN LARGER URBAN AREAS. SMALLER TRANSIT SYSTEMS, FORCED TO COMPETE WITH HIGHWAY INTERESTS, WILL LOSE EVERY. PLEASE GIVE US A THRESHOLD THAT PROTECTS OUR FUNDING. WE WILL NEVER GET ANY OF THE MONEY FOR HIGHWAYS AND BRIDGES. AND WE SURE NEED YOU TO KEEP THE HIGHWAY FOX OUT OF OUR HENHOUSE.

FOUR. DESIGNATED RECIPIENT STATUS. ALONG WITH THE MAYORS OF THIS COUNTRY, TRANSIT OPERATORS IN URBAN AREAS UNDER 200,000 POPULATION URGE CONGRESS TO RETAIN OUR STATUS AS DIRECT RECIPIENTS OF FEDERAL GRANTS. THE CURRENT LAW WORKS AND IT SHOULD BE RETAINED.

FIVE. DON'T GIVE THE GOVERNORS AUTHORITY TO DISTRIBUTE SECTION 9, SECTION 18, AND SECTION 16(B)(2) FUNDS AS IF THEY WERE ALL IN ONE POT. THE GOALS OF THE FEDERAL PROGRAM WILL WASH OUT IN SUCH A PROCESS.

SIX. THERE ARE MANY SMALL OPERATORS PROVIDING SERVICES IN LARGE URBANIZED AREAS. THEY MUST COMPLY WITH FEDERAL REQUIREMENTS THAT APPLY TO THE LARGE TRANSIT SYSTEMS - HOWEVER BURDENSOME. PLEASE BE SURE TO CONSIDER THE DIFFERENCE BETWEEN THE TWO AS YOU PROMULGATE YOUR POLICY INITIATIVES.

OUR LOCAL CONSTITUENTS IN THE HUNTINGTON, WEST VIRGINIA AREA HAVE CLEARLY EXPRESSED THEIR SUPPORT FOR MASS TRANSIT. THEY HAVE

OVERWHELMINGLY APPROVED DEDICATED PROPERTY TAXES FOR TTA IN FIVE ELECTIONS SINCE 1982. WE CANNOT ASK THEM FOR MORE MONEY. URBAN TRANSIT RECEIVES NO STATE OPERATING ASSISTANCE IN WEST VIRGINIA. THAT WON'T CHANGE IN THE NEAR FUTURE. MANY SMALL OPERATORS FACE THE SAME STATE AND LOCAL FISCAL CONSTRAINTS IN EVALUATING THE SHELL GAME THAT THE ADMINISTRATION'S PROPOSALS FOR MASS TRANSIT REPRESENT.

BUS SERVICE - MASS TRANSIT - HAS A VITAL AND LEGITIMATE ROLE TO PLAY IN THE ECONOMIC AND SOCIAL FABRIC THAT WE WEAVE FOR OUR SMALLER URBAN AND RURAL COMMUNITIES. WE ARE DEPENDING ON YOU TO TAILOR A SUIT THAT ALSO FITS THE LITTLE GUYS.

THANK YOU.

TESTIMONY OF

PETER E. STANGL

CHAIRMAN, N.Y. METROPOLITAN TRANSPORTATION AUTHORITY

BEFORE THE

SUBCOMMITTEE ON SURFACE TRANSPORTATION

WASHINGTON, D.C.

APRIL 10, 1991

MR. CHAIRMAN, MEMBERS OF THE SUBCOMMITTEE, I AM PETER STANGL, CHAIRMAN OF THE METROPOLITAN TRANSPORTATION AUTHORITY IN NEW YORK.

THANK YOU FOR INVITING ME HERE TODAY TO SHARE THE MTA'S VIEWS ON THE SURFACE TRANSPORTATION ACT REAUTHORIZATION.

BEFORE I COMMENT ON THE ADMINISTRATION'S RECENTLY INTRODUCED PROPOSAL, LET ME TELL YOU A LITTLE BIT ABOUT US.

THE MTA IS A COMPLEX ORGANIZATION. YES, WE RUN NEW YORK'S SUBWAYS AND BUSES. WE ALSO RUN THE FIRST AND SECOND LARGEST COMMUTER RAILROADS IN THE COUNTRY, THE LONG ISLAND RAIL ROAD AND THE METRO-NORTH COMMUTER RAILROAD. AND, WE OPERATE 7 BRIDGES AND 2 TUNNELS THAT CARRY 800,000 CARS PER DAY. OUR 13 MILLION PERSON, 4,000 SQUARE MILE SERVICE AREA COVERS TWO STATES, 14 COUNTIES AND DOZENS OF CITIES.

IN SHORT, WE RUN A PRETTY FAR FLUNG <u>MULTI-MODAL</u> ENTERPRISE.

BUT THE COMMON THREAD THAT GLUES OUR ORGANIZATION TOGETHER IS THAT EVERYTHING WE DO REVOLVES AROUND EFFICIENTLY MOVING PEOPLE. NOT SUBWAYS, BUSES, RAILROADS OR AUTOS, BUT PEOPLE. AND THAT, MR. CHAIRMAN IS WHAT I THINK THE SURFACE TRANSPORTATION ACT SHOULD BE ABOUT -- MOVING PEOPLE.

AFTER WWII, WE AS A NATION BECAME ENTRANCED BY THE AUTO. IT MAY NOT HAVE BEEN AS EFFICIENT AS TRANSIT, BUT GAS WAS CHEAP AND THE CAR GAVE US POWER, CONTROL AND FREEDOM. EFFICIENCY TOOK A BACK SEAT. OUR LOVE AFFAIR WITH THE AUTO ACCELERATED RAPIDLY AND BEGAN TO SHAPE OUR LIVES, OUR GOVERNMENTAL POLICIES AND OUR SPENDING PRIORITIES. ROADS WERE IN -- TRANSIT WAS OUT.

AND IT WASN'T JUST HERE IN WASHINGTON -- IT HAPPENED IN EVERY STATE CAPITOL IN THE COUNTRY -- AND, IT HAPPENED IN A BIG WAY IN NEW YORK. BY THE LATE 1970S, THE EFFECTS ON THE MTA'S INFRASTRUCTURE WERE PAINFULLY CLEAR.

TRAINS WERE DERAILING ON AN AVERAGE OF ONCE EVERY 18 DAYS. WE HAD "GO-SLOW" ORDERS ON DECAYED TRACKS IN AT LEAST 400 LOCATIONS ON THE SUBWAYS. GRAFFITI HAD COVERED THE ENTIRE FLEET FOR YEARS.

AND SO, WITH A TRANSIT SYSTEM ON THE BRINK OF COLLAPSE, THE MTA IN 1981 LAID OUT A STRATEGIC CAPITAL REBUILDING PROGRAM -- THE LARGEST NON-FEDERAL PUBLIC WORKS RENEWAL PROJECT IN THE COUNTRY.

THINGS WERE IN SUCH BAD SHAPE, IT WAS CLEAR FROM THE OUTSET THAT IT WOULD TAKE SEVERAL DECADES FOR OUR TRANSIT NETWORK TO WORK ITS WAY BACK TO A STATE OF GOOD REPAIR. NINE YEARS LATER, WE HAVE SEEN WHOLESALE CHANGES IN THE MTA.

WE BELIEVE OUR STRATEGY HAS WISELY USED FEDERAL DOLLARS TO IMPROVE TRANSIT SERVICE IN OUR REGION. WE EXPECT THAT EVEN BEFORE

WE REACH A STATE OF GOOD REPAIR BY 2012, THE INVESTMENTS WE ARE CONTINUING TO MAKE IN OUR TRANSIT SYSTEM WILL INCREASE OUR REGIONAL AND NATIONAL ECONOMIC COMPETITIVENESS, CLEAN OUR AIR, AND REDUCE OUR DEPENDENCE ON FOREIGN ENERGY SOURCES.

THUS FAR, MORE THAN 80% OF OUR 6,000 SUBWAY CARS, 90% OF OUR 4,000 BUSES AND NEARLY ALL OUR COMMUTER RAIL CARS ARE NEW OR OVER-HAULED. TWO-THIRDS OF OUR 700 MILES OF SUBWAY TRACK HAS BEEN REPLACED. SUBWAY CARS NOW AVERAGE 30,000 MILES BETWEEN BREAKDOWNS -- 4 TIMES THE LEVEL IN 1982. GRAFFITI IS A THING OF THE PAST.

IN SHORT, GREAT PROGRESS HAS BEEN MADE. AND -- AS A DIRECT RESULT -- RIDERSHIP HAS GROWN SIGNIFICANTLY.

THESE ACCOMPLISHMENTS WOULD NOT HAVE COME ABOUT WITHOUT A CONTINUED FEDERAL COMMITMENT. IN FACT, FEDERAL DOLLARS MADE UP NEARLY ONE FOURTH OF THE $16 BILLION WE SPENT OVER THE LAST DECADE.

BUT OUR JOB IS NOWHERE NEAR COMPLETE. WE HAVE A HUGE AGENDA OF UNFINISHED NEEDS -- AT AN ESTIMATED ANNUAL COST OF $2.5 BILLION. A FEDERAL ROLE IN OUR FUTURE EFFORTS IS THEREFORE JUST AS CRITICAL AS IT HAS BEEN OVER THE PAST NINE YEARS.

BUT WE DO NOT APPEAR BEFORE YOU TODAY WITH A TIN CUP -- WE ARE NOT LOOKING TO WASHINGTON TO SOLVE ALL OUR PROBLEMS. WE WILL CONTINUE TO DO OUR SHARE -- PUTTING OUR MONEY WHERE OUR MOUTH IS.

BUT, IT'S NO SECRET THAT THE MTA IS LOOKING TO SECURE MORE DOLLARS FOR OUR TRANSIT SYSTEM IN THE REAUTHORIZATION PROCESS. IT IS CERTAINLY IN OUR INTEREST TO DO SO -- BUT MORE IMPORTANTLY, MR. CHAIRMAN, IT'S ALSO IN OUR NATIONAL INTEREST TO DO SO.

LET ME TELL YOU WHY.

WHEN I LOOKED AT THE ADMINISTRATION'S PROPOSAL, MY ATTENTION WAS IMMEDIATELY DRAWN TO ITS CALL FOR SUBSTANTIAL FUNDING INCREASES FOR "HIGHWAYS OF NATIONAL SIGNIFICANCE". MY FIRST REACTION WAS, "WHAT ABOUT US?"

I SUBMIT TO YOU THAT THE MTA IS A "TRANSIT SYSTEM OF NATIONAL SIGNIFICANCE" -- GREAT NATIONAL SIGNIFICANCE.

WE CARRY A THIRD OF ALL TRANSIT RIDERS IN THE COUNTRY -- 6 MILLION PEOPLE A DAY. WITHOUT THE MTA, THE MOST DENSELY POPULATED REGION IN THE COUNTRY WOULD BE PARALYZED. IT WOULD USE AN EXTRA 1.3 BILLION GALLONS OF GASOLINE A YEAR. THE L.I. EXPRESSWAY WOULD NEED TO HAVE 15 MORE LANES TO ACCOMMODATE THE ADDITIONAL TRAFFIC. LIFE IN THE REGION WOULD LITERALLY BE IMPOSSIBLE WITHOUT US.

SO WHY ARE WE LESS SIGNIFICANT THAN HIGHWAYS? DOES OUR SUCCESS IN MOVING 50% OF ALL PEOPLE WHO WORK IN THE METROPOLITAN NEW YORK AREA WARRANT HAVING TO SUFFER A FEDERAL FUNDING HIGHWAY TO TRANSIT RATIO OF 5:1 IN FFY '92 AND 7:1 BY FFY '96?

SURE WE UNDERSTAND THE NEED TO MAINTAIN AND EXPAND OUR ROADS. ROADS ARE IMPORTANT FOR OUR REGION AND OUR COUNTRY. ROADS FEED THE MTA'S OWN BRIDGES AND TUNNELS, WHICH IN TURN HELP SUPPORT OUR TRANSIT SYSTEM.

BUT THE ADMINISTRATION'S PROPOSAL IS SIMPLY A REPACKAGING OF THE SAME HIGHWAY-DOMINANT STRATEGY -- IT FOCUSES ON MOVING CARS, NOT PEOPLE. THIS, DESPITE SOME OBVIOUS TRENDS OVER THE LAST FIVE YEARS AGO THAT CRY OUT FOR A NEW COURSE OF ACTION.

FIRST, OUR COUNTRY CONTINUES TO GROW EVER MORE DEPENDENT ON IMPORTED OIL. THE NORTHEAST IS MORE DEPENDENT ON IMPORTED OIL THAN ANY OTHER PART OF THE COUNTRY -- AND THAT DEPENDENCE IS GROWING. EARLY IN THE NEXT CENTURY, IT IS ESTIMATED THAT IMPORTS WILL ACCOUNT FOR 84% OF NY'S PETROLEUM REQUIREMENTS.

SECONDLY, TRAFFIC CONGESTION -- ONCE A CONCERN ONLY DURING RUSH HOURS -- HAS EVOLVED INTO SEVERAL "CRUSH" HOURS OF GRIDLOCK A DAY. LITTLE WONDER, SINCE VEHICLE MILES TRAVELED IN NEW YORK STATE MULTIPLED 15 TIMES FASTER THAN THE POPULATION SINCE 1960. THE RESULT: OVER 350,000 WORK HOURS ARE LOST EVERY DAY BECAUSE OF TRAFFIC-RELATED DELAYS. TRUCKING COSTS IN NY ARE 30% ABOVE THE NATIONAL AVERAGE -- BUT WE'RE FAR FROM ALONE.

THEN THERE'S OUR ENVIRONMENT. DESPITE THE 1970 CLEAN AIR ACT, THE AIR IN MANY PARTS OF THE COUNTRY HAVE NEVER BEEN IN COMPLIANCE WITH ITS STANDARDS -- MAINLY AS A RESULT OF THE AUTO.

IT'S OBVIOUS TO ME -- THE TRADITIONAL "HIGHWAY SOLUTION" IS NO SOLUTION.

FEDERAL POLICY HAS FED THIS GROWTH THROUGH INCREASING FEDERAL HIGHWAY AID AND CUTTING TRANSIT AID. SINCE 1981, HIGHWAY FUNDING HAS RISEN BY 60%, WHILE TRANSIT FUNDING HAS DROPPED BY 30%. AND THAT'S BEFORE INFLATION.

SPECIAL TAX TREATMENT FOR AUTO COMMUTERS ALLOWS UNLIMITED TAX-FREE PARKING SUBSIDIES, WHILE TRANSIT RIDERS ARE LIMITED TO $15 PER MONTH TAX FREE. A NUMBER OF BILLS HAVE BEEN INTRODUCED TO ALLEVIATE THIS INEQUITY. WE ARE CAUTIOUSLY OPTIMISTIC ABOUT THEIR PASSAGE.

A "BUSINESS AS USUAL", POLICY IGNORES IMPORT DEPENDENCY, POLLUTION, AND CONGESTION. AT SOME POINT WE WILL HAVE TO CONFRONT THESE FACTS OF LIFE. LET'S DO IT NOW!

YES, THE ADMINISTRATION'S PROPOSAL DOES HAVE A FEW SHORT-TERM POSITIVES FOR THE MTA, BUT ITS UNDERLYING PRINCIPLES ARE DISASTROUS FOR ALL PUBLIC TRANSIT PROVIDERS AND RIDERS IN THE LONG TERM.

A FLAT UMTA PROGRAM OF $3.3 BILLION FOR FOUR YEARS, WITH A MARGINAL INCREASE IN THE FIFTH, WOULD REPRESENT A 20% DROP IN REAL TERMS OVER THE LIFE OF THE REAUTHORIZATION, ASSUMING MODERATE INFLATION. MEANWHILE, HIGHWAY FUNDING SOARS BY 40%. WHY?

THE WHITE HOUSE SAYS IT'S INCREASING "MASS TRANSIT CAPITAL FUNDING .... BY 29%." THIS IS MISLEADING. THE INCREASE IN FORMULA CAPITAL GRANTS COMES AT THE EXPENSE OF ELIMINATING OPERATING ASSISTANCE FOR CITIES OVER ONE MILLION AND BY ROLLING DISCRETIONARY MONEY INTO THE FORMULA PROGRAM. THE REAL INCREASE IN THE OVERALL UMTA PROGRAM IS ONLY 2.2%.

AND RATHER THAN PROVIDE NEW MONIES TO COVER THE COSTS OF THE AMERICANS WITH DISABILITIES ACT (ADA) AND CLEAN AIR ACT, IT ROBS PETER TO PAY PAUL BY LIFTING $50 MILLION OF THESE EXISTING FUNDS FOR SUCH PURPOSES. THAT $50 MILLION FALLS FAR SHORT OF THE COSTS THAT TRANSIT SYSTEMS EXPECT TO INCUR JUST AS A RESULT OF ADA ALONE.

BY ELIMINATING OPERATING ASSISTANCE FOR CITIES WITH MORE THAN ONE MILLION PEOPLE, THE MTA LOSES $93 MILLION A YEAR. THIS COMES AS WE'RE TRYING TO COPE WITH GROWING OPERATING DEFICITS CAUSED BY RECESSION DRIVEN DECLINES IN RIDERSHIP AND DEDICATED STATE SUBSIDIES.

IN SHORT, DON'T ELIMINATE OPERATING ASSISTANCE.

THE PROPOSAL SUBSTANTIALLY REDUCES THE FEDERAL MATCHING SHARES FOR TRANSIT PROJECTS. HIGHWAYS FARE MUCH BETTER. TRANSIT MATCHING SHARES DROP FROM 75% OR 80% TO 50% OR 60% WHILE HIGHWAY PROGRAMS CONTINUE TO RECEIVE 75% TO 90%. STATE TRANSPORTATION PLANNERS COULD BE FORCED TO CHOOSE HIGHWAYS OVER TRANSIT SIMPLY BECAUSE THEY GET MORE MONEY THAT WAY. THAT'S A BAD WAY TO PLAN.

ONE OF THE MORE ASTOUNDING SUGGESTIONS IN THE PROPOSAL IS ONE THAT REWARDS GAS CONSUMPTION BY SENDING MORE HIGHWAY DOLLARS. IT WOULD BE JUST SILLY IF IT WASN'T SO HARMFUL. IT IS PARTICULARLY BAD FOR NEW YORK -- THE MOST ENERGY-EFFICIENT STATE WHEN IT COMES TO TRANSPORTATION -- IN LARGE PART BECAUSE OF OUR EXTENSIVE TRANSIT SYSTEMS. THE 1.3 BILLION GALLONS OF GASOLINE OUR TRANSIT SYSTEMS SAVE EACH YEAR BECOMES A LIABILITY, RATHER THAN AN ASSET.

ONE OF THE BILL'S SLICKEST CONCEPTS IS FUNDING "FLEXIBILITY". I SAY "SLICK", BECAUSE FLEXIBILITY SOUNDS LIKE A GREAT IDEA. BUT FLEXIBILITY, AS DEFINED IN THE PROPOSAL, ABUSES A CONCEPT WE AND APTA PROMOTED IN 1989 & 1990. IT ALLOWS ALL OF A STATE'S FEDERAL TRANSIT FUNDS TO BE USED ON HIGHWAY PROJECTS, BUT ONLY 30% OF THE HIGHWAY FUNDS ON TRANSIT NEEDS. THAT'S PATENTLY UNFAIR.

WE SUPPORT FLEXIBLE FUNDING, BUT ONLY AFTER BASIC TRANSIT REINVESTMENT NEEDS ARE ADDRESSED. AND $3.3 BILLION ONLY GETS US HALFWAY THERE. WHEN WE REACH AN UMTA PROGRAM OF $6.5 BILLION OR MORE, THEN LET'S TALK FLEXIBILITY.

THE PROPOSAL ALSO CALLS FOR COMPLETELY ELIMINATING GENERAL FUND SUPPORT FOR TRANSIT AND SWITCHING THE FUNDING SOURCE ENTIRELY TO THE HIGHWAY TRUST FUND'S MASS TRANSIT ACCOUNT. THIS IS SIMILAR TO A 'SHELL GAME', EXCEPT THAT AFTER A NUMBER OF YEARS THERE WILL BE NOTHING UNDER ANY SHELL AS THE TRUST FUND RUNS DRY.

WHILE WE BELIEVE IN DRAWING DOWN TRUST FUND BALANCES, WE THINK THAT ITS COFFERS NEED CONSTANT AND MORE SUBSTANTIAL REPLENISHMENT. AND GENERAL FUND SUPPORT SHOULD BE CONTINUED AT LEAST AT CURRENT LEVELS. IF THESE STEPS WERE TAKEN, THE UMTA PROGRAM COULD EASILY BE INCREASED TO $5.5 BILLION FOR FISCAL YEAR 1992.

IN THE BEST OF ALL POSSIBLE WORLDS, WE WOULD LOVE TO SEE CONGRESS PROVIDE THE $6.7 BILLION LEVEL IN FISCAL YEAR 1992 THAT CHAIRMAN ROE REQUESTED OF THE HOUSE BUDGET COMMITTEE LAST MONTH. THAT APPROXIMATES THE AMOUNT THAT APTA'S 1989 "TRANSIT 2000" STUDY IDENTIFIED AS BEING THE MINIMUM NEEDED TO ADDRESS CURRENT TRANSIT NEEDS NATIONWIDE.

BUT WE'LL NEVER EVEN BE ABLE TO GET THERE IF WE ALLOW THE NEW NICKEL A GALLON GAS TAX, INCLUDING THE 1/2 CENT FOR TRANSIT, TO LAPSE IN FFY '95, A YEAR BEFORE THIS REAUTHORIZATION BILL EXPIRES AS THE CURRENT PROPOSAL SUGGESTS. IS THE INTENT TO SAVE AUTO DRIVERS A NICKEL? WE ALREADY HAVE THE LOWEST GAS TAX -- BY FAR -- IN THE INDUSTRIALIZED WORLD.

AND JUST IN CASE YOU DIDN'T NOTICE, RECENT GAS PRICE RISES HAVE HAD VIRTUALLY NO EFFECT ON DRIVING HABITS -- AND THOSE INCREASES DON'T PRODUCE ANY TANGIBLE BENEFITS FOR US -- LIKE INFRASTRUCTURE INVESTMENT WOULD.

THE NICKEL SHOULD SHOULD STAY IN EFFECT FOR THE FULL FIVE

YEARS OF THE REAUTHORIZATION PERIOD AND BEYOND. AND IN FACT, IT SHOULD BE BROADENED TO PROVIDE ADDITIONAL REVENUES FOR THE TRANSIT ACCOUNT.

WELL, SPEAKING ON BEHALF OF A TRANSIT SYSTEM "OF NATIONAL SIGNIFICANCE," AN ONGOING FEDERAL ROLE IS NOT ONLY APPROPRIATE, IT'S ESSENTIAL. WE CONTINUES TO NEED A STRONG FEDERAL MASS TRANSIT ADMINISTRATION THAT WILL PROMOTE TRANSIT AS AN EQUAL PARTNER IN REACHING THE GOALS OF OUR NATIONAL TRANSPORTATION POLICY.

I'M NOT SUGGESTING THAT THE REAUTHORIZATION BILL IGNORE OTHER VALID TRANSPORTATION NEEDS, BUT I URGE YOU TO CRAFT A BILL THAT BALANCES THOSE NEEDS WITH THOSE OF PUBLIC TRANSIT AND ONE THAT WILL RECOGNIZE TRANSIT'S VITAL CONTRIBUTION TO ATTAINING NATIONAL ENERGY, ECONOMIC, ENVIRONMENTAL GOALS, AND MOST OF ALL -- THE GOAL OF MOVING PEOPLE!

JUST TO RECAP, MR. CHAIRMAN, WE CAN REACH THOSE GOALS IF:

- THE UMTA PROGRAM GROWS TO $5.5 TO $6.5 BILLION BY ADDING BACK GENERAL FUND REVENUES AND LETTING US HAVE ALL OF THE GAS TAX REVENUES TRANSIT DESERVES.
- THE PLAYING FIELD IS LEVELED BOTH IN TERMS OF TAX TREATMENT AND FEDERAL MATCHING SHARES.
- "FLEXIBILITY" TREATS HIGHWAYS AND TRANSIT EQUALLY AND KICKS IN ONLY AFTER BASIC TRANSIT NEEDS ARE MET.
- THE INTERSTATE TRANSFER PROGRAM IS REAUTHORIZED
- THERE IS A CLEAR REAFFIRMATION OF A LONG-TERM FEDERAL COMMITMENT TO TRANSIT.

WE NEED YOUR HELP. THANK YOU.

Statement in Support of the Exton By-pass

to the

Subcommittee on Surface Transportation

by

Robert J. Thompson, Executive Director

Chester County Chamber of Commerce

April 10, 1991

I am Robert J. Thompson, Executive Director of the Chester County Chamber of Commerce. As a Chester County native and life-long resident, a two-term county commissioner, and former member and chairman of the board of the Southeastern Pennsylvania Transportation Authority (SEPTA), I believe I can speak with some knowledge of the need for federal assistance for the Exton By-pass.

It is both a pleasure and an honor for me to to appear here today before the Subcommittee on Surface Transportation.

As a personal aside, both Congressman Schulze and I grew up within a few miles of Exton in Paoli. And we can both attest to the unparalleled growth and the congestion that has resulted. (Honesty compels me to admit that the Congressman actually grew up in a slightly earlier era than I did, however.)

The Chester County Chamber of Commerce, is a grass-roots business organization of 2,600 members. The chamber, along with ten affiliate local chambers located throughout Chester County, is a strong advocate for the Exton By-pass. A letter of support from our board of directors is included with the material distributed to you.

I am actually appearing here today on behalf of the Chester County Highway Task Force, a group of local government officials, private sector individuals, and business people who were appointed by the County Commissioners and the Chester County Partnership for Economic Development to conduct a unified lobbying effort on behalf of the Exton By-pass. The Chester County Chamber of Commerce is an active member of that task force.

Congressman Schulze and Commissioner Kanna have done an excellent job in stating the case for the Exton Bypass this afternoon -- fortified with compelling evidence prepared by the Chester County Planning Commission.

In addition to emphasizing that building the Exton By-pass provides the missing link in the East Coast's toll-free, limited access highway system, I would like to expand upon three points which I feel qualify this project for the support of this subcommittee and ultimately, federal backing.

## GROWTH IN POPULATION, JOBS AND CONGESTION

First is the unprecedented growth that has taken place in the area. If a picture speaks a thousand words, this exhibit utters volumes. It portrays vividly the growth in development that has taken place along the route of the proposed by-pass.

The areas of red overlay represent development that either has taken place in the past ten years or has been approved during that time.

The yellow represents areas of proposed development.

1990 census figures show a growth of 15,619 or a 38% increase in population in municipalities adjacent to the proposed by-pass during the last decade. Overall, the county has grown by 60,000 or 17% during that period.

Areas overlayed in red represent 37,500 new trips through the intersection per day. To put that into perspective, recent traffic counts reveal that the Exton crossroads area is handling -- or attempting to handle -- twice the volume it was designed to.

In reality, the intersection is not handling the overload. Motorists who know the area have turned to alternative routes, clogging narrow side streets and parallel roads, causing further congestion.

## PRIVATE SECTOR PARTICIPATION

Second is the willingness of the private sector to participate in the project. We're not talking about pledges. We're talking actual expenditures of private capital to improve the highway infrastructure in the area.

In West Whiteland Township alone, more than $6.1 Million has been spent in private funds to widen and improve an already overburdened local highway system.

In adition, township supervisors plan to establish a Transportation Improvement District which calls for the use of another $6 million in private funds from the property owners involved.

Meanwhile area businesses have expressed a willingness to make in-kind, right-of-way, utility relocation, and direct cash contributions to the project.

INTER-MODAL OPPORTUNITIES

Finally, we cannot overlook the opportunities for linking various modes of transportation in the region through the project.

As you can see in the second exhibit, the Exton By-pass project offers an excellent opportunity to link a limited access highway with interstate rail, commuter rail, light rail and bus lines.

The project will tie the by-pass direcly to the existing Exton railroad station which serves Amtrak's principal east-west artery and the SEPTA's R-5 line, linking Parkesburg in western Chester County with Philadelphia, and Doylestown in Bucks County.

In addition, the by-pass will tie in directly with a station being built and financed by a local developer to serve as an interchange point between the Amtrak/SEPTA main rail line and a proposed SEPTA Cross County Metro light rail line, linking Downingtown with Bucks County. This will significantly reduce congestion on the Route 30 corridor and intercept commuter traffic which now overburdens Route 30, Route 202 and the Schuylkill Expressway.

Finally, by relieving the congestion along the Route 30 corridor and the secondary roads paralleling it, the privately-owned Reader Bus Service and SEPTA's Route 92 bus route will be able to operate more efficiently, attracting new ridership.

In conclusion, I have no doubt that former Pennsylvania Transportation Secretary -- now Federal Highway Administrator --Tom Larson and other members of the Bush Administration had Federal help for projects like the Exton By-pass in mind when they drafted the principles described in "Moving America -- New Directions. New opportunities."

I hope you agree.

Thank you for your time and your interest.

TESTIMONY OF THE

AMERICAN PUBLIC TRANSIT ASSOCIATION

BEFORE THE

SUBCOMMITTEE ON SURFACE TRANSPORTATION

OF THE

HOUSE COMMITTEE ON

PUBLIC WORKS AND TRANSPORTATION

APRIL 10, 1991

STATEMENT BY

DAVID L. TURNEY

APTA VICE PRESIDENT, ASSOCIATE MEMBERS

CHAIRMAN, ASSOCIATE MEMBER BOARD OF DIRECTORS

GROUP EXECUTIVE, MARK IV TRANSPORTATION PRODUCTS

PLANO, TEXAS

I AM DAVID L. TURNEY, GROUP EXECUTIVE OF MARK IV TRANSPORTATION PRODUCTS, A MAJOR OPERATING SEGMENT OF MARK IV INDUSTRIES, INC. . . . A $1.2 BILLION NYSE FORTUNE 500 COMPANY. MY ROLE IN APTA IS THAT OF VICE PRESIDENT, ASSOCIATE MEMBERS, AND CHAIRMAN OF THE ASSOCIATE MEMBER PART OF APTA.

APTA HAS MORE THAN 500 ASSOCIATE MEMBERS. ASSOCIATE MEMBERS ARE THE SUPPLIERS OF GOODS AND SERVICES TO THE TRANSIT INDUSTRY. WE SUPPLY THE EQUIPMENT, SUPPORT, AND PRIVATE SECTOR SERVICES THAT ENABLE TRANSIT OPERATORS TO CARRY OUT THEIR PUBLIC SERVICE MISSION OF MOBILITY FACILITATORS.

ASSOCIATES HAVE MEMBER COMPANIES IN MOST STATES AND MANY FOREIGN COUNTRIES; TENS OF THOUSANDS OF EMPLOYEES ARE INVOLVED. MY COMPANY ALONE HAS OPERATIONS OR MAJOR BUSINESS OUTLETS IN NEW YORK, ILLINOIS, TEXAS, CALIFORNIA, NEW JERSEY, FLORIDA, MICHIGAN, ONTARIO AND QUEBEC IN CANADA, GERMANY, THE U.K., FRANCE, ITALY, AND JAPAN . . . DIRECTLY INVOLVING OVER 1500 PEOPLE. YOUR ACTIONS ON REAUTHORIZATION HAVE A DIRECT ECONOMIC IMPACT ON THIS NATION THROUGH ASSOCIATE MEMBERS OF APTA.

IT IS A PLEASURE AND A PRIVILEGE TO APPEAR BEFORE THIS VITAL SUBCOMMITTEE. I TAKE SPECIAL NOTE OF THE HONOR OF ADDRESSING A

SUBCOMMITTEE INCLUDING THE HONORABLE GREG LAUGHLIN AND PETE GEREN FROM MY GREAT STATE OF TEXAS . . . AND ALSO THE DISTINGUISHED JOHN PAUL HAMMERSCHMIDT WHO HAS ROOTS IN THE GREAT STATE OF ARKANSAS WHICH MIRROR MY OWN ROOTS AND FAMILY.

AS A PRIVATE SECTOR MANUFACTURING OPERATION PERSON IN THIS INDUSTRY, I AM UPSET OVER THE CONTINUAL BASHING THAT AMERICAN INDUSTRY HAS TAKEN OVER "PRODUCTIVITY." A WELL-KEPT SECRET IS THE FACT THAT OUR INDUSTRY IS SHIPPING PRODUCTS ALL OVER THE WORLD WHERE WE HAVE A FAIR AND OPEN MARKET IN WHICH TO OPERATE. BUT, THAT IS SERIOUSLY AT RISK; AND, YOU HOLD THE KEYS TO DEALING WITH THAT RISK. PEOPLE SITTING IN TRAFFIC JAMS INSTEAD OF EFFICIENTLY MOVING TO WORK IS A VERY DANGEROUS AND RAPIDLY INCREASING CONTRIBUTOR TO ANY PRODUCTION DEFICIT WE HAVE IN AMERICA. IF PEOPLE CAN'T GET TO WORK WITH REASONABLE EFFORT AND IN REASONABLE TIME, HOW ON EARTH CAN THEY BE PRODUCTIVE?

THE COST OF CONGESTION WAS $9 BILLION IN 1984. IT WILL EXCEED $50 BILLION IN THE YEAR 2005 . . . UNLESS WE LEGISLATE INTO EXISTENCE AN INNOVATIVE TRANSIT REAUTHORIZATION BILL LIKE THAT ADVOCATED BY APTA. EVERY BUS FULL OF PASSENGERS TAKES 40 CARS OFF THE STREETS; AND TRAINS ELIMINATE OVER 75!

GIVE US A GOOD TRANSIT BILL AND WE WILL GIVE YOU INDUSTRIAL PRODUCTIVITY GAINS! OVER 70 PERCENT OF OUR U.S. POPULATION LIVE IN AREAS WHERE AIR QUALITY FAILS TO MEET MINIMUM HEALTHY STANDARDS SET HERE IN WASHINGTON. THAT CONDITION IS GROWING WORSE DESPITE MORE COMPLEX AND EXPENSIVE GADGETS TO CONTROL TAILPIPE EMISSIONS. WE HAVE TO INCREASE THE AVERAGE NUMBER OF PEOPLE TRAVELLING PER VEHICLE IF WE ARE SERIOUS ABOUT SOLVING THAT PROBLEM.

FOLKS, SOME AREAS OF THIS COUNTRY ARE FACING RESTRICTIONS ON USE OF THE AUTOMOBILE . . . MAYBE EVEN ALTERNATE DAYS ON WHICH USE MIGHT BE RESTRICTED OR EVEN PROHIBITED. WHEN THAT HAPPENS, A PUBLIC REVOLT IS GOING TO OCCUR AS PEOPLE COME TO REALIZE THAT WE HAVE ALLOWED THE PAVING OF AMERICAN FOR AUTO USE TO PAINT US INTO A CORNER SO FILLED WITH POLLUTION THAT WE CAN'T BREATHE. WHEN YOU WORK TO ENACT A REAUTHORIZATION BILL SIMILAR TO WHAT APTA PROPOSES, YOU NOT ONLY HELP US INCREASE PRODUCTIVITY . . YOU ALSO HELP IMPROVE THE ENVIRONMENT!

TRANSIT INVENTORIES ARE A BARGAIN AND SO ARE TRANSIT INVESTMENTS. MAJOR URBAN HIGHWAYS CAN COST $100 TO $120 MILLION PER MILE. BUSWAYS, TO MOVE HIGH VOLUMES OF PEOPLE, COST ONE-TENTH OF THAT. EVEN HEAVY RAIL COSTS LESS. ON TOP OF THAT, EVERY DOLLAR INVESTED IN TRANSIT HELPS SOLVE THE PROBLEMS OF POLLUTION,

CONGESTION, PRODUCTIVITY, MOBILITY, AND DEPENDENCE ON FOREIGN OIL. THAT IS A BARGAIN; TELL ME, WHERE ELSE ONE DOLLAR APPLIED CAN TOUCH ALL THOSE PROBLEM AREAS SIMULTANEOUSLY?

LET ME TOUCH BRIEFLY ON THE BUY AMERICA PROVISIONS OF THE PRESENT LAW. WE URGE YOU TO LEAVE IT AS IS. THE CHANGES ENACTED IN 1987 ONLY PASSED THROUGH RULEMAKING IN THE PAST FEW WEEKS; WE NEED TIME TO WORK WITH THE BUY AMERICA PROVISIONS THE WAY THEY ARE RIGHT NOW BEFORE WE CONSIDER FURTHER CHANGES. AND, THERE IS STILL A LARGE PERCENTAGE OF THE WORLD MARKETS INTO WHICH WE SIMPLY ARE NOT ABLE TO SHIP OUR PRODUCTS THANKS TO DISCRIMINATING TRADE PRACTICES.

THE PRESENT LAW LEVELS THE PLAYING FIELD PRETTY WELL; I URGE YOU, LEAVE IT AS IS. THE ADMINISTRATION'S PROPOSAL TO SELECTIVELY WAIVE THE STATUTE'S APPLICABILITY TO CERTAIN COUNTRIES IS JUST NOT ACCEPTABLE TO PRIVATE INDUSTRY. I DON'T WANT THE FUTURE OF MY COMPANY BEING TRADED LIKE A PAWN BY THE ADMINISTRATION.

THE APTA ASSOCIATE MEMBERS STRONGLY SUPPORT A REAUTHORIZATION PROGRAM IN THE $34-40 BILLION RANGE, AS ALREADY PROPOSED BY THE LEADERSHIP OF THIS COMMITTEE AND APTA. LOWER FUNDING WILL NOT ALLOW US TO DO OUR JOB. AND, FUNDING HAS TO HAVE

A MUCH HIGHER DEGREE OF STABILITY AND PREDICTABILITY THAN IN THE PAST. THIS CUT-IT-EVERY-YEAR MENTALITY OF PAST ADMINISTRATIONS SENDS SIGNALS TO CORPORATE AMERICA THAT TRANSIT BUSINESS IS NOT THE PLACE TO INVEST FOR THE FUTURE. GIVE US A $34-40 BILLION PROGRAM WITH STABILITY, AND VITAL PRIVATE SECTOR DOLLARS WILL GRAVITATE TO TRANSIT TO HELP PROVIDE PUBLIC MOBILITY.

AGAIN, I WISH TO IMPRESS UPON YOU THAT I AM DEEPLY HONORED TO HAVE THIS OPPORTUNITY TO ADDRESS THIS DISTINGUISHED SUBCOMMITTEE. I AM AT YOUR DISPOSAL.

45-155 O—91——32

ADDITIONS TO THE RECORD

Hennepin County Regional Railroad Authority

Testimony of HCRRA Chairman Mark Andrew
to the Surface Transportation Subcommittee
of the House Public Works and Transportation Committee
Regarding the Surface Transportation Assistance Act of 1991

April 10, 1991

Mr. Chairman and Members of the Committee, my name is Mark Andrew, and I am Chairman of the Hennepin County Regional Railroad Authority (HCRRA) and a member of the Hennepin County Board of Commissioners. On behalf of the HCRRA and other regional agencies in the Twin Cities metropolitan area, I want to thank the Committee for this opportunity to present our views and needs with respect to the important transportation policy issues before you as you consider reauthorization of this country's surface transportation legislation.

The Hennepin County Regional Railroad Authority is charged with planning and implementing rail transit service in the greater Minneapolis metropolitan area. Along with the other county railroad authorities in our region, the Regional Transit Board (RTB), and the Joint Light Rail Transit Advisory Committee, and the Metropolitan Transit Commission (MTC), we are working hard to make cost-effective rail transit service a reality in the Twin Cities metropolitan area.

Over the past 15 years, we consolidated our public bus service, endeavored to improve our existing road network through Transportation Systems Management (TSM) measures, constructed a downtown transit mall that has served as a model for the nation, and planned extensively for rail transit service. We remain dedicated to finding new approaches and techniques for achieving our goals in the most efficient and effective manner possible.

All of our work is focused on the development of a balanced transportation system for our region. There is a strong regional consensus for achieving that goal.

Just under a year, ago our Regional Transit Board submitted documentation to UMTA summarizing our rail transit planning activities to date and seeking federal assistance to complete those activities. We propose to update the region's recent planning, alternatives analysis, and environmental impact studies to support our proposed Construction Efficiency and Local Overmatch Pilot Project (CELOPP).

As indicated by its name, our proposed project consists of two parts. First, it reflects the goals of the Local Overmatch policy announced by the Secretary of Transportation in March 1989. Second, it incorporates fixed-price, turnkey construction contracting and project management techniques like those to be used in Houston's System Connector project that was awarded last month. Let me elaborate on both parts.

Hennepin County established a two-mill property tax in 1988 to serve as dedicated local funding for LRT development. The federal share we seek for our proposed project would not exceed 35 percent, up to a maximum of $250 million, over a five-year period. Federal matching funds would be used to leverage scarce additional state and private sector investment in the both the pilot project and extensions to build the regional system.

The construction efficiency component of this pilot project will demonstrate that, with appropriate performance specifications and contracting incentives, fixed-price contracting can reduce project costs and ensure timely project completion.

During this past year, HCRRA commissioned a study, international in scope, to compare the conventional transit development process utilized in this country with fixed-price and turnkey contracting used more commonly overseas. That study concluded that turnkey contracting could provide us with a better means of ensuring quicker project implementation, better cost control, and better sharing of project risks with the private sector.

We intend to procure the pilot project on a turnkey basis. This means we will solicit proposals from qualified bidders, conduct competitive negotiations among the best teams, and award a single contract with a guaranteed maximum price to build the project to our performance specifications.

To implement our pilot project, we are seeking your support for an expedited process, funding, and oversight of UMTA activities in this regard. Our pilot project is estimated to cost $200 million. Funding and local consensus for that project are already in place. We are requesting authorization of $30 million in each of fiscal years 1992 and 1993 for this project.

The resulting federal share of $60 million dollars is only 30% of project costs -- the lowest federal share for any federally-funded fixed guideway project to date. Our dedicated local resources consist of a two-mill property tax that generates approximately $21 million annually and can be bonded for the local share of $140 million.

We are also seeking authorization for $55 million in fiscal year 1994, $60 million in fiscal year 1995, and $75 million in fiscal year 1996 for a total of $250 million. In the suggested statutory and report language that we are prepared to submit to the Committee, we have specified a deadline of October 1, 1993, to put in place dedicated local funding to overmatch the federal funds requested in fiscal years 1994, 1995, and 1996. If we are not successful in meeting this deadline, we are prepared to relinquish our claim to 1994, 1995 and 1996 federal funds.

To implement our proposed project, we are making and will continue to make a good faith effort to achieve UMTA's Major Capital Investment Policy objectives within a framework of timely intergovernmental decision making. But to do so requires a true federal/local governmental partnership -- something beyond the existing UMTA transit development process.

While UMTA decries the earmarking process, we are convinced that its existing transit development process creates the very climate whereby local agencies such as HCRRA, out of frustration with endless delays inherent in the UMTA process, seek Congressional support for viable and worthy projects.

In fact, critics of UMTA's Major Capital Investments Policy argue that the process itself contributes to -- rather than controls -- lower than forecast patronage and higher than estimated capital and operating costs. To date, such results have all occurred under the conventional approach, in which there are three to four years of planning for every year of project construction.

It is in the interests of all, especially UMTA, to improve our methods of leveraging scarce federal resources while better meeting project cost, schedule, and performance objectives. That is why we welcome the Secretary's Local Overmatch policy and why we intend demonstrate how it can result in improved project delivery.

In exchange, we are asking you to require UMTA to implement its promise of removing barriers for new start projects with a large majority of local funding. With this shift in project financial risks to the local project sponsor and the private sector, we believe it is reasonable and equitable to expect a commensurate reduction in federal red tape.

In particular, we are requesting the Committee to recognize and acknowledge the extensive system planning eforts already completed in the Twin Cities metropolitan area and therefore to waive the statutory criteria for new starts and to authorize an expedited environmental impact and project analysis process for our Construction Efficiency and Local Overmatch Pilot Project. We are also asking the Committee to direct UMTA to waive its requirements for transportation system management alternatives as well as other requirements of its Major Capital Investment Policy that would delay implementation of the project.

Mr. Chairman and Committee members, we believe that our proposal is inherently fair, reasonable, and of national significance. The Twin Cities are one of 21 metropolitan areas of over 2 million population in this country. We rank 16th in size. Since 1982, the State of Minnesota has contributed more than $87 million to the Transit Account of the Highway Trust fund. In return, we have received only $17 million in Section 3 grants for buses and bus-related facilities. Of the largest 19 metropolitan areas in this country, we are the only one that has not received any Section 3 funds for a fixed guideway project.

Mr. Chairman, we are seeking a balanced transportation system and fairness in its development. Again, we appreciate the Committee's consideration of our Construction Efficiency and Local Overmatch Pilot Project. With the Committee's assistance and support, we will advance mass transit in the Twin Cities and demonstrate improved project delivery to the benefit of other future new start projects around the country. Thank you.

# PUEBLO DE SAN FELIPE

OFFICE OF THE GOVERNOR

RECEIVED
APR 17 1991

April 17, 1991

The Honorable Norman Mineta, Chairman
Subcommittee on Surface Transportation
United State Congress
B376 Rayburn House Office Building
So. Capitol St. & Independence Avenue SE
Washington, D.C. 20515

Dear Chairman Mineta:

We were informed by Congressman Richardson's office that testimony is still being received on the Surface Transportation Act re-authorization for funding. As the Governor of the Pueblo of San Felipe, I have a number of concerns in regard to several of our roads on the reservation. Our primary concern is the "farm to market roads." Many of our tribal members are farmers and these roads are in need of paving to improve the delivery time of fresh produce to markets in Albuquerque and Santa Fe.

Another need is the paving of the main arteries at the entrance of the village. This would cut down on dust pollution and vastly improve the condition of the road bed.

There are several roads on the reservation which require compacting and graveling. These include the east Tonque Arroyo Road from Interstate-25 to the eastern boundary of the reservation and the west bank roads in both the north and south quarters of the area to the extreme limits of the reservation.

The Pueblo of San Felipe's need for road improvement and repair is great. We appreciate this opportunity to share our concerns with you and to request maximum funding for the improvement of reservation roads.

Sincerely,

Frank Tenorio
Governor

xc: Congressman Bill Richardson
Daniel Sanchez, All Indian Pueblo Council

TELEPHONE (505) 867-3381 P.O. BOX A SAN FELIPE PUEBLO, NEW MEXICO 87001

ALL INDIAN PUEBLO COUNCIL

**TESTIMONY TO THE**
**HOUSE SUBCOMMITTEE ON SURFACE TRANSPORTATION**
**APRIL 22, 1991**
**ALL INDIAN PUEBLO COUNCIL**
**3939 SAN PEDRO, N.E.**
**ALBUQUERQUE, NEW MEXICO 87110**

Mr. Chairman and members of the Subcommittee, we are pleased with this opportunity to provide recommendations leading to the reauthorization of the Surface Transportation Bill. It is especially important that the nineteen Pueblos of New Mexico have been requested to address the inadequate levels of funding among other issues for surface transportation purposes on Pueblo tribal lands.

The All Indian Pueblo Council (AIPC) is an organization which represents the nineteen Pueblo Indian tribes of New Mexico. Historical recordings show AIPC was formally established in 1598, however, the members believe the organization may have been in existence well before that date. AIPC has long been a force in assisting the Pueblo members with pressing problems that have been the direct result of Federal policy changes resulting in unrealistic funding levels and imposed Federal legislation that have never realistically address Indian socio-economic needs.

Roads development within the exterior boundaries of each of our member Pueblos are in varying stages, but all share the

immediate need to improve the road systems and to repair the existing dilapidated road conditions in the Pueblo communities. Too often, the tribes are not aware of the lack of funds through the Bureau of Indian Affairs (BIA) until requests for road improvement or new construction are made. There should be, as well, recognition for longer appropriation expenditure time frames because of the lead time necessary to plan and implement actual construction. Perhaps, three year carry-over authority should be considered using existing Federal law for contractual agreements.

Pass through Federal funds that go to the State of New Mexico almost never return directly to the Indian tribes as well. On a small scale, tribes benefit indirectly by improvements and new construction with the major roads, such as interstate highways and other major arteries, but Indian people pay far more state transportation related taxes than what they get in return.

It is important for Congress to understand that New Mexico is a vast rural State, and that the majority of the Indian reservations are located in isolated areas statewide. And, especially that in order for economic development to be successful in New Mexico for everyone, the road systems must be improved and it must include the Indian tribes transportation systems need.

We are informed the Area BIA had been conducting a surface transportation needs analysis, however, the study that has been conducted over five years will not be available to Congress for consideration for this current Surface Transportation Bill.

The All Indian Pueblo Council is very supportive of the

overall road improvement and repair needs of New Mexico, but especially improvements to Pueblo roads. As an example, we support the proposed improvements for Albuquerque's freeways, especially the area beginning at the I-25 and I-40 exchange to Unser Boulevard. We support an on-off ramp at Twelfth Street as well. The Indian Pueblo Cultural Center, also a State Information Center and the current activity to develop 44 acres on the old Albuquerque Indian School property will enhance our development and will benefit the City of Albuquerque with the placement of an on-off ramp at Twelfth Street.

Recommendations:

1. Adequate funding must be made available either directly or through special line item appropriations to Indian tribes, which would guarantee meeting the unique surface transportation needs of each Pueblo tribe. The method that is eventually adopted must insure a set-aside of funds for the Pueblos tribes including carry-over authority for appropriations because of the time frame involved from planning to actual construction.

2. Funds must be made available for tribes to conduct comprehensive analysis of their current and future surface transportation needs under authority of the Indian Self-Determination and Education Assistance Act as amended.

3. Congress must mandate States to consult with Indian tribes on proposed improvements to state road systems and in some cases, it may be appropriate for States and Indian tribes to enter into joint venture road projects; when such is necessary.

We support the testimony provided by the Honorable Bill Richardson, and while we are not sure how reliable the data that was provided by the Bureau of Indian Affairs, the nature of his testimony is very accurate.

Attached is data provided to AIPC by some of the Pueblo tribes and the BIA Northern Pueblos Agency and BIA Southern Pueblos Agency offices. These documents address certain specific surface transportation needs of the Pueblo, but should there be any questions, the BIA Road Departments should be contacted.

Thank you Mr. Chairman for the opportunity to provide our comments to the Subcommittee. We stand ready to assist and provide more information to help reauthorize the Surface Transportation Bill especially to target Pueblo Indian road systems as may be recommended by the AIPC member Pueblos.

Respectfully Submitted

ALL INDIAN PUEBLO COUNCIL

James S. Hena

James S. Hena, Chairman

Mr. MINETA. There being no further business before the committee, we stand adjourned.

[Whereupon, at 6:46 p.m., the committee adjourned, to reconvene at the call of the Chair.]

# REAUTHORIZATION OF SURFACE TRANSPORTATION PROGRAMS

THURSDAY, APRIL 18, 1991

HOUSE OF REPRESENTATIVES,
SUBCOMMITTEE ON SURFACE TRANSPORTATION,
COMMITTEE ON PUBLIC WORKS AND TRANSPORTATION,
*Washington, DC.*

The subcommittee met, pursuant to notice, at 10:04 a.m. in room 2167, Rayburn House Office Building, Hon. Norman Y. Mineta (chairman of the subcommittee) presiding.

Mr. MINETA. The subcommittee will please come to order.

I am pleased to announce that this is the final Washington, D.C. hearing on the Surface Transportation Reauthorization Bill. Needless to say, we are a lot wiser from the experience of our thorough hearing schedule.

I'd like to take this last opportunity to reaffirm the importance of our mission and to thank all of those who have been participating in the past hearings as well as in today's hearings.

The members of this subcommittee have the chance to craft legislation which is visionary: legislation which will not only address our transportation system, but help us meet our national needs in terms of competitiveness, the environment, and our all around quality of life.

Our transportation network will only truly improve in the years ahead if we put our increasingly scarce Federal dollars where the needs are today, and where they must be in the future. That foresight demands not a single strategy, but a series of policies that will be responsive to State, regional and local needs well into the next century.

We will be hearing from some of our congressional colleagues and we will also hear testimony from national experts on the issues of highway construction and safety as well as a wide variety of important transportation issues.

I look forward to hearing the testimony of today's witnesses. Their insights on these issues will be very helpful as we continue to formulate our committee and House legislation.

At this time, I'm very pleased to yield to our fine Ranking Republican Member from Pennsylvania, Bud Shuster. Bud.

Mr. SHUSTER. Thank you very much, Mr. Chairman.

Mr. Chairman, first, I want to congratulate you for the diligence with which you've proceeded not only in this set of hearings but throughout the entire effort. We indeed do have the opportunity to

craft a historic piece of legislation and I'm confident that working together on a bipartisan basis, that we will be able to do just that.

While everyone is aware of the many hours that you and everyone have spent publicly working on this, there also have been countless hours behind the scenes where we have been working together to do the hard work of crafting, and I certainly congratulate you and all the members of the subcommittee for their efforts in this historic enterprise.

Thank you.

Mr. MINETA. I'm pleased to see that we are honored by the presence of the Chairman of the full Committee on Public Works and Transportation, Chairman Roe.

Mr. Shuster.

Mr. SHUSTER. Mr. Chairman, I ask unanimous consent that a statement by the Honorable John Paul Hammerschmidt, Ranking Member of the full Committee also be inserted in the record.

Mr. MINETA. Without objection.

[Mr. Hammerschmidt's prepared statement follows:]

STATEMENT OF THE HONORABLE JOHN PAUL HAMMERSCHMIDT—AUTHORIZATION OF THE POST-INTERSTATE SURFACE TRANSPORTATION PROGRAMS

Thank you, Mr. Chairman. Today we begin our third day of Washington hearings on legislation which will be one of the most significant accomplishments of the 102nd Congress.

We have heard from many distinguished public officials and private individuals, and I am looking forward to the comments of our witnesses, who come from a broad array of interests—mayors, State legislators, highway users and builders, recreation and safety advocates, trucking officials, and many others.

Your input is extremely important to this process, and I can assure you that your views on the administration proposal will be considered very carefully by the committee. We want this bill to be the best response to the Nation's needs as a whole—a bill that will ensure we have a transportation system that will enable us to effectively compete in the international marketplace. We also want a bill that will improve safety on our Nation's highways.

I welcome you to the committee and appreciate your testifying here today.

Mr. SHUSTER. And also, Mr. Chairman, I also have a statement from my colleague from Pennsylvania, Mr. Coughlin, that I would like inserted into the record at this point.

Mr. MINETA. Without objection, so ordered.

[Mr. Coughlin's prepared statement follows:]

Statement of Congressman Lawrence Coughlin

Surface Transportation Reauthorization

I am pleased to submit this statement in connection with hearings on the Surface Transportation Reauthorization Bill. Following are three areas I would hope the Committee will consider. The first is **five legislative initiatives** that are important to mass transportation--both big city and small town. The second is the **ratio between transit and highway spending**. The third is a **highway-transit demonstration project** of great importance to my Congressional District and the surround area. I am seeking to have the legislative initiatives, the spending ratio, and the demonstration project included in any new Surface Transportation Bill. Your support of all or any of these proposals would be very helpful in furthering transportation.

Legislative Initiatives

1. **H.R. 954** requires states establish and implement a safety program plan for each rail fixed guideway mass transportation system not regulated by the Federal Railroad Administration. Fixed guideway transit systems such as trolleys and light commuter rail systems currently fall between the cracks and are not subject to any safety regulating jurisdiction. The affected areas are the eight rail mod cities: New York, Philadelphia, Chicago, San Francisco, Boston, Pittsburgh, Cleveland, and New Jersey Transit; Washington, D.C.; and new start cities. Bus turn around lanes, technically fixed guideways, are excluded.

The plan includes safety requirements, lines of authority, levels of responsibility and accountability, and methods of documentation. States also must designate an agency responsible to 1) require, review and approve, and monitor implementation of plan and 2) investigate hazardous conditions and accidents and require corrective action.

The penalty for non-compliance is withholding Highway funds: 5 percent each of the first two years, 10 percent thereafter. This is the same penalty for states which do not revoke driver's license of convicted drug law violators (Section 333, PL 101-516, Fiscal Year 1991 Transportation Appropriations). There is an over two year grace period before penalty applies.

New York is the only state with a Public Transportation Safety Board, a special agency created by New York legislature to be independent, investigative and advisory body for safety of public transportation systems. Six states (California, Georgia, Maryland, Massachusetts, New Jersey, and South Carolina) have public utility commissions with varying regulatory authority and responsibility for transit safety. Thirteen states (California, Florida, Idaho, Indiana, Iowa, Louisiana, Maine, Massachusetts,

Michigan, Montana, New Jersey, New York, and Utah) have designated an agency for transit safety oversight. Three states (Florida, New York, and Utah) require system safety plans.

This is recommended by the National Transportation Safety Board and supported in principal by the Administration. Urban Mass Transportation Administrator Brian Clymer said "a process of independent safety audit and oversight of local public transportation is vital." Former Urban Mass Transportation Administrator Al DelliBovi said "I would like to see State safety regulations in place, State transportation safety boards which have a regulatory role, and I would like to see the Federal government providing guidance."

2. H.R. 955 gives the Urban Mass Transportation Administration (UMTA) the authority to promulgate drug testing regulations. Although five anti drug programs have been upheld for other transportation modes, on 19 January 1990, U.S. Court of Appeals for the District of Columbia Circuit held that UMTA did not have sufficient statutory authority to issue drug rules for recipients of federal mass transit assistance. (Amalgamated Transit Union, et al. v. Skinner, et al., Nos. 89-5380, et al. (D.C. Cir. Jan. 19, 1990). UMTA subsequently suspended its rule.

The UMTA rule is equivalent to the others in every material respect. In this case, the court did not say UMTA drug rule flawed or unnecessary. The court said Congress had not authorized UMTA to enact one.

The UMTA drug rule was issued in November 1988, having been developed with full public participation. The rule was effective for large transit systems from 21 December 1989 to late January 1990. A number of positive tests resulted during this period even though most transit systems had not begun the random drug testing portion. Random testing works as it resulted in a drug use drop from 27.6 percent in 1980 to 4.8 percent in 1988 at the Department of Defense and 10.3 percent to 2.8 percent in 1988 at the Coast Guard.

This regulation would cover only sensitive safety workers of recipients of UMTA funds. It is estimate 195,000 transit workers would be subject to such drug testing requirements as pre-employment, post accident, reasonable cause, random, and return to duty drug testing, as well as drug training and education. There are detailed procedures to protect employees' privacy and ensure confidentiality of results: 1) only Department of Health and Human Services certified laboratories are used, 2) employers must submit blind samples to assure continued accuracy, and 3 ) an initial positive test is retested under second analytical procedure using a different technique and chemical principle before a positive test confirmed.

A medical review officer notifies an employee of a positive

test and allows an opportunity to explain. The employee has the right to retest the same sample by different lab. Firing is not required--only that employee not perform a sensitive safety job until he or she no longer tests positive. Rehabilitation not required.

The public entitled to drug free mass transit operators. This would give UMTA the authority to provide the commuting public the same antidrug protection as other travellers. This is supported by the Administration.

3. H.R. 956 expands the definition of mass transit maintenance items to include all supplies and maintenance expenses except fuel and labor. It makes operating expenses non-capital expenses and capitalizes all maintenance expenses. As operating subsidies are reduced, transit systems would be able to receive more funds for maintenance.

There is a hold harmless provision for computing the amount allocated for supplies and other non-capital items based on average operating assistance Fiscal Years 1989 through 1990. There also is a provides for new urbanized areas under 1990 census. This is supported in principal by the Administration.

4. H.R. 958 authorizes the use of Federal-aid bridge replacement and rehabilitation funds for transit and railroad bridges which cross highways. These bridges are often similar to orphan bridges. A deficient or unsafe rail or transit bridge serving a highway causes just as many problems as a highway to highway crossing. Expanding the universe of eligible bridges expands bridge construction union jobs. This is supported by Amtrak and local transit authorities.

5. H.R. 1605 allows states flexibility to use highway funds for transit or rail projects which alleviate traffic congestion or improve air quality. This is a transportation investment strategy which can be tailored to needs of individual states instead of being mode-specific approach. It encourages the most cost-effective and efficient transit, intercity and commuter rail capital projects.

Up to 25 percent of primary, secondary, and urban highway funds may be used but not interstate highway funds. This ensures that the interstate system will be completed. A 25 percent local share is required. Supported by Amtrak and local transit authorities.

Ratio of Transit to Highway Spending

The ratio of mass transit to highway funding should be at least $1 to $4 and I am in the process of introducing H. Con. Res. ___ is a sense of the Congress resolution to that end. This is the ratio used in the 1982 gas tax increase and for several years thereafter. It is also the ratio that the Department of

Transportation requested of the Office of Management and Budget for Fiscal Year 1992.

Highway-Transit Demonstration Project

Finally, I respectfully request a highway-transit demonstration project. The highway portion would widen and improve safety on United States Route 202 between King of Prussia and Montgomeryville in Pennsylvania. This segment is the number one priority of the Montgomery County, Pennsylvania, Planning Commission. It is the missing link between two on-going projects, the Route 202 project from I-76 to PA 252 in the vicinity of King of Prussia, largely in Representative Richard Schulze's District, and Representative Peter Kostmayer's Route 202 project from Montgomeryville to Doylestown. Work on the Environmental Impact Statement is already underway. The total cost of preliminary engineering, right-of-way, and construction is estimated at $30 million.

The transit portion would build a park and ride station for the Southeastern Pennsylvania Transportation Authority (SEPTA) where Route 202 and the SEPTA R5 Lansdale Line cross in Lower Gwynedd Township. This intermodal segment is part of the Route 202 project supported by the local planning commission. It also has the strong support of SEPTA officials. The total cost of preliminary engineering, acquisition, and construction is estimated at $5 million.

This highway-transit demonstration project is critically needed for improving travel and road safety in my Congressional District and the surrounding area. Your favorable consideration of it, the five legislative initiatives, and the transit to highways spending ratio would be greatly appreciated.

Mr. MINETA. Chairman Roe, we're pleased to have you here with us today. Mr. Chairman, if you would like to make an opening statement?

The CHAIRMAN. Mr. Chairman and members. Yesterday, as you know, a full committee hearing was held, and we heard eloquent and compelling testimony from Pat Choate and others about the imperative need for a national program of infrastructure investment. All our witnesses emphasized, time and again, the close link between the infrastructure, investment and economic development. We had a very good discussion in that direction.

I know you're working in your hearings in bringing that issue into focus. So, without further ado, Mr. Chairman, I would ask unanimous consent that my statement be included in the record at this point.

Mr. MINETA. Without object, so ordered.

[Chairman Roe's prepared statement follows:]

STATEMENT OF HON. ROBERT A. ROE, CHAIRMAN, COMMITTEE ON PUBLIC WORKS AND TRANSPORTATION

Mr. Chairman, yesterday we held a full committee hearing during which we heard eloquent and compelling testimony from Pat Choate and others about the imperative need for a national program of infrastructure investment. All of our witnesses emphasized time and again the close link between infrastructure investment and economic development.

Yet yesterday the House approved a budget resolution for 1992 and beyond that simply does not do the job. Instead of providing the funding levels that will allow you, Mr. Chairman, and the members of this subcommittee to develop a visionary, forward-looking transportation plan for the 21st century, the House budget resolution provides only minimal increases beyond the President's clearly inadequate transportation budget.

Instead of the 5-year $153.5 billion program for highways and transit that the Public Works and Transportation Committee recommended, the H. Con. Res. 121 provides only $120.5 million. That is more than we are investing now but it is just not enough if our Nation is to remain competitive with other nations in the global economic competition.

The budget process is preventing us from investing adequate funds for the economic future of the Nation. It has created an artificial process in which infrastructure investment is competing with other forms of spending when there really is no such comparison. Infrastructure investment improves productivity, revitalizes the economy, and provides tangible economic paybacks over years and decades.

If we cannot work through the budget process to prepare for the 21st century global economy, we must find new sources of revenue that will fund an infrastructure investment program on a pay-as-you-go basis. Mr. Chairman, you and I have talked at length about a new 5-cent gas tax, a nickel for America, that will raise the funds needed for infrastructure investment. We would require the funds from the additional 5-cent tax to be spent on transportation infrastructure or we would not impose the tax.

The development of an intermodal transportation system involving highways, mass transit, airports, harbors, and inland waterways is crucial to the economic future of our Nation. Investment in the infrastructure is the means to create the new wealth of the Nation, the way to find the funds to deal with our other problems.

Our transportation policy will be key to our economy, our environment, and to our ability to reduce our dependence on foreign oil.

I look forward to hearing from our witnesses on these important issues.

Mr. MINETA. I have received a statement from our colleague from Illinois, Mr. Jerry Costello, that I will insert into the record at this point.

[Mr. Costello's prepared statement follows:]

STATEMENT OF U.S. REPRESENTATIVE JERRY COSTELLO OF ILLINOIS—AUTHORIZATION OF THE POST-INTERSTATE SURFACE TRANSPORTATION PROGRAMS

Mr. Chairman, I am pleased to be here to continue our preparation for the reauthorization of the Surface Transportation Assistance Act. This series of hearings has been very useful and I look forward to our continued inquiry today.

I would like to welcome our witnesses and thank you, Mr. Chairman, for convening us here.

Mr. MINETA. Any other members with opening statements?

[No response.]

Mr. MINETA. If not, we are pleased to have with us our fine colleague from Pennsylvania, Mr. Kanjorski. Mr. Kanjorski, your statement will be made a part of the record, so if you would go ahead and proceed in your own fashion.

## TESTIMONY OF HON. PAUL E. KANJORSKI, A REPRESENTATIVE IN CONGRESS FROM PENNSYLVANIA

Mr. KANJORSKI. Thank you very much, Mr. Chairman.

Mr. Chairman, first, may I congratulate the committee for its enlightened approach to the need for highway systems in the country and the improvement of our infrastructure. I'm here today to request that we utilize the highway funds for projects which will stimulate economic development, particularly as a part of the interstate highway system's future expansion.

I represent a district in northeastern Pennsylvania which has Interstate Highways 80, 81, 84 and the Pennsylvania Turnpike within its boundaries. When the interstate highway system was originally constructed, northeastern Pennsylvania was in the depths of a long-term recession or depression as a result of the failure of the anthracite coal industry in the United States.

Since that time, over the last 30 years, northeastern Pennsylvania has made a bootstraps effort with great success in diversifying its economy from dependency on production of anthracite coal to a very diversified industrial base where there are very few large employers—when I say large, that is employers employing more than 1500 people—but where the diversity of the amount of employment in the area has just grown tremendously.

With the great economic expansion of the State of New Jersey recently and other areas on the east coast we consider ourselves the secondary market.

Unfortunately, because of a lack of the capacity to build airfields due to the terrain and the crowded sky on the east coast, we cannot rely on further expansion of airports for transportation, but must rely primarily on the highway system.

The requests I have before the committee today are not major requests for new highways; rather, they are for new access to the existing interstate highway system. We have a highway system that is quite sufficient to meet the needs economically and otherwise of northeastern Pennsylvania, but in many areas, large masses of our land is severely limited in terms of proper access.

When the original highway was designed, Interstate Highway 81 plans were made for additional exits to be constructed in the future. The first project I'm talking about today is the Highland Park Exit 46. As you go up 81, you'll come to Exits 44, 45 and then you jump over 46 and go to 47. There is a planned exit which I am

asking now to be installed. The need for it is a result of a very large distribution center that is in the process of construction that will cause thousands of trucks a day to come on and off the highway.

For public safety and for economic development purposes within the area, it is essential that the committee designate Exit 46 as a demonstration project to show how coordinated infrastructure on behalf of the Federal Government can aid and assist in the expansion of economic development at the community level.

My testimony will include the amount of people involved, the creation of thousands of jobs that will be created with just this one interchange, and the amount of private sector investment well in excess of $150 million that is located right in a nearby business park. But without this proper access, even limited growth will strangle the secondary roads in the area.

The second interchange, off of I-81 is the Mountaintop Exit, Exit 45K. The need for this exit is to provide increased access to I-81 for expansion occurring in an industrial park of approximately 1,000 acres, which features a new section recently opened totaling 350 acres. We probably will have another national distribution center locating there requiring the movement of about 1,400 trucks per day in and out of the park.

Right now they have to traverse the secondary State highway system to get from that industrial park to the interstate highway approximately 4 miles away over mostly two lane highways. It's dangerous, but worse than the danger, it has inhibited the economic development of thousands of acres of land within the area. Without Exit 43A, again, we will seriously impede the economic development of the area.

I would request that these exits on Interstate 81, 43A and 46, be designated demonstration projects to show that advanced planning on the construction of the interstate highway system was done with some wisdom. Moreover, that it is required that the Federal Government follow that advanced planning by keeping the promises made when the interstate highway system would be constructed—when additional access was needed to accommodate the traffic and the industrial development of an area, the Federal Government would provide that support system.

I can't more strongly state that the literally thousands of jobs depend on these two interchanges onto I-81. The amount of investment of the Federal Government involved in these interchanges will be well-spent, in terms of returned revenue to the Federal Government. Furthermore, this Federal investment will stabilize the economy of an area of northeastern Pennsylvania that had suffered for more than 50 years from extreme depressed conditions. Now we are just about at the point of joining the of relative prosperity of the east coast region.

If we don't take advantage of the opportunity now, over this next 5-year period, we will materially set back the economic growth and the prosperity of northeastern Pennsylvania.

Mr. MINETA. Thank you very much, Congressman Kanjorski.

Let me ask, where does this meet in terms of the ratings with PENNDOT in terms of the 12-year capital improvement program?

Mr. KANJORSKI. In the one instance, exit 46 is now being strenuously argued to be put on the 12-year program but the limitations—as my good friend, Mr. Shuster from Pennsylvania knows—of PENNDOT and the budgetary constraints in Pennsylvania at the present time, this project is competing with a multiplicity of other projects and we really don't know the likelihood of it being approved. I'm in close contact with the Secretary of Transportation in Pennsylvania and, if it is designated, I would inform the committee and withdraw that request and just ask for exit 43A.

Exit 43A has no opportunity at this point to be placed on the 12-year program because of the fantastic amount of requests in Pennsylvania. The funds just wouldn't be there in the foreseeable future.

Mr. MINETA. As you well know, these two projects would be eligible for construction as an interstate reconstruction project with a 90 percent Federal share. If additional amounts of Federal funds are provided for these two projects, would the State of Pennsylvania be able to provide the 10 percent share to complete the project?

Mr. KANJORSKI. I have personally talked to the Secretary of Transportation, Howard Yerusalum, and he's assured me that if the Federal Government sees its way to approve these as demonstration projects, Pennsylvania will do anything and everything to provide the State share.

Mr. MINETA. Thank you very much.

Mr. Shuster.

Mr. SHUSTER. Thank you, Mr. Chairman.

As my good friend knows, I'll help in every way we can here. I think these are very meritorious projects and we want to do everything we can to be helpful.

Mr. KANJORSKI. Thank you very much, Mr. Shuster.

Mr. MINETA. Any other questions of Mr. Kanjorski?

[No response.]

Mr. MINETA. If not, again, thank you very much.

Mr. KANJORSKI. Thank you very much, Mr. Chairman.

[Mr. Kanjorski's prepared statement follows:]

TESTIMONY OF CONGRESSMAN PAUL E. KANJORSKI
BEFORE THE SUBCOMMITTEE ON SURFACE TRANSPORTATION
APRIL 18, 1991

Mr. Chairman, I appreciate the opportunity to testify before you and the other members of the Subcommittee this morning. The reauthorization of the Surface Transportation Assistance Act has afforded Congress the opportunity to examine this country's transportation priorities and take swift action to stem the deterioration of the nation's roadways and infrastructure while stimulating badly needed economic growth. Consistent with these goals, I would like to request your support for two very important proposed highway projects in my district.

Both projects are vital improvements to Interstate 81, a north-south highway critical to the transportation needs of the Northeast region of the United States. When Interstate 81 was constructed, highway planners reserved the exit number 46 in anticipation of future growth in the Wilkes-Barre metropolitan area. That growth has occurred, in fact, far beyond anyone's ability to predict even ten years ago as Northeastern Pennsylvania experiences an economic renaissance.

The proposed projects involve the construction of two new exits off of Interstate 81 and related highway improvements - one in the vicinity of Mountaintop, Pennsylvania (exit 43a) and the other near Wilkes-Barre, Pennsylvania (exit 46). Both proposed projects would substantially improve access to two rapidly expanding industrial parks which are adding vital jobs to Northeastern Pennsylvania. The construction of these exits and related improvements will enhance public safety, reduce congestion, and provide for planned economic development in areas which have been economically disadvantaged.

**Proposed Exit 46** - Severe traffic congestion in the east quadrant of Wilkes-Barre is a serious and constant problem. The traffic flow on Route 309, which is the main thoroughfare in this section of the city as well as the primary means of access to the fast growing Highland Park Business Park, is especially bad. Wilkes-Barre elected officials, local economic development groups, and the area business community are unified in support of the construction of a new exit off of Interstate 81 and related road improvements which will alleviate the present traffic problems and provide for orderly economic growth.

The Greater Wilkes-Barre Partnership, an economic development organization serving the Wilkes-Barre area, has conducted a study of the traffic situation in the east quadrant of the city which identified the seriousness of the present problem and made recommendations about future action. The Partnership's study found that the present traffic congestion on Route 309 is more

than an inconvenience; it poses a threat to public safety and imposes severe constraints on economic development.

I was particularly convinced of the need for the Partnership's proposed project after learning of the results of research on present and projected traffic flow and development in the area. The Partnership's study of the east end quadrant found that during the last six years, the number of major traffic generators in the region has grown from eight to nineteen, causing an increase in vehicle trips per day from 37,775 to 56,715. In addition, my personal experience driving in this area has convinced me this additional exit is crucial.

By 1995, growth in the new East Mountain Business Park, which is located in a nearby municipality, the Highland Business Park, and in the surrounding vicinity will dramatically compound the present traffic problem. I was struck by the Partnership study's conclusion that within the next four years, buildings now under construction, planned, or anticipated will add fifteen traffic generators to the quadrant which will create 50,000 additional vehicle movements per day. I was further convinced of the necessity to take action now after reviewing the study's conclusion that by 1996/97, the quadrant will employ 22,000 persons in thirty-four major traffic generators which, including "pass through traffic," will result in at least 150,000 vehicle trips a day.

For years, the Greater Wilkes-Barre Partnership, Wilkes-Barre, Pennsylvania Department of Transportation, Luzerne County, local businesses, and concerned citizens have been working to address the growing traffic load in the east end quadrant. This coordinated effort is evident by the Partnership's plans to devote land valued at over $1 million for the proposed I-81 exit. In addition, Wilkes-Barre, Wilkes-Barre Township, Luzerne County, and Pennsylvania Department of Transportation each have contributed funds for a study of the east end quadrant while private investment in area road projects totals nearly $5 million.

The Partnership has submitted its proposed construction/road improvement proposal to the Pennsylvania Transportation Commission for inclusion on the state's Twelve Year Program which would enable the project to receive funding. Unfortunately, Pennsylvania, like many states, is experiencing a severe budgetary crisis which precludes the Pennsylvania Department of Transportation from providing the full financial support for the project which they have estimated will cost $15,000,000. To enable the design, site acquisition, engineering, and construction of this project I ask that $12,000,000 be authorized for this purpose.

**Proposed exit 43a** - Mountaintop is a growing municipality just south of Wilkes-Barre near Interstate 81 which, like Wilkes-Barre, has been economically disadvantaged. The local economy of Mountaintop has recently shown progress in recovering from the devastating results of the recessions of the 1970's and early 1980's. One of the most notable success stories in Mountaintop has been the development of the Crestwood Industrial Park. Unfortunately, the park's rapid growth has caused traffic problems on Route 309 which serves as the only major north-south roadway through the town as well as the main point of access to the park.

Working with local municipal and county officials, the Greater Wilkes-Barre Partnership has studied the situation in Mountaintop and determined that construction of a new exit off of Interstate 81 and related road improvements in Mountaintop are needed to correct the present traffic flow problems and provide for future planned growth. I was particularly convinced of the need for this project when I learned of the strong possibility of a major distribution center locating in the park which would dramatically increase truck traffic by as many as one thousand trucks per day on Route 309 and significantly worsen the present traffic flow problem. In addition, two other large industries are on the verge of deciding to locate in Mountaintop.

As I noted earlier, the state's budgetary constraints prevent the Pennsylvania Department of Transportation from devoting full financial support to this project which is estimated will cost $18,000,000. To enable the design, site acquisition, engineering, and construction of this project, I urge that $14,400,000 be authorized for this purpose.

Mr. Chairman, once again I would like to thank you and other members of the Subcommittee for the opportunity to testify about these highway projects which are so important to the safety and economic welfare of citizens in Mountaintop and Wilkes-Barre, Pennsylvania. It is my hope that you will find these projects are in agreement with sound transportation policy goals which I know you are seeking to enact.

Mr. MINETA. At this time, I'd like to submit for the record, the statement of the Governor of West Virginia and our colleague, Congressman Nick J. Rahall.

[Congressman Rahall's prepared statement follows:]

Nick Rahall

STATEMENT OF

HONORABLE NICK J. RAHALL, II (D-WV)

HEARING BY THE SUBCOMMITTEE ON SURFACE TRANSPORTATION

April 18, 1991

MR. CHAIRMAN, I am pleased today to provide the Subcommittee with testimony from the Honorable Gaston Caperton, Governor of the State of West Virginia. Governor Caperton's testimony provides a broad view of the current needs of West Virginia's Highway needs through the five year authorization of the proposed Surface Transportation Assistance Act of 1991.

I would like to spend a moment emphasizing two important points the Governor has made. I will conclude with the specific projects which are priority projects affecting my Congressional district.

The State believes that it is imperative that the some 2,200 miles it requested from the U.S. Department of Transportation be included in the proposed National Highway System. I concur with this assessment. Governor Caperton correctly points out that West Virginia serves this Nation, fueling our economy with our precious natural resource of coal.

Mr. Chairman with the advances in the mining industry today, it is easier to move coal from its seam beneath the earth than it is to move it over our deteriorating roadways. Today, we have an opportunity to correct this unbelievable fact.

I will again point out to my fellow subcommittee members that we must look to assisting States with energy transportation impacted roads. It is vital for West Virginia, yes, but it is no less vital to these United States.

Secondly, as Governor Caperton explains, the Administration's proposed federal/ state match ratios will sound the death knell for many desperately needed road improvements for the State. The Administration's offer of flexibility is in essence saying to our states, "OK, you can do more with your federal dollars, now here is less with which to do it. Does this make any kind of sense? My answer, West Virginia's answer is a loud, NO.

Mr. Chairman, you joined me last year to tour the most necessary projects in my district. The State of West Virginia has committed millions of dollars for study, engineering, and design on these projects. The communities and interested citizen groups are speaking with one voice on these projects and I would like to briefly review these for the Subcommittee's benefit. It is my belief these projects should be included and my efforts will be to include these important projects in the National Highway System.

o EAST-WEST COMMON GROUND CORRIDOR - This year three citizen groups interested in upgrading the highways generally running East to West in Southern West Virginia, namely the TOLSIA concerned citizens, the Shawnee Parkway Association, and the Bluefield to Huntington Highway Association Highway came together and agreed to a common routing. The TOLSIA section of Route 52 is extremely dangerous. Some estimates indicate that approximately one in every seven tons of coal mined in the Nation travels TOLSIA. Additionally I believe the basic East-West Routing, as proposed by the Shawnee Parkway Association, and adopted in the common ground approach, will bring to our area economic diversity and enhanced access to our scenic wonders.

Mr. Chairman, attached to my statement is a description of the common ground proposal.

o POINT PLEASANT TO HUNTINGTON - This highway as well as its companion highway from Point Pleasant to Charleston will greatly assist the economic development of one of our State's fastest growing regions. It will also certainly enhance the business climate in what I like to call the region's economic triad of cities, Point Pleasant, Huntington, and Charleston.

o COALFIELD EXPRESSWAY (Beckley to Grundy, VA) - This highway could well open up an area of our State which is as important to us and as rich in coal and natural beauty resources as any in our state.

Mr. Chairman, I thank you for your attention and consideration of these comments and those of West Virginia's Governor, Gaston Caperton.

AGREED JOINT POSITION STATEMENT

The Shawnee Parkway Association and the Bluefield to Huntington Highway Association hereby agree as follows:

COMMON GROUND

Each of said highway projections or concepts will be constructed upon common ground and the same course of roadway from POINT A at the juncture of the Flat Top Mountain and Indian Ridge at the head of Pinnacle Creek in the area of the three county (Mercer, McDowell and Wyoming) corner, thence along the Indian Ridge boundary of McDowell and Wyoming counties as a limited access, all-purpose, four lane, divided highway, with appropriate interchanges at crossing of Route 16 near Welch and the other appropriate road crossings, and straightening said roadway as may be feasible with cuts and fills to POINT B along said Indian Ridge course located in the area of Ike's Fork and Wharncliff between Iaeger and Gilbert.

INDEPENDENT COURSES EASTWARD

From POINT A EASTWARD, the SHAWNEE PARKWAY shall maintain and preserve its originally projected course by bridging over the Pinnacle Creek and continue along the course of Flat Top Mountain northeasterly along the highest ground of said Flat Top Mountain through or around the north side of the Booge Harmon Flats or Bluff Mountain, and continuing with the highest ground of the Flat Top Mountain through the Egeria country to a merger with the Interstate 77 at the boundary line of Raleigh and Mercer County, as a four lane, divided, limited access Parkway, and from the area of Flat Top Post Office, the Shawnee Parkway shall continue to be projected as an improved two lane linkage over existing Ellison Ridge Road to connect to the Bluestone State Park and the New River Parkway now under official study and projection.

From POINT A EASTWARD, the BLUEFIELD TO HUNTINGTON HIGHWAY is projected to take the most convenient and feasible route to connect

with I-77 at or near the East River Mountain tunnel interchange of said Interstate with appropriate interchanges along such course.

INDEPENDENT COURSES WESTWARD

From POINT B WESTWARD, the SHAWNEE PARKWAY will continue toward its originally projected connection with the Daniel Boone Parkway in the area of Prestonsburg, Kentucky with the Route projected through the area of Phelps, Kentucky and thence westward to such junction with the Daniel Boone Parkway as an east-west divided, four lane, limited access highway.

From POINT B WESTWARD, the BLUEFIELD TO HUNTINGTON HIGHWAY shall project a course to make most direct and feasible connection with U.S. 52, the "Tolsia Highway," from Williamson to Huntington, West Virginia.

The above statement is submitted to all State and Federal officials and agencies concerned with highway planning and construction and to the public media as an agreed position statement of above named organizations.

Dated this the 14th day of December, 1990.

The Honorable Norman Y. Mineta
Chairman
Subcommittee on Surface Transportation
United States Congress
2350 Rayburn House Office Building
Washington, DC 20515-0513

Dear Chairman Mineta:

I am sorry that I was unable to accept the invitation of the Honorable Nick Joe Rahall, member of the Committee on Public Works, to personally present my comments on HR 1351, the proposed Surface Transportation Act of 1991, before the Subcommittee on Surface Transportation.

Please find attached hereto, however, my brief written comments relating to how I see the proposed bill as it addresses highway transportation needs in West Virginia.

If I can provide further clarification, please let me know.

Sincerely,

Gaston Caperton

PRESENTATION BY THE
HONORABLE GOVERNOR OF WEST VIRGINIA, GASTON CAPERTON
TO THE HONORABLE NORMAN Y. MINETA, CHAIRMAN
SUBCOMMITTEE ON SURFACE TRANSPORTATION
April 18, 1991

Thank you for the opportunity to present the State of West Virginia's concerns with the proposed Surface Transportation Assistance Act of 1991, as well as to address certain highway needs of our State.

Our concerns with the proposed Act include:

1) the extent of the proposed National Highway System (NHS);

2) the apportionment formulas/factors to be employed; and

3) the proposed changes in federal/state matching ratios.

While we support the basic concept of the National Highway System, we contend that it is imperative that the current "illustrative" system in West Virginia be expanded to more closely approximate the 2,200 mile system we submitted. We strongly feel that the Administration's criteria should be expanded to allow mileage for service to the areas of our State involved in energy extraction; not only is the coal that is mined in West Virginia exported to other states, it is also exported to other countries. By improving transportation facilities, the price of energy extraction might be made more competitive in the World Market. By increasing the demand for West Virginia coal, economies of the nation, the State and localities may be improved through fuller employment. In addition to the issue of energy extraction, other areas in which we feel the limited mileage of the "illustrative system" fails to provide adequate access include: areas of West Virginia contiguous to vast national forests and recreation facilities, areas connecting to commercial river valleys, and areas of high growth such as our Eastern Panhandle that is currently growing primarily due to the overflow of urban growth from the Washington, D. C. area.

We are in agreement with AASHTO's response to the 1991 Surface Transportation Act when they stated that "...funding is clearly inadequate to meet our national transportation needs, and what money is there is not fairly distributed."

The proposed Act would apportion Federal Highway Funds to the states based upon motor fuel consumption (70%), area (15%) and highway mileage (15%). These factors are not favorable to rural states with relatively low traffic volumes. Preliminary figures

would indicate that West Virginia, under the Administration's proposal, would become a donor state, contributing to more affluent urban states. It would appear that West Virginia would be actually receiving less money than it pays into the Highway Trust Fund; while taxes collected amount to 0.85% of the Highway Trust Fund, our appropriations would only be 0.77% in 1992 through 1994.

Our contention is that if a more equitable apportionment formula cannot be developed, then some allowance should be made for a rural state, such as West Virginia, that has an extensive state highway system (35,000 miles), very difficult terrain and cyclical weather patterns. Some type of "difficulty factor" should be derived that would allow West Virginia to support our fair share of a national highway system.

Our last major area of concern is with the proposed federal/state matching ratios. While West Virginia presently makes extensive state expenditures beyond that necessary to match federal-aid, we will not be able to shift the necessary amount to the federal-aid program to come up with the significantly increased matching share. In West Virginia, it is quite likely that we would have to forego the use of federal funds in order to have a state funded resurfacing and bridge repair program on those 26,000 miles of road not eligible for federal funding. Given our high fuel tax rate (20.35 cents per gallon), West Virginia simply cannot afford to come up with the $21 million in additional matching funds necessary to obtain a $2 million increase in federal-aid.

In addition to our concerns over the 1991 STAA, West Virginia has certain other highway needs that should be enumerated. The topography and climate of West Virginia is such that highway and bridge construction/preservation is extremely costly. Our mountainous terrain and extensive river system combine to bring costs considerably higher than average; data from previous editions of the Federal Highway Administration's "Highway Statistics" indicate that it costs five (5) times the national average to build a mile of Interstate highway in West Virginia. Other construction costs are comparably higher than average. West Virginia is one of only a few states that do not have county highway departments; in West Virginia almost all highways and roads, other

than some in urban areas, are on the state highway system. Some 72% of the mileage the State is responsible for is off the federal-aid system and money generated from our already high fuel tax (20.35 cents per gallon) has to also be spent on this lower functional system. Unlike other states, funds from property taxes are not available for these local roads in West Virginia.

With completion of the construction of West Virginia's extensive Interstate highway system, our priorities have turned more toward preservation of our highway system in order to protect the tremendous investment that generations of West Virginia citizens have made in their highway system. To maintain and preserve the State's highway system to an acceptable standard is both difficult and expensive.

Second only to the problem of roadway preservation is the problem of bridges. In West Virginia, our bridge "problem" is two-fold. First, we have a large number of major structures that we must construct and maintain; for example, practically all of the structures that span the Ohio River between West Virginia and Ohio are constructed and maintained by the State of West Virginia. Second, West Virginia has a higher than average number of bridges that are inadequate; while 40% of the bridges nationally are considered to be deficient, 59% of West Virginia's are deficient, according to a recent issue of the Highway Users Federation's "At Issue" publication. To replace or extensively renovate the almost 4,000 currently deficient bridges will be an enormous cost, not to mention the additional cost of those bridge that are not yet deficient but shall become so in future years.

An additional area of highway "need" is the completion of the currently authorized Appalachian Development Highway (APD) System in West Virginia, presently estimated to cost in excess of one billion dollars. The completion of the currently authorized APD System will not complete our State's expressway system. Among the remaining needs, without going into specific corridor locations, notable would be the upgrading of the already designated but uncompleted expressways located in two prominent navigable river valleys. Not only do these two needed expressways serve to connect major metropolitan centers in West Virginia, they also pass through two of the most industrially viable areas of our State.

The Division of Highways is presently studying the feasibility of a Statewide network of proposed highways totaling some 775 miles with an estimated total cost of some $5.7 billion. These additional major highway corridor needs might best be classified into broad categories:

Energy Extraction

As previously stated, improved highway transportation would expedite the movement of coal mined in West Virginia. Improved access should result in a more competitive price, which could bring about an improved economy at both the state and local levels by reducing unemployment in the mining industry.

Areas With Already Demonstrated Demand

As mentioned before, the Eastern Panhandle of West Virginia is already experiencing rapid development, brought about primarily by an expansion of the Washington, D. C. area. Improved access in an already rapidly developing area is dependent upon an adequate roadway system.

Industrial/Commercial

The advantages of adequate access to areas of potential industrial and/or commercial development are well known. Without adequate highways, future industrial/commercial expansion will be hampered.

Tourism

West Virginia is blessed with beautiful scenery and abundant recreational opportunities such as snow skiing, whitewater rafting, hunting and fishing, to name only a few. Improved access within our state boundaries and to the large population centers of the Eastern Seaboard are necessary to attract sufficient numbers to make our State's tourism industry viable and usable.

Thank you for the opportunity to present West Virginia's concerns with the Administration's proposed 1991 Surface Transportation Assistance Act and to outline some of West Virginia's highway transportation needs.

Mr. MINETA. Our next witness was to be Congressman Jim Cooper, of the 5th Congressional District of Tennessee. For other reasons, he will not be able to be here. His wife has just entered the hospital to give birth, so unfortunately, Jim can't be here today, but I would like to enter into the record at this point his parpared statement.

[Congressman Cooper's prepared statement follows:]

TESTIMONY OF CONGRESSMAN JIM COOPER

BEFORE THE SUBCOMMITTEE ON SURFACE TRANSPORTATION

APRIL 18, 1991

Mr. Chairman and Members of the Subcommittee, thank you for this opportunity to testify on the important matter of highway safety.

Traffic accidents are the number one killer of Americans ages 1 to 44, and Congress needs to act now to reduce this threat.

I am here to ask you to consider, as you draft the Highway Reauthorization bill, including in it the provisions of my bill, The National Traffic Fatality and Injury Reduction Act of 1991 -- H.R. 1782, which would strongly encourage every state to adopt seat belt and helmet legislation.

According to the Department of Transportation, if all automobile passengers had buckled up and all motorcyclists wore their helmets, more than 12,000 lives would have been saved in 1987, and Americans would have saved $7 billion of the costs of injury.

The case for helmet and seat belt laws is compelling, but unfortunately too many politicians have let themselves be swayed by the few who complain that such laws are somehow "government intrusion" or that they are unnecessary.

These opponents of helmet and seat belt laws are trying to push three myths:

1. The Myth of Traffic Safety

We hear people all the time who incorrectly think flying on an airline is more dangerous than driving. They certainly don't complain when the airlines require them to buckle up.

But airline crashes killed only 389 people in 1989, while vehicular crashes killed 45,000. That's like having three jumbo jets crash every week with no survivors. Put another way, that works out to about 5,000 deaths during the 43 days of the Persian Gulf War, or one every 12 minutes.

And this does not even take into account the injuries. Motor vehicle accidents leave 1.8 million people disabled each year, 140,000 of them permanently. They produce more paraplegics and quadraplegics than all other causes combined.

There can be no doubt that motor vehicle accidents are taking a terrible toll, especially on America's youth.

2. The myth of ineffectiveness

The opponents of the laws will try to cast doubt on how effective helmets and seat belts are. They complain that they're ineffective and unnecessary.

But the facts tell another story. Look at what happened to a few states which repealed motorcycle helmet laws:

In Colorado, fatalities increased 63 percent.

In Rhode Island they increased 50 percent.

In Texas, they were up 70 percent.

And in Kansas, fatalities increased by 63 percent.

It's a grim fact, but in Tennessee in 1989, unbelted automobile crash victims were found dead-on-arrival nine times more often than belted victims.

Again the facts are clear: wearing helmets and seat belts saves lives.

3. The Myth of Government Intrusion

The opponents of these laws will tell you that this is government intrusion into the privacy of their own cars and motorcycles. But when they unnecessarily end up in the hospital because they failed to take simple precautions, they impose on us taxpayers to pay their medical bills.

Traffic accidents are not just deadly, they are also extremely costly. The annual cost of injuries to automobile and motorcycle riders is estimated at $37 billion.

The public pays these bills twice -- through our taxes and through our hospital bills and insurance premiums.

Government programs, especially Medicaid and Medicare, are estimated to directly pay for about one half of all medical costs of traffic injuries.

On top of that, many uninsured victims who are not eligible

for these programs, simply can not pay their bills. Hospitals are then forced to pass on their costs to the rest of us through higher charges. That means not only higher hospital costs but also higher insurance rates for us.

Why should we pay these costs when a simple precaution on the part of the injured could have saved us this money (and saved them from terrible injury)?

Laws Work

Many states have been wise enough to pass laws requiring motorcycle helmet or automobile seat belt use. In these states, 20,000 lives and billions of dollars have already been saved in the last five years. Seat belt and helmet laws cost almost nothing. And they cut our traffic fatality rate sharply without new bureaucracies or unforeseen consequences.

Before the first law passed in 1984, nationwide seat belt use rates were an abysmal 13 percent. With laws on the books in the majority of states, rates rose to a national average of 47 percent at the end of 1988. With further action, we can help the country meet President Bush's goal of 70 percent belt usage by 1992.

And in states with helmet laws, more than 98 percent of riders wear helmets, as opposed to less than 50 percent elsewhere.

Clearly, these laws are effective, but they are not widespread enough -- only 17 states have both laws.

That is why I have introduced the National Traffic Fatality and Injury Reduction Act of 1991.

My bill provides matching grants to states which adopt both laws, to help fund increased safety, education, and enforcement programs.

If a state does not pass both laws in three years, it will be required to expend a small percentage of its highway construction funds for driver safety purposes (1.5 percent in 1994 and 3 percent thereafter). No state would have funds withheld.

This approach reflects a good balance between federal and state interests, and would be cheap, simple, and effective.

The Federal Government has changed public attitudes for the better on many occasions, and we must take the lead again on this matter of public safety, before we end up burying another generation of our young.

Congressman Jim Cooper
National Traffic Fatality and Injury Reduction Act of 1991
H.R. 1782

Summary

1. Safety Incentive Grants:

States are eligible for grants from the Secretary for up to three years. The grants may be used for

* Public education on motorcycle and automobile safety
* Training law enforcement officers
* Monitoring rates of compliance with the laws
* Enforcing the laws

In order to qualify for a grant a state must:

a. In the first year, have laws requiring helmet and seatbelt use.

b. In the second year, have the laws, and achieve compliance of 75% in the use of helmets and 50% in the use of seatbelts.

c. In the third year, have the laws, and achieve compliance of 85% in the use of helmets and 70% in the use of seatbelts.

The total authorized for the grants is $95 million.

2. Further incentives:

If, at the start of any fiscal year, beginning with FY 1995, it was lawful during the previous year in a state to:

* Operate a motorcycle without a helmet, or
* Operate a car without the driver and front seat passengers wearing seat belts,

Then a state must expend a portion of certain of its federal highway construction funds to supplement its safety programs.

The percentage of construction funds that a state shall expend on safety programs is:

a. 1.5% in fiscal year 1995
b. 3.0% thereafter.

Mr. MINETA. At this time, I would like to ask to the witness table, the very able Kenneth M. Mead, the Director of Transportation Issues for the U.S. General Accounting Office. As I understand it, Mr. Mead will be accompanied by Ron Wood, Assistant Director for Highway and Vehicle Safety; Jacquelyn L. Williams-Bridgers, Assistant Director for Surface Transportation Infrastructure.

Mr. Mead, we always appreciate your diligent work at GAO on our behalf. Your full statement will be made a part of the record and you may proceed in your own fashion.

**TESTIMONY OF KENNETH M. MEAD, DIRECTOR OF TRANSPORTATION ISSUES, U.S. GENERAL ACCOUNTING OFFICE, ACCOMPANIED BY RON WOOD, ASSISTANT DIRECTOR FOR HIGHWAY AND VEHICLE SAFETY, AND JACQUELYN L. WILLIAMS-BRIDGERS, ASSISTANT DIRECTOR FOR SURFACE TRANSPORTATION INFRASTRUCTURE**

Mr. MEAD. Thank you, Mr. Chairman. This is Ms. Jacquelyn Williams-Bridgers on my left. She's our Assistant Director for Surface Transportation and Infrastructure. Ron Wood is on my right for Highway Safety.

I appreciate the opportunity to be here today. I will abbreviate the statement greatly. I'll confine my remarks to the highway portion of the program and highway safety. We've already testified on mass transit and if you wish me to amplify on that testimony, I'd be glad to do so.

The Administration proposes reauthorizing highway programs at $89 billion over the next 5 years—$86 billion of that is for highways; $2.3 billion for highway safety. Accounting for inflation, that means highways will grow about 3.8 percent and safety would grow about 14 percent.

Despite this, we estimate, Mr. Chairman, that about $5.1 billion in additional authorizations could be supported using current Administration revenue projections. A related point is that the Administration's proposed 5-year program is about $18 billion higher than the 1987 to 1991 authorization, but more than half of the increases are slated to occur in fiscal years 1995 and 1996.

In 1995, under the Budget Enforcement Act, highway program outlays will have to compete with outlays from all Federal discretionary programs, including defense. Of course we don't know what type of budget agreement will be in force in 1996. We are concerned that backloading the bulk of the proposed increases into the later years raises questions about whether the proposed increases will actually be realized.

The Administration also has proposed a significant reduction in the Federal matching share. This will require the States to pick up an additional 15 percent of the costs on around 700,000 miles of Federal aid roads. If Congress chooses to adopt those reductions, we believe they should be phased-in over time. It's a big hit to take all at once. Thirty-one States are already facing budget deficits; virtually all have raised gasoline taxes over the past decade to meet existing needs and could find it difficult to raise gasoline taxes to meet new requirements. In addition, States already totally finance 78 percent of the highway mileage in this country.

Several observations on the proposed program as it would be restructured. We do support the consolidation of most categorical programs into a two-tiered system. Our work has shown that this allows States to customize their funds to critical needs.

We also think there is promise in allowing transferability between highways and mass transit and vice versa. However, a number of obstacles will have to be overcome for transfeasibility to succed.

First, for example, the ability to implement a multi-model policy is not well-served by DOT's practice of preparing separate needs studies for highways, bridges, mass transit. Second, the preliminary results of an ongoing review we have underway to assess transferability suggests that the choice between the two modes may be very difficult. That's because highways generally focus on accommodating more and more cars where transit focuses more on moving people out cars.

An area of the legislation we believe needs to be strengthened is in the area of preserving the interstate. The Administration proposal recognizes the importance of the interstate preservation and proposes a 90 percent Federal share for interstate preservation activities as compared to a 75 percent share for lane-widening and interstate capacity enhancements. While this is an important step, it may not be enough.

DOT estimates that between 1987 and 2005, up to 50 percent of investment requirements could be for Interstate capacity enhancement. Under the Administration's proposal, the states will continue to have wide latitude in selecting and programming preservation and capacity enhancement projects. In light of competing capacity enhancement and preservation demands, there are no assurances that the approximately $130 billion investment in the Interstate system will be protected.

Another problem we see is while DOT, has responsibility for monitoring state maintenance, it has no standards for what constitutes adequate maintenance. Our work has shown that although 42 percent of the nation's interstates are considered to be in fair or poor condition, all those roads were certified to be adequately maintained.

Let me turn quickly to highway safety. The Administration proposes funding NHTSA's safety programs at $1.6 billion for fiscal years 1992 to 1996. This includes a new safety bonus grant program. We agree with that principle, but we're concerned about how the criteria will be applied to the States in an even-handed way. For example, using fatalities as a criteria for awarding grants may do a disservice to States with many rural roads. Most fatalities occur in rural areas.

On the motor carrier safety program, we are concerned that DOT has imposed additional responsibilities onto the States for fiscal year 1992, while imposing funding reductions in 1992 over fiscal year 1991.

That concludes my summary. We'll be glad to answer any questions, Mr. Chairman.

Mr. MINETA. Thank you very much, Mr. Mead.

Mr. Mead, in your testimony, you indicate support for a multimodal strategy to address surface transportation infrastructure and

congestion needs. Do you have any recommendations for establishing that uniform procedure or criteria in order to create an environment that would support a multimodal strategy?

Mr. MEAD. First, we believe that the Department of Transportation needs to make an effort to intergrate the separate needs studies it prepares for each mode of transportation.

Secondly, the States will need guidance to facilitate making choices between mass transit and highways. Some methodologies already exist, and this transferability has a good chance of success if States are provided guidance drawing on those methodologies for making the choices between transit and highways.

Just to restate what I point out in the testimony, highways does push for the accommodation of more and more cars and transit pushes moving people out of cars.

Mr. MINETA. Under the Administration's proposed level of service, the LOS methodology that they talk about in order to identify deficient bridges eligible for Federal funding, a number of off-system bridges may become ineligible for Federal aid to highway funds. How would the level of service criteria affect the ability of state and local governments to fund their off-system bridge needs?

Ms. WILLIAMS-BRIDGERS. Mr. Chairman, the level of service methodology proposed by the Administration, as you suggest, would effectively eliminate from eligibility about 70,000 off-system bridges. Our approach to applying the level of service methodology would not restrict the States so they would not be able to attend to their local system bridges; rather Federal dollars should first be targeted to those bridges which are serving the national interest—the interstate and the primary system bridges—and also are the most costly to repair.

Mr. MINETA. Thank you.

Mr. Taylor.

Mr TAYLOR. The bridge program has been criticized a good deal for rewarding States which do an inadequate job of maintaining their bridges because funding is allocated on a needs basis. What would be your view of a bridge program that was decoupled from the needs and allocated funds to States based on bridge volume or the BMT?

Ms. WILLIAMS-BRIDGERS. We suggest that any methodology used to assess the deficiency of bridges look first at the load capacity on those bridges. Load capacity by highway system is clearly a better indicator of bridges safety than what is currently used in the sufficiency rating process.

However, you are correct, Mr. Taylor, in that any methodology that uses load capacity does, in effect, provide funding for lack of attention to bridges. The bridge program has been consistently funded fairly low and we don't see much of an increase in bridge funding proposed over time. Possibly what we might want to do is reexamine the total level of funding for the bridge program and allow states some discretion in using Federal aid funding as has been done in the past with interstate bridges.

Mr. MEAD. I might add on the general question of maintenance of bridges, I think there is a parallel problem with bridges that we have pointed out in our testimony on maintenance of the interstate. As we point out in our testimony, one can argue fairly per-

suasively that the current program provides some disincentives to doing regular maintenance because it's not funded at the Federal level. You can make the same analogy to the bridges.

Mr. MINETA. Mr. Roe.

The CHAIRMAN. Yes, Mr. Chairman, thank you.

One thing that's bothering me, and I think you alluded to it a bit. Have we done any look-see into the quantitative costs that would be involved, for example, in implementing the Clean Air Act as it relates to the cost against transportation?

Mr. MEAD. No, we're not aware of any. We know when we were over on the Senate side, the same issue came up.

Ms. WILLIAMS-BRIDGERS. We are, Mr. Roe, in the course of our work looking at the obstacles to transferring highway dollars to transit and transit dollars to highway, and at what incentives currently exist within the Administration's reauthorization proposal and what incentives might be introduced to allow States or to encourage States to address clean air through increased use of transit.

The CHAIRMAN. Well, we passed the Clean Air Act last year and we passed the Americans with Disabilities Act. The point I'm attempting to get to, if we can think about this along the line, is as we continue to pass different additional legislation—I'm not faulting the legislation, I voted for it—that's added costs that are involved to implement the transportation system.

Therefore, when people just take the view that this year the President provided so much, our committee is fighting for more, and the whole bit, that is not the whole story. Effectively, the quantitative dollars that are going out there also have to meet these other needs because we passed that in the law.

I'm simply thinking that it would be very profitable to attempt to quantify that as far as dollars are concerned. So that, in effect, there is lesser funding. I'm not talking about the decision between mass transit and the compliance issue, but there literally is less funding going to be available as we bring into account these two particular needs. Do you follow?

Mr. MEAD. That's a very interesting point. The Administration seems to have had a little difficulty in quantifying how much the Federal Government should contribute to the Clean Air Act and the Disabilities. The mass transit account, I think is $50 million. We don't have the other side of the equation, yet overall, mass transit funding will be declining when you consider inflation factors by about 16 percent.

The CHAIRMAN. Under their proposal?

Mr. MEAD. Yes. So we have half the equation of what the Administration is prepared to pay, but we don't really know the total impact on localities.

The CHAIRMAN. You made a very telling point—if the Chairman will indulge me further—in the attempt to recognize, and we've got to kind of bond that idea and make it stick is what we're talking about when we talk about intermodality. You made that point and you said that under the present system, other administrative changes would have to be made because that is how the present system works—and I'm not faulting it. You have a separate analy-

sis here, and a separate analysis there, and a separate analysis there, and they don't relate, they don't come together.

So when we talk about intermodality, that is an enormous change, in my judgment, in the way the whole transportation system has worked before. Fair play?

Mr. MEAD. Yes, sir.

Ms. WILLIAMS-BRIDGERS. Yes, sir.

The CHAIRMAN. The second point I'm trying to come back with is that as we set new criteria and then decisions are to be made—and we talked about the idea of the flexibility or transferability—we want to be able to give more and more authority back to the States. They are the ones who know best what they want to do with their transportation system and their decision should not be driven by the level of funding that we are providing, nor should it be driven by the level of what the matching formulas will be, because that's going to skew the whole program.

But I think it's terribly important to again reiterate where the Clean Air Act is involved. That is a powerful force as to what States will be able to do. One, to be in compliance with the Clean Air Act; and two is how they would be allocating their funding. So the Clean Air Act is not just another bill passed over here; it is an integral part of the modifications that are going to have to be made to achieve the goals we've set for ourselves. Is that a fair commentary to make?

Mr. MEAD. Yes, sir.

The CHAIRMAN. Thank you, Mr. Chairman.

Mr. MEAD. Just to reinforce the point we're making and to further respond to Chairman Mineta's question about the transferability, a further obstacle may well be the structures of the State and local governments. Currently, most Federal highway dollars go to the State level, while most transit dollars go to the local level. Those two bureaucracies are going to have to get together and perhaps this legislation will provide the impetus for that.

The CHAIRMAN. If the gentleman would yield further, it's not whether the bureaucracy—I don't mean this unkindly—gets together or not, it's what this committee and the Congress is going to tell them we're going to do. I think the point has to be made abundantly clear, at least as far as this person is concerned on this committee, we are not writing a new highway bill. That is not what we are doing. That's got to be made very clear.

We are writing an intermodal transportation legislation for the country and therefore, as we write that legislation—as the Chairman is working on now and his counterparts—we've got to write into that what direction we choose the transportation system and the administration of transportation in the nation to go.

I don't see this as being a patching here and a fixing there and changing a piece of paper there. We've got to establish what we mean by intermodality. You made that point yourself and you're quite right. Out of that will stem—from your testimony and the background information given us—what other things we have to be doing and I would think a lot of that is going to have to be done in legislative writing.

I don't think you can leave that to chance or we'll go ahead and we'll have hearings and we'll talk about regulations because then

you're going to defeat the fundamental purpose of what you mean and how Congress wishes to direct the system where the intermodality issue is involved.

Thank you, Mr. Chairman.

Mr. MINETA. The gentleman from New Hampshire, Mr. Zeliff.

Mr. ZELIFF. I'd just like to ask one quick question. You pointed out the economic effects of reduced funding and the change in the formulas. What kind of data do you have to back that up and maybe you can just expand on that?

I know from New Hampshire's point of view, it's going to be tough. In speaking to our Department of Transportation, there's $26 million in hard match funds versus maybe $6 or $7 million and it's going to be very tough to be able to work within that, but do you have some hard data and facts that you can share with us?

Mr. MEAD. Yes. We could share some data with you in your particular State if you wish, but, in general, what we considered was the general state of the States, if you will, in terms of whether they have a budget deficit or are about to face a budget deficit; conditions of cities, such as the City of Philadelphia—not a paragon of financial health today—the condition of roads and accrued backlog of maintenance needs. The States need to attend to that.

Also, though we have not quantified this, there are any number of other Federal programs that are extemporaneously being transferred to the States, for example, in the health area. As Chairman Roe was pointing out, there are enormous responsibilities being placed on your urban areas in the Clean Air Act and the Disabled Americans Act. The tab will have to be picked up by the localities.

We'd be glad to share any individual data from your State with your office later, if you wish.

Mr. ZELIFF. Okay.

Ms. WILLIAMS-BRIDGERS. We have also examined the anticipated gasoline tax increase that States would have to enact in order to absorb the additional financial responsibility. Looking at data that the Department of Transportation has collected, DOT has indicated that, on average, States would have to raise their gasoline taxes by one penny in order to absorb the additional financial responsibility created by the proposed reduction in the Federal share for 1992.

However, if you look at the proposed authorization levels beyond 1992 through 1996, you will see that some States will have to raise their gasoline taxes considerably up to 7 or 8 cents.

Second, we note that the average calculation of a State's anticipated gasoline tax increase is not really a fair way to evaluate the increased burden on the States. As you are well aware, many States will have to raise their gasoline taxes considerably more in order to absorb the additional responsibility created by any proposed reduction in the Federal share.

Mr. ZELIFF. That's a good point. What about the 2½ cent gas tax that goes into the general revenue, what does that equate to in total dollars?

Mr. MEAD. I would figure for every one cent increase in tax, you're talking in the neighborhood $1.1 to $1.3 billion per year.

The CHAIRMAN. Will the gentleman yield?

Mr. ZELIFF. Yes.

The CHAIRMAN. I think we have to clarify, Ms. Bridgers. We're saying if that is the determination of the State as far as how they intend to raise any other matching funds, it doesn't have to be——

Ms. WILLIAMS-BRIDGERS. That's correct. DOT's data are predicated on raising their gasoline taxes but many States do have alternative revenue sources that they can and do use to dedicate to their highway programs.

The CHAIRMAN. A lot is going to depend upon what this committee and the Congress determines in making more funding available up front which has been the recommendation of this committee. We recommended, I believe it was, a 50 percent increase if we added the nickel on and the nickel had to be used, it couldn't be impounded or all that sort of thing.

That's a terribly important point you're making because the interrelationship in the transportation direction that the States choose to go, and how they raise that funding, we're either going to be transferring the debt back to States—which is an inequity depending upon their usage—and/or moving in the direction where Congress would provide additional funding. It is our judgment that providing the additional funding is going to add materially to how we structure the flexibility issue. Do I make any sense on that?

Ms. WILLIAMS-BRIDGERS. Yes, sir.

The CHAIRMAN. I thank the gentleman for yielding.

Mr. MEAD. Would you like us to get in touch with your office later, Mr. Zeliff.

Mr. ZELIFF. If I could just get your information on the gas tax increases and some of those tables, that would be helpful.

Mr. MEAD. Just to come back to this point though, it is not fair to say that well, it would only take an extra cent on the part of the States and raising the gas tax will cover this match. It's just not reasonable to advance that; it would vary all over the map.

The CHAIRMAN. Would the gentleman yield further?

Mr. ZELIFF. Yes.

The CHAIRMAN. That's another very telling point because—if it happens, depending on what the committee decides, or at least as the Administration has said—as they lower the formula ratios requiring more funding from the States, if that were to prevail and even if Congress moved ahead to provide 40 percent additional money, assuming we could be successful, if those formulas were to remain in focus, as it is written in the Administration's bill, it would further exacerbate the cost to the States.

Ms. WILLIAMS-BRIDGERS. Initially, that's correct.

Thank you.

Mr. MINETA. Mr. Anderson.

Mr. ANDERSON. Thank you, Mr. Chairman.

I don't have a question, but I have a statement that I'd like to make and perhaps Mr. Mead may want to comment after I get through. I'm sorry I couldn't be here earlier, I was at the I&O hearings, but I do want to join you in welcoming our many guests for today's hearings.

Before we get too far along, I wanted to discuss a moment a component of the Administration's surface transportation bill which, frankly, is one of, if not the most, short-sighted and unfair policies I've ever seen submitted to this committee for our approval.

I'm specifically talking about the Administration's blatant bias against urban areas. For example, if we were to pass the Administration's bill as it's been sent to us without any changes, the State of Alaska would receive $440.94 per capita, while my traffic-clogged State of California would receive only $24 per capita. This is outrageous. Another example, the State of North Dakota would receive $149.60 per capita, while the State of New York would receive only $17 per capita.

Mr. Chairman, as you know, I'm one of the roadbuilders' greatest fans, however, in these changing times when we're trying to get more bang for our buck and are under the gun to take people out of their cars, we must draft a more equitable bill so that the areas with the most need receive the greatest share of the funds.

I might add, Mr. Chairman, that the per capita numbers for each State that I just mentioned, are based on the 1990 Census which several experts have recognized was a sham, thus the numbers could be even worse than they already are.

Thank you, Mr. Chairman.

Mr. MINETA. Thank you very much.

Mr. Boehlert.

Mr. BOEHLERT. Thank you, Mr. Chairman.

I would like to say to Mr. Anderson that much of what he says I can identify with because New York does not get treated the way it should and I'm particularly concerned about the inadequacy of the funding for mass transit.

I'd like to revisit the bridge issue, if I may, Mr. Mead. I'm comforted by the fact that over a 5-year period there will be an approximate 15 percent increase in the funds allocated for bridge work. I'm particularly sensitive to this issue because the bridge over the Schoharie Creek happens to be in my district. One day people were driving along the New York State Thruway going from point A to point B only to discover the bridge was no longer there, and tragically we lost a number of lives.

The thing that concerns me most is the arbitrary manner in which the funds are allocated. Am I correct in understanding that there is now a 10 percent cap on the bridge allocation? No one State can receive more than 10 percent of the total funds?

Ms. WILLIAMS-BRIDGERS. I'd have to check that, Mr. Boehlert. I'm not sure.

Mr. BOEHLERT. I think the answer to the question is yes. I try to ask questions that I know the answer to, I just want to get it confirmed.

Ms. WILLIAMS-BRIDGERS. I'll defer to your judgment, sir.

Mr. BOEHLERT. This disturbs me because if we have a formula based on need, it's estimated by experts who are not necessarily New Yorkers like myself, but just concerned about bridge safety across America, that if we had a change in formula and we allocated based upon need, New York might be getting about 19 percent of the total.

I'm not looking to have a disproportionate share of all Federal aid flow to New York, although I wouldn't be adverse to that, but the fact of the matter is when we have a serious problem, as we do, with the bridges of America and when there is clearly identified one State that has an exceptional need and then we have a con-

tinuation of a formula that limits the amount of money that can go to that State, I just think it's wrong.

I would hope that you'd be able to address that now or in maybe some future correspondence you would submit to the committee.

Mr. MEAD. We would do that and I might add that there is some comfort to be taken in the shift from what is now known as the sufficiency rating manner of deciding which bridges are deficient to what's called a level of service methodology.

The level of service methodology—this is proposed in the Administration's package—would distinguish between the deficient bridges much better than we do now in this country. For example, the level of service methodology would take into account extent of usage of bridges, whereas, the current system the methodology uses weights all bridges in the country equally for that purpose.

It also may consider a bridge that's off-system to be deficient because it's not up to interstate design standards, when there is possibly no need for that bridge to be up to interstate design standards. So there is some hope there.

What I heard you saying is that there should be better linkage between the deficiency rate and bridges that appear in rank order on the deficiency rating and the allocation of funds under the bridge formula.

Mr. BOEHLERT. And you endorse that? I've now had an endorsement from you?

The CHAIRMAN. Will the gentleman yield?

Mr. BOEHLERT. I'd be glad to yield, Mr. Chairman.

The CHAIRMAN. In your thought process as we're talking about the interpretation, at least as we look at it, of flexibility and if a State such as New York or kindred State of New Jersey had particular problems in bridges, it would seem to be logical if you had a cap on that, the 10 percent you speak to, one could arithmetically work out how long it would take you to fix those bridges with that level of funding being allocated.

Mr. MEAD. That's right.

The CHAIRMAN. Pardon the reference, if all your bridges were falling down, if you do not get more flexibility in the bridge program which is not necessarily the cap issue you speak to, but it seems to me you'd be able to spend some of your funding where you have emergency needs above and beyond what we're talking about through the method of the flexibility.

Again, that further to me indicates that as we write what our determination would be in flexibility, why should it just be limited to the point of highways and mass transit? If in our State we have a particular problem which is the public safety is involved with the bridges, that decision should not be driven by artificial caps and lack of flexibility to use the New York funds where the New York funds are needed most. Is that reasonable?

Mr. BOEHLERT. Mr. Chairman, you are always reasonable.

The CHAIRMAN. I thank the distinguished gentleman from New York.

Mr. BOEHLERT. If I may go back to Mr. Mead, I do find the same level of comfort you find in the Administration's change that is going to level of service from deficiency methodology. But it's over a level of comfort, I still have some problems.

Right after the tragic collapse of the bridge over the Schoharie Creek, Senator Moynihan and I went to the immediate area to have a hearing. The State Thruway Authority, I think, thought they were providing us with a level of comfort by telling us not to worry because they had inspected all of the 167 or 168 bridges along the New York State Thruway following the collapse of the bridge over the Schoharie Creek, and they found them not deficient, so that was supposed to comfort us.

But my comfort zone was strained when I asked the question if they had used the same criteria to inspect those bridges as they had used to inspect the bridge over the Schoharie Creek which was found to be not deficient and ultimately collapsed, and their answer was yes.

Mr. MEAD. Well, your point is well taken and we'll make certain that we get over to your office some work that we reported on over the last couple of years on the conduct of the bridge inspection program.

Mr. BOEHLERT. Thank you so much, Mr. Mead. I really appreciate what you're doing and the outstanding work that you and your colleagues are making available to us.

Thank you, Mr. Chairman.

Mr. MINETA. Thank you, Mr. Boehlert.

Mr. Lipinski.

Mr. LIPINSKI. Thank you, Mr. Chairman.

I don't really have any questions. I have had the opportunity to hear Mr. Mead and his staff testify at other hearings and I simply want to say that I always enjoy your testimony very much. I think it's very objective and enormously helpful to us serving in Congress. So I want to thank you very much.

Mr. MEAD. I'd like to if I may come back to something that Chairman Roe said.

For the first time in many years, there is more and more talk in the House Public Works and Transportation Committee about the urgency of looking at transportation as a system rather than as, let's favor highways, let's favor rail, let's favor this mode over the other. So much of the discussion, I think has advanced to the point that I think this is the right way to go in addressing our infrastructure needs, and it's very refreshing.

Mr. MINETA. The very distinguished gentleman from Pennsylvania, Mr. Clinger.

Mr. CLINGER. Thank you very much, Mr. Chairman.

Mr. Mead, as always, we are very grateful for your testimony. I think you're endorsing and stressing the idea that we really need to be looking at this thing as a system is the most important element of what we're going to be dealing with here.

I think too often in the past we have tended to look at various modes as discrete, separate pigeon-holed areas without any concept of how they relate one to the other. I think we're now at a level of maturity as a nation that we can no longer afford to do that. We really have to look at this thing in a holistic sense.

I think that's what we're all about and frankly, I think that's what the Administration's policy really stressed was the need to have a systemic approach rather than a sort of separate entity

kind of thing. So I hear you and I think we all agree that's the direction that we're going. Thank you again.

Mr. MINETA. Mr. Geren.

Mr. GEREN. I have no questions.

Mr. MINETA. Congresswoman Norton.

Ms. NORTON. I have no questions.

Mr. MINETA. Mr. Laughlin.

Mr. LAUGHLIN. No questions.

Mr. MINETA. Again, Mr. Mead, thank you very, very much and your team for again your fine report to us and again as has been reiterated by other members of the subcommittee, we do appreciate very much the work that all of you do on our behalf. Thank you very, very much.

Mr. MEAD. Thank you.

[Mr. Mead's prepared statement appears on page 1904.]

Mr. MINETA. Let me also indicate to the witnesses that we go through all your statements and they are made a part of the record. So we'd like to have you keep your comments as short as possible when you're making your presentations.

At this time, I'd like to call forth the Secretary of Transportation of the State of South Dakota, Richard L. Howard. Secretary Howard? Mr. Howard, your statement will be made a part of the record and if you would go ahead and summarize in your own fashion and, in fact, introduce your colleagues as well, please?

**TESTIMONY OF RICHARD L. HOWARD, SECRETARY OF TRANSPORTATION, STATE OF SOUTH DAKOTA, ACCOMPANIED BY DEAN SCOFIELD, DEPUTY SECRETARY, AND JOHN A. DE VIERNO, COUNSEL**

Mr. HOWARD. Thank you, Mr. Chairman, and members of the subcommittee.

I am Dick Howard, Secretary of the Department of Transportation in South Dakota. I'm accompanied today by my Deputy Secretary, Dean Scofield, and legal counsel, John DeVierno.

I appreciate the opportunity to testify today and I would like to note that my prepared statement has been endorsed and concurred in by nine other States. I will summarize my statement this morning.

I understand that the hearing today is intended to focus on the Administration's bill. We have studied it carefully and have concluded that there is a better proposal—in particular, the proposed Transportation Improvement Act of 1991, S. 823, which was introduced two days ago by Senators Baucus and Reid, Senators Pressler and Daschle from my home State of South Dakota, and seven others.

That proposal continues the basic program structure of today but would invigorate it with more funding and far greater transferability between highway categories, and also, Mr. Chairman, more transferability to transit than any other proposal which I'm aware of.

I believe that this transferability would address some of the concerns that Mr. Roe has mentioned in regard to intermodality and

also some of the bridge problems that were discussed earlier today by the Congressman from New York.

Basically, the proposal—which is included in the bill introduced by Senators Baucus and Reid—would continue program categories for Interstate 4-R; for primary, secondary, and urban highways; for bridges; and for hazard elimination and railroad highway crossings. The bill makes these familiar categories work better, however, by providing significantly increased funding and greatly expanded transferability between the distinct categories and to transit.

The bill's apportionment formulas, which are basically the same as the current formulas that have been developed by Congress over time, we believe fairly and adequately distribute the funds back to the States.

The Administration's bill does include a number of good features from the perspective of a rural, smaller population State. In particular, we commend the Administration for including the low population density formula, the land area and public road mile factors in its apportionment scheme for the National Highway System, and for including a one-half of 1 percent minimum apportionment for the urban/rural program.

We feel that these are among the appropriate ways of recognizing in a total transportation program that low population density States cannot be asked to finance construction and upkeep of long stretches of highway which truly serve national needs. We believe this properly reflects that a donor/donee relationship must continue if we are to have a National Highway System which truly serves the national interest.

We are very concerned, however, about some parts of the Administration's bill, specifically the inadequate funding levels, the small size of the proposed National Highway System, the lack of flexibility for States to transfer funds from the National Highway System to other projects, and the increased State matching share.

Just briefly elaborating on the points, first, in regard to the funding level, more money is desperately needed for transportation in all areas of the country. In my home State of South Dakota, we have a backlog of $500 million of needs in highway projects and new needs are accruing each year at a rate of about $140 million per year.

Mr. Chairman, I will not belabor this point today unless you want me to. I understand that this committee is on record as wanting to significantly increase the size of the program. We agree and we urge you to keep working on that.

Another major point I think that we can discuss quickly concerns the proposal to increase the State and local match. I have heard you, Mr. Chairman, out in Phoenix, Arizona, refer to this proposal as giving the States "the shift and the shaft." I rest on that point and trust I don't need to say anything more about matching shares at this time.

Now, turning to the program structure, today's Federal aid highway system consists of only 20 percent of the nation's public road mileage and carries over 80 percent of the total travel. That heavy usage, combined with functional classification of these highways, we feel makes it clear that the entire Federal aid system is nationally significant.

This is an important group of roads and nothing has happened in recent years that tells me that the Federal interest in public roads has become narrower instead of broader. So we need a program structure, we believe, that will make the entire system work well.

The Administration has come up with a proposal which consists of a bridge program and two highway categories. We have thought long and hard as to whether this approach will really allow the nation to do the best job on its highways and have concluded that it will not. Let me explain briefly.

First, this committee has previously received testimony, and we heard some more just a few minutes ago, explaining that our nearly completed interstate highways are deteriorating seriously. Every State in the nation has needs to upgrade and rehabilitate our interstates, which are approaching 30 to 40 years in life.

We also know that additional lanes are needed on many metropolitan interstates but the proposed National Highway System has no clear response to these needs.

Also, today's Federal aid primary system is a group of tremendously important roads. They connect our towns and cities to the interstate system; they provide an economic link for rural and urban areas; yet the proposed National Highway System would include only 40 percent or about 100,000 miles of the existing primary system.

Most of our urban arterials, which are certainly important, are on the primary system and would not be covered under the National Highway System as proposed.

So, Mr. Chairman, we see the Administration's proposed 150,000 mile National Highway System not as a positive new category, but as a device to chop down 60 percent of a very vital existing category. The primary system needs more money and it would not receive it under the two-tier structure as proposed.

Simply, Mr. Chairman, the proposed National Highway System really is a "primary system reduction plan" and that's not what the nation needs at this time.

The proposed urban/rural program would require States to divide funds "equitably" between urban and rural areas. I doubt that there's anyone in this room who knows what that really means or would interpret it the same. We would avoid that problem under our proposal by continuing the urban and secondary systems and allowing transferability. That approach would assure that funding would reach both rural and urban needs.

Municipal and county officials in my State, Mr. Chairman, are deeply concerned that the Administration's proposal does not contain something specific for them in terms of urban and secondary systems.

As to safety construction, my prepared testimony explains that the proposed abolition of safety construction programs in the Administration's bill, combined with vaguely-worded regulatory provisions, could mean too little safety construction, too much regulation of State project selection, or both. We support continuation of the safety construction programs.

Mr. Chairman, these are just some of the deficiencies we see in the two-tier program structure. We think that the more traditional

program structure combined with more flexibility responds more directly to the needs of the transportation system.

Let me emphasize we're talking about flexibility to transfer funds without Federal Highway Administration approval. The Administration's bill, H.R. 1351, is lacking on that score.

In conclusion, Mr. Chairman, we support a larger, more balanced program. However, if the Congress should use H.R. 1351's two-tier structure as a starting point, we strongly support the administration's formulas to distribute the funds back to the individual States and we think that the identified deficiencies could be partially corrected if you would do the following.

One, greatly increase the size of the proposed National Highway System. Two, provide greater transferability from the National Highway System to the urban/rural system and other categories. Make sure that the transferability between categories does not require Federal Highway Administration approval and assure some balance between urban and rural funding and not reduce the Federal share.

Today, by supporting the Transportation Improvement Act, S. 823, we believe we have offered a very serious alternative to H.R. 1351, one which will preserve yet mobilize and customize the entire Federal aid system. The funding comparison attached to my prepared testimony demonstrates that this is a proposal that offers a lot to all regions of the country.

That concludes my testimony, Mr. Chairman. I thank you for the opportunity to testify today and would be happy to answer any questions.

Mr. MINETA. Thank you very much, Mr. Secretary.

Under the proposal for maintaining continuity and balance for the Federal aid highway program, is the State of South Dakota, and the other States who are joining you in this testimony, basically supporting no changes to the existing Federal aid highway program other than providing higher funding levels and increased flexibility for the use of Federal funds?

Mr. HOWARD. Mr. Chairman, we also propose eliminating some minor categories. I believe there are now some 30 individual categories of funding and we propose reducing that down seven major categories. There are some minor modifications, certainly, which could be made in the formulas for apportionment in terms of using, rather than postal miles, maybe public road miles, or some more contemporaneous measure of need.

The basic principle is based on preservation of the existing Federal system through putting major emphasis on rehabilitation, repair and upgrading of the interstate system, which is certainly of the highest Federal interest, and the primary highways, the bridges, and maintaining a funding capability and assurance for the local governments.

Mr. DEVIERNO. Can I elaborate, Mr. Chairman?

In preparing testimony for ten States, we focused on a core group of issues. If what you're asking is, do we think those are the only issues that should be addressed in new legislation, the answer is no. There are a host of other very important issues that this committee has heard about ranging from toll roads, the tremendous

need to increase research on things such as intelligent vehicle highway systems, and other issues.

Through omission, we don't mean to say that those are not important. This testimony focused on a certain core of issues and other issues, we think, can fit together with our positions on that core of issues as well as they could fit together with somebody else's core positions. We're just explaining what we prefer on limited issues.

Mr. MINETA. You're recommending funding for a separate interstate for our program. In order to preserve the Federal investment in the interstate system, should the States be required to expend certain amounts for maintaining the interstate system?

Mr. HOWARD. Certainly, and part of our proposal deals with providing incentives in terms of increased funding for the States based on their level of effort. So I think the program would be set up so that those States who do a better level of maintenance could also enjoy a higher level of funding on that basis, so the burden of maintaining these facilities wouldn't be all placed on Federal aid.

Mr. MINETA. Mr. Zeliff.

Mr. ZELIFF. You oppose, Mr. Secretary, the Administration's proposed National Highway System because it contains too few miles. If the NHS would be expanded to include all primary roads as you suggest, it would double the proposed mileage to some 300,000 miles. Many primary system roads are minor arterial roads serving mostly local traffic.

What would be the justification for placing these roads on a NHS system which is supposed to represent those roads that are nationally significant and carry primarily interstate and interregional traffic?

Mr. HOWARD. I believe in response to that, the current primary system has been developed over the years through the cooperative efforts of the Federal Government, the State Government and local governments and they are identified as those highest priority roads necessary for interstate commerce, moving people from across the individual States.

I recognize that some of those are classified as minor arterials, but certainly all the primaries do serve as arteries to the interstate and are important in our overall economic development and movement of people, goods and products across this country.

Mr. ZELIFF. You can justify all 300,000?

Mr. HOWARD. It would trouble me if the NHS were to be less than 300,000 but I think there are some potential tradeoffs and involved in those tradeoffs certainly are factors such as, first of all, there would need to be a good and equitable funding formula to allocate funds to States, similar to what's proposed by the Administration. There also would need to be greatly increased flexibility in terms of being able to transfer funds from the National Highway System to the urban/rural program.

Each State, I think, should be assured that a minimum percentage of their current interstate and primary systems would be placed on the National Highway System. I note that, in the system proposed by the Federal Highway Administration, currently the percentage of current interstate and primary miles that have been placed on the National Highway System varies from 28 percent as

the low up to as high as 84 percent of interstate and primary highways in other States.

I think that each State should be assured that some fairly high level of their total interstate and primary miles, some level in the neighborhood of 60 percent, would be placed on the system.

Number four, certainly there should not be an increased match requirement for the National Highway System.

Mr. ZELIFF. Thank you, Mr. Chairman.

Mr. MINETA. Mr. Geren.

Mr. GEREN. No questions, Mr. Chairman.

The CHAIRMAN. First of all, I applaud your testimony and you make reference of speaking, of course, for—not directly but indirectly—half a dozen other States you've been working with, which is good. But, you know, I'm puzzled at your approach in the respect, but I understand where you're coming from, I think.

If we increase the miles in the highways of national significance, if we were to increase that recommendation from 150,000 to 300,000 miles, obviously we are doubling what the Administration is recommending.

That also would mean that is a priority issue. It's very important to understand this. If that is a priority issue as far as the National Transportation System is concerned, because there are highways of national significance, therefore, they get, in effect, the imprimatur of the Federal Government saying these are the key roads we need for defense and so forth and so on.

A much larger proportionate share of the extremely limited funds is going to be allocated to that purpose, something like in the order of magnitude of 65 percent of the funding that they are talking about. Are you with me?

Mr. HOWARD. Yes.

The CHAIRMAN. Which is going to materially shrink the other fundings that we need in the other categories that you speak to, okay? For example, in my State of New Jersey—would you believe this—they declared the New Jersey Turnpike, a major route north/south of the State of New Jersey, and the Garden State Parkway—both toll roads—are considered to be highways of national significance. Well, that's okay if we can get the same kind of funding that they are going to be giving to South Dakota or the other States. That's only fair. That's only equitable.

We're paying for those highways and our people are being taxed on a daily basis to do that—and I don't mean this to be quarrelsome in any respect. I think that's also true in Pennsylvania where States have used imagination and their own methodologies and they developed their own highway system and the people are paying for it.

Where I'm trying to come from, you made the point of equitability and what disappoints me a little bit is that you seem to center on the old highway system. We're not looking for that. Should you not have the right, if you need an access to a regional airport in your State, to be able to include that as part of your program? If you have a port in your area, and I'm thinking a major port which is a major problem in California right now—that's the Alameda corridor issue, three railroads and 123 grade crossings.

Now it's almost impossible to get that freight out of there on a timely basis and the intermodality issue we are speaking to.

You speak of transferability in your area, which I happen to subscribe to, by the way. By the same token, there are different problems in other regions of the country that we have to look to particularly when you speak of the intermodality issue.

One of our members testified out in St. Louis and made a very telling point, in fact, two of them did. If we were fortunate to be born or have our State along the coast where we have harbors; if we were fortunate to be along the Mississippi or the water resources where we have a natural geographical issue—you know, the water resources—or if we had our railroads that were built in the 1800s in our particular area, we are connected to an intermodal system at least in part and somebody a long time ago and God provided those resources for us.

The converse to that point—and this was the key point—is the other States who do not have ports, who do not have inland waterways, who do not have the highways, industry passes them by because we don't take into consideration the economic necessity of building transportation systems in the areas that don't have those natural assets. Do you understand what I'm trying to say?

Mr. HOWARD. Yes, sir.

The CHAIRMAN. So, it seems to me that I would hope we would raise our horizons in your respective States—and I'm not faulting a number of things that you said—but look to the intermodality, how do you build South Dakota, how do you provide the economic base and the jobs that are going to be needed in South Dakota if you don't have the intermodality and the flexibility we're speaking to? Do I make any sense to you?

Mr. HOWARD. Yes. In response to that, Mr. Roe, what is proposed in terms of the transferability is that 30 percent of the funds in any of the highway categories could be transferred to any other category. Thirty percent of the urban system funds could be transferred directly to transit and then an additional 20 percent of any category could go to transit or other uses.

The CHAIRMAN. You made the point earlier, that there shouldn't be any direction really from Washington on transferability. It seems to me if I were a commissioner in my State, why shouldn't I have the right to use my State's money the way I choose to use if I need it in that direction?

That's an interesting point. If the States have to pay more funding under the Administration's proposal, which I do not agree with, then we're putting more money in and yet Washington is telling us what we should or shouldn't do as far as our need of transportation is concerned because it's not a decision the people are making, it's being driven by an artificial formula. Do I make any sense on that? That's my concern.

One other point, Mr. Chairman, if I may. I happen to think you're hitting another important point, however. When you come back and say, let's take a serious look at these formulas, let's not be too quick to throw them out—the old formulas; I'm thinking about the split between urban and rural that you spoke to. Just because somebody wants to tidy up the chairs on the Titanic, it took years and years and years and years and years to develop the rea-

sonability where rural and urban was involved. I don't think we should just throw it out the window because somebody wants to tidy up the paperwork, at least from my point of view.

Thank you, Mr. Chairman, for indulging me.

Mr. MINETA. Thank you, Mr. Chairman.

Mr. Geren.

Mr. GEREN. I have no questions.

The CHAIRMAN. Mr. Secretary, go ahead.

Mr. HOWARD. Could we elaborate on one point?

Mr. MINETA. Absolutely.

Mr. DEVIERNO. Mr. Roe, in response to some of your points, I would like to make both a general and a technical comment. As I understood what you said, you were distinguishing in transferring money to different highway categories and you were wondering to what extent the proposal that the Secretary is advancing here this morning allows him to reach to certain intermodal connections.

I think there are two answers, one which probably would be contained within the four corners of the proposal and another which I think thematically we would support that would be an easy change. It depends on whether the highways or systems within, say a port area or a river area, already happen to overlap with the Federal and highway system. I suspect that the key roads in those areas are on designated systems in most cases and need to be upgraded and could under the proposal.

But in the case where they are not on the system, I think that—just speaking for myself—the kind of flexibility that the people we have worked with have supported indicates that they would be willing to work in additional transferability to off-system roads provided they are just not minor. So I think in that sense, within this context rather than the Administration's context, we can get at that problem.

I appreciate what I think you're saying about flexibility and I just want to say I don't think there's any thematic resistance to that here.

The CHAIRMAN. Maybe I'm not being clear then. Don't misunderstand me, I think the Secretary and his colleagues have done a splendid job because you have raised the level of the issues. I think that's why we're here; that's what testimony is about and I think you've done a wonderful job.

Let me point something out to you. That's not what I'm saying. I'm saying two things. Who decides the quantitative number of miles and determines what would be the highways of national significance? The good Secretary in his testimony said that in his judgment, which I respect, it shouldn't really be 150,000, it should be around 300,000 miles.

Now, logic has to prevail at that time, and I think it's fair play, that where you have the western and the far western States, you're going to have more miles. The Secretary spoke to that issue. Should South Dakota be penalized because we've got major highways going through South Dakota that were built to accommodate a national system?

By the same token, should the States that have lesser miles, but 10,000 times more people be also penalized simply because they happen to fall in that category as the States of New York, Califor-

nia or a high density State such as Pennsylvania or New Jersey. So this committee has to struggle with that.

What I'm trying to say to you to carry back, not in debate, but the qualitative miles that's decided upon under the present posture of the legislation as presented by the Administration is going to siphon off considerable flexibility and funding because you're going to be mandating in effect this national system and that means there is going to be considerably lesser funding to do all these other things we're talking about—the bridges, the urban, the rural and everything else.

That is the reason why the committee is coming back and saying to South Dakota and their brothers and sisters, the money isn't going to be there unless we do what we have to do.

Let me talk to you about intermodality so we understand where we're coming from. Isn't it crazy in my great State of New Jersey they have designated the turnpike, a toll road, to be one of the major north/south routes. We just built a new airport, a fine airport, the Newark Airport, three great pods, it's one of the fastest growing airports in the country—I think it's the second.

Across that very same highway, we have the containerized shipping port of Port Elizabeth, one of the biggest in the country. We can't get to them because in the transportation system, they didn't deal with the system, so for us to be able to get from that airport to bring freight to that airport, to bring it to just a quarter of a mile across that same turnpike, we've got to go through 30 cities because nobody planned on the intermodality. That is the point I'm trying to get across to you.

I want to add one more codicil to that. The capability of your flexibility and how you determine in your State to use that intermodality is going to determine the economic dynamics of your State because then you would plan in kind in a transportation system rather than the debate of whether to provide more highway money. That's the point I wanted to make.

Mr. HOWARD. Thank you. I agree that the States could do that. Thank you, Mr. Chairman.

Mr. MINETA. Again, Mr. Secretary, thank you very, very much.

[Mr. Howard's prepared statement appears on page 1733.]

Mr. MINETA. I would now like to call forward a panel made up of a couple of organizations with which I had a prior connection—the U.S. Conference of Mayors, The Honorable Peggy Rubach, Mayor of Mesa, Arizona, the Chair of the Transportation and Communications Committee; The Honorable James T. Beall, Council Member, City of San Jose, California and Chairman of the Transportation and Communications Policy Committee for the National League of Cities; and The Honorable Charles L. Waddell, State Senator from the Commonwealth of Virginia, and the Vice Chair of the Transportation Committee of the National Conference of State Legislators.

Mr. Chairman, while everyone's coming to the table, let me just indicate to you that time has a way of moving forward and I can recall when as Mayor of San Jose, I appointed Jim Beall to our Youth Commission. A few years have gone by and State Senator Waddell is probably one of the first people I ever met when I came to Washington, D.C. as a new member of Congress because at that

point Senator Waddell was working, prior to his retirement from his long service with American Airlines, at Dulles International Airport.

I feel I have, not two old friends before me, but friends of long-standing as well as Mayor Rubach from the great city of Mesa, Arizona.

The CHAIRMAN. Will the gentleman yield?

Mr. MINETA. Absolutely.

The CHAIRMAN. You know, your cordiality always highly impresses me as you speak for our very important guests, but if I may say to the good folks that are on this panel, this Mayor from San Jose thought much, much further ahead if you notice in the idea of setting up a youth committee and I hope we can add that to the transportation because you're going to need it.

Mr. MINETA. Mayor Rubach, your testimony will be made a part of the record and if you would summarize and proceed in your own fashion.

**TESTIMONY OF HON. PEGGY RUBACH, MAYOR, MESA, AZ, AND CHAIRMAN, TRANSPORTATION AND COMMUNICATIONS COMMITTEE, U.S. CONFERENCE OF MAYORS; HON. JAMES T. BEALL, COUNCIL MEMBER, SAN JOSE, CA, AND CHAIRMAN, TRANSPORTATION AND COMMUNICATIONS POLICY COMMITTEE, NATIONAL LEAGUE OF CITIES; HON. CHARLES L. WADDELL, SENATOR, COMMONWEALTH OF VIRGINIA, AND VICE CHAIRMAN, TRANSPORTATION COMMITTEE, NATIONAL CONFRERENCE OF STATE LEGISLATURES**

Ms. RUBACH. Thank you, Mr. Chairman and Chairman Roe.

We really appreciate the opportunity to be here today. In the interest of time, which is fleeting not only for Youth Committee members, but this morning looking at the rest of the people giving you valuable testimony, I will depart from my prepared remarks which are already a part of the record and request that I be allowed to submit one deletion by our omission, additional resolution that was adopted in 1986 and has yet to be addressed by the Congress which related to the Catch-22 of transit past subsidization versus free parking and all of those issues that are there. If I might submit that as an addition to the record, along with my prepared statement. I would appreciate that.

Mr. MINETA. Without objection, so ordered.

Ms. RUBACH. Chairman Roe has, in his questioning, stolen most of my speech anyway, but we are talking about a vision for the future here and I think that it is critical that we not get bogged down in some of the mistakes of past.

The system presently, as I see it, is broken and you have the opportunity to fix it. You have the opportunity to tie together those intermodalities to do away with many of the bad examples that have been referred to today where the system didn't work.

The way that you do that is by creating a framework for local and State decision-makers to use the limited dollars. I would love to get additional funding. I think transportation is a vital link to our future. However, if those funds aren't there, at least untie our hands and let them use it to the best effect, for two reasons—for

the economic development, moving goods and services, or moving people.

I cannot stress too much to you the tie-in to the Clean Air Act that you, as members of the committee, and to a certain extent I feel I'm preaching to the choir here because I know that you had an integral part in creating that.

Let me just back up a second and tell you how many hats I'm wearing today. I'm the Mayor of a suburban city of 300,000 in a metropolitan area of 2 million, Phoenix, Arizona, that is in one of your clean air hit areas; a major metropolitan area as many across this country that are going to be bearing the additional costs without a great deal of assistance and yet in rhetoric, in both the Clean Air Act authorizations and the proposed transportation authorizations, you're forcing a link here without giving us the tools to make sure that link happens. Flexibility is absolutely critical.

Yesterday, in some roundtable testimony before the Senate, the Santa Clara area spoke to the fact that the courts have placed sanctions on the use of highway dollars as a result of Clean Air Act nonattainment. Now, that's a real Catch-22 for an area that's not moving people, their air is dirty—and I'm not singling out Santa Clara, you can find your own example all across the country—and you're going to have 70 percent or more of the funding in highways that can't be built sitting out there in a pot as the streets get more and more crowded, as goods and services don't move, and nobody is achieving the national goal.

You have the opportunity to articulate that goal, give us—dangle the carrot of funding, so to speak—in a new partnership where State and local officials are at the table. Right now, local officials in everything I've heard this morning, I believe, given the past history of many of you sitting at the table that sat in local seats before you came here, are implicit in the process. They are there in the planning, but we are not, in present legislation, at the funding table.

If we're not there, then we've got a real problem because the urban/suburban, the rural versus urban, and all of those issues when you have limited dollars, if you don't create a process that includes, not only in the planning but in the funding side, the actual players—and in the case of Phoenix, in the case of San Jose, the local money for transportation is a very increasing share, the self-help, half cent sales tax initiatives and all of those are creating a network in the Phoenix area.

Because we weren't there years ago when the Federal money was available, we're now doing a couple hundred miles of road with local dollars. I'm not faulting that. I think the decision-making process for where those roads go, how they go, belongs at the lowest possible level to get the most value for the dollar spent, whether it be local, State, or Federal, but I don't see that partnership coming about unless you, as a Congress, write it in and don't think that it's going to happen.

We have a fairly good working relationship in Arizona with our Department of Transportation. It's a good partnership, but that isn't true all across the country and I think that the structure you have in the forcing of intermodal choices, in perhaps going to a performance standard—clean air attainment, moving people,

moving goods and services—and then backing off and saying, okay local people, figure out how best to use these limited dollars.

I think that would be the best melding and I don't care if there's 150,000, 300,000, 450,000 miles of whatever you want to call it, if you're not moving people—in our urban areas the congestion is going to kill us and kill our economic ability to compete on a national level unless you create that vision and allow the local people to be at the table.

A couple more Catch-22s, just quickly. To tie funding as you go through these—and I'm not saying throw out the baby with the bath water on all formulas because I don't purport to have a substitute here. Especially for nonattainment in clean air areas, if you tie funding to gas consumption where we're under a clean air mandate to decrease gas consumption, it's one of those Catch-22s and I think that you should seriously look at that.

Most of the rest of the testimony that we have, you have heard and you will hear from other speakers, so I would leave you with the idea that we want to be partners with you. The local governments feel that moving this country forward in the next 30 years is the responsibility of this committee to come up with a visionary plan and not one that necessarily harkens back to what worked 30 years ago, and may not work in the future. So be visionary.

Thank you very much for the opportunity.

Mr. MINETA. Thank you very much, Mayor Rubach.

Let me have the panel continue in their testimony and Mr. Beall, your statement on behalf of the National League of Cities will be made a part of the record.

Mr. BEALL. Thank you very much, Mr. Mayor. I'll call you Mr. Mayor because that's what I'm used to calling you. You call me, Mr. Youth Commissioner, if you like. Every time I come to the committee, I'm pointed out as being a Youth Commissioner, but I'd like to point out to the committee that I've been on the San Jose City Council for ten and a half years and enjoy my work as a Council Member and as Chair of the National League of Cities' Transportation Committee.

So representing the cities here today on transportation issues, I'd like to echo the statement regarding a need in the legislation which is not present at the present time in the Administration's proposal for a partnership with local government. There is no proposal in the legislation that deals specifically with local government in terms of a partnership. We believe that should be a part of the Federal commitment to leveraging their dollars, to make their dollars used more effectively.

We believe that the Administration's proposal that has been presented in a policy fashion really indicates the importance of investing in the urban and suburban areas. We think that the infrastructure is at a point in many communities that threatens our economic future. The congested roads, aging transit systems, and deteriorating bridges have been documented quite succinctly by the Department of Transportation. It acknowledges that our needs are great and the Federal resources are limited. However, we believe that much can and should be done at the national level to meet the current and future needs.

Local government officials believe that the Federal Government needs to play a substantial role in maintaining and improving urban mobility. Cities and towns are the key to our economic future. The National League of Cities endorses a separate, flexible urban/suburban program targeted at strengthening our cities' functions at economic centers, moving people to and from their jobs and other activities, and moving goods to their intended destination in our urban areas.

An urban/suburban program should deliver the Federal funds directly metropolitan areas with local responsibility for selecting and programming projects. Local officials are most familiar with and committed to local needs and they should be responsible for decision-making on local projects.

Funding directed to local or regional bodies brings transportation communities together to develop and agree upon priorities, plans, work programs, and improving schedules. The cities have improved more and more financial responsibility and funding transportation programs as the Federal support has declined.

The San Jose area voters, for example, have approved our half cent sales tax for needed highway improvements. Local government now funds 75 percent of all highway construction in our county. In California, 18 counties have approved half cent sales taxes generating $20 billion—that's billion, not million—for transportation. Local financial support must be accompanied by increased local decision-making over the expenditure of Federal funds.

In turn, the city must seek and encourage innovative solutions with transportation programs that further stretch local, State and Federal dollars. Federal funds under a new urban/suburban program should be flexible for use on highway or public transportation programs that meet a regional mobility need.

The Federal matching ratio should be the same across modes of transportation so that planning decisions can be based on the best option for meeting local transportation needs.

We also seek a separate, flexible rural program to meet the needs of smaller communities. The Administration proposal would pit urban/suburban centers against rural areas within a State. We believe that large and small communities have really different needs and spending decisions are based on different criteria in those areas. Urban, suburban and rural spending and program decisions should be treated separately and funded at appropriate levels.

Local officials support Federal funding for the preservation and maintenance of the interstate system. We do not support the National Highway System outlined in the Department of Transportation proposal. We are concerned that the NHS envisioned by the Administration would absorb the bulk of Federal transportation funds. This may not be the best use of limited transportation resources.

We believe that the NHS proposal will not result in congestion relief in cities since the proposal does not consider the best way to address mobility needs in a particular quarter and makes no effort to tie the highway projects in with other transportation modes.

Further, local governments have played a minor, if any, role at all in the planning of the system. Local officials strongly oppose the Administration's proposal to end Federal funding for public transportation and we believe that the Administration is going in the wrong direction in reducing Federal support for public transportation.

Compliance with our Clean Air Act and the recent passage of the American Disabilities Act will most definitely increase local responsibilities for transit expenditures. While commendable goals, local government cannot replace the shrinking Federal dollars and meet new financial responsibilities imposed by the Federal Government. In fact, it may result in a significant net loss of revenue for urban/suburban areas.

We believe that the Federal support for public transportation should be enhanced rather than diminished. Funds should be flexible for both ways, from highway to public transportation programs and from transit to highways.

Further, we urge your support for correcting inequity in the Federal tax laws which favor employer-provided parking benefits over employer-provided public transportation.

Local officials are also particularly pleased with the provision in the Administration proposal on billboard reform. We believe that the Highway Beautification Act should be amended to prohibit new billboard construction on federally-aided highways, prohibit tree-cutting on public right-of-ways for the purpose of improved billboard visibility, and restore the rights of cities and States to amortize billboards.

Mr. Chairman, members of the committee, we greatly appreciate your leadership on these issues and look forward to working with you to pass a surface transportation measure before the September 30th deadline. You've always been strong supporters of the needs of local government and we urge you to continue that support in your deliberations on this bill.

Thank you very much.

Mr. MINETA. Thank you very much, Mr. Beall.

State Senator Waddell, it's good to have you with us. As I recall, are you not also Chair of the Transportation Committee for the State Senate for the Commonwealth of Virginia?

Senator WADDELL. Yes, Mr. Chairman, right.

Mr. MINETA. Thank you very much. If you would go ahead and proceed, Senator Waddell.

Senator WADDELL. Mr. Chairman, members of the subcommittee, distinguished panel guests, in the General Assembly of Virginia, Mr. Chairman, when you have a very popular subcommittee, sometimes the big Chairman comes to sit on that subcommittee and I noticed you have Mr. Roe from New Jersey here and we're delighted. I think that points up the importance of this committee and also the popularity of this committee at this particular time.

Mr. Chairman, members of the subcommittee, I am State Senator Charles Waddell and I chair the Virginia Senate Transportation Committee. I appreciate this opportunity to represent the National Conference of State Legislatures and the Virginia Assembly on the reauthorization of Federal aid and highway and mass transit programs.

The State/Federal partnership which as successfully managed the creation, construction and soon to be completion of a national interstate system provides an excellent opportunity and an excellent foundation for the next era in the Federal aid program. However, this foundation has developed some structurally unsound piling.

In the budget Congress approved last year, the long-standing commitment to dedicate highway user fees to highways was breached. Spending caps were established which arbitrarily limit transportation spending and now there are proposals surfacing to impose yet another Federal fuel tax increase without remedying existing diversions and withholdings of transportation revenue.

I hope that my statement thus far constitutes, as you've said, Madam Mayor, preaching to the choir. We applaud the Public Works and Transportation Committee's efforts to secure higher obligation ceilings and reclaim transportation user fees for surface transportation programs.

Also, comments made by members of the committee expressing concern over the ability of States to take on more of the financial burden did not go unnoticed. I would like to include for the record a NCSL State Budget Update which provides a rather austere budget picture.

While the Federal Government can count on approximately $1 billion in revenue to be generated from every penny increase, there is a great deal of variance at the State level. For example, in Virginia, we estimate each penny generates $34.9 million, whereas California gets $130 million for each penny increase. The State of New Jersey can generate about the same revenue as Virginia, but does so with a tax of 10.5 cents. That is less than two-thirds the level of Virginia's 17.7 cents.

To further highlight this variance, a look at Nebraska's motor fuel tax shows the highest tax in the nation at 26.4 cents. Yet the State only generates $7.7 million per penny to raise one-quarter of the revenue Virginia collected in the same year, fiscal year 1990.

While NCL supports the rationalization of Federal/State matching ratios, clearly all taxes are not created equal. The ability of each State to generate funds to match Federal dollars should be closely examined in undertaking any restructuring of the Federal matching requirements.

As a means of maximizing the spending power of limited funds, NCSL supports streamlining and consolidating many of the existing highway funding categories. Specifically, this support envisions consolidating categories according to a similar function or service in providing State programming flexibility.

Proposals to create a consolidated program for a national highway system as well as focus attention on regional mobility concerns reflect this philosophy. In the spirit of a State/Federal partnership, NCSL supports the elimination of all Federal sanctions used to enforce Federal standards, particularly in operator specific areas.

The Federal Highway Safety Program in particular should foster comprehensive safety programs at the State level through the use of incentive grants. Incentive grants do work if the compliance criteria is realistically devised.

On motor carrier preemptions, the Administration's reauthorization proposal, as well as at least four other legislative proposals, seeks to preempt State authority over interstate motor carrier regulation, registration, taxation and judicial process. NCSL opposes and foresees these efforts as unacceptable intrusions into State revenue-raising authority, police powers and administrative procedures.

States have an obligation to insure that all users of State transportation networks pay an equitable share of the cost of using the system. The State efforts to attempt to balance these contributions would be severely undermined by Federal preemption into selected areas for selected users.

State prerogatives to enact and enforce laws to insure the safety of the motoring public must be protected. This is of critical concern in the area of State motor carrier regulation. I would encourage this subcommittee to forego addressing the litany of motor carrier regulatory issues as a part of this reauthorization package.

In the area of transit, States are making every effort to support increasing demands. In 1988, State operating assistance represented the third largest aggregate source of transit income. The Commonwealth of Virginia has contributed approximately $350 million to meet transit needs, excluding the State contribution to Metro which serves this metropolitan area.

In view of the increased costs the Federal requirements impose on transit services, the Federal Government's contribution should be reevaluated. While NCSL's position has been to support the highest funding level for reauthorization which can be supported by transportation user fees, we have not settled on any arbitrary amount. We do, however, assume that all transportation taxes and fees should be made available for transportation expenditures.

Preliminary House Budget Committee reports of a mere $1 billion increase of the transportation functions are clearly inadequate and unacceptable. At the end of 1991, approximately $11 billion in State apportionment will remain unused due to the obligation ceilings imposed by the Congress. In short, the financing decisions made by Congress to increase or divert Federal fuel taxes have a disparate impact on State efforts to recoup these losses.

In 1986, the Commonwealth of Virginia adopted a $10 billion, 12-year transportation program to be supported through the creation of a multimodal transportation trust fund. This long-range plan, however, was predicated on a continuous, predictable Federal contribution. Virginia needs at least $400 million per year in Federal assistance just for the existing interstate system.

Our population has grown some 14 percent in the past decade, but travel has doubled during the same period. Those of you with homes in northern Virginia may know that a $7.3 billion shortfall in meeting priority transportation needs is predicated in the years prior to the year 2010.

Although the Federal contribution to the nation's transportation system has been steadily declining, there has been no reduction in Federal strength. At this time, States operate under threat of losing vital Federal aid highway dollars if not in compliance with at least 15 mandates, some of which relate to the highway program.

I strongly urge this subcommittee to resist the temptation to dictate State legislative behavior through the use of sanctions. A much more palatable approach which was included in last year's transportation appropriations legislation provides for a State to opt for a State approach in lieu of federally-mandated license revocation procedures, a rather appealing exercise in a participatory democracy.

In closing, if the goal embodied in a new and improved national transportation program is to efficiently move people and goods in an integrated manner, we have an obligation to insure that there are no weak links in the system. In restructuring the Federal aid highway and mass transit programs, clear national goals should be established which are supported by both the public and the private sectors. In this way, we all work with the same blueprint.

In general, the States are concerned that the following premises underlay the reauthorization package: one, maximize expenditure of trust fund monies by increasing obligation ceilings and dedicating all user fees to appropriate trust funds; two, focus Federal spending in areas of national significance as determined in collaboration with the States; three, insure that States receive a fair return relative to their contributions to the trust fund; four, provide greater flexibility to States in planning and programming, both between and within funding categories; five, eliminate the Federal aid highway funding sanctions; six, remove Federal restrictions which limit States in their ability to develop innovative financing.

I am including for the record a copy of the NCSL transportation policies which provide additional direction and recommendation on highway safety and mass transit programs. I'm also including the Commonwealth policy goals developed by Virginia.

Again, I have appreciated the opportunity to share with you the views and concerns of the nation's legislatures. I look forward to working with you on the programs that will not only address mobility needs but complement our national, social, economic and environmental goals as well.

I thank you, Mr. Chairman and members of the committee, for your kind attention.

Mr. MINETA. Thank you very much, Senator Waddell.

Mayor Rubach on page seven of your testimony, you talk about the Administration's proposal relegating local decisionmakers to the planning table giving us no role at all at the funding table. In terms of COGs, metropolitan regional planning organizations and councils of governments, do those agencies locally constituted become that kind of a planning function where you are talking about both dollars as well as transportation planning?

Mayor RUBACH. Mr. Chairman, as Chairman of one of those COGs, the Maricopa Association of Governments, we serve in partnership with our State Department of Transportation in a number of different areas. The transportation side is that we set priorities and make recommendations that become part of their 5-year capital improvement plan, so technically they are the funding, we are the planning side.

It has caused a little bit of consternation over the years and as there's become an increasing local share of dollars, in our case,

Maricopa County, like San Jose, has a half cent sales tax, a concern that the State was dictating to the local area. I think that some sort of way of either having a population adjustment in the decisionmaking process or some sort of super majority in order to achieve certain goals might be a way to structure that.

I do believe that the regional COGs, as part of the clean air, as part of the major source or the major focus of congestion problems, have a responsibility at both the planning and funding table. In fact, under the Clean Air Act, we are the ones locally with the responsibility, not the State, for nonattainment.

So if we are going to tie the two programs together, it's important that you structure and encourage the regional COGs to become important players at that decisionmaking table.

Mr. MINETA. Well, I think that's part of our intent, but the question is, how do you get that template, let's say, in the Phoenix area as compared to Salt Lake City, San Jose or to northern Virginia, New York, or wherever? It seems to me that what we, as well as the Administration, are talking about is flexibility and we're saying yes, that ought to be done at an MPO/COG level and I would think that transportation planning and transportation funding come together at that point.

Mayor RUBACH. Yes.

Mr. MINETA. You're saying that it's not a level playing field when you're negotiating with the State?

Mayor RUBACH. Our State, as in many States, has competing priorities, rural versus urban. We are somewhat unique in that most of the population in Arizona is clustered in the Phoenix metropolitan area. However, the partnership would work a little bit better if we knew we were at the table on the funding side. I think that's probably true nationwide.

Mr. Chairman, can I take this opportunity to hit one of the other Catch-22s that I think metropolitan areas and certainly the Conference of Mayors has concern about? In the address that you give to what gets included or not included in the reauthorization bill, I'd like to echo the National League of Cities' commitment to the billboard reform. That is a part of our policy; I think it does belong in there.

Many of our local jurisdictions have addressed this issue and to have you absent on many thousands of miles of roads on this issue would probably not be visionary for the future either.

The other Catch-22 that we've got is the funding as currently proposed is still tied to lane miles rather than passenger miles and once again we are reinforcing what we don't want as behavior in the long term. We are not moving people, we're moving vehicles again. That sways towards the highway and really speaks against mobility needs in metropolitan areas.

Mr. MINETA. Let me ask, Mr. Beall, as you stated in your testimony, the Administration bill restores to cities and States the right to amortize billboards. There is nothing in the Administration bill, however, that requires that cities or States use amortization.

Do you and the other members of the panel believe that your cities or, in the case of Senator Waddell, State, would exercise this kind of a restored right?

Mr. BEALL. I think a lot of rights of the cities in that regard have been clarified recently by the Federal courts in the Raleigh case recently handed down last week. We do have the right to amortize the billboards and that has been clarified in Federal courts as of last week.

Mr. MINETA. In what case?

Mr. BEALL. Raleigh, North Carolina.

Mayor RUBACH. Major Media's the Southeast v. The City of Raleigh.

Mr. BEALL. So we're going to be looking at that for direction in terms of that issue to clarify the issue.

Mr. MINETA. Senator Waddell, do you have a particular percentage in mind when you testify with regard to the allocation of highway funds that States should receive "a fair return relative to their contributions to the trust funds"? As you're well aware, the current minimum allocation is 85 percent.

Senator WADDELL. Well, as I pointed out, Mr. Chairman, the long-term commitment Virginia made in 1986 with a $10 billion program over the next 12 years, an integral part of that was expecting $400 million from the Federal Government each year as a part of that.

Mr. MINETA. Mr. Hammerschmidt.

Mr. HAMMERSCHMIDT. I have no questions.

Mr. MINETA. Mr. Anderson.

Mr. ANDERSON. Yes. Thank you, Mr. Chairman.

I have a question for Councilman Beall. Jim, as you well know, the ramification of the conformity issue of the Clean Air Act are, in my opinion, just starting to be realized by many State transportation officials throughout the nation. I know our Chairman, Mr. Mineta, is very familiar with the situation that you in the City of San Jose, have faced in recent months in trying get the Guadalupe corridor open.

Could you please take a moment and explain the situation again so that all of our members may have the benefit of your views on this matter, specifically, how has the conformity provision of the Clean Air Act already impacted one of California's most important improvement projects?

Mr. BEALL. The Guadalupe corridor is a combined highway, light rail transit project that's funded in a true partnership with the Federal, State and local dollars. The light rail will be open next Thursday and we're completing the project, we're having a grand opening Thursday.

The highway portion was stopped in essence by a Federal court due to the lawsuit that has been filed against the Metropolitan Transportation Commission. The project has been stalled for 9 months and the interesting thing about this project is the funding sources are about 85 percent local, meaning the City of San Jose, 15 percent by the State, and only 5 percent federal, yet the Federal law that has been applied has stymied this project and numerous others in the Bay area.

Mr. MINETA. That was on the conformity issue, wasn't it?

Mr. BEALL. That's right. It's not that the highway is a project that encourages air pollution, it's just that the process was challenged in court. As it turned out, we recently did a study on all the

highway projects, specifically in the Bay area and it's rather interesting that this particular project was found to be an improvement in air quality by doing this computer study that they've done.

So it's really cost a considerable amount of money in the process issue that hasn't been clarified. Right now, the law is being written by a Federal judge, not by Congress. So I think it's a very serious issue that has to be clarified.

Mr. MINETA. Mayor Rubach.

Mayor RUBACH. Mr. Chairman, Mr. Anderson, we need help as cities as we forge this linkage between transportation and clean air. In my testimony that was presented in writing, I spoke to the need for the Phoenix area to get some technical assistance perhaps in some sort of a project that would have transferability to other parts of the country.

We in Arizona and California are the court cases that this is being tested upon. Without a great deal of help, we are expending our very limited dollars to try and come up with these computer models, these technical things, because EPA can't tell us what they need.

I would submit to you that if Congress is going to ask us to meet certain standards, then you should be partners with us in trying to at least determine what those standards should be or could be. Perhaps included in your reauthorization, could be several projects typical around the country that would have some transferability in assisting.

I also submit that the courts are probably not the right place to determine where clean air or what clean air is and I'm not sure if you would like to make some clarifications that would perhaps deal with those issues so we don't end up in court on every highway and byway across America.

Mr. ANDERSON. I'm glad you mentioned the Phoenix area along with San Jose because that's the problem I've had. I've been getting questions on this conformity issue all over the country. Wherever they build a highway, and usually you think when you build a highway, it's going to move traffic and maybe even clean things up a little bit, but then they hit this conformity issue and it's happening all over. I just thought we ought to know that and try to do something about it. I don't know what.

Mr. BEALL. Well, I think the confusion is resulting in serious delays in the projects and it's costing literally millions of dollars in terms of the delay costs for these projects. In this case, the project in San Jose was stopped and it was 90 percent built. The project was 90 percent completed and all they had to do was pave over the road bed and put the electrical signs in and so forth and it was stopped for 9 month so far. It hasn't been started yet so it will probably be another few months.

Mr. ANDERSON. I was told when you got your project completed, not only would you clean up traffic but you might also even clean up air.

Mr. BEALL. It will clean up air.

Mr. ANDERSON. And yet the conformity thing, it kind of stalls me and I think we ought to know that there is a problem and we ought to try to do something about it.

Thank you, Mr. Chairman.

Mr. MINETA. Mr. Clement.
Mr. CLEMENT. No questions.
Mr. MINETA. Mr. DeFazio.
Mr. DEFAZIO. No questions.
Mr. MINETA. Let me thank our very distinguished panel for your presentation today and we appreciate your helping us in terms of that process because frankly, if I can use a metaphor—I don't know if it really fits—but you're at that level where the rubber touches the pavement and I know that when I was in local government, I used to always wonder whether or not those people in Congress knew what was coming out at the other end of the legislative pipeline.

I'm convinced now that those who are writing the law are cognizant of what happens at the other end of the pipeline. I'm not sure that those who write the regulations have even read the law or are cognizant of what happens at the other end of the pipeline. So again, thank you very much for your helping us go through this process.

Mayor RUBACH. We would like to assist as you continue as well. Thank you.

[Mayor Rubach's prepared statement appears on p. 1998.]
[Mr. Beall's prepared statement appears on p. 1259.]
[Mr. Waddell's prepared statement appears on p. 2021.]

Mr. MINETA. At this time, I'd like to call forward a panel made up of The Honorable Andrew Warren, Commissioner, Bucks County, Pennsylvania, Vice Chair of the Transportation Steering Committee for the National Association of Counties and The Honorable Lilla Richards, Supervisor, Fairfax County, Virginia, Chairman of the National Capitol Transportation Planning Board, Metropolitan Washington Council of Governments, and representing the National Association of Regional Councils.

Mr. Warren and Ms. Richards, your testimony will be made a part of the record and again, I would like to ask you, as much as you can and all the other witnesses if you could, to help us out since we do have over 30 witnesses today to abbreviate your remarks since your full testimony is put into the record.

Mr. Warren, if you would introduce your colleague and proceed?

**TESTIMONY OF HON. ANDREW WARREN, COMMISSIONER, BUCKS COUNTY, PENNSYLVANIA, VICE CHAIR, TRANSPORTATION STEERING COMMITTEE, NATIONAL ASSOCIATION OF COUNTIES, ACCOMPANIED BY BOB FOGEL, NATIONAL ASSOCIATION OF COUNTIES; HON. LILLA RICHARDS, CHAIRMAN, NATIONAL CAPITOL TRANSPORTATION PLANNING BOARD, METROPOLITAN WASHINGTON COUNCIL OF GOVERNMENTS AND THE NATIONAL ASSOCIATION OF REGIONAL COUNCILS**

Mr. WARREN. With me today is Mr. Fogel from the National Association of Counties.

Mr. Chairman, it's a pleasure to be here and I would suggest to you that a number of the county commissioners throughout the United States did appreciate your appearing at our National Association meeting last month. Your comments were quite enlightening. I hope mine can be half as much. I was very impressed by the

caliber of the committee and it is not difficult by the questions that have been asked to identify the members of the committee who have spent time in city halls and county courthouses throughout this country.

As you said, I am a county commissioner in Bucks County, PA and today am representing the National Association of Counties where I do, in fact, serve as Vice Chair of the Transportation Steering Committee. Bucks County is a suburb of Philadelphia with a population of 560,000 and aside from experiencing a dramatic population increase over the past decade, we have also seen a change in commuter patterns to the extent that there is now a substantial reverse commute from the central city of Philadelphia to places of business in Bucks County.

There are no new roads being built to address this commuting problem. Interstate 95, which goes through Bucks County, is now being used increasingly as a local road and averages about 19 miles a hour at rush hour with speeds expected to decrease 2 percent annually over the next 5 years.

The Southeastern Pennsylvania Transportation Authority, on whose board I sit, is on the verge of bankruptcy, in part because of Federal cuts in the transit program and in part because of Pennsylvania's failure to enact a dedicated source of funding for transit.

I recently chaired a study of transportation financing which estimated that $4 billion would be needed over the next 10 years just to keep our transit systems maintained in good condition with no expansion whatsoever.

I have stated these concerns not only to highlight conditions in Bucks County but to illustrate some of the points which NACo believes must be factored into any rewrite of the Surface Transportation Act. We have interstates being used as local roads, we have a transit system which has been severely impacted by cutbacks in Federal funding and a suburban mobility problem which is being ignored.

Let me comment on where NACo believes the Surface Transportation legislation should be heading. The competitiveness of American goods and services is undermined by not investing in highways, bridges and mass transit. Rather than simply measuring traffic or ridership, we must make decisions based on strengthening our economy and making our goods and services competitive on an international as well as a national level.

The choke points of our economy are in our suburban and rural areas. In suburbia, congestion adds billions of wasted dollars to the costs of moving goods, services and people. Our rural areas' underinvestment in highway and accelerated deterioration of these same roads make it more expensive to move commodities and discourages new economic activity.

NACo believes that the Federal Government needs to invest more money in surface transportation. Most county, city and State governments have been increasing their investments and it is time for the Federal Government to increase their share.

Concerning the financing and structure of the Federal highway program, NACo suggests all the funds collected in the trust fund be spent for highway and bridge purposes and not be used for deficit reduction or any nontransportation purposes. Additionally, NACo

supports continuing the same match ratios in the highway and transit programs.

The highway program should have four basic programs. For the purpose of this testimony, let us assume an obligation level of approximately $16 billion, slightly above the level recommended by the House Budget Committee.

The first program would be in urban/suburban mobility funded at $2 billion; the next would be a rural access program at $2 billion; the third would be a bridge program funded at $2.95 billion; and the final program would be an interstate-primary block grant somewhat analogous to the Administration's National Highway System, but with more mileage. It would be funded at $7.8 billion.

It is NACo's view that legislation should contain both an urban/suburban mobility program and a rural program. They should be separate because the problems of urban and rural America are substantially different. NACo also believes that this program should have the flexibility to allow, at the option of local government officials, up to 100 percent of these funds to be spent on mass transit.

Like the Administration, we believe the bridge program should continue to remain separate. Historically, the bridge program has been funded by the county government with the largest number of Federal highway dollars as compared to other categories.

The mass transportation program should be continued in its current structure but with increased funding and flexibility and we urge Congress to spent down the balance in the trust fund in order to increase the size of the program so that it can make up for the cuts that it has absorbed over the past 10 years.

Frankly, we would like to see a dedicated source for transit funding rather than having to depend on the general fund, but if additional gas tax is not likely, we certainly support the use of general fund monies.

In conclusion, a very key issue for county government is strengthening the Federal/State/local relationship in the surface transportation program. While the current law calls for fair and equitable treatment of local government and cooperation and consultation with local officials, we need a process to back it up.

One suggestion would be a State level commission attached to the State Department of Transportation or Highway Department consisting of representatives nominated by the State Association of Counties, the State Municipal League and the Governor. It would review and approve the plan developed by the State Department of Transportation or Highway Department for the allocation of Federal funds.

At this point, I would conclude my testimony in deference to your time and be happy to answer questions after Ms. Richards.

Mr. MINETA. Thank you very much, Mr. Warren.

Ms. Richards.

Ms. RICHARDS. Good morning, Mr. Chairman and the other distinguished members of the committee.

My name is Lilla Richards. I'm a member of the Fairfax County Board of Supervisors and its Transportation Chairman. Since June of 1989, I have been Chairman of the National Capital Region Transportation Planning Board, which is the metropolitan planning organization for the Washington area.

Yesterday, we released a study that I'd like to also make a part of the record that is very much on point to comments people have been making about parking, employer-provided parking. I think in Congress' consideration of the changes in the Federal tax law in that area, this contains some very helpful illustrations of how an employer would have to put up $4400 to achieve the same fringe benefit for his employee as giving him a free parking space.

That works against the interest of metropolitan areas when we are trying to encourage people to use transit because our tax law gives preference to the free parking instead of to the person who uses transit.

Ms. RICHARDS. I appreciate the opportunity to appear before you today on behalf of the National Association of Regional Councils, which is the national association that represents substate, multijurisdictional MPOs such as mine across the country.

I'd like to begin, Mr. Chairman, by thanking you and the subcommittee for moving so expeditiously toward reauthorization of the Surface Transportation Act. We also commend you for your efforts in seeking a broad range of views and perspectives on the future Federal program.

Now that the construction of the interstate highway system is almost complete, we have an opportunity to fashion a new Federal surface transportation program for the nation. The kind of program that is put in place must address growing congestion in our metropolitan areas and the mobility needs of rural America. The program must address the environmental degradation that is associated with congestion, and it must address our dependence on foreign oil.

The failure to structure a surface transportation program that addresses these issues will surely limit our ability to compete in the global marketplace and will threaten the quality of life of all citizens. The Administration shares these goals but we differ on the approach to best achieve these goals.

Our views are shared by five other national interest groups that co-authored the statement of principles entitled "Tying It All Together." I'm sure you all have copies of that. That is the National Association of Counties, the United States Conference of Mayors, the National League of Cities, the American Public Works Association, and the American Public Transit Association.

The concepts we envision are shared by another broad coalition, the Surface Transportation Policy Project. Again, I believe you just recently received copies of their publication. Their members range from the American Institute of Architects to the Energy Conservation Coalition and the National Wildlife Federation.

Reauthorization discussions ultimately always turn over the financing issue. We endorse the recommendations of the National Council on Public Works Improvement which call for a doubling of the investment in our infrastructure and for a restoration of the Federal Government's financial participation to past levels.

We appreciate the leadership of the House Public Works Committee in seeking a renewed Federal financial commitment to transportation. We fully support your proposal to increase the motor fuels tax.

We believe the program structure and intergovernmental planning and program management process should be governed by the following objectives: preservation of the interstate highway system; greater flexibility to respond to unique needs and conditions and discretion to meet specifically-defined Federal policies and priorities; the use of systems management techniques as a condition for highway and transit project approvals; a broadened definition of transit to include all forms of high occupancy vehicle use; an equitable distribution of resources to the States and metropolitan areas based on federally-established formulas; a strengthened planning, programming and prioritization role for MPOs to insure integrated transportation systems; to coordinate land use and transportation investment decisions; and to organize effective programs for attaining air quality and energy goals and other national objectives.

These objectives can best be served by refocusing the Federal transportation resources to serve four basic objectives: the interstate highway preservation with emphasis on improved interstate and interregional travel performance; metropolitan mobility focus on development objectives and congestion relief—again, this can be transit not just highways; rural access and interregional travel needs and bridge rehabilitation and repair.

A redirected Federal program structure must be coupled with a strengthened intergovernmental planning and program management process. We seek a process that would not diminish the role of the States but rather one that would provide a stronger voice for local governments through a joint collaborative process.

Under our approach, local governments, in collaboration with the States, transit operators and the private sector, would jointly decide investment strategies based on the most effective solutions.

We are in agreement with the Administration's national transportation policy that the future program must address ever-increasing metropolitan congestion. We differ over how to achieve this objective. We are concerned that the Administration's legislative proposal would focus the lion's share of resources, 70 percent, on a pre-defined set of highway facilities which would not necessarily result in the most effective mix of investments to achieve enhanced mobility and other national goals.

This coupled with limited transferability and flexibility would result in continued reliance on expanding the capacity of a limited set of highway facilities as the primary solution to congestion. In my own State of Virginia, which is one of the few States in the Union that has complete responsibility for highways, major Federal highway projects like Interstate and Interstate 4-R projects are not jointly determined through a serious local and regional planning and allocation process. These types of Federal projects should be selected for Federal funding based on where the congestion is and where the cars and trucks are.

At the same time, my county is constantly seeking Federal funding for high capacity congestion relief projects like expanded HOV and transit projects, while new highway capacity projects are being built and planned in parts of Virginia that pale in comparison to northern Virginia's transportation needs.

We also believe the nonuniform matching requirements proposed by the Administration would exacerbate the current bias toward

expanding the capacity of our interstate system as the preferred strategy for dealing with congestion.

Even in the Washington area, we found the most effective strategies for improving the performance of the interstate are often investments off the system. By wisely investing in integrated strategies for overall mobility rather than an exclusive focus on a few highway facilities, we can help ensure that the interstate system performs once again as it was intended, with high levels of service.

In the 96 metropolitan areas that are in violation of air quality standards, the Clean Air Act amendments just enacted by Congress may require a change in transportation investment strategies. In serious and severe nonattainment areas, including this area, highway capacity expansion will be restricted.

We are concerned that with the limited flexibility and the highway bias in the Administration's proposal, nonattaining metropolitan areas would have difficulty finding eligible projects for Federal transportation funding. This would erode the ability of nonattainment areas to make investments in transportation control measures that would assist in achieving air quality standards while enhancing mobility.

Congestion is a national problem that cannot be solved solely by widening the interstates, by upgrading principal arterials to interstate standards or by building bypasses. We believe that to deal with congestion, we need a metropolitan transportation program that will focus resources on integrated metropolitan transportation systems.

We need to have flexibility and incentives to employ a combination of highway strategies, transit options, HOV lanes and more effective systems management techniques. Moreover, we need allocation formulas that do not penalize areas that take actions to reduce vehicle miles traveled.

The metropolitan systems program we propose is designed to assure that resources are directed to metropolitan areas for use on designated metropolitan systems and corridors. An enhanced performance based planning and programming process would assure that resources are most effectively invested to meet the national mobility objectives as well as other national goals such as air quality.

Thank you, Mr. Chairman.

Mr. MINETA. Thank you very much, Ms. Richards. You just provoked a discussion up here on sanctions versus incentives. I guess that's what you were getting at in your last piece.

Ms. RICHARDS. Yes.

Mr. MINETA. How is NARC's metropolitan systems program different from the existing Federal aid urban system? Are funds allocated differently and are you proposing to change the relationship between State officials and regional planning organizations?

Ms. RICHARDS. What we'd like to suggest is that the example that we've had in the Washington Metropolitan Area ought to be more widely available as we change the focus of the Federal effort in transportation. We have a collaborative process with the States and with local governments through the Metropolitan Washington Transportation Planning Board we have here. That has been in process for 25 years now.

It has been working well. We think that example ought to be strengthened. We think there should be additional funds. We think there should be additional incentives to have people get together and do that planning in that way. The Federal effort can help us by focusing funds towards congestion management and not just vehicle miles.

Mr. MINETA. In that light, what do you envision as incentives?

Ms. RICHARDS. Well, the problem with the existing legislation that's being proposed is that it penalizes areas like ours where we have achieved fairly high levels of HOV use and we want to see that changed. We want to see through this program——

Mr. MINETA. But it seems to me the Administration comes back and says yes, we're giving localities increased flexibility. They are trying to use that argument of flexibility as the tradeoff in saying that is your incentive since local and regional bodies ought to be in a better position to determine the choice as to whether you want an HOV lane or whether you're going to put it into a fixed rail system, or another lane of highway, that you can make those kinds of decisions at the local level.

Ms. RICHARDS. We think it's in the national interest that there be incentives, bonuses and so on to those metropolitan areas throughout the country that do that kind of extra thing so that you're not taking money away from the rest of your possible uses for the funds in order to do something that enhances congestion management.

There needs to be throughout the nation incentives available to encourage high occupancy vehicle use and transit use. We don't want that taken away.

Mr. MINETA. But wouldn't you have that ability, let's say, if there were a bridge in your area and you were to use off-peak bridge fares or pike-peak bridge fares to try and make those kinds of flexible or the kinds of incentives that you want at the local level?

Ms. RICHARDS. We're really not talking about from within that same pot. We're talking about giving an extra bonus to those areas that make the kinds of changes in the way that peoples' lifestyle has to change.

Mr. MINETA. Okay. You also list, "the use of systems management techniques as a condition for highway and transit project approvals." I'm wondering if you could explain what techniques you're referring to and how this would work?

Ms. RICHARDS. Well, for example, ramp metering where you increase the capacity on the system by what you do with the roadways that are coming in from the side; synchronized traffic signals. There are a variety of examples.

Mr. MINETA. Mr. Warren, in your testimony, you call for a direct passthrough of flexible urban funds to local governments in areas above 200,000. How would this affect the metropolitan planning process and would local governments be less inclined to participate in setting project priorities at the regional level with a direct passthrough of funds?

Mr. WARREN. I don't believe they'd be less inclined at all. I think they would certainly stay involved in that but at least if it came directly to them, they would be able to better quantify just exactly

where the funds should be and how it should be spent because it would affect them more so.

In Pennsylvania we have a lot of uniquely weird things that need correcting but throughout the rest of the country where there is some semblance of order to things, I do not see that as a deterrent, no.

Mr. MINETA. Maybe this is something that Mayor Rubach was sort of alluding to. If I were to go back to my experience as a Mayor, we would make our priorities in terms of how we were going to spend our city monies, the local projects, and we would say, here is the priority list, we would like to see how the State would spend their money in our area. But we were always over the barrel because they'd say, well, we'd like to have you take this State project and use your local monies to do it. We'd say, well, that's not on our priority list. Well, then okay, fine, and then they'd walk away from the table.

Is this something that—in Bucks County or Fairfax County—you face in trying to leverage against the State when you're discussing as to how you're going to use your local funds or your State funds in your local areas?

Mr. WARREN. We experience that, yes.

Mr. MINETA. Do you find that you're over the barrel and don't have the leverage to counter the power of the State?

Mr. WARREN. Yes.

Mr. MINETA. That's why you talk about this direct passthrough?

Mr. WARREN. That's correct.

Mr. MINETA. Trying to avoid or to avert—I don't want to use the word bypass—but to—

Mr. WARREN. That the money get to where I think you and Congress intend it to be when it is a passthrough—I am a member of our Delaware Valley Regional Planning Commission also and that is unique, as you may be aware. It's New Jersey and Pennsylvania, a nine-county region. We have both Departments of Transportation on that planning commission. It makes it quite difficult. I think the sooner it gets to where it's directed to go, the better.

Ms. RICHARDS. If you want a good example of a major battle between the localities and the State of Virginia would have been the controversy over I-66. It was the Metropolitan Planning Organization where we were able to get the process stopped so that we could redesign the road to have it be an HOV facility. I was very much involved in that as a private citizen.

If it hadn't been for the fact that the Federal legislation allowed that decision-making to be done as a collaborative, cooperative process that involved the localities as well as the State, we would not have been able to achieve what has been a major advance in throughput of people, not just automobiles.

Mr. MINETA. Mr. Warren, you call for an increased percentage of funds to be dedicated to "off-system bridge repair and replacement." I'd like to ask why is this necessary?

Mr. WARREN. Based on the report of the Secretary of Transportation to the United States Congress, dated March 1989, I note on page 124 that there are a total of 130,000 bridges that have a lower than 50 sufficiency rating. Of that total 130,000 bridges, 102,000 of

them are categorized as off-system. The off-system, however, gets only 15–35 percent of the funds.

It would seem to me that the off-system proportions ought to be closer to the total percentage of off-system bridges which need to be replaced—80 percent of the bridges. I believe the increased funding ought to be more proportional to the ratio of bridges.

Mr. MINETA. But the thing is if they are off-system bridges, just as the Administration refers to highways of national significance, what would make these bridges of national significance? Why would there have to be Federal funding going to these kinds of off-system bridges?

Mr. WARREN. Basically, the local governments in this nation do not have the funding to pick up the exorbitant costs for a bridge.

Mr. MINETA. Let's say that we make it eligible and we also put a mandate in there for a bridge maintenance program?

Mr. WARREN. That's fair.

Mr. MINETA. Mr. Taylor.

Mr. TAYLOR. Mr. Chairman, thank you.

I have an eight-year-old son, he wants a land rover. I don't mean he wants me to have a land rover, he wants a land rover and I have to explain to him there's a lot of things that are never going to happen, and looking at some of your requests here, they get to be very difficult to see how.

I want to question one of the things where you're advocating greater consultation and participation by local governments, and I can sympathize with that because I believe in the old Jeffersonian axiom "that governs best that governs least," and it governs least if it's closer to home.

You ask about a State level commission consisting of the State association representative and the Governor and the municipal league representative and that they would review and approve the planned development by the State DOT. Do you mean you would give them veto power over your State Department of Transportation?

Mr. WARREN. I'm not so certain I'd go so far as the absolute veto but right now, we have a 12-year plan in Pennsylvania that we supposedly, as the County Commissioner, have some input into. It's merely coincidental if anything on the 12-year plan ever gets done in a 12-year period of time.

You can work your way up to four years and be back down the plan to 12. That's the type of thing that makes it intolerable for elected officials to have any semblance of order. When your son gets to be 16, he may be able to negotiate for the land rover, but he ought to know that there is a logical time that he's going to get there.

Mr. TAYLOR. I served in the State legislature and also not served in local government but deal very close in local government, but the local governments are a creature of the States politically and legally. Your existence depends on what happens in Harrisburg, I guess, isn't it?

Mr. WARREN. Correct.

Mr. TAYLOR. Is that not the better place to go for the type of advisory input that you're talking about here rather than Congress placing it inside transportation legislation or mandating it?

Mr. MINETA. Would my colleague yield on that point because it's going to be interesting to hear this. I know from my own perspective, I always felt that local government was a creature of State government but we get treated like illegitimate children and they don't hold up to parenthood. I know when I was Mayor, that's why we used to bypass the State and in the 1960s and early 1970s, came and made a Municipal/Federal relationship because we are creations of State government and yet after that, there was really no help that we were getting.

Now, I think States are getting better about it now because of the recognition of the Federal/State/Local relationship but I hope that it's improving. I see some aspects of it improving but I'd like to hear what your comments are now.

Mr. WARREN. Maybe that's one of those things that will start in California and work east because it isn't happening in Pennsylvania. I happen to be Vice Chairperson of the Station Association of County Commissioners also and I keep thinking a creature, a lot of times a creature is a bug that's going to get squashed and sometimes that's exactly the way I feel as a county commissioner with the State. The State is very quick to give more and more and more responsibility and somehow less and less funding.

I suspect that a lot of the funds that you may send out of Washington, by the time they get up to Harrisburg, don't get to the county commission. I'm not meaning to suggest that county commissioners are an end all and know everything. I don't suggest that at all.

All I'm suggesting is that the people who are responsible, who have the program last, deserve at least a look to as an active member of the family and as a participant. For example, if I had my way, we'd have a dedicated tax for mass transportation in Pennsylvania but that was frankly defeated because the State Legislature wouldn't give us locally the right to impose it should we choose. It's that kind of thinking that confounds the work of local elected officials.

Mr. TAYLOR. I can certainly sympathize with that. We've had that problem with local governments too and we solved it by changing the representatives so that the new group in the Capital gave a little more attention to the local governments.

I can sympathize with what you're saying. The proposal you have for replacing, to some extent, the Board of Transportation, with another layer with local government, might give you more attention at the particular time but it would seem it would be better to work at it from the State legislative side to improve those relationships between the State government and the county government. Yours is not the only State that has that problem by any means.

Mr. WARREN. I understand that and that's why we suggested having tried that, maybe we could try this other and again, it's not to supersede but it's to at least be an active part in this process.

Mr. TAYLOR. I don't want to disillusion you but Washington is not much kinder to local governments than the State is. We send you a lot of mandated programs and not much money to support them.

Mr. WARREN. I was your guest today so I wanted to be kind and blame it on Harrisburg.

Mr. TAYLOR. Thank you.

Mr. MINETA. That's why I think recognizing that we did pass the Clean Air Act and the Americans with Disabilities Act, those were mandated, we're trying to say, I think, in this new era that we recognize that as a mandate we want to do something to help you.

Mr. WARREN. SEPTA could speak to the disability program. That's going to be a major, major expense. SEPTA may not be around but if it is, it's going to be a major concern.

Ms. RICHARDS. That's one reason, Mr. Chairman, we're talking about having a major role for the metropolitan planning organizations because the Clean Air Act goes to those SMSAs, not to the State, so in order to manage our air quality in the Washington area, we've got to be able to make the decisions about those changes in our transportation system that lead us towards compliance.

Mr. MINETA. From that perspective, how do you feel about those proposals that say we ought to include air quality planning officials as part of the body to make the decisions as part of the planning process in these nonattainment areas?

Ms. RICHARDS. They certainly should be at the table in the metropolitan planning organization. It would be those nonattainment areas and the largest metropolitan planning organizations that would end up or should be designated to have the kind of responsibility that we think should be given. Where they can't meet the criteria, then the responsibility would be left just to the State.

Mr. MINETA. Very well. Let me thank again, all of you for taking the time from your own busy schedules to help us here at the subcommittee level as we try to fashion legislation. The Chairman of the Committee on Public Works and Transportation always says we really have the opportunity to be visionary. We don't want to just be renewing and reauthorizing a highway bill and we do want to be very much in a position to help the transportation planning process for the 1990s.

Again, thank you very, much.

[Mr. Warren's prepared statement appears on p. 2062.]

[Ms. Richards' prepared statement appears on p. 1991.]

Mr. MINETA. At this time, I'd like to call forward on behalf of the National Association of Governors' Highway Safety Representatives, William H. Leighty, Deputy Commissioner, Department of Motor Vehicles for the Commonwealth of Virginia and Mr. Robert L. Suthard, Secretary of Public Safety for the Commonwealth of Virginia and the Second Vice President of the International Association of Chiefs of Police.

Just last night, Mr. Suthard, I don't know if you had the opportunity to also be at the reception of the IACP over in the Capitol building, but your President of the International Association of Chiefs of Police, Commissioner Lee Brown, was an officer and a sergeant in our San Jose Police Department and in fact, during that time while he was on our police department, got his Ph.D. Of course, we have seen him then go from there to the University of Portland to set up their Department of Criminal Justice, to Atlanta, to Houston and now, of course, in New York City.

So I had an opportunity to visit with Lee just a very short time last night. It was just great to see him.

Mr. Leighty is before us and his statement will be made a part of the record and if you would give your abbreviated version, I'd appreciate it very much.

**TESTIMONY OF WILLIAM H. LEIGHTY, DEPUTY COMMISSIONER, DEPARTMENT OF MOTOR VEHICLES, COMMONWEALTH OF VIRGINIA AND HIGHWAY SAFETY REPRESENTATIVE, NATIONAL ASSOCIATION OF GOVERNORS; ROBERT L. SUTHARD, SECRETARY OF PUBLIC SAFETY, COMMONWEALTH OF VIRGINIA AND SECOND VICE PRESIDENT OF INTERNATIONAL ASSOCIATION OF CHIEFS OF POLICE**

Mr. LEIGHTY. Thank you, Mr. Chairman.

In the interest of time, I will just cover a few points that were covered in the written statement. Before turning to the written statement, I'd like to just say a few opening remarks. Much of the discussion this morning has dealt with the highways of national significance. I would like to talk just for a moment about what I consider one of the smaller programs in this particular bill that is of national significance to us.

The Section 402 program, which is known as the State and Community Highway Safety Grants Program, has been responsible for a remarkable decline in the number of highway deaths in the United States. In 1966, when this particular program was enacted, we were killing on average 5.2 people for every 100 million vehicle miles traveled. Last year, on a national level, we killed 2.2 people per 100 million vehicle miles traveled and that is the statistic that we use in the safety business to measure how well we're doing. The 402 program is responsible for much of that decline.

In my own State of Virginia in 1966, that death rate was 5.1 people killed for every 100 million miles and last year, I'm happy to report it was 1.7 deaths per 100 million. Over that 25-year period of the history of this particular program, the 402 program, Mr. Chairman, we saved a total of 20,503 lives in Virginia as a result of the increases in safety.

Mr. Chairman, the 402 program saves more than just lives. It saves countless injuries and disabilities and increases the quality of life for all of our citizens here in the United States.

Finally, one last point, Mr. Chairman, before reviewing my testimony. That is, you talked a great deal this morning about congestion in our urban areas. Just one thought that you might want to keep in mind the next time you're late for an event. On the Beltway, 62 percent of all of the traffic delays are accident-induced delays.

So when we talk about increasing the ability of our urban areas to move vehicles, safety should be a major component of that particular problem.

Mr. Chairman, I failed to introduce myself. I am the Deputy Commissioner of Motor Vehicles with the Commonwealth of Virginia and am testifying on behalf of the National Association of Governors' Highway Safety Representatives. I'd like to focus on just two areas that are covered by my written testimony.

First, I'd like to provide just a critique of the Administration's proposed bill and also cover some of the recommendations that our organization, NAGHSR, would like to make to the committee.

We are quite pleased with the Administration's desire to only make minor changes to the 402 program, to eliminate any earmarking provisions within the 402 program, which I think mirrors much of what you all have been discussing this morning, and also to provide a flexible bonus program for these particular funds—although we do not support the specific bonus program that has been proposed.

We are also pleased that the bill continues to maintain the requirement for an aged 21 drinking age and also requires each State have in place a safety management plan before being eligible for either these funds or for construction money.

We are both disappointed in and cannot support other provisions of the Administration's proposal, however. For example, the funding levels contained in the bill for safety are just inadequate. As for the reduction in the Federal share from 75 percent to 60 percent, we cannot find the rationale for that, and we are very, very disappointed that there has been no increase whatsoever for nonconstruction safety-related initiatives in the Administration bill.

We feel that on the whole, if you look at the funding levels for impaired driving that have been provided in the bill as proposed, that $25 million is not enough money for a national problem that results in over 50 percent of the highway deaths in the United States.

We are disappointed that the bill itself deemphasizes speed compliance by not requiring increased monitoring and reporting of speeds.

NAGHSR would recommend that there should be a substantial increase in funding for highway safety, both in NHTSA and the FHWA provisions of the 402 program. We believe that the Federal match should be maintained at 75 percent.

We would like to see three funding priorities established for highway safety programs. Those are the impaired driving priority, increased occupant protection, and increased speed enforcement provisions.

For programs other than those three priority areas, we would like to see flexibility so that States could utilize 402 funds if they document a specific problem within their State, provide documentation on what they intend to do, and then be allowed to utilize the funds for those particular provisions.

Mr. Chairman, we'd also recommend from NAGHSR's position that the traffic records programs that are contained within the 402 section be financed at a higher Federal match reflecting the higher priority and importance of uniformity of records management and traffic safety accident reporting.

We would like to see the impaired driving incentive programs combined, streamlined and targeted and would suggest that using a supplemental program for special alcohol-related countermeasures would be desirable.

We are encouraged and would also support an occupant protection incentive grant program and would encourage the committee

to continue requirements that States monitor for speed and collect speed reporting data, and provide that to the Federal Government.

In summary, I'd like to just say that it really is time to match the rhetoric about safety with the funding levels in this bill. I was most disappointed that the proposal when it first came out was touted as a safety bill, but in reality when you closely examine it, the increase in safety is not readily apparent.

Mr. Chairman, that ends my testimony.

Mr. MINETA. Thank you very much, Mr. Leighty.

Let me go ahead and have Mr. Suthard present his testimony.

Mr. SUTHARD. Mr. Chairman, thank you very much. I am Robert Suthard, Second Vice President of IACP and the Secretary of Public Safety for the State of Virginia.

I do appreciate your attending the reception last evening. I also would like to mention at the beginning that I have recently had communication with the head of the California Highway Patrol, Mr. Hannigan, and the remarks that I make are based on not only Lee Brown but reflect consensus and agreement with the highway patrol and State police people throughout the United States.

As you know, the International Association of Chiefs of Police have one major section which is composed of the State police and the highway patrol, and we provide continuous liaison with the Department of Transportation and the National Highway Traffic Safety Administration, hopefully in all matters that relate to highway safety.

In order to make my remarks very brief, I would appreciate it if the full text couid be entered into the official record of this hearing.

Mr. MINETA. It will be without objection.

Mr. SUTHARD. Thank you.

I would like to first point out a couple of things. I would like to praise the direction that we are moving in. First, we are continuing some of the innovative programs that have been very effective and very helpful in traffic safety across this nation. They involve the driving under the influence and the safety belt programs. They are ongoing in the 402 funding area; they are very essential to us and I want to express the appreciation of the State and Provincial Police and IACP for your continuing those programs.

Additionally, the 403 funding with the drug recognition program and the possibility of spreading this technology throughout the nation, is extremely helpful, I think, overall in America.

We are especially pleased with the concept of rewarding innovative programs rather than sanctioning those that have failed. This concept was recommended by law enforcement people throughout the country at a traffic safety summit that was held in Chicago last year. It was passed along to Secretary Skinner and I am very happy to see that it has been implemented in the reauthorization proposals.

As you know, we have always been against the use of sanctions because there are times when those States that are not able to comply with certain standards are the ones that need the funding the most. We are most appreciative of seeing those changes made.

We are very pleased with the new safety bonus program and we are pleased that it contains the alcohol traffic and safety, drunk

driving and incentive awards, and expands upon the concept of rewarding State action for improving highway safety laws and programs. Again, it is this kind of incentive that we think will save more lives.

We do have serious concerns, as previously expressed by Mr. Leighty, about speed enforcement. Speed enforcement ranks right up in the area with driving under the influence, safety belts and so forth, and speed enforcement seems to have been deemphasized. It is not considered in the point value in the bonus program at all.

There are ways to measure speed enforcement. Agencies can demonstrate their speed enforcement by submitting a plan for evaluation. Such items as the types of devices used, the types of innovative things that they have in their program such as enforcement vehicles, perhaps aerial surveillance, can all be looked at as to whether the speed enforcement is really applied at the location where the accidents are taking place.

I would hope that speed enforcement could remain a high priority and that it could be a part of the bonus program.

We do have some concerns in IACP about the threat of the larger triple trailers that are being considered on the highways of the nation. We feel that they could certainly affect highway safety and law enforcement. There is the added problem of when a traffic accident does occur, at the present time, it takes a long time to get it cleaned up, to get the traffic moving again, and to add one more trailer will just complicate the problem.

We do have some concern about the growth of our funds. Growth has been included in the Title 23 program, but we think it should be included in other programs. During the last 7 years, there seems to have been little or no growth. In fact, the authorized levels during the last several years have not been completely funded. Now this year, with a decrease in the authorized levels, certainly I would hope it would be fully funded because if it isn't, it will certainly have some adverse impact on the law enforcement community.

We also have some serious concerns about the Federal matching share being reduced to 60 percent. Mr. Chairman, I wish you would please take a look at that match and retain it at the present level.

We would like to encourage the reinstitution of the $20 million that had been earmarked previously for speed enforcement of 55 mile per hour roads, not necessarily for specific speed enforcement, but at least to earmark it for enforcement purposes. Enforcement, I think we all recognize, is a very important part of the overall program.

Mr. Chairman, in summary, in IACP we put a very high priority on trying to keep our highways as safe as we possibly can. In summary I will say to you, we really are pleased that you're moving to incentives rather than sanctions. We are very concerned about the lack of emphasis on enforcement, especially speed enforcement. We are concerned about the amount of funds, and the triple trailers, and we're very concerned about the matching funds.

I want to express my most sincere appreciation to you for taking a few minutes to hear us today. I wish you well, and thank you for your support in the past.

Thank you very much.

Mr. MINETA. Thank you very much, Mr. Suthard.

Mr. Leighty, in your statement you indicate that highway data collection, reporting, and analysis are currently inadequate, and you cite lack of uniformity in State reporting as one cause. What are the greatest problems facing the States in terms of collecting accurate data, and what the NAGHSR believe a data collection reporting and analysis system should consist of in order to provide comprehensive facts that are reported for purposes of addressing highway safety problems?

Mr. LEIGHTY. Mr. Chairman, we have a group called the "critical accident data reporting elements committee" that has been grappling with just that question for some time now. One of the problems we have deals with the uniformity of reporting data at the Federal level consistent with what NHTSA requires and what FHWA requires. The agencies are moving internally to come up with their own data element definitions and working with NAGHSR on that. We just have very different ways of collecting that data among the States and we need to set a baseline of what type of information we need to collect so that we can have common reporting and common ability to compare data. We often get requests for how effective programs are and you can't make those kinds of comparisons without good data.

Mr. MINETA. Is there a concern that you have about the collapsing of the 408 and 410 programs, having them as categorical programs as the Administration has suggested in their bill? They still retain the 402, as I recall.

Mr. LEIGHTY. I don't think we have a problem with collapsing the two together. We do endorse wholeheartedly the movement toward performance-based criteria rather than strict rules that govern adoption of a specific State law. A good example of that I think would be in the alcohol sections on impaired driving, the requirement that you do sobriety checkpoints. Both Oregon and Louisiana have constitutional provisions against doing random search and seizure, so either one of those States would be eligible for that one particular point.

We would encourage some sort of criteria but we need to have some flexibility within each State to meet that criteria. I think the common denominator would be judge states by performance not by what measures they have adopted.

Mr. MINETA. As I recall, the Mothers Against Drunk Driving are very concerned about the collapsing of the 408 and 410 programs, afraid that there may be "watering down" of the program if this were to stay in place.

Mr. LEIGHTY. Well, Mr. Chairman, I think our positions are very similar. What I'm saying is that we ought to have a base program that has a certain set of impaired driving criteria and then a supplemental program that requires and encourages strongly States to go further than what they are presently doing.

Mr. MINETA. So that the need for better accident reporting data has been noted by previous testimony as well as by GAO. Again, from your perspective, how might you think that collection system might be made more uniform and a better system?

Mr. SUTHARD. A national system is important because it seems like every time you go to gather and enter data, the requirements

and the guidelines in one jurisdiction are different than the other. So if you don't have uniform guidelines, the data that you have might show accidents much worse at one point than the other when that may not be the case. To gather accident data throughout the country, in order to have the funding applied where the need exists, you must have that uniformity; otherwise, it just doesn't work.

In recent years, we have tried to be more selective in our application of enforcement. We have tried to find out where the problem is and then apply the funds to get the problem corrected at that location. The same thing is somewhat true of seatbelt usage. Different people have different ways of measuring the percentage of people who are using their seatbelts. If you don't have the same criteria, then you don't know the extent of the problem.

So uniform data is significant, and I would hope that we can improve on it. I think it is worthwhile to give some attention to it. I would certainly recommend it.

Mr. MINETA. In terms of enforcing traffic laws, it is always a difficult and demanding job even when it comes to enforcing what you might consider more popular traffic laws, but it seems to me one of the big problems is this whole idea of achieving public acceptance for law enforcement efforts. Do you feel that we ought to be doing more in public information and education programs?

Mr. SUTHARD. Mr. Chairman, I really do. I think that the entire traffic safety program is dependent upon the public's support and convincing the public of why we do things the way we do. That has been so obvious over the years to me. I didn't mention it, but I started as a trooper in 1954, so I've been in law enforcement and have worked up through the ranks to the position that I'm in now. But when we had the fuel shortage a few years ago and when the speed limit was reduced and when the public believed that they were helping our national security and doing what was right for the country, fatalities went down tremendously. They were complying with the law because of two things, I think: one, they thought it was safer, two, it was good for our country. If we can provide the public with more information and let them know why we're doing things the way we do, I think we can get a lot accomplished without it costing us a tremendous amount of money. So I think public information is critically important.

Mr. MINETA. You think we ought to do that, Mr. Leighty, by reprogramming a certain amount of highway construction monies towards compliance and safety issues or are there other ways we might be able to get that additional sum to highway safety education and enforcement issues?

Mr. LEIGHTY. Yes, sir, Mr. Chairman, and I would suggest 2 percent of the total, if you want to throw a number on the table. But Mr. Chairman, the fact is we have to move as a society to more education and behavior modification programs if we're going to succeed in reducing the death rate much further. We've come a long way with engineering; we've come a long way with emergency response capability and improving our ability to bring an accident victim into the hospital. We need to educate and enforce the laws we have, continue the good engineering and trauma measures. We

have developed, but behavior modification before the accident occurs is the key to the future.

Mr. MINETA. I assume that both of you have real concerns about the match changing from the 75-25 to the 60–40.

Mr. LEIGHTY. Yes, sir.

Mr. MINETA. Thank you very much.

Mr. LEIGHTY. Thank you very much for the opportunity.

Mr. MINETA. Mr. Taylor.

Mr. TAYLOR. Mr. Leighty, your organization's position on the use of highway funding—or what is your organization's position on the use of highway funding sanctions as a method for forcing State compliance with Federal mandates? Could you give me a word or two on that.

Mr. LEIGHTY. By my count, Mr. Taylor, there were 14—and I heard this morning of 15—sanctions that States could possibly be sanctioned for. We strongly believe in incentives as the primary way of inducing States to action. The basic philosophy for our organization is to try to encourage state action. Even with the speed enforcement, we would rather see you encourage us to provide with the speed compliance and reporting measures rather than sanctioning us for failing to do so.

Mr. TAYLOR. Thank you.

Mr. Suthard, you mentioned a moment ago that you oppose the triple trailers. Could you give me a specific reason why you would oppose those on Interstates, what hazards you would see there on Interstate roads?

Mr. SUTHARD. Mr. Chairman, it would be difficult for me to give you a specific figure as to a percentage of accidents they might cause. I am concerned about the turning of them. Some of our most serious blockages occur as vehicles are going on or coming off of the Interstate system, especially if the weather is not too good. They can tilt over and just tie up the traffic for hours in an urban area.

I'm concerned abut the accidents occurring at those locations. I think the maneuverability and the stopping ability would be made more complex. The triple trailers—economically, of course, make sense—but when it comes to strictly safety, the discussions that we have had in IACP are that they are going to further complicate our efforts to be able to move the traffic smoothly.

Mr. TAYLOR. Thank you.

Mr. Chairman, I didn't mean to get into that too far. I have one other question of Mr. Suthard, but we'll be chasing that rabbit a little later and I wanted to get your point of view on it.

You indicated that the Motor Carrier Safety Assistant Program is working well. Would you favor increasing its scope to cover drug interdiction or weight enforcement?

Mr. SUTHARD. I would favor that.

Mr. TAYLOR. Thank you, Mr. Suthard. Thank you, Mr. Chairman.

Mr. MINETA. Mr. Leighty or Mr. Suthard, I forgot who mentioned the 62 percent figure about traffic delays being based because of accidents. Do either of you have any data on whether or not let's say, prepositioning tow trucks during the high traffic periods so that you could move right in and pull the vehicles off the road has been or can be helpful?

Mr. SUTHARD. There's no question it can be helpful, Mr. Chairman, to have a tow truck readily available. In the Washington, D.C. area, statistics have been used that if you hold up traffic for as much as a minute, it takes ten minutes to get it cleared out; which means that if the traffic is stopped for as much as ten minutes, it may take a hundred minutes to get the traffic back to its normal flow. So for every single minute you can save, it is tremendously helpful. The problems that exist are to be able to find the funding to have them stand by, and sometimes we have been able to commercially have them stand by because there are enough blockages that it is cost-effective for them to do it. But it is extremely helpful in certain areas. You can't do it all over the rural areas, of course.

Mr. MINETA. Also in your statement, Mr. Suthard, you mentioned a drug recognition expert program. I was wondering if you could just briefly expand on that statement you made.

Mr. SUTHARD. We have received Federal grants in which the police officers have received special extensive training as to how to identify a driver who is using drugs while they are operating a motor vehicle on the highway, and then how to test them. I believe that Mr. Leighty has overseen the project in Virginia and we had one of the very first projects that started in Virginia and has been very, very successful.

Mr. LEIGHTY. Mr. Chairman, it is a two-week course that we give special officers. It gives them the capability to do a psycho-physiological test that takes about 15 minutes. At the end of that test, if the officer believes that the individual is under the influence, he can order a blood test. We have a law in Virginia that allows them to order the blood test. We then send it to the lab which has some pretty good technology to fingerprint the drugs that are in the individual's system. In Virginia, we've trained 53 officers in 7 jurisdictions. They can tell you within seven categories what type of drug the individual is using generally after they complete the examination.

Mr. MINETA. Very well.

Mr. Taylor, go ahead.

Mr. TAYLOR. What if the individual refuses the blood test? What is your criterion for enforcing it?

Mr. SUTHARD. It is the same as driving under the influence. If they refuse the blood test, then they would be charged.

Mr. MINETA. Well, Mr. Leighty and Mr. Suthard, thank you very, very much for your testimony here today. We appreciate.

Mr. LEIGHTY. We appreciate the opportunity.

Mr. SUTHARD. Our pleasure, and thank you for your interest.

Mr. MINETA. Absolutely.

[Mr. Leighty's prepared statement appears on page 1871.]

[Mr. Suthard's prepared statement appears on page 2016.]

**TESTIMONY OF JACQUELINE GILLAN, DEPUTY EXECUTIVE DIRECTOR, ADVOCATES FOR HIGHWAY AND AUTO SAFETY, ACCOMPAINED BY GERALD DONALDSON, ASSISTANT DIRECTOR FOR HIGHWAY SAFETY; CHARLES DAWSON, PRESIDENT, AMERICAN TRAFFIC SAFETY SERVICES ASSOCIATION, ACCOMPANIED BY CAROLINE CARVER, DIRECTOR, GOVERNMENT RELATIONS; MILO KIRK, VICE PRESIDENT FOR CHAPTER AFFAIRS, MOTHERS AGAINST DRUNK DRIVING (M.A.D.D.), ACCOMPANIED BY THOMAS HOWARTH, VICE PRESIDENT, PEYSER ASSOCIATES, AND GOVERNMENTAL AFFAIRS OFFICER, M.A.D.D.**

Mr. MINETA. I would like to now call forward a panel made up of Ms. Jacqueline Gillan, deputy executive director of the Advocates for Highway and Auto Safety, accompanied by Doctor Gerald Donaldson, assistant director for highway safety; Mr. Charles Dawson, president of the American Traffic Safety Services Association, accompanied by Caroline Carver, director of Government Relations; and Milo Kirk, vice president for Chapter Affairs, Mothers Against Drunk Driving, accompanied by Mr. Thomas Howarth, vice president, Peyser Associates.

All of your testimony will be made a part of the record and if you would go ahead and abbreviate your testimony with an oral presentation.

Ms. Gillan, if you would proceed first in your own fashion.

Ms. GILLAN. Thank you, Chairman Mineta, and members of the subcommittee. I am Jacqueline Gillan, deputy director of Advocates for Highway and Auto Safety, a coalition of consumer, safety, and insurance organizations dedicated to promoting passage of highway and auto safety laws and policies to reduce death and injury on America's highways. I am accompanied this afternoon by Gerald Donaldson, assistant director of Highway Safety for Advocates.

I am also pleased to be on this panel with one of Advocates' member organizations, Mothers Against Drunk Drivers.

I am very grateful for the opportunity to testify on safety issues in the Surface Transportation Assistance Bill, and I thank you for your leadership in highlighting the importance of safety through this hearing. I will summarize my remarks and ask that the entire statement be inserted into the record.

I am here today because Advocates believes the reauthorization of Federal highway programs offers an unparalleled opportunity to be, as you stated, visionary with regard to safety. Motor vehicle crashes constitute a major public health dilemma and cost society more that $85 billion annually. Motor vehicle crashes are the number one cause of death of Americans under the age of 44.

Every single day, as many Americans die on our highways as U.S. servicemen and women were killed during the 45 days of Operation Desert Storm—120 per day, nearly 45,000 people per year. Additionally, nearly 5 million Americans are injured and 500,000 more are hospitalized each year in automobile crashes.

Although much progress has been made, more remains to be done through effective Federal, State, and local programs. The Surface Transportation Assistance Bill can lessen one burden now being shouldered by all Federal taxpayers; the health care costs associated with deaths and injuries which could have been avoided if

every State had safety belt and all-rider motorcycle helmet use laws.

Currently, 38 States and the District of Columbia now require safety belt use, 23 States and the District of Columbia have all-rider helmet laws. We believe California is about to adopt a helmet law. In fact, the California Assembly, if I might digress, has passed an all-rider helmet bill, this week the Senate Transportation Committee reported out an all-rider helmet bill, and Governor Wilson has indicated that he will sign such a bill into law. We're very pleased about that.

The American public overwhelmingly supports motorcycle helmet laws. In a recent Roper survey, 90 percent of the respondents said they supported such laws. We believe that all States should have these use laws, and the Administration also agrees. The goal of the National Highway Traffic Safety Administration is to have safety belt use laws and all-rider motorcycle helmet use laws in all 50 States by 1992. Yet, the Administration's proposed surface transportation bill is painfully silent on how this goal would be reached. Advocates urges this legislation include provisions, such as those in the National Highway Fatality and Injury Reduction Act, sponsored by Representative Jim Cooper and Senator John Chafee.

The Surface Transportation bill must also address the issue of speeding. It will take further Federal initiative to address the growing speed epidemic on our highways. Recent studies have shown a yearly increase of as many as 700 deaths as a result of States raising the speed limit to 65 miles per hour on rural Interstates.

Yet, under the current Federal highway program, safety-minded States that wish to remain at 55 are penalized for attempting to stem this speed epidemic and face constant pressure to increase their speed limits to 65. On the other hand, if a State has raised the speed limit to 65 miles an hour, it is not covered by the speed limit compliance rules on these roads and thus can sidestep sanctions.

This anomaly must be addressed in the reauthorization bill but not as suggested by the Administration, which simply eliminates compliance requirements for everyone. We believe a better approach is to create effective mechanisms encouraging the States to take speed limit enforcement seriously, whether it be 55 or 65 miles per hour.

In addition, if a State wishes to post or to continue to post a rural Interstate at 65 miles per hour, drivers of these roads should feel confident that the highway is as safe as it should be at that speed. The State should be required to upgrade the standards of their Interstate highways posted at 65 miles per hour. We have specific recommendations on how to achieve systematic safety improvements on our existing Interstate highways that will benefit all drivers on these roads.

While this is not a popular position to take, we feel that without strong Federal oversight of State enforcement programs, we will see an ever-increasing disregard for posted speed limits, resulting in more fatalities and injuries.

The Surface Transportation Assistance bill must also address the vital issue of commercial vehicle safety, an issue which affects all highway users. Since changes in Federal law in 1982, the Federal Highway Administration has repeatedly indicated its inability to control State size and weight practices, and we have already seen a steady upward trend in truck lengths and weights. About 35 States currently allow loads greater than the Federal limit of 80,000, and 20 of these States permit such loads to be carried in longer combination vehicles. These examples illustrate how the Federal stance sharply influences safety in every state.

If Congress adopts major program changes increasing flexibility for the States, it should not be at the expense of decreasing safety for the travelling public. Congress and the Federal Government can decrease the toll on our highways by providing leadership in the Surface Transportation bill through three methods: Increasing the role of safety in the traditional highway construction programs, reauthorizing and strengthening existing highway safety programs, and using Federal highway dollars to encourage State action on safety issues.

As we know, most of the monies in the surface transportation assistance program apportioned to State and local governments are used for construction, reconstruction, and rehabilitation of Federal-aid highways. Rarely has safety been a paramount consideration early in the planning process or throughout preliminary engineering and construction of roadways.

Congress should ensure that safety is a paramount consideration in the use of Federal assistance by requiring that States adopt plans for highway safety, highway work zone safety, the Interstate system, bridge, and pavement management. For example, as part of a comprehensive Highway Safety Management Program that Advocates proposes, the basic safety needs of all projects must be reviewed before Federal approval is given.

These comprehensive management programs are necessary to restrengthen the Federal stewardship of the highway program and guarantee that congressional objectives of safety, mobility, and cost-effectiveness are not remiss throughout the Federal-aid highway system.

Advocates is also convinced that special attention must be paid to highway work zone safety. More than 785 people were killed in work zones last year and we believe an intensive effort is necessary to reduce work zone fatalities and injuries. In addition, we recommend that Congress adopt a provision for an Interstate safety emphasis program, which requires States that adopt a 65 mile per hour speed limit to systematically upgrade those Interstates in order to reduce fatal and injury crashes.

Advocates also supports reauthorizing and strengthening the existing highway safety programs. The basic Federal highway safety programs, such as the 402 program, have been traditionally underfunded and have been poor stepchildren to other Federal highway programs. I would like to digress for a minute and say also that we believe that these programs should grow with the highway construction programs, and we would support a set aside of 2 percent to fund these programs.

Funding for the basic 402 program has not increased in the last six years. These programs should be reauthorized at increased funding levels and, at a minimum, should grow in concert with growth in the Federal highway construction and rehabilitation programs.

Advocates also supports the use of Federal highway dollars to encourage State action on safety issues. Advocates supports retention of sanctions for States that do not have a 21-year-old minimum drinking age. We feel that a provision similar to what the Administration proposed should be included in the Surface Transportation Assistance bill.

Advocates has many concerns in this legislation and would be happy to provide more details on our safety proposal.

As the committee develops its vision for the Surface Transportation Assistance bill, I hope it does not remain content with the status quo for highway safety. An investment now will reap social and economic benefits well into the next century.

We urge that our new highway system be a new highway safety system.

I would be happy to answer any questions that you have. Thank you very much.

Mr. MINETA. Thank you very much, Ms. Gillan.

Mr. Dawson.

Mr. DAWSON. Mr. Chairman and members of the subcommittee, I am Charles Dawson, national president of the American Traffic Safety Services Association, known at ATSSA. We are a national trade association in our 21st year representing over 850 companies. Much of the traffic safety equipment and services used on our highways are provided by ATSSA members. Public officials at all levels of government who are concerned with traffic control and highway safety are also members of our association.

Mr. Chairman, at this point I would like to request that my full text be entered into the minutes, and I will try to abbreviate this as much as possible.

Enhanced transportation safety has been mentioned by both the Administration and Members of Congress as one of the top national priorities. With this in mind, I would like to make some recommendations.

First, aging drivers. We all know that the numbers of older drivers are increasing. Currently, 12 percent of our drivers are older than 65 and that number will double over the next 30 years. We commend the States that have taken the lead in developing programs that will aid these drivers. These programs often include larger and better maintained signs, upgraded pavement markings which sometimes mean wider and more visible edge lines. These safety improvements not only enhance the safety and mobility of older drivers, but of all drivers.

Congress should direct the Secretary of Transportation to propose rulemaking that would establish revised visibility and legibility standards on all streets and highways for signs and markings that will accommodate all drivers, including the elderly and those with diminished visual capability.

Next, I would like to talk about work zone safety. Each year when we address this committee we report an increase in work

zone fatalities. Sadly, this year is no exception. There were 782 traffic fatalities and an estimated 28,000 disabling injuries in work zones in 1989. The latest work zone summary report from the Federal Highway Administration indicates deficiencies continue to exist in the areas of development, implementation, and the management of work zone traffic control plans. The report also indicates that a limited number of trained personnel is a problem. With this in mind, ATSSA endorses the recommendations from the Advocates for Highway and Auto Safety which call for a highway work zone safety program.

We specifically recommend that each highway department designate and require a contractor to designate for each project a person trained and certified who will have the responsibility for traffic control. To ensure enough funding is available for adequate traffic control, we recommend that 100 percent Federal funding should be made available to the States for traffic control.

Last week at the April 10th hearing on reauthorization of the highway act, this committee heard Congresswoman from Ohio, Marcy Kaptur, ask for Federal dollars for replacement of signage. She said funding is inadequate. And yet the Administration is proposing to cut an existing program that allows for 100 percent Federal funding for signing, pavement marking, and other safety improvements that have significant cost-benefit ratios in terms of lives saved for money spent.

Section 120(d) of Title 23 U.S. Code allows for 100 percent Federal funding for certain vital cost-effective safety improvements. These projects, even with the current 100 percent Federal funding, are bypassed for other types of highway work. If we cut this program and require a 25 percent or a 40 percent match, many of the more important safety projects are likely to be disregarded altogether.

Therefore, we would recommend that section 120(d) Title 23 U.S. Code be retained and amended to include traffic control devices in highway work zones among the other safety improvements available for 100 percent Federal funding.

I would like to briefly mention comprehensive safety management. The Federal Highway Administration reports that one of the top two improvements that have been used most effectively to reduce fatal and injury accidents at lower costs are traffic signs. In spite of this, replacement of signs and other safety improvements are not coordinated with regular construction programs. Safety is categorized into a narrow, low funded program and is often the last thing to be considered.

We would suggest that the next highway act should ensure that the States engage in safety construction work as part of their project requirements in performing 3R work.

I would like to now mention an area of safety that has been neglected and that we have not previously addressed at any of the congressional hearings. I am referring to the traffic safety on private property. Washington's own Doctor Gridlock refers to malls as "new downtowns." These new downtowns, as well as industrial parks, resorts, hospitals, colleges, private residential streets, and condominiums are not governed by established public standards of traffic control. As a result, signing and pavement markings are

often confusing or non-existent, and worse than that, these areas are dangerous. The National Safety Council reports that there were between 1,000 and 1,100 fatalities each year on non-public roadways.

We would recommend that Title 23 Section 109 and Section 402 of the U.S. Code be modified to require that standards for traffic control devices that are approved by the Secretary for Federal-aid highways and other public roads also be applicable for all roadways on private property open to public travel.

Finally, and I would be remiss if I didn't point out the tremendous human and economic costs caused annually by traffic accidents—45,000 fatalities and 3 million injuries each year. Many of these injuries are debilitating, requiring enormous attention and cost, and this places additional burdens on our already overtaxed health care and legal systems. Because of this, safety considerations must be an integral part of every aspect of the new Federal highway program. At a time when we're frantically searching for ways to reduce the skyrocketing costs of medical and legal care, a modest requirement that we improve safety on our Nation's highways could make a substantial contribution to this overall effort.

Thank you, Mr. Chairman.

Mr. MINETA. Thank you very much, Mr. Dawson.

Ms. Kirk.

Ms. KIRK. Thank you. My name is Milo Kirk and I am here on behalf of Mothers Against Drunk Driving as vice president of Chapter Issues. Accompanying me today is Tom Howarth. Tom is in our Governmental Affairs Office here in Washington for M.A.D.D.

It is a pleasure to appear before the committee today to discuss drunk driving and the Federal Government's role in helping us rid our highways of drunk drivers. As a co-founder of the Dallas, Texas chapter of Mothers Against Drunk Driving almost ten years ago, I am pleased to note the longstanding commitment of this committee in combatting drunk driving.

I am going to abbreviate my remarks today in the interest of time and would request that our full text of our testimony be entered into the record.

To come before this committee is to come before old friends. Over the course of MADD's ten years as a grassroots advocacy organization combating drunk driving, the House Committee on Public Works and Transportation has been the venue for many of our most significant advances. The committee developed the NHTSA 408 Alcohol Incentive Grant program in 1982, known as the Howard-Barnes bill, named for the late chairman of this committee, Representative James Howard of New Jersey, who is sorely missed by those of us fighting drunk driving and promoting highway safety. In 1984, this committee led the way in the fight to raise the minimum drinking age nationwide to 21. With the support of this committee and Representative Glenn Anderson in 1988, the Drunk Driving Prevention Act, now known as the NHTSA 410 program, became law.

MADD has been proud of our association with these legislative victories for the victims of drunk driving, and we look forward to many further progresses this year as Congress extends and modi-

fies the highway safety provisions of the Surface Transportation Assistance Act.

My purpose in being here today is to urge the committee and this Congress to revise and extend the provisions of the NHTSA 408 and 410 anti-drunk driving incentive grant programs consolidating these programs into a single program devoted exclusively to combating drunk driving.

Let me also make clear that while MADD wishes to maintain an anti-drunk driving program which is authorized and appropriated as a discreet program, we will also support separate programs designed to advance an agenda for highway safety initiatives.

There will be those who would say that drunk driving is but one of the many problems on our Nation's highways and that now is the time for the adoption of a generic highway safety bill. While MADD recognizes that safety belt laws, motorcycle helmet statutes, and other measures are important, we would emphatically maintain that more than 22,000 Americans lost their lives last year in alcohol-related highway crashes. That's more than half of the total fatalities. This is no time to diminish the concentration on drunk driving as a national problem of tragic proportions.

In the early drafts of its modifications to these programs, the Bush Administration suggested the consolidation of 408 and 410 programs into one program. MADD thinks it was a suggestion well taken. We have learned a substantial amount since 1982 about what works and what does not work in combating drunk driving. MADD believes it is time to consolidate and streamline the two incentive grant programs in existing law in the interest of targeting our efforts on those countermeasures which have demonstrated the greatest ability to save lives.

MADD believes not all countermeasures are equal. While many may be useful, some are of more immediate importance than others. That is why we suggest a continuation of a feature found in Section 408 and 410—that is the separation of countermeasures into two tiers, a set of criteria which would qualify a State for basic grant and a set of supplemental criteria, which, once basic eligibility is achieved, would provide additional support for the adoption of additional countermeasures.

We would urge you to adopt a program which includes the following basic criteria: Administrative license revocation, a .08 BAC blood alcohol concentration per se definition for intoxication, the use of sobriety checkpoints, mandatory 48 hours incarceration for repeat offenders, and self-sufficient STOP-DUI-DWI programs.

MADD activists across the country have been working in State capitals urging adoption of administrative license revocation, designed to deliver swift and certain punishment to drunk drivers and safer roads for all. In 1988, the Insurance Institute for Highway Safety found a 9 percent decrease in nighttime fatal crashes in those States which adopted administrative revocation. NHTSA, in a separate study, confirmed the same. Administrative revocation is legally sound, it works, and it saves lives. MADD has been working with a coalition of insurance and auto safety groups convened by the National Transportation Safety Board and NHTSA dedicated to making advances on administrative revocation across the country. We are encouraged by results to date.

The major new item which we hope you will put on your agenda is the adoption of .08 BAC as the per se definition of intoxication in every State. California, so often the bellwether State, has adopted .08. Three other States have also moved to .08, and we believe on the basis of what we see around the country that .08 is the next major advance to be made in combating drunk driving across the country. Congress has set the intoxication level for pilots and commercial truck drivers at .04. There is ample scientific evidence that shows that impairment occurs as low as .02 BAC and virtually all drivers are impaired at .08. It is clearly time to move to .08 nationwide.

Mr. Chairman, MADD strongly favors the inclusion of .08 among basic grant criteria employed in any new incentive grant program. However, to avoid making States ineligible for grants while they revamp their BAC level, we would suggest that States be given two years to adopt .08 during which time they would qualify for a basic grant provided they met the other basic grant criteria.

In the aftermath of the Supreme Court's finding in 1990 that sobriety checkpoints were a constitutional means of deterring and apprehending drunk drivers, MADD favors a major push to have this very effective countermeasure employed by the States. MADD also continues to support the development of self-sufficient programs at the State level which provide ongoing support for STOP-DUI efforts.

MADD has been listening to many State highway safety representatives who argue that Federal programs are often too rigid and do not give enough credit for performance as opposed to the achievement of certain criteria devised in Washington. We think the States make a good point in this regard and are prepared to see performance rewarded. We would therefore suggest that any State which achieves a 5 percent average reduction in alcohol-related fatalities over the five year period prior to their application for an incentive grant be given credit for that performance and have one of the basic criteria waived. A State so characterized would therefore have to meet only four basic criteria, not five.

Once a State is eligible for a basic grant, we believe that the State should continue to show progress in order to remain eligible. We therefore suggest additional supplemental criteria; namely, mandatory BAC testing in the case of crashes which result in death or serious injury, prohibitions on open containers, and the confiscation of license plates of those who drive under a revoked or suspended license. For each supplemental criterion adopted, MADD suggests that the State receive an additional 5 percent of its 402 allocation.

MADD suggests that a State could be eligible for a five-year period if it achieved basic eligibility and adopted at least two supplemental criteria during its period of eligibility. Basic eligibility alone would be a maximum of three years. The intent here is to provide an incentive for States to maintain momentum.

Mr. Chairman, MADD would urge the committee to provide adequate funding for the effort to combat drunk driving which will send a signal to those States and to the general public that as a Nation we are serious about this effort. MADD would suggest a $25 million authorization for fiscal year 1992 for a consolidated 408 and

410 program, rising to $50 million in the fiscal year 1993, and $75 million in the fiscal year 1994. The source of funding for this program should be the Highway Trust Fund. The money should remain available until expended.

As noted earlier, we see no justification for lumping drunk driving in with a host of other highway safety initiatives. The concentrating on drunk driving under existing law in a separate and focused program is warranted by the facts facing us on our Nation's highways. Indeed, a Gallup poll currently underway for MADD shows that the public considers drinking and driving a far greater highway safety problem than poor highways or highway construction. This is no time to let down our guard on drunk driving.

We also see no justification for holding alcohol safety incentive grants constant at $25 million per year while construction related grants grow steadily over the five years. There are ample funds available for safety under the Federal Highway Administration program today. Why the Federal Highway Safety Administration needs to encroach on the resources of the much small NHTSA program has not been adequately justified.

Thank you for the time here today and for your attention and your support in the past. I will be glad to answer any questions.

Mr. MINETA. Thank you very much, Ms. Kirk.

I am going to leave for about fifteen minutes and Mr. Swett will assume the chair.

Mr. SWETT [assuming the Chair]. As I get myself into the flow of things here this afternoon, I will let my distinguished colleague carry on with the Republicans' point of view, and I will come in after he has concluded his questioning.

Mr. TAYLOR. Thank you, Mr. Chairman. I'll try to leave something on the table there for you. [Laughter.]

I certainly appreciate these comments and I share speaker Kirk's comments about the drunken driver. I worked with the State Legislature in North Carolina years ago with our first laws. How much progress do you think we can make with the .08 recommendation that your organization is talking about? Do you have any sort of estimates of how we might impact this 22,000 deaths per year?

Ms. KIRK. As I stated, we have four States currently that are the only States that do have a .08 BAC. The problem that we're finding and the reason that we're asking for .08 is honestly we believe that .08 should be the legal limit, but in fact we're having a hard time in many of the States even prosecuting a .10 or just over a 1.0. Basically we feel like incentives given to the States would help them pass these laws.

I know that I work diligently in the Texas legislature, where I'm from, and have since 1983. We have a bill pending and this is one reason why they are even considering it, is because of the problem that we have with prosecuting and the funding that could possibly be attached to it.

Mr. TAYLOR. Do you have any statistics that might lead you to make an educated as to the number of reductions from the 22,000 deaths we have now? Would it be a half or a quarter, or do you have any information to go on at all?

Ms. KIRK. I could check.

Ms. TAYLOR. I think it would be helpful to making the arguments in the future. It is not neccesary today, but it would be for those of us who are very much interested in your point of view here and your recommendations. I think that would be good.

Ms. KIRK. Okay.

Mr. TAYLOR. I had a question for Mr. Dawson. Your recommendation where you want to modify the standards for traffic control devices to make those standards apply to private roads as well as public travel—in other words, the same Federal signage and other devices and standards. Has your organization looked into that a great deal both from the legal standpoint, the environmental considerations, a number of other considerations that come to mind?

Mr. DAWSON. Yes, sir, we have. There are about as many different laws throughout this country as there are States as it relates to private property and control of traffic where the public is invited. I find it appalling that in parking lots and in off-public areas and private areas that over 1,000 people are killed each year. That's 2.5 percent of our total traffic deaths. Most of the time we don't have standard signs, we don't have any way of enforcing things, and we don't have the local ordinances that require people when they're building these centers to put in standard signs and standard traffic control devices. If we could get this, I'm sure that we could bring these accidents down and that we would provide a safer place for the public to be.

Mr. TAYLOR. Mr. Chairman, one other question. I was wondering if your organization has discussed it or had any sort of input from the people who push quite often sign ordinances as it has environmental impacts in private parks and recreational areas, and various other ways. They design the signs often for the particular area they're in and they don't always meet the Federal standards as far as size or shape or color. Would that have any real impact on those organizations or any flexibility there for those organizations?

Mr. DAWSON. Well, it is difficult to have something that's nonstandard because the eye isn't trained to see this. I've seen green stop signs that are only a foot square in resort areas and the architect thinks they look nice but he doesn't visualize two cars coming together when they're supposed to stop. We need to take a bigger look at this as we expand these areas and as these new downtowns are created, as our Mr. Gridlock in Washington refers to them.

Mr. TAYLOR. Thank you. Thank you, Mr. Chairman. I appreciate the comments that have been given.

Mr. SWETT. Thank you very much.

It is my understanding that we have our next panel coming up at 2:00, so I will try to be brief and I hope that you, in giving your answers, will likewise assist me in that endeavor.

I would like to start out by asking a general question to the entire panel—and I'll let you determine among yourselves who best can handle the answer. You state that there have been specific recommendations on how to achieve systematic safety improvements on Federal-aid highways to benefit motorists. Can you very briefly summarize what some of those safety improvements might be?

Mr. DONALDSON. I would be glad to respond to that, Mr. Swett. I am Gerald Donaldson from Advocates for Highway and Auto Safety. What we've basically had in our hands here since the early

1970s is an approach towards safety which has been a patchwork quilt of remedies, it has brought up the rear, it hasn't given us any systematic safety benefits at all. What we need is to have safety enter at the front door of the program and we need it integrated into the basic project planning and to the disbursement of Federal funds at the front end.

Safety has come in through the back door. It has come in belatedly, it has come in a very unpredictable manner. We have not gotten systematic safety built into our system. Indeed, despite the claims that our Interstate system is the most superior system in the world, there are very inconsistent safety qualities about that system, much less the conditions in our lower class system. We believe that highway safety programs have to be raised to a level of a management-intensive effort in which safety is programmed at the front end of all the basic reservicing, restoration, rehabilitation projects the Federal Government allows to be funded.

Mr. SWETT. Thank you. At this point in time, it has been brought to my attention that we need to move on to our next panel—not that it begins at 2:00, but I have been informed that it ends at 2:00. [Laughter.]

That doesn't leave us much time to accomplish what needs to be done. As you all realize, this is a forum at which testimony is given and questions are asked and answers given in order to be a part of the record in helping us to decide how to move on certain legislation. I appreciate your time and your thoughtfulness in this preparation.

Thank you very much for your time.

[Ms. Gillan's prepared statement appears on page 1644.]
[Mr. Dawson's prepared statement appears on page 1501.]
[Ms. Kirk's prepared statement appears on page 1752.]

Mr. SWETT. At this point I would like to call forward Ms. Joan Claybrook, co-chair for Citizens for Reliable and Safe Highways, acronym CRASH.

Thank you very much for joining us this afternoon. I apologize for the brevity of your panel. I look forward to your comments. Without further ado, I think it would be most appropriate if you launch right into your opening statement.

## TESTIMONY OF JOAN CLAYBROOK, CO-CHAIR, CITIZENS FOR RELIABLE AND SAFE HIGHWAYS [CRASH], ACCOMPANIED BY GERALD DONALDSON, CO-CHAIR, CRASH

Ms. CLAYBROOK. Thank you very much, Mr. Chairman. It is a good way to enforce the five minute rule to have to catch an airplane.

My name is Joan Claybrook. I am president of Public Citizen and co-chair of CRASH, Citizens for Reliable and Safe Highways. With me today is Gerald Donaldson, who has already been introduced, and is also a co-chair of CRASH.

First, I would like to just address the issue of the safety of longer combination vehicles, that is the twin 48s, the Rocky Mountain doubles and triples, weighing as much as 135,000 pounds and covering as much as 120 feet in length, the equivalent of a 10-story building.

Analysis of scientific literature from sources including the California Department of Transportation, the California Highway Patrol, the Transportation Research Centers at the Universities of Michigan, North Carolina, Pennsylvania State, and Texas, the Congressional Office of Technology Assessment, the Transportation Research Board, the Federal Highway Administration, and the National Transportation Safety Board show that longer combination vehicles, or LCVs, are unsafe for the following reasons:

One, their engineering—which for a triple includes 5 articulation joints making it possible to turn on corners and highway ramps—makes them inherently unstable, prone to sway, more likely to jackknife, overturn, and separate than a single trailer truck;

Two, by virtue of their size, weight, difficulty in accelerating, serious braking problems, and prolonged splash and spray, LCV's are incompatible with cars in traffic;

Three, as a result of their engineering, LCV's are involved in crashes that would not occur with a single trailer truck;

Four, multi-trailer trucks are disproportionately involved, or over-involved, in crashes compared to single trucks; and

Five, crashes involving LCV's will be more severe with higher probabilities of deaths and injuries.

What we are asking the committee to do in its reauthorization bill is four things.

First, we would like to have a provision which limits the cargo portion of multi-trailer trucks operating on the designated national network to 65 feet. This will serve to reduce road and bridge damage on our most heavily traveled highways. I know that I don't need to articulate for this committee that 15.9 percent of the bridges on the Interstate are already classified as functionally obsolete or structurally deficient by the Federal Highway Administration.

The issue is not whether we can afford these repairs, that is an issue that already has been raised for the committee's consideration. The issue in my view is can we take the chance of subjecting our highways to heavier abuse and costlier deterioration from LCV's, as well as the question of safety, all in the name of productivity. And that is the rationale that has been used by the trucking industry to encourage nationwide use of these larger trucks.

The obvious question at this point is why do we need a Federal length limit when we already have the 80,000 pound gross vehicle 20,000 pound single axle, and 34,000 pound tandem axle weight limits for the Interstate? Well, the answer is that 19 States already permit these unsafe LCV's on their Interstates and other Federal-aid highways. LCV proponents are lobbying State-by-State to allow them in every State in the Nation. The National Governors Association, I should point out, agrees with us that there should be uniformity in allowable truck sizes and weights, which is what we are attempting here to achieve.

With regard to the weight issue, which is our second point, we have to talk about the grandfather provisions in Section 127 of Title 23. The problem is with the 1982 amendments to this law, which allow the trucking industry to engineering a massive loophole in the Federal truck weight law, essentially sideswiping the

80,000 pound gross vehicle weight limit on Interstate highways. There is chaos on the highway as a result.

The Federal Government has been shackled, it has been removed from exercising any authority to decide whether a legitimate claim for grandfather rights exists. As a result, we have the fox in the chicken coop—the States claim they have a grandfather right and then they decided that they have a grandfather right; they are judge and jury together as well as advocate.

So we believe that we have to go back to 1982. There are as many as 34 States which now claim some kind of grandfather rights. Prior to 1982, 20 States made such a claim and those claims were reviewed by FHWA. But the fact is, no one has been keeping track of grandfather claims in the meantime because since 1982, the Federal Highway Administration has essentially been removed from any involvement.

Additionally, I should point out that the permits that are issued by the States for heavier weights are supposed to only be for not easily-divisible loads. But if you look at the reports, you will find that they are indeed being issued for divisible loads. Since 1982, the number of these permits have increased dramatically.

Therefore we are asking to amendment Section 127 to put the Federal Highway Administration back in control.

Our third issue concerns data and information. This is a clear issue of importance because there are now conflicting claims about current data and what is safe and what is unsafe.

The specific problem we have is that there is an absence of accurate data on the type of vehicle configuration and on vehicle miles travelled for these longer combination vehicles. The truckers have claimed that these vehicles are safe. What they have done in making such claims is taken data from a number of sources, poured them into a cauldron and extracted a witch's brew of confused conclusions.

We would like to suggest that the existing studies which have been done, whether by the University of Michigan the Transportation Research Institute, or a number of different States, show that in fact this is simply not true. Right now, these longer combination vehicles have been operated on very limited basis. While there are 20 LCV States, only 9 of the States have them in any kind of general use. Even then, they are in local use, not traveling across the country. In addition they travel under the best of conditions, that is in the daytime, when there is good weather, with the best drivers, and the most care.

Obviously, under such circumstances, you would probably have fewer safety problems with LCV's. Nevertheless, we still see from the data in the studies that have been done on multi-trailer trucks, more jackknifing, more roll-overs, and disproportionately more accident involvements of these particular vehicles. There is a new study that has just come out from the Oregon Public Utilities Commission which highlights the real problems with these vehicles in a State where they have been operated for some years.

What we need is an accurate and uniform national truck safety monitoring system so that we have accurate data for future decisionmaking both in the Congress and the Federal Highway Administration.

Finally, we are asking the Congress to improve the Motor Carrier Safety Assistance Program (MCSAP), which has been such a great success story. Under MCSAP inspections, some 30 percent of the inspected vehicles have been ordered out of service. Similarly, some State random inspections conducted in California, Michigan, Washington, and Wisconsin have produced out-of-service orders for more than 25 percent of the nationally inspected trucks.

Here, what we're asking is to establish uniformity in vehicle inspections. Now the States are doing it with the support of the Federal Government. There should be more uniformity—uniformity in minimum fines for safety violations and enforcement of out-of-service orders.

That is a very fast review, Mr. Chairman, of the issues that we believe are essential. I know that this is a controversial series of proposals.

We have made them because we believe that safety on the highways is not an option. The truckers have suggested a State option for use of these larger vehicles. We do not believe that there ought to be an option on safety.

Thank you very much.

Mr. SWETT. Thank you very much. I am going to yield my time. I know that you're on a very tight schedule. I might ask my good friend and colleague from New York if he has any quick questions that you might be able to field. During those questions, in deference to the true Chairman of this subcommittee, I will relinquish the Chair back to its rightful owner. Thank you very much for your patience and indulgence.

Let my distinguished colleague ask his questions at this time. Thank you.

Mr. BOEHLERT. Thank you very much, Mr. Chairman.

You've given us a lot to digest; I'm beginning the process here and now. Part of the problem with the LCVs— I'm trying to distinguish where perception and reality are distinct. Do you have any empirical data in terms of losses of lives or accidents directly related to LCVs?

Ms. CLAYBROOK. Yes. There are documented at least 18 fatalities over the last 10 years, even with their very limited usage. One of the real issues here is that the traffic reports do not show the number of trailers that are on multiple trailer vehicles in many cases, and so the accuracy is subject to some question. However, I should add that in the analyses done by several States as well as the University of Michigan, the longer combination vehicles—the longer doubles and the triples—have been shown to be more dangerous. We would be glad to submit for the record all the details of that. My written testimony spells out in some detail the Oregon Public Utilities Commission study which also makes such a finding.

Mr. BOEHLERT. All right. Thank you very much. I am trying to get an idea on the dimensions of the battle. Any indication as to how much the opposition is spending to keep what it has? Can you give us some feel for what your group is spending to change what you'd like changed?

Ms. CLAYBROOK. Our budget is about $1.5 million for the year. I don't know what the truckers are spending, but I would love for

you to ask them that question and have them answer it on the record.

Mr. DONALDSON. We know that their budget is far greater than $1.5 million.

Ms. CLAYBROOK. Right. Their budget is about $30 or $40 million a year; something of that nature.

Mr. BOEHLERT. Thank you very much. I'll have some additional questions at a later time, but I know you are on a time constraint. Thank you.

Ms. CLAYBROOK. Thank you very much.

Mr. MINETA. Let me quickly ask. In your testimony you propose that the Federal Highway Administration be given the authority to determine State's claims to grandfather rights under Section 127. In your research, have you been able to determine which States would meet the requirements of Section 127?

Ms. CLAYBROOK. Do you mean which states would convene to meet the requirements if section 127 was amended?

Mr. MINETA. If it, in fact, has grandfather rights at the present time.

Ms. CLAYBROOK. That's a very interesting question, Mr. Chairman, because the Federal Highway Administration has not been involved in this issue since 1982 as the primary enforcer of the law. As a result, there is a lot of confusion about what the State grandfather claims are. As of 1982, it is our understanding that 20 States had made such claims. Now, as of this date, as many as 34 States have some kind of claim. The problem is what does that claim mean? Is it based on a statute; does it stem from a regulation; is it derived from an ordinance; or is it based simply on a state practice? There are very few claims that are based either in statute or regulation, which are clear and easy to understand. So I believe that it would be a great service if the committee would request that the Government Accounting Office or the Federal Highway Administration, actually collect this information so that it was clear.

We did talk to the Federal Highway Administration and we specifically asked them the question you are asking. They indicated their lack of information and knowledge here.

Mr. MINETA. But in order to do this, we would then have to repeal the Symms amendment; is that correct?

Ms. CLAYBROOK. That is correct. It is important to point out, Mr. Chairman, that while there are 20 States that allow some use of LCVs, by-and-large it is a very limited number of miles that these vehicles travel. In fact, the American Trucking Association has acknowledged the very small number of miles travelled by LCVs. Only about 9 States permit any kind of general use, and again mostly local in their States.

If we went back to the Symms amendment, the economic impact would be, we believe, quite modest. When you compare that to the safety cost if LCVs were allowed to operate nationwide—which is going to be the eventual alternative result—we feel that clearly safety should be the priority, and the economic impact of prohibiting LCV operations is going to be quite modest.

It is important to point out that there is a split in the trucking industry itself it is the very large trucking companies who want to

operate these very large vehicles, while many truckers are opposed to LCVs because their operation would be an economic disadvantage for the smaller carriers. Not only of course is there a split in the truckers, but the Teamsters do not want larger vehicles allowed on the highway, also opposing LCVs are the medical profession, the insurance industry, the railroads, and many others. So there is a real balance on our side of the issue, I think, including public opinion—with 85 percent of those surveyed favoring reducing the size of vehicles on the highway.

We believe that this is a very modest proposal that we are making. It is important that it be included in this year's highway bill because if truck size and weight is not grappled with and dealt with now, then the next time this legislation comes up in several years, it is going to be much more difficult to resolve. So that's the reason we have urged the committee to deal with truck size and weight in this year's bill.

Mr. MINETA. But you refer to it as a modest effort but does it not roll it back to pre-1982, in which there were in 1954, what, there were what 3 States——

Ms. CLAYBROOK. In 1956, there were 3 States; and as of 1982, there were 20 States, that's correct. But I emphasize that the usage of these longer combination vehicles is fairly modest at this time in terms of mileage.

Mr. MINETA. Right. And so the thing to do is to— Would the repeal of the Symms amendment then just take it back to the seven then, or whatever States——

Ms. CLAYBROOK. It would probably go back to 1982, which covered 20 States.

Mr. MINETA. Twenty States.

Ms. CLAYBROOK. Right. And it would be enforced by the Federal Highway Administration. I think it is important to say that really the Federal Highway Administration would be the decisionmaker here and not us. They would have to evaluate these grandfather claims and look at the law and determine what would be permissible

Mr. DONALDSON. Mr. Chairman, I would like to put an appendix on Joan's remarks.

Mr. MINETA. If I could just interrupt for just a minute. Since you have to leave, Ms. Claybrook, feel free to go ahead and leave and Doctor Donaldson I'm quite sure could stay.

Ms. CLAYBROOK. Thank you very much, Mr. Chairman. I really appreciate your consideration. We will submit some additional information for the record to supplement our testimony, if that's permissible.

Mr. MINETA. That's fine. Thank you very, very much.

Ms. CLAYBROOK. Thank you so much.

Mr. MINETA. Doctor Donaldson, go ahead.

Mr. DONALDSON. I just wanted to emphasize, Mr. Chairman, that in a display of refreshing candor, the Federal Highway Administration itself has spoken very loudly and clearly as well as repetitively in its annual reports concerning its attempts to enforce the law under Section 127. In fact, I have in front of me the March 1990 report. With your permission, I would like to read a few sentences

about how they regard the truncation of their stewardship over the enforcement of truck size and weight under Section 127. It says:

> Since the Federal-aid Highway Act of 1956 was passed, FHWA's ability to protect the Nation's multi-billion dollar investment in its highways and bridges has been compromised by permissive legislation regarding vehicle weights. By competing interests of our highway and transportation industries and by various court decisions.
>
> The States are liberalizing their weight regulations through new interpretations of their grandfather rights, particularly with respect to the issuance of multiple trip permits for divisible loads that exceed statutory weight limits. This trend is likely to continue inasmuch as recent court decisions have upheld State authority in this area. . . . The Nation's present system of vehicle weight laws, State and Federal, for several States results in heavier trucks being compelled to use highways with pavements built to standards lower than those for Interstate pavement.

So I think the issue here, Mr. Chairman, is that we have an agency which is being about as candid as it could possibly be about the fact that it has been cut off at the hips in its ability to not only protect and advance public safety, but to also protect the public investment that we've already made in these roads, streets, and bridges.

Mr. MINETA. One of the things, as I understand from the testimony, is that your organization is calling for the limitation of the cargo portion of multi-trailer trucks to be limited to 65 feet.

Mr. DONALDSON. Yes.

Mr. MINETA. Is this not the first time that we would be getting into the business of limiting length rather than weight, as we had in the past, either axle weight, total weight. I guess to the only designation we've had in length is I believe is distance between wheels, or something of that nature? So this would be the first time we'd be getting into a limitation in terms of 65 feet?

Mr. DONALDSON. What it consists of in a simple form, is that we're basically asking for what was established as the minimum in a 1982 STAA as being a cap, a maximum, or a lid on size. You are correct, it would be the first time we are getting into a size cap. But I think the important thing to accentuate here, Mr. Chairman, is that Congress increasingly since 1956 has tried to impose a stronger and stronger regime on both public safety and the protection of our pavements and bridges. While we did finally raise the width limit, and the axle and gross vehicle weight limits of trucks, we also mandated compliance with bridge formula to protect the integrity of our bridges.

Simply, the proposal we have here in our hands is the forgotten parameter. What Congress did is simply address width, address axle and gross vehicle weight, and address the condition of our bridges through the bridge formula. However, there has been an oversight in not putting a maximum limit on the length of trucks. Our proposal is the necessary correction so we now have the proper intersection of all these components or parameters—weight, length, width, axle weight, gross vehicle weight—so that we can control both the consequences for public safety and road and bridge damage.

Mr. MINETA. This would eliminate everything but the twin 28s. Has there been any study in terms of what the cost of that would be or the increased cost let's say in terms of transportation if that were to be the case?

Mr. DONALDSON. It depends on whose studies you read, Mr. Chairman; and there are strongly competing studies. I know the one that is always going to be cited, particularly by the trucking industry is going to be Transportation Research Board's study. I will just simply say in a very facile manner, we have very, very serious misgivings about that study. I will also say that the Transportation Research Board has very serious misgivings about the way that particular study has been used and even exploited by the trucking industry.

For our own part, we believe that the cost of prohibiting the use of these trucks in terms of controlling highway deaths unfortunately, what we have to measure is the quantified or economic cost of lives lost and additional injuries—is going to more than offset anything that we might lose in terms of supposed economic efficiencies from LCV operations.

Mr. MINETA. Fine. Thank you very much.

Mr. Taylor.

Mr. TAYLOR. I'll follow-up, Mr. Chairman, on what you're asking. What would you envision—in following up on what the Chairman was asking—to be the practical affect? Would you envision a phase-out of existing equipment? What would be your thoughts?

Mr. DONALDSON. I don't think so Mr. Taylor, because there is no difference in equipment. What we essentially have is existing tractors out there which are capable of pulling any kind of rig as long as it has at least the minimum amount of horsepower to weight ratio.

The trailers that are going to make up LCVs—Rocky Mountain doubles, Turnpike doubles or triples—are all existing trailers which can be used in smaller combinations, or even as single semi-trailer trucks. So there is no phase-out of equipment at all. We are simply saying that instead of a triple truck with three units trailing behind a tractor, you can only have two; and instead of having double 48s behind a single tractor, you can only have a single 48-foot trailer.

Mr. TAYLOR. Mr. Chairman, I apologize, I was out with a constituent for a moment there. I was wondering, are you talking about recommendations that were made on the limitations of 65 feet and so forth? Were you thinking in terms of any limitations on single tailer units or all just on doubles?

Mr. DONALDSON. No, we have no limitation whatever. As you might be aware, Mr. Taylor, in fact the 48 foot minimum single trailer size set in the 1982 Act has been substantially exceeded. An overwhelming majority of States now recognize at least a 53 foot single trailer as being the industry standard; and indeed, some States have significantly higher limits than that. We have no single trailer size cap proposal at all.

Mr. TAYLOR. Thank you. Thank you, Mr. Chairman.

Mr. MINETA. Doctor Donaldson, thank you very much for your presentation here at this subcommittee. Thank you very much.

[Ms. Claybrook's prepared statement appears on page 1334.]

Mr. MINETA. At this time I would like to call forward Robert Desjardins, Executive Vice President, Cianbro Corporation, Pittsfield, Maine, and Chairman of the Highway Division of the Associated General Contractors; and J.C. Lanford, president, Adams Con-

struction Company, and chairman of the American Transportation and Road Builders Association, accompanied by Doctor T. Peter Ruane, president and CEO, of ARTBA.

Mr. Desjardins, your testimony will be made a part of the record. So if you would go ahead and make your abbreviated presentation, I'd appreciate it very much.

**TESTIMONY OF ROBERT DESJARDINS, EXECUTIVE VICE PRESIDENT, CIANBRO CORP., PITTSFIELD, ME, AND CHAIRMAN, HIGHWAY DIVISION, ASSOCIATED GENERAL CONTRACTORS OF AMERICA [AGC]; J.C. LANFORD, PRESIDENT, ADAMS CONSTRUCTION CO., AND CHAIRMAN, AMERICAN TRANSPORTATION AND ROAD BUILDERS ASSOCIATION [ARTBA], ACCOMPANIED BY DR. T. PETER RUANE, PRESIDENT AND CEO, ARTBA; BERTRAND WILSON, VICE PRESIDENT, BARRIERE CONSTRUCTION CO., REPRESENTING THE ASSOCIATED BUILDERS & CONTRACTORS, INC.; AND LOUIS J. COLETTI, PRESIDENT AND CEO, NEW YORK BUILDING CONGRESS**

Mr. DESJARDINS. Thank you and good afternoon, Mr. Chairman and members of the subcommittee. I am Robert Desjardins, a contractor from Pittsfield, Maine. I am also this year's Highway Division Chairman of the Associated General Contractors of America. AGC is a national trade association of more than 33,000 firms, including 8,000 of America's leading general contracting firms.

AGC appreciates the opportunity to express its views on issues facing the Nation in surface transportation. AGC believes this Nation must increase investment in its surface transportation infrastructure to provide the foundation for continued economic prosperity and international competitiveness.

AGC is also concerned that this country is in a recession and that steps must be taken immediately to stimulate the Nation's economy and to create jobs.

The harsh realities of the recession in the construction industry are dramatically demonstrated by the United States and the State-by-State Economic Fact Sheets which are included with the written testimony. These fact sheets show that the construction industry lost 498,000 jobs in the 10 month period from May of 1990 to March of 1991, and that construction unemployment rose from 13 percent in February of 1990 to over 21 percent in February of 1991.

Clearly, there is a critical problem that needs to be addressed. AGC believes that reauthorization of the Nation's surface transportation programs can play a significant role in bringing the Nation out of the recession and provide the long term framework to promote needed investment in our Nation's transportation infrastructure.

With the Nation in a recession, AGC believes the economic benefits of infrastructure investment are particularly worthy of note. Unlike many Government expenditures, infrastructure spending is an investment which has short and long term benefits.

The short term benefits of infrastructure investment are increased construction employment and the ripple effect of induced economic activity in other industries that follows. The U.S. Department of Commerce estimates that each additional $1 billion spent

on new construction creates 46,800 jobs in construction, supply, and service industries. A $25 billion highway program sustains nearly 1.2 million jobs. Each $1 spent on new construction in the United States generates $3.62 in economic activity across all industries and services. A $25 billion highway program generates over $90 billion in economic activity throughout the country.

These statistics show that at a time when construction industry unemployment looms at over 21 percent, increased spending for the Nation's surface transportation programs couldn't be more critical.

As the 102nd Congress gets underway, we applaud this subcommittee for scheduling these hearings and getting on with the important task of reauthorizing the Nation's highway and mass transit programs. AGC is also very encouraged that President Bush and Transportation Secretary Skinner have placed transportation as a top priority of the Administration's domestic agenda.

We commend you, Mr. Chairman, and the leadership of the House Public Works and Transportation Committee for taking the initiative earlier this year to propose an aggressive five-year $153 billion budgetary framework for the future funding of our Nation's surface transportation programs.

AGC believes the committee's budget request is on the right track to improve and expand the efficiency of our Nation's highways and bridges and make a substantial Federal commitment towards addressing documented annual highway capital needs at all levels of government of $58.5 billion. It can also make a critical difference in the state of the U.S. economy now and in the future.

Therefore, at our recent convention, AGC unanimously adopted a convention resolution in support of the House Public Works Committee's budget proposal. AGC supports congressional efforts to increase funding for the Nation's highway program through spending down the Trust Fund balance, increasing highway user fees, and elimination of the tax exemption for gasohol. The committee can count on our continued support and cooperation as you develop the details of the committee's reauthorization proposal.

Included in AGC's statement for the record are a number of recommendations which we offer to the subcommittee for its consideration in development of the legislation. These recommendations include:

One, that user fee Trust Fund concepts must be retained for a successful future program;

Two, AGC strongly urges the Congress to reject any further proposal to increase the gasoline tax for deficit reduction or non-transportation spending;

Three, AGC is concerned by the provisions in the Administration bill which would provide State and local governments the flexibility to transfer funding between highway and transit programs. AGC continues to believe that revenues placed in the highway account of the Trust Fund must be expended solely for highway improvements. Current revenues are insufficient to meet documented highway needs. Allowing the transfer of funds to mass transit projects further exacerbates an already critical funding problem; and

Four, AGC urges the Congress to sunset the current DBE program which results in the denial of subcontracts to many individ-

uals because of their race, gender, or national origin. Instead, the Congress should explore means of promoting the participation of disadvantaged business enterprises in the Federal-aid highway programs that will not be subject to constitutional challenge.

Additional recommendations are included in our written testimony.

In closing, AGC acknowledges that the Congress faces a tremendous challenge in balancing interest in the future legislation and stands ready to work with the Congress as it develops solutions to the Nation's transportation infrastructure crisis.

Again, thank you for the opportunity of appearing before the subcommittee today. I would be pleased to answer any questions you might have.

Mr. MINETA. Thank you very much.

I apologize for—and I see Mr. Bertrand Wilson, but I didn't call up Louis J. Coletti, president and CEO, New York Building Congress. Is Mr. Coletti present? I apologize for not calling you as part of this panel, Mr. Coletti. Mr. Bertrand Wilson is here. He is vice president of Barriere Construction Company and a member of the Associated Builders and Contractors.

Mr. Lanford, your statement will be made a part of the record. If you would go ahead and make your oral abbreviated presentation, we'd be pleased to hear it.

Mr. LANFORD. Mr. Chairman and members of the subcommittee, I am Jack Lanford, the 1991 chairman of the American Road and Transportation Builders Association. I am also a highway contractor from Roanoke, Virginia. With me today is ARTBA president Pete Ruane.

Mr. Chairman, ARTBA commends you and the chairman of the full committee for the strong leadership you have shown in calling for a five cents per gallon increase in the Federal motor fuels excise tax to fund needed highway and bridge capital improvements. We agree that a motor fuels user fee increase is needed. We respectfully suggest, however, that at a minimum an increase of ten cents per gallon will be required to fully meet the Nation's surface transportation requirements.

As the members of this subcommittee are aware, ARTBA has forcefully advocated the need for a substantial increase in the Federal motor fuels excise tax for the past two years. We have made our case before Congress and have taken our message to the print and electronic media. In a nutshell, we are making an all-out effort to bring home the fact that the repair and improvements of our Nation's roads and bridges is a legitimate and pressing objective; an objective that we believe, as you do, should be a high national priority.

Mr. Chairman, I know the time is short so I will highlight our main areas of concern and our principal recommendations. A detailed statement has been submitted for the subcommittee's consideration and I ask that it be made a part of the hearing record.

The Federal-aid highway program must be greatly expanded if we are to remain competitive in what is increasingly a global marketplace. It is important to realize that deficiencies in our surface transportation system result in higher costs to producers of goods

and providers of services. These higher costs put U.S. firms at a competitive disadvantage.

The U.S. Department of Transportation, in its most recent report to Congress, stated that a sustained $40 billion per year program is needed to bring the roads and bridges that constitute the Federal-aid highway system up to minimum conditions of engineering standards. I emphasize that a sustained $40 billion annual funding level, which represents both Federal and State monies, would not result in a perfect "gold-plated" highway system. It would, however, meet existing and anticipated deficiencies through the year 2005. A $40 billion annual program would go far toward fixing the bridges in the Federal-aid highway system, many of which are in deplorable condition. As the chart at my right shows, fully 16 percent of the Nation's interstate highway bridges are deficient according to the DOT. A $40 billion program would also provide funds for the repair of the Nation's roads, 40 percent of which, according to the U.S. DOT, are in imminent need of repair.

Mr. Chairman, as the chart now before you shows, 38.8 percent of the Nation's rural interstates and 40.1 percent of the urban interstate highways are in need of repair. The conditions get even worse as we move to other less prominent categories, as evidenced by the fact that almost 70 percent of urban collectors require substantial work.

As you know, every two years the U.S. DOT is required to submit to Congress a full report on the conditions and performance of the Federal-aid highway system. The conditions just described are from the Department's 1989 report. We have reason to believe that the Department's new report, due this year, will show a further deterioration of the system over the past two years. In fact, we would urge you, Mr. Chairman, to request that the Secretary of Transportation submit this important report, which we understand is virtually complete, to the Congress quickly so that it might be used as a source document for your deliberations on the reauthorization and funding of this important program.

Mr. Chairman, ARTBA believes that a $40 billion per year Federal highway program is needed and that it can be achieved, as shown by the next chart. The current program is about $16.5 billion. As you add to that an annual spend-down of the Highway Trust Fund balance at $3 billion per year, a dedicated of the diverted 2.5 cents user fee the Highway Trust Fund—another $2.5 billion, by eliminating the gasohol subsidy of $1 billion, the 10 cent Federal user fee increase would bring $10 billion, and the State matching funds at a 20 percent average would be $7 billion, that combination would give you a program of totalling $40 billion.

The enactment of a surface transportation bill prior to the September 30, 1991 expiration date of the current program is of vital importance. A break in the continuity of the highway program will result in delays, confusion, and uncertainty in the States, as well as leave hardship on thousands of small businesses that comprise the transportation construction industry.

ARTBA recommends a reauthorization period of five years. Some consideration has been given to a two year bill so that a longer authorization could be developed after the initial impact of the budget agreement is known. We believe that a far better approach

is to lock-in the parameters of the program now for the next five years.

We also recommend dedication to the Highway Trust Fund of the 2.5 cents-per-gallon Federal fuel tax that now goes into the General Treasury. Such action would restore the concept that the gasoline and diesel excises are user charges applied only to transportation programs. Equally important, this action would increase the funds available for highway improvements. ARTBA also recommends that the entire five cents-per-gallon motor fuels tax increase approved in 1990 be made permanent and that proceeds be made available for immediate obligation.

The scope of the surface transportation program must be increased without delay to tackle urban congestion and to accelerate the preservation and modernization of our highway network. This is possible if the recommendations made by ARTBA are included in the reauthorization bill.

Mr. Chairman, it is no accident that these bottom-line proposals of ARTBA deal almost exclusively with funding. Structural and operational refinements could be made in the program, but without a substantial commitment of additional funds, our highways and bridges will continue to deteriorate at the expense of improved mobility, economic expansion, job creation, safety, and pollution reduction.

On the issue of program improvements, ARTBA supports the concept of a national highway system which maintains our investment in the interstate system and the key portions of the primary system.

In addition, ARTBA members are strongly committed to safety. We agree with the Administration requirement for spending 10 percent of apportioned construction funds on safety construction work but suggest that the existing safety construction categories of hazard elimination and rail-highway crossings be retained. A poll conducted by Penn and Schoen Associates for ARTBA demonstrates a strong willingness by the American public to pay for road, bridge, and safety improvements.

Mr. Chairman, two years ago when ARTBA first publicly advocated an increase in the Federal highway user fees to finance an expanded Federal highway program, many people questioned our judgment, perhaps because they did not believe an excise increase was politically correct. Mr. Chairman, we will pursue what we know is right for the Nation with vigor and let the chips fall where they may. We have complete confidence in our position and the merits of our arguments.

At our 1990 convention you told us that when the time was right for increased Federal highway user fees, you would help lead the charge. You are a man of your word. Again, we commend you for your leadership. I pledge to you, to Chairman Roe, to Speaker Foley, and the other leaders, both Democratic and Republican, in the Congress, that ARTBA will continue to devote all of its available resources in the coming months toward helping you accomplish this mission of an expanded Federal-aid highway program.

Mr. Chairman and members of the subcommittee, this concludes my remarks. I would like to thank you for the opportunity to present ARTBA's views on the reauthorization of the Federal Sur-

face Transportation Program. I would be glad to answer questions that you or members of the committee may have.

Mr. MINETA. Thank you very much, Mr. Lanford.

Let me now call on Mr. Bertrand Wilson, representing the Associated Builders and Contractors.

Mr. WILSON. Good afternoon, Mr. Chairman and subcommittee members. My name is Bert Wilson and I am vice president of Barriere Construction Company, an asphalt paving contractor located in New Orleans, Louisiana. On behalf of the Associated Builders and Contractors, a national trade association representing over 17,500 merit shop contractors and subcontractors, I appreciate this opportunity to comment on reauthorization of the Nation's surface transportation programs.

I come before you today as the end of the reauthorization debate nears to respond to the Administration's legislative proposal and to encourage, with less than six months remaining until the September 30 deadline, a timely reauthorization.

There are two fundamental issues we believe Congress must focus on during reauthorization—program structure and funding. Acknowledging the current fiscal situation and political climate, it is now more important than ever to have a long-term, integrated transportation plan and allocate Federal funds accordingly.

ABC supports the basic program structure of H.R. 1351 which recognizes financial constraints and seeks a unified approach. The five-year plan will allow for coordinated planning and the continuity necessary to meet our transportation needs of the future. ABC supports a strong Federal commitment to the National Highway System and believes the two-tiered approach, focusing more Federal resources on these roads of national significance, will ensure safe and reliable transportation for our national defense and interstate commerce needs.

Conversely, States will focus on internal transportation issues such as congestion relief, rural access, and intermodal links. The increased flexibility of the Urban and Rural Program empowers States to choose how they will improve their condition. The capability of States to prioritize their transportation demands and allocate funding as needed is a basic necessity for transportation efficiency in the future.

The increased emphasis placed on planning in H.R. 1351 and the reliance on Metropolitan Planning Organizations will be invaluable in properly coordinating needs and planning for the future, and will facilitate and integrate a fluid travel system.

ABC applauds the Administration's increased emphasis on innovation and technology. It is the investment of the future.

Where the Administration's bill falls short, unfortunately, is in addressing one of the major problems inherent in the future stability and credibility of the program—financing. Until the Highway Trust Fund is made permanent and taken off budget, the program will not be honest or whole.

ABC opposes the current practice of holding money in the Trust Fund to mask the size of the Federal deficit. While ABC supports deficit reduction, we believe it can and should be achieved through spending restraints in a manner which is equitable to all—not by

diverting dedicated trust fund revenues or by raising the gas tax for non-transportation related purposes.

We applaud this committee's attempt to recover the 2.5 cents diverted to the general fund and to achieve a spend down in the trust fund. The gas tax increase diverted to the general fund last year during budget reconciliation must be returned to the Highway Trust Fund. A direct taking of this nature is the ultimate insult to highway users and dramatically undermines the program.

Recognizing budget agreement constraints, ABC supports a total overall funding level of $23 billion each year for the duration of the reauthorization bill. While H.R. 1351 falls short of this goal, the bill has several positive financial features.

We applaud the Administration for proposing to raise the Davis-Bacon threshold to $250,000. However, we continue to support a minimum Davis-Bacon threshold on Federal construction projects of $1 million. With immediate needs for highway and bridge construction and repair far outstripping the supply of available funds, reform of the Davis-Bacon statute can provide additional dollars to fund our infrastructure needs.

Considering the country's shrinking capital base, innovative financing techniques and funding mechanisms are essential. These efforts bring the experience, business savvy, and financial strength of the private sector to government entities for the benefit of all.

The Administration's bill continues the Disadvantaged Business Enterprise Program whereby 10 percent of Federal-aid highway safety and mass transit program funds are to be awarded to DBE contractors. This stringent 10 percent DBE requirement fails to recognize the need for flexibility and cooperation which we believe Congress had originally intended in its minority provision.

Rather than pursuing set-asides, ABC believes training and mentor programs will enable disadvantaged businesses to compete and win contracts on merit. ABC focuses a large portion of its financial, membership, and staff resources on the issue of craft and supervisory training. We have recently begun a major effort funded by nine of the Nation's largest open shop contractors to develop standardized craft training to more efficiently and effectively train and upgrade the construction workforce. We have long recognized that if the United States is to foster expanded opportunities for all its citizens and maintain its competitiveness, hundreds of thousands of additional highly skilled workers are needed. Training is the best solution.

H.R. 1351 allows a percentage of funds apportioned to the States to be available for highway construction training and funds administration of disadvantaged business proficiency programs. We believe this is a step in the right direction. Taxpayer dollars should be invested in training to help disadvantaged firms and their employees become more skilled at both the craft and the management levels. Training is an investment in the future, better equipping DBE firms with the skills necessary to successfully compete in the absence of preferential treatment.

We believe the case for tightening the DBE program is even greater because of this increased assistance, and would encourage the inclusion of safeguards such as a sunset provision, size restrictions for eligibility, or limits on the number of contracts a DBE can

obtain. These safeguards will ensure the program does not perpetuate the firms DBE status.

ABC adamantly opposes the use of Federal highway funding sanctions to force State compliance with safety or environmental goals. We believe our infrastructure needs are far too immense to be used to penalize States for inaction and, in turn, support the Administration's safety bonus program which rewards States for achieving highway safety goals. We feel this is a more positive approach and will encourage States to act swiftly to meet their highway safety goals.

Finally, H.R. 1351 recognizes the current wetlands dilemma and establishes eligibility of Federal funds to create wetland banks or contribute to State-wide programs which create, conserve, or enhance wetland areas. While this bill is not the vehicle for change, we will urge the Water Resources Subcommittee to consider the effects of wetlands regulations on transportation.

We are at a critical juncture in the history of our Nation and the history of our Nation's transportation system. If we do not act now to rebuild our Nation's foundation, America cannot expect to remain competitive in an increasingly global economy. We need a bill signed by the President before September 30.

On behalf of the Associated Builders and Contractors, I again want to thank Chairman Mineta and the Subcommittee on Surface Transportation for the opportunity to be here today. I will be happy to try to answer any questions you have.

Mr. MINETA. Thank you very much, Mr. Wilson.

Next, we have Mr. Louis J. Coletti, president and CEO, New York Building Congress.

Mr. Coletti.

Mr. COLETTI. Thank you very much, Mr. Chairman, and members of the subcommittee. My name is Louis Coletti. I am the president and chief executive officer of the New York Building Congress. We are the only private sector association in New York City which represents every segment of the design, building, and construction industries, including organized labor. I appreciate the opportunity to give our perspective on this legislation.

I know that there are probably some people in this room who are wondering why someone who has among its membership the General Contractors Association of New York City, which represents the highway contractors and the organized labor who perform the work, why we would come to Washington to argue the case for more Federal dollars for New York's subways and commuter rail.

I really didn't wander off to the wrong hearing. I am here because I represent a wide constituency, all the elements of which agree that urban mass transit must be at the top of our agenda. They advocate a continuing, vigorous Federal commitment throughout the 1990s for the benefit of the people of New York and the future economic health of our Nation. Consequently, they view the Administration's National Transportation Strategy as a dangerous threat both in the near-and long-term.

We recognize that we will not get our members out of the slump by building more roads and skyscrapers. There is simply no place to put them. Nor could more asphalt and concrete extricate the motoring public from a pervasive congestion that begins in the sub-

urbs and the outer boroughs of New York and spills into Manhattan's central business district every single day, clogging our streets and fouling our air.

For residents of the metropolitan New York region surface transportation means rail lines and bus lines. The "E" train is to us what Interstate 80 is to Pennsylvania or Iowa.

President Bush, in his address to a Joint Session of Congress last month, urged quick action on his transportation plan, saying that, "If our forces could win the ground war in 100 hours, then surely the Congress can pass this legislation in 100 days."

Like all Americans, I want the President to have a successful next 100 days and I want that for New York City, too. I don't want, however, the kind of 100 days Napoleon was remembered for. You'll recall, he rallied the troops, grabbed a few headlines, then lost crushingly at Waterloo, finally ending up imprisoned on a forbidding, storm-lashed island.

New York will become such a desolate place if we lose America's next ground war—the fight for surface transportation, transportation consistent with each region's pressing needs, apportioned in an equitable manner.

The Administration's plan at the moment is disturbingly short on equity. After the devastating cutbacks borne by its public transit throughout the 1980s, New York needs to be made whole again. Instead, what we find here is a profoundly unjust funding formula that would eviscerate our system. In awarding aid based on fuel consumption, the new proposal would punish us for being an energy-efficient city.

I opened my newspaper one day last month and was shocked to find that Los Angeles, the city of angels and freeways, and Miami, each with more miles of road than we have, are slated to receive more aid than we will. Senator Moynihan has noted that in a few years time, Interstate 95 between Fort Lauderdale and Miami will have to be 44 lanes wide to prevent that stretch from experiencing near-continuous traffic delays. Reading this proposal, I asked myself if that isn't what the Department of Transportation has in mind. Maybe, against all logic, the idea is to somehow build our way out of congestion.

Then to pile injury upon injury, all of New York's Federal operating funds are to be eliminated and we no longer touch the general revenue for our capital expenses. True, we can completely draw down the mass transit account of the Highway Trust Fund but that will be gone by fiscal year 1998.

In that event, we will have to tap into the general fund again or the New York subway and bus systems, Metro-North service to Westchester and Connecticut and Long Island service will either disappear or be priced at a level only the wealthy could afford. And the shame of it is that the Metropolitan Transit Authority has been making great progress which, if allowed to continue, would make it an excellent feeder system for an overhauled, rejuvenated Penn Station serving the entire Northeast corridor.

New York must have the ability to keep our Nation globally competitive. By comparison to a number of our foreign trading partners, all of whom invest far more heavily in public transportation, America's transportation infrastructure is woefully inad-

equate and we are paying the price. It is estimated that $73 billion is wasted on traffic jams each year—$73 billion in lost productivity, lost wages, and excess fuel consumed.

The New York Building Congress has been in the forefront of the recent successful effort to urge both Governor Cuomo and Governor Florio to accept the Port Authority of New York- New Jersey's toll increase on its Hudson River crossings. We took this position, not only to boost economic growth in the two States, but also to help the Authority upgrade the Port of New York's capacity as a hub of international trade. When you consider that unified Germany possesses not one but two port facilities superior to ours—Hamburg and Bremen—you begin to have some idea of the distance we must travel to meet the challenge of an economy integrated Europe or Japan.

While New York in the last quarter century has added a grand total of five miles of new rail service, Tokyo, already in first place in public transportation, will add 300 miles of new rail and trolley routes to its transportation network in the next 10 years.

Make no mistake, for America to remain competitive, New York must also remain competitive. If New York loses its place as the capital of world business, the baton will pass on not to Houston or Atlanta, but to Frankfurt or Tokyo.

I hope everyone understands by now that as a Nation we will all prosper or fail together. When countless Americans in other parts of our country saw their dreams disintegrate through the chicanery of venal savings and loan operators the Federal Government did not say, "Sorry everybody in Texas, you there in the sunbelt, you had it pretty good through the 1980s. Now, we will forget about you and let you take your losses, no matter how it affects you and your children." Instead, Congress and the President recognized that the victims needed relief and they dipped into the Treasury—if "dipped" is the right word for a bailout now at $500 billion and rising—and the taxpayers of the Northeast kicked in, too.

Our Nation's transportation infrastructure is just as important as our savings and loan infrastructure or our banking infrastructure. It should not be shortchanged.

New York's share of that transportation infrastructure is approximately 40 percent, for 40 percent of the mass transit used in the United States is used in the New York City area. One other statistic: 85 percent of all central business district commuters in New York use mass transit.

With the suburbs having become the location for most of our regions's employment growth, ensuring mobility for the reverse-commuter is increasingly a problem.

Over the years the State of New York has made a large contribution to the City's transit, contributing annually $1.4 billion to both the capital and operating budgets. That figure represents nearly half the entire Federal mass transit program, but now with Albany in its own financial difficulties, New York cannot rely on that revenue source as it once did.

Washington should be increasing its support of mass transit. Instead, it sends contradictory signals. On the one hand, New York City is required to comply with the 1990 Clean Air Act, which mandates greater costs for pollution control and, lest one forget, im-

poses penalties for non-compliance which can result in Federal dollars being denied to a community. On the other hand, it withdraws support for maintaining the one system that reliably reduces exhaust emissions. Since it takes 10 lanes on roads into Manhattan to equal the carrying capacity for just one track lane on the Long Island Railroad or Metro North, does the Department of Transportation's highway-tilted formula make sense for a city on the move that would like to breathe, too?

There is precious little breathing occurring on the Brooklyn-Queens Expressway. A recent study placed the cost of congestion to truckers there at $34 million annually for just one 12-mile long highway. A major shipping service estimates that New York's trucking expenses to be 30 percent above the national average.

Last August after Iraq invaded Kuwait, the President called on Americans to conserve energy. What better way to do so than to expand mass transit?

Yet the President and his advisors have presented to Congress a program that, with its higher matching ratios for funding highways, would almost certainly, as incoming MTA chairman Peter Stangl has said, "tempt" State and local officials to choose roads over subways. I urge you to help them resist temptation by restoring balance to the funding formula and restoring our operating funds. The New York Building Congress would also ask that within the limits of the budget enforcement act you provide funding levels that would give the Metropolitan Transit Authority, over time, the wherewithal to continue meetings its capital needs.

As it would appear likely in the wake of the Gulf war that the United States may enjoy even lower prices for imported oil, this could be a propitious time for an increase in the Federal gas tax, perhaps, as the MTA has already suggested to this subcommittee, on the order of one cent for every two on average that the real price falls.

That kind of commitment to urban mass transit would go a long way toward guaranteeing that the Nation's largest metropolitan region has a transportation system second to none, able to serve its own residents and the Nation at large.

Thank you very much.

Mr. MINETA. Thank you very much Mr. Coletti.

Let me ask of the panel, as you are aware, under the great leadership of our chairman, Chairman Roe, the Committee on Public Works and Transportation submitted to the budget committee its views and estimates which supported increasing funding levels for surface transportation programs by attempting to recover the 2.5 cents going into the general fund for deficit reduction, spending the increase and interest, and drawing down the Highway Trust Fund.

As all of you have indicated, in order to address our transportation needs, additional revenues are necessary. I am wondering if I could ask of each of you what kind of support would there be among your organizations for an increase in motor fuels taxes that are dedicated solely to transportation purposes and, I might add, that make it mandatory spending like an entitlement program so that we don't get caught as we did in the budget summit agreement this last year. If we do get an commitment for additional gas-

oline taxes, my condition is that it be made a mandatory spending program.

Mr. LANFORD. ARTBA would fully support a major motor fuels tax increase, Mr. Chairman. It is our position exactly as I have enunciated in my prepared statement. We cannot meet our highway needs without more revenue. While five cents is a start, more is needed if this Nation is to have a highway system that meets our economic and mobility requirements. ARTBA strongly supports at least a ten cent-per-gallon increase in Federal motor fuel user taxes.

Mr. DESJARDINS. And AGC would also fully support it, Mr. Chairman.

Mr. COLETTI. Mr. Chairman, our organization would also support it but we would also like to see that the requirement for spending that money be balanced between highway and mass transit use.

Mr. MINETA. I take it you would have some concern with the split that is exhibited in the Administration's bill between highways and transit.

Mr. COLETTI. That is correct, Mr. Chairman.

Mr. MINETA. Since enactment of the Surface Transportation Assistance Act of 1982, the Congress has authorized the Disadvantaged Business Program, which requires that not less than 10 percent of the funds authorized be expended with small business concerns owned and controlled by socially and economically disadvantaged individuals. Could you explain to the committee how the construction industry has been able to successfully achieve the 10 percent goal.

Mr. DESJARDINS. Mr. Chairman, I would like to start on that one. Looking at statistics, it would appear that the program has been successful, but, unfortunately, it forces me, as a general contractor, to turn my back on a very highly qualified subcontractor who quite often has the lowest price only because he is a white male, and it forces me to turn to someone that qualifies as a DBE even though their price may be higher and to go that route in order to meet the goal.

I guess you could say, in addition to that, contractors tend to be quite innovative, and we have found innovative means of meeting the goals.

Mr. MINETA. Anybody else wish to respond?

Mr. WILSON. Yes, sir, I would.

Mr. MINETA. Mr. Wilson.

Mr. WILSON. ABC believes in training, training, training. We don't support set-asides or programs which specify the financial status or the social background of contractors. We experience the same things that Mr. Desjardins commented about, we quite often cannot use the lowest bid in order to achieve the goal.

Mr. TAYLOR. Mr. Chairman.

Mr. MINETA. Mr. Taylor.

Mr. TAYLOR. On that same point, would you allow the members to comment on the "mentor program" that you mentioned a moment ago as how you might envision a program that would work and might be the alternative to the 10 percent set-aside.

Mr. WILSON. ABC has a number of programs that have been put into different chapters. They center on middle management, upper

management, as well as craft training. The programs that they use are trying to create good contractors, good contractors who understand the industry and the business.

Mr. TAYLOR. And then, sir, how would you envision that there would be no preference program for them at all, it is just that they would be competing. You would train them in all facets of contracting, including bidding and so forth?

Mr. WILSON. Yes, sir. We do train people in all facets of the construction business. We would support a program where trainees would work their way up.

Mr. TAYLOR. Has that been tried anywhere, Mr. Chairman, if I may ask? Is anyone trying it? Any companies trying it? Anyone doing it as an experiment?

Mr. LANFORD. The State of Virginia has a mentor protege program similar to what is being discussed.

Mr. TAYLOR. How is it working; do we have any idea?

Mr. LANFORD. It is in the beginning stages, but it appears to have promise.

Mr. COLETTI. Mr. Chairman, if I may also respond to that question. The Port Authority of New York and New Jersey embarked upon a program last year in cooperation with educational institutions on how to run small businesses; it really gives them some business backgrounds. There is going to be a major announcement, I understand, in the next several weeks, so I feel a little uncomfortable in going into the details, but you may want to contact the Port Authority. It has been an extremely successful program.

Mr. TAYLOR. Thank you. Mr. Chairman. I will have some other questions, but thank you for yielding.

Mr. DESJARDINS. Mr. Chairman, I might add that I believe our association, although it hasn't addressed it, would support some type of mentor programs or perhaps affirmative action programs such as you have in relation to employment of minorities; anything to help these people to get away from these percentage goals that we're forced to meet.

Mr. MINETA. Does Cianbro, as an example, have a mentor program?

Mr. DESJARDINS. Unfortunately, most States limit what we can do to assist our DBE subcontractors. I think that's unfortunate. They restrict us from what we can do to help them by providing supervision, and to what equipment we can allow them to use. Where we can do that with other subcontractors, we're prevented from doing that with DBE subcontractors. So, in some respects, our hands are tied as to what we can do to help these people. We help them all we can.

Mr. MINETA. Could you explain that to me. You say you can't do certain things with DBE contractors that you can do with others?

Mr. DESJARDINS. That's correct.

Mr. MINETA. As an example, what?

Mr. DESJARDINS. Some States do not allow us to rent them, if you will, construction equipment that we own. They force a DBE to go out and get that equipment elsewhere. Also, we're prevented from——

Mr. MINETA. Whereas a non-DBE contractor, you would be able to lease them the equipment?

Mr. DESJARDINS. Absolutely. Absolutely.

Mr. MINETA. What's the rationale there?

Mr. DESJARDINS. I think it is a concern with staying away from what might be called sham DBE subcontractors. They want to make sure that the general is not assisting someone who is not qualified in doing the work themselves.

Mr. MINETA. In a way, though, I wonder if I'm not hearing, you know, I don't like the program, do away with it. On the other hand, I can't participate or there are other State laws that keep me from participating in the program. It seems to me that you are trying to get it both ways.

Mr. DESJARDINS. I don't believe these are State laws. These are State DOT regulations that prevent us from doing the things that we would like to do to help these firms along and we're prevented from doing that by State DOT regulations.

Mr. MINETA. Then how do you advocate for a program and then at the same time count them as participation in your programs?

Mr. DESJARDINS. I guess what I am supporting is a loosening of these restrictions and getting into more of a mentor program, assisting these people along and requiring some type of affirmative effort in that regard in lieu of percentage DBE goals.

Mr. WILSON. Mr. Chairman, an example in Louisiana of the same type of thing that he's describing, concerns a DBE firm on a State highway project. If they were to be a subcontractor for hauling on a project, they are only allowed to hire one truck for every truck that they own themselves. Whereas another subcontractor that might provide hauling for a contract of mine would be able to hire and get trucks as best he could to fulfill project requirements.

Mr. MINETA. The Administration has proposed greater private sector participation in transportation development. Are the private sector initiatives, such as financing of toll facilities and providing transit services, as proposed in the Administration's bill, sufficient incentives to encourage private sector involvement in transportation programs?

Doctor Ruane.

Mr. RUANE. Yes, Mr. Chairman, we do support the provisions in the Administration's proposal dealing with greater private sector involvement to include the commingling of funds up to 35 percent. We also believe, however, that there should be greater incentives and we're taking a hard look at this right now. For developers and the financial community to come in, perhaps some changes to the tax code would be a greater stimulant. The bonding market needs to be looked at. We intend to have some very specific suggestions for this committee in the course of your looking at the legislation over the next few months.

Mr. DESJARDINS. Mr. Chairman, I would add that AGC would not want these additional funds to replace Federal funding. But I think these things are good in that they would provide, we would hope, additional funds to rebuild this country's infrastructure.

Mr. MINETA. Mr. Taylor?

Mr. TAYLOR. Thank you, Mr. Chairman.

Let me say at the beginning there are a number of us here who are concerned about the draconian programs that have very legitimate purposes in their creation for minorities but over years of use

are not providing the benefits for minorities that we would like to see. There are many of us who would welcome improvements in those programs—mentor programs, or what other programs put forward—if they genuinely carry out the goals that were envisioned when those minority programs were created. In other words, we don't want sham programs, we don't want programs that aren't tough, that are just going to be substituted for purposes of getting away from the original minority programs. But there are many of us on this committee, in banking with CRA, and other areas, if we can find less costly, more beneficial programs, programs that carry out the objectives that we first intended, a lot of us would welcome that. So I would urge you to pursue that and perhaps keep records and work to see if we can't come up with a better way. I wanted to say that, Mr. Chairman, because I think it is something that spreads across the area. If we can improve and give minorities better opportunities by revising these programs, that's a goal worth going after.

With the statistics that you presented, Mr. Desjardins, regarding the high percentages of commuting freight, personal travel being done on highways, what is your view of making significant highway dollars eligible for the transit projects?

Mr. DESJARDINS. We're opposed to allowing the States to transfer funds from the highway fund to mass transit. We feel that those decisions are better made here at the Federal level and by Congress. I might point out, the transferring highway funds to mass transit needs would further impact the serious need we have today in rebuilding our country's highways. There are balances in both the highway account and mass transit account that should be spent first before any funds are transferred to the mass transit account.

Mr. TAYLOR. If I may, I want to say that the material you presented, by the way, I think is excellent. It gives us very succinct and statistically presented information. I appreciate your doing that. I plan to spend more time going into it in detail.

Mr. DESJARDINS. Thank you.

Mr. COLETTI. Mr. Chairman, if I may respond to the same question. We would support more funding used for mass transit. I think different regions of our country have different needs. I think to not transfer that ability to many of the urban areas across our country could potentially wreak economic havoc. If you live in the New York-New Jersey metropolitan region, no matter what time you get up in the morning, you simply cannot get to work if you are driving. We are going to have to rely more and more on mass transit, and we think it is an excellent idea.

Mr. TAYLOR. Thank you, Mr. Chairman.

Mr. DESJARDINS. Mr. Chairman, could I have one more word on that subject. We believe that the users of the systems should pay for the cost of that system. We have nothing against spending money on mass transit, but our feeling is that the users of the mass transit system should pay for the cost of that system, as the highway user is paying through his gas tax for the highway system.

Mr. MINETA. Mr. Anderson.

Mr. ANDERSON. No questions, Mr. Chairman.

Mr. MINETA. Mr. Nichols.

Mr. NICHOLS. No questions at this time.

Mr. MINETA. Mr. Clinger.

Mr. CLINGER. No, thank you, Mr. Chairman.

Mr. MINETA. Well, let me thank the panel very much for taking time from their own busy schedules to be here. We appreciate your testimony. Thank you very much.

[Mr. Desjardins' prepared statement appears on page 1521.]

[Mr. Lanford's prepared statement appears on page 1780.]

[Mr. Wilson's prepared statement appears on page 2081.]

[Mr. Coletti's prepared statement appears on page 1485.]

Mr. MINETA. I would now like to call on our very fine colleague from Minnesota to make his presentation at the present time. Congressman Oberstar is a very fine, highly recognized member of our full committee, and now the very distinguished chairman of the Subcommittee on Aviation. So we're pleased to have Congressman Oberstar make his presentation at this time.

Mr. Oberstar.

## TESTIMONY OF HON. JAMES L. OBERSTAR, A REPRESENTATIVE IN CONGRESS FROM MINNESOTA

Mr. OBERSTAR. Thank you very much, Mr. Chairman, for the opportunity to squeeze in between other panels in the hearing.

If I may summarize, we are at an historic demarcation point in the evolution of the Nation's highway and transit programs. We are on the threshold of the post-Interstate era. Since 1957, this country has invested nearly $100 billion in building the Nation's and the world's finest interconnected system of highways—the Interstate. It represents 1 percent of the Nation's highway mileage but carries 26 percent of its traffic, and last year that was some 440 billion miles travelled.

We are at a point of concluding construction of the Interstate, moving to what I have called, and what others have referred to, as that post-Interstate era, but we are also moving to a point of demarcation among drivers. By the end of this decade, studies show that half of all the Nation's drivers will be 55 years of age and older. That means more interest in leisure driving; that means more time spent enjoying more of the Nation's scenic beauty; that means using the interstate and our primary and secondary highway system to get to points of interest, points of excitement, of enjoying the great American outdoors, the great scenic beauty and historical and cultural beauty of this country. That is what I am here to appeal for.

I want to congratulate you on the enormous task you have conducted over the last two years of extensive, detailed, thoughtful probing into the nature, condition, priorities, and other aspects of the Nation's highway and transit programs. You've conducted an extraordinarily meticulous inquiry throughout the last two years of the 101st Congress and now you're in more detailed and specific, targeted hearings as you prepare to shape the Nation's highway program not just for the next five years, but for the balance of this decade. I realize that there is a great push to reduce categories, to reduce the kinds of programs that are funded in the Federal-aid

Highway Program. I am here to make an appeal for three categories or three designations.

The first is what I just alluded to—scenic byways. I became excited about the scenic byways program when I was an administrative assistant to my predecessor, and administrator of this committee working on the Great River Road, which was included in earlier highway legislation. Last Congress, I sponsored legislation, co-sponsored in the Senate by Senator Rockefeller, to authorize funding for a study of a National scenic byways program. That study has been completed. That study has been completed by the Department of Transportation, and is supported by a wide range of national organizations who are interested in the development of a scenic byways program.

The list of supporters of Scenic Byways is long and distinguished, but let me focus on the proposed I am now developing. We're not asking for billions of dollars but something perhaps in the range of $30 million a year. Not a Federal program, organized, operated, directed by the Federal Highway Administration, but a national program that is grassroots up, that is stimulated, that is designated, whose segments of which are supported by, backed by, and categorized by the States, the localities, the areas that most benefit; but also measuring up against minimum national standards of what constitutes a Scenic Byway.

There are many precedents for Scenic Byways in this country—the Natchez-Trace Parkway that goes through three States; the Blue Ridge Parkway; the Great River Road from Canada to the Gulf of Mexico; the Sunshine Parkway in your part of the country; Wisconsin's Rustic Roads Network. They all bring Americans closer to that which is so typical and so extraordinary and so beautiful about this country.

We—by we, I mean Senator Rockefeller and I, and other members of this committee, including Mr. DeFazio—are shaping the final version of a bill that we shall shortly introduce that will spell out the specifics of what we understand by a Scenic Byways Program. I look forward to discussing its details with you.

The other element that I want to address, Mr. Chairman, is bicycle and pedestrian pathways. The Federal-aid Highway Program literally got its start from bicyclists in 1894 who banded together to ask the Congress for a grant of $10,000 to study and develop a network of hard surface roadways, not because bicyclists were enamored of roads, but because bicyclists were riding on paths that were then beginning to be used by automobiles and the automobile created ruts which made bicycling difficult. So they thought if they could get the Congress to designate a system of hard surface roadways, it would be safer for cyclists. Just about that time the safety bicycle had been invented—even though it was 300 years after Michelangelo first designed a concept of a safety bicycle—and that replaced the "Penny Farthing" high wheeled bicycle, and today we have millions and millions of bicyclists all over America.

There are two purposes for the bicycle: for urban commuting and, secondly, for recreational and leisure cycling, of which I am a particular enthusiast. I have, again, a legislative proposal in its final stages of development which I hope to introduce very soon to provide bike trails and lanes, and pedestrian walkways along roads

and highways. Cities like Madison, Wisconsin; Seattle, Washington, which is designated by several bicycling organizations as the safest place to ride a bicycle in America, have gone even further in urban areas to designate cycling-ways, including a curb-like feature in the roadway that makes it clear that the adjoining three feet or four feet are set aside for bicyclists and car may not enter.

We can reduce congestion, pollution, and save on energy by making it safe and attractive for more people to commute by bicycle, as people do in Europe. You only have to travel a bit in Germany or France or The Netherlands to see the extent to which those countries have made cycling attractive, safe, convenient. We ought to do the same and we can for a very, very modest amount of money.

Mr. Chairman, I know that you have a long list of witnesses. There will be other opportunities for me to present further thoughts before this committee. I will conclude at that point.

Thank you.

Mr. MINETA. I want to thank you very much, Jim, for your fine presentation and your innovative approaches to issues. I was just wondering, do you think that there would ever be any kind of a potential conflict between those who want to preserve the environment along scenic routes and something like a scenic byways that would be an enhancement that you are proposing? Would there be any kind of potential conflict there?

Mr. OBERSTAR. Whenever there is an unusual environmental feature there is always potential for conflict. What I have attempted to do in fashioning this concept of scenic byways is to make sure that the scenic beauty, the environmental values that we want people to come and enjoy will not be diminished, devaluated, or destroyed by a massive new construction program.

In many places, all that would be needed, for example, in Wisconsin's Rustic Roads Programs or in the Forest Service's Scenic Byways Program, is a little pull-off for recreational vehicles to get them out of the travelled roadway. In other places, it will be an overlook, just a little bit of a construction area out of the way but fitting in with the scenic area. In most cases, you are going to find that the States will designate a road as a Scenic Byway and preserve its status. I'll give you an example in my own congressional district. There is quite a hubbub going on on a little segment of roadway through the Superior National Forest to and just outside of the Boundary Waters Canoe Area Wilderness. All the resorters along the road want more people to travel. They want them to travel safely but they don't want the highway department to build a 75 foot swath through the forest. So they are now working to improve the roadway, take out some of the dangerous turns, keep it scenic, but not make it a speedway. Cooperative efforts are necessary to achieve that balance between access and safety as well as preservation of the environmental values.

Mr. MINETA. Any cost estimate as to the different proposals?

Mr. OBERSTAR. We are thinking in terms of a $30 million a year program ultimately building to $100 million over a five-year period for Scenic Byways.

Mr. MINETA. Fine. Thank you very much.

Mr. Nichols.

Mr. NICHOLS. No questions, Mr. Chairman.

Mr. MINETA. Mr. Anderson.

Mr. ANDERSON. I have no questions, Mr. Chairman.

Mr. MINETA. Mr. Clinger.

Mr. CLINGER. No questions, Mr. Chairman. I just want to thank my chairman for a very innovative idea. I think it is one that would be very useful in a number of congressional districts. In my own, for example, we will be designating a new recreational area along the Allegheny River where there are abandoned rail lines that lend themselves very easily to this kind of a concept. So I think it is one that should have very broad-based support. I certainly commend the gentleman for his very useful and innovative concept.

Mr. OBERSTAR. Thank the gentleman very much. In fact, the "Rails to Trails" concept is one that will fit in with this idea of scenic byways very, very nicely and we're hoping to do that, both for cycling purposes and in some cases for motor vehicle travel.

Mr. MINETA. Mr. Nichols.

Mr. NICHOLS. Congressman Oberstar, I only wanted to mention as a result of the Portland-Seattle trip that we were on just a couple of weeks ago, I hadn't realized myself to what extent bicycle paths were taking place. It's a healthful type of thing but a way in which numbers, as you have pointed out, of people actually get to work. That's not evident in many other environments, but certainly in these crowded environments it is very, very practical, plus the health aspect and the economical advantages to that.

Thank you.

Mr. OBERSTAR. Thank you, sir.

Mr. MINETA. Thank you very much, Congressman Oberstar. We appreciate it.

Mr. OBERSTAR. Thank you, Mr. Chairman.

[Mr. Oberstar's prepared statement follows:]

STATEMENT OF HON. JAMES L. OBERSTAR

before the

SUBCOMMITTEE ON SURFACE TRANSPORTATION

COMMITTEE ON PUBLIC WORKS AND TRANSPORTATION

April 17, 1991

Mr. Chairman, and Members of the Committee, I'm pleased to be here today to speak on two subjects close to my heart: Scenic Byways and Bicycle and Pedestrian Paths. Several colleagues and I will in the near future have specific legislation to discuss with you, and hope that it can be included in the landmark surface transportation legislation you are now preparing. We are working with Senator Jay Rockefeller to introduce complementary bills.

With the completion of the Interstate system, it's time to turn our attention to a different aspect of travel: leisure travel; a different landscape: the scenic, recreational, cultural, and historic wonders of America; and a different road system: Scenic Byways.

Unlike Interstate highways, scenic byways would take travelers away from the main corridors and into the mountains, forests and countryside, along the lakes, rivers and seashores of our great nation. Instead of bypassing towns and villages, scenic byways would take the traveler into America's rural communities, to eat, to shop, to stay, perhaps to experience a different way of life. Scenic byways would provide a change of pace for the traveler, and a boost to the economies of areas bypassed by our nation's trans-continental highways.

The Report accompanying the 1990 Department of Transportation

Appropriations Act ordered DOT to prepare a study and make recommendations on a national scenic byways program. That study is complete and, I think, fully deserves the unanimous acclaim it has received. My only disappointment is that it did not go quite far enough in recommending comprehensive a Scenic Byways Program complete with adequate funding.

The legislation we will soon introduce will do that.

The legislation will establish an Office of Scenic Byways in the Federal Highway Administration, and an Advisory Commission to recommend program elements such as scenic byways criteria and signing.

It will create a new section in Title 23, providing a modest amount of matching money to states for planning, program development, and scenic features for scenic byways and special "All-American Roads" of surpassing scenic beauty. Scenic features would include, but not be limited to, safety improvements, scenic easements, bike and pedestrian paths, turnouts, overlooks, and interpretive and information facilities.

Participation in the program by states is not mandatory. Those states choosing to submit applications would be awarded on a merit basis. This is not to be an entitlement program.

We have chosen to create a separate section for Scenic Byways because experience has shown that it is the only way to assure that the goals of such a program are realized. On the Great River Road along the Mississippi River, in which I played a role in establishing and fostering, less than 30% of the money spent has gone to what we call scenic, cultural, or historic "amenities," or the essence of the Great River Road. While road improvements would not be precluded, and

in some cases may be necessary, under my bill they are not to be the primary use of the funds.

Mr. Chairman, unlike the Interstate system, a national Scenic Byways system will not have to be built from scratch. Our 4 million miles of public roads already include a wonderful collection of parkways, byways and other routes which simply need identification, enhancement and protection.

Many states already have scenic byway programs, such as the Great River Road which follows the Mississippi River from Minnesota to the Gulf; the Blue Ridge Parkway; and Oregon's U.S. 101. The national program will be flexible enough to accommodate them. As all commenters have asked, this will be a national, not a federal program. Scenic Byways can be virtually any type of road, from Interstate to two-lane road.

This program will add to what states are already doing, to bring the wonders of America closer to the people, to make recreational travel easier, and to bring economic development to communities along America's back roads.

I look forward to discussing the legislation with you in the near future.

BICYCLE AND PEDESTRIAN PATHS

Mr. Chairman, today, on the threshold of the post-Interstate era, when we have completed 46,000 miles of highest quality trans-continental highway, it is remarkable to recall that, as late as 1900, this country had only about 200 miles of hard-surface roads

outside large cities.

It wasn't the car and the motorist that first demanded better roads; rails offered a much smoother, faster, and more economical way to travel long distances.

It was the bike, and the bicyclist, that required and demanded high-quality highways. The development of the safety bike, with gearing and chain drive, improving on the older, high-wheeled velocipede, gave men, women and children a wonderful new means of transport. The eighties and nineties saw a flood of bicyclists, who rapidly became outraged at the condition of the nation's roads. The first "Road Gang," as the highway interest group calls itself, could in reality have taken the name of our newest interest group, the "Chain Gang" of bicycle enthusiasts.

It's time to return bikes, and pedestrians, to their rightful place in the new transportation bill.

According to the 1980 census, 6.1 percent of commuters walk or bike to work, which is mor than the flat 6 percent who take the train or bus.

A recent Harris poll indicates that, if safe bicycle lanes could be provided, some 20% of all U.S. adults would sometimes commute to work by bike.

We need to make biking safer and more practical and attractive, with such simple measures as wider shoulders, or separate paths along the right-of-way.

The bill I am developing will help provide these improvements, to facilitate bike and foot commutes, ease rush-hour congestion, lessen pollution, and give people an expanded number of options to get to

work.

I am excited by this opportunity, and look forward to describing the details of my bill to you.

Mr. Chairman, thank you for the opportunity to appear before you today, and I await any questions you and the Committee may have.

Mr. MINETA. At this time I would like to call forward a panel made up of Lester P. Lamm, president, Highway Users Federation for Safety and Mobility; Mr. James Goetz, president, G.A. Truck Stops, Inc., and National Association of Truck Stop Operators; John Archer, managing director of Government Affairs, American Automobile Association; and Kenneth D. Mulzer, corporate secretary, Mulzer Crushed Stone, Inc., Tell City, Indiana, and also the chairman of the National Stone Association, accompanied by Paul C. Mellott, Jr., executive vice president, H.B. Mellott Estates, Inc., McConnellsburg, Pennsylvania, and chairman of the Government Affairs Division of the National Stone Association.

Mr. Lamm, your testimony will be made a part of the record. So I would appreciate your giving your abbreviated oral presentation.

**TESTIMONY OF LESTER P. LAMM, PRESIDENT, HIGHWAY USERS FEDERATION FOR SAFETY AND MOBILITY; JAMES GOETZ, PRESIDENT, G.A. TRUCK STOPS, INC., ON BEHALF OF THE NATIONAL ASSOCIATION OF TRUCK STOP OPERATORS; JOHN ARCHER, MANAGING DIRECTOR OF GOVERNMENT AFFAIRS, AMERICAN AUTOMOBILE ASSOCIATION; AND KENNETH D. MULZER, CORPORATE SECRETARY, MULZER CRUSHED STONE, INC., TELL CITY, IN, ON BEHALF OF THE NATIONAL STONE ASSOCIATION, ACCOMPANIED BY PAUL C. MELLOTT, EXECUTIVE VICE PRESIDENT, H.B. MELLOTT ESTATES, INC., McCONNELLSBURG, PA, AND CHAIRMAN, GOVERNMENT AFFAIRS DIVISION, NATIONAL STONE ASSOCIATION**

Mr. LAMM. Thank you, Mr. Chairman. I will very briefly summarize my remarks.

As committee members know, I have appeared many times over the years before this committee. For the past five years-plus I have represented the Highway Users Federation which in turn, represents the American travelling public from the standpoint of those who collect and pay the highway user fees at State and local level. Our members depend on good and safe highways for their own economic bottom-line. Consequently, their main concern is that they want their hard-earned tax revenues to be used in a timely fashion for what they see as needed transportation capital investments.

Our members are concerned at the current state of performance of the U.S. highway system, in particular. We think we have exhibited 20 years-plus of increased demand year in, year out, and at the same time, generally reduced investment during that same time period. That is really a recipe for failure and that failure is now showing up around the country in three main elements.

First, as several of your previous witnesses have mentioned, it is indisputable that there is growing urban and suburban traffic congestion in all of the large urbanized areas around the country.

Secondly, in many parts of the United States—and we live in one right now—old roads and bridges are wearing out faster than Government agencies can keep them up.

And the third problem is a very severe problem in that even though our traffic fatality rate is coming down, we still have 45,000 traffic deaths per year.

Yesterday, very interesting, Mr. Chairman, the full committee heard the same message coming from two widely disparate representatives of the highway user community. You heard the chairman of Bethlehem Steel and a highly placed executive in the Walt Disney organization speaking from the tourism point of view, both saying, although they have widely differing needs for highway service, they come from different regions of the country, they have the same problem—which is they see an inadequate highway service.

As you all know even better than I, 1991 will be a pivotal year for surface transportation. I would like to say that from the standpoint of our members, we believe that the DOT bill, which has been submitted and been discussed at length before your committee, represents a good start toward getting surface transportation legislation in place. We have commended Secretary Skinner and the Federal Highway Administration staff, in particular. Not only this year but ever since they've come to Washington, I think they have exercised absolutely proper leadership on the issues that concern us all, in that in 1989 and 1990 the new transportation leadership undertook a long-term intermodal transportation policy statement. Beginning in late 1990, they began to translate that national policy into specific legislative treatments, first with aviation and then this year with highway, transit and highway safety.

I say again, I believe the Administration's version of the STA is a good bill. My full testimony points out many areas where Highway Users Federation and DOT agree. In particular, we like the shift in priorities to a post-Interstate era, devoting much more Federal funding and attention to problems such as relieving traffic congestion.

We believe that the shifts toward better management proposed by the Department to State and local flexibility for greater use of technology are all steps in the right direction. And in particular, Mr. Chairman, we would urge your subcommittee at some point in the future when perhaps the dust has settled on this year's legislative activity, I think it would be interesting if you convene specific hearings on intelligent vehicle highway systems. We believe that this greatly enhanced use of technology to move traffic more efficiently and safely is going to have tremendous benefits for the next 40 and 50 years on how highways work. We think this is one small investment we can make now at the research stage that will eventually greatly improve traffic safety, result in much more energy conservation, in relieving urban and suburban traffic congestion, and in advancing a lot of the environmental goals, such as clean air, that we all share.

We have relatively few concerns with the DOT bill, but we would like the committee to evaluate those so I'll mention them specifically.

We agree with several other witnesses that the money in the DOT bill is not really sufficient, particularly in the highway program where we think the program level should be closer to $20 billion rather than $16 billion at such time as your budget pressures surrounding Congress might ease up a little bit. In the transit area, we feel that there is a continued need for general funding for the major transit systems to backup and augment the user fees devoted

to transit. And even in highway safety, we would like to see roughly 25 to 30 percent more funding than DOT proposes.

The second issue that I think your committee has already picked up and will spend a lot of time debating is the new proposed Federal-State matching ratio. As I look around the country and talk to local and State transportation managers and elected leaders, now might not be the right time to raise the matching share so drastically.

The third point is that we'd like to see better standards or more guarantees to protect the performance of the Federal Interstate System. Lumping it in with the National Highway System is all right but we're convinced that it may be likely that the needs for a new facility off the interstate system might swallow up a lot of money that states would otherwise devote to 3R work on the older interstates. We would not like to see that.

We also believe there is over-emphasis on tolls as a solution. Tolls might be the best method in specific projects, but we would have concern if people felt that tolls would replace a broad-base free user financed highway program. I point out in 1989 of the $73 billion used in the highway program, less than $3 billion came in from tolls.

We have particular problems with congestion toll pricing. I think with congestion toll pricing, if carried on in this area, you could hypothesize that Potomac River crossings might end up requiring an outlay of $5 to $10 a day. If that happened, I think people would just move out to the next surrounding band of counties, and that is not going to solve our problem.

I also point out the proposed commercial use of rest areas on the Interstate Highway System may require a very close look by the committee because I think that's a sleeper issue. It has been in place with no change since 1956 and anything that has been working one way for 35 years, if it is overturned immediately, I think it may cause some problems.

Finally, I would like to suggest that the committee would ask DOT to review specific policy areas. In my testimony, attachment 1, pages 4 and 5, list 11 specific policy areas that we think the committee should ask DOT to undertake. If you had information on those issues today, I think you could make better decisions on this year's legislation. You should certainly have that information by the next round.

However, our main interest and our main concern is on timing. Right now, today, you have about 80 House of Representative legislative work days before October 1. There are even fewer days available in the Senate. Looking back by comparison with 1986 and 1987, the committee had been further advanced in that your bills were already on the table by April of 1986 and yet we did slip that process between October 1986 to April 1987. That, in turn, I think leads to the prospect that we might have another gap or a hiatus in Federal aid financing this year.

We want to help the committee to make sure this does not happen. Members of the Highways Users Federation are working now and will be working even more in future months to contact every Member of Congress, every representative, every senator, to describe local transportation problems and to indicate that we are

expecting help out of the Public Works Committee to get legislation in place in time to carry the badly needed Federal-aid Highway Program into the next century.

Thank you, Mr. Chairman. I'll be glad to stick around for any questions you might have.

Mr. MINETA. Thank you, Mr. Lamm.

Mr. Goetz.

Mr. GOETZ. Mr. Chairman, members of the committee, on behalf of the National Association of Truck Stop Operators, I want to thank you for this opportunity to offer this testimony.

I am a truck stop operator from south central Wisconsin and I am also a former Lieutenant Governor of the State of Minnesota. I make that point because I want the committee to understand that my comments are not only those of one involved in the business of surface transportation, but also those of one who has been on the receiving end of public testimony and I remember it well, particularly that the mind can comprehend only that which the seat can endure. So, Mr. Chairman, my remarks will be brief. [Laughter.]

We support the current law, Section 111 of Title 23, U.S. Code, which prohibits the establishment of commercial activities on Interstate rights-of-way. One exception exists, operation of vending machines by the blind is permitted. We oppose removing this prohibition. Commercialization of rights-of-way is, in our judgment, unnecessary. Billions of dollars have been invested by small businesses on the interchanges to meet the needs of the interstate traveller. Interchange facilities are capable of meeting the demands for goods and services. Competition is vigorous among those of us located at or near the interstate interchanges, thus providing customers with the lowest possible prices and the best of service. Mr. Chairman, we believe that Section 111, Title 23 is not broken and, therefore, doesn't need fixing.

Mr. MINETA. Thank you very much, Mr. Goetz.

Let me go to Mr. Archer.

Mr. ARCHER. Thank you, Mr. Chairman.

AAA, serving more than 32 million members, appreciates this opportunity to present its views on reauthorization issues.

AAA believes visionary, long-term legislation is vitally needed. Peoples' taxes have already been paid and extended. They deserve to get their money's worth. The Administration's proposal to establish three funding categories—the National Highway System, Bridge, and Urban/Rural—is a very good start and deserves serious consideration. But if a separation of the rural and urban categories would be helpful in eliminating unnecessary political squabbles, we think that ought to be seriously considered.

AAA strongly opposes raising the gas tax for deficit reduction. Diverting user fees to general operating expenses will ultimately destroy the dedicated funding process. Trust in the Trust Fund should be restored by spending the $17 billion in tax revenues and interest now earmarked for road construction and repair, plus the Trust Fund balances, and by recapturing the 2.5 cents of the gas tax now earmarked for deficit reduction.

AAA takes strong exception to those who contend new roads do not alleviate traffic congestion. Traffic congestion has mushroomed in the 1970s and 1980s because road construction did not remotely

keep pace with economic, social, and demographic changes which dramatically increased vehicle miles travelled, especially in suburban and exurban areas. Alleviating that congestion will be complex. It will require a number of approaches, but one of them in particular is the expanded highway capacity. HOV lanes especially have the potential to carry large numbers of people. Where feasible, we believe urban bypasses and outer beltways also can help substantially.

Alleviation of congestion also would help improve highway safety, an absolutely critical goal. Because vehicle miles travelled are expected to double by the year 2020, fatalities could increase to 90,000 per year in 2020 unless the fatality rate is further reduced.

In fatal crashes involving passenger cars and tractor trailers, car occupants are killed 38 times as often as truck occupants. Truck brakes are notoriously deficient. For instance, about 50 percent of the large trucks removed from service for mechanical reasons are done so because of improper brakes. No wonder motorists feel intimidated by the increasingly large numbers of trucks on our roads. Congress should demand improved highway safety and not allow it to be degraded by greater use of longer vehicle combinations.

AAA applauds the testimony you just heard by Congressman Oberstar with respect to scenic roads. We were a strong supporter of the study he mentioned, and we're a strong supporter of its recommendations.

In particular, we believe a national—not Federal, but national—scenic road system should be established. A Scenic Roads Office should be created within FHWA to serve as a central clearinghouse for information, provide technical advice, help create the so-called national All-American Scenic Road System, and work with the U.S. Travel and Tourism Administration in marketing U.S. scenic roads overseas.

Understandably, scarcity of funds is driving the push for more tolls. But AAA remains opposed to toll financing because of its numerous problems, including excessive costs, double taxation, inefficiency, inconvenience, and our belief that widespread toll financing would be a breach of trust to the Nation's motorists who have paid literally hundreds of billions of dollars to fund a toll-free system.

Finally, Mr. Chairman, I emphasize that AAA does not minimize the funding problem, but there are better ways to do it than toll financing, such as spending down the Highway Trust Fund balance, impact fees, and the traditional taxing methods. Thank you.

Mr. MINETA. Thank you very much, Mr. Archer.

Mr. Mulzer.

Mr. MULZER. Mr. Chairman, I am Kenneth Mulzer, secretary of Mulzer Crushed Stone, Inc., Tell City, Indiana. My appearance today is on behalf of the National Stone Association where I serve as the 1991 chairman of the board. With me is Paul Mellott, Jr., executive vice president of H.B. Mellott Estates, Inc., in McConnellsburg, Pennsylvania, and chairman of NSA's Government Affairs Division.

The National Stone Association represents approximately 500 producers of crushed stone and related industries that provide services and supplies to our producer members. Our Association repre-

sents companies that account for over 80 percent of the crushed stone produced in the United States, and provide over 64,000 jobs. Stone is quarried in 70 percent of the counties in the country and 49 of the 50 States. It is a $5.5 billion a year industry and is the largest non-fuel extractive industry in the country.

We are both a major supplier to the transportation construction process and a user of the Nation's transportation infrastructure. Approximately 86 percent of the crushed stone is trucked directly to its end use from our quarries. In addition, much of the stone that is shipped initially by rail or barge will reach its final destination by truck. We share your and other members of the committee's concern that we need to develop efficient and effective intermodal links. Because of the location of our facilities, the vast majority of our employees must commute to their jobs by automobile so congestion is impacting employees on a daily basis as they go to and from their jobs.

We are vitally concerned as business people and citizens with the decline in the performance of our Nation's transportation infrastructure. I have a two-fold purpose in testifying today. First, I wish to voice NSA's vigorous support for the timely passage of the Surface Transportation Act, H.R. 1351, at adequate funding levels to meet our Nation's transportation needs. As you know from Mr. Mellott's letter of March 20, 1991 to you and Congressmen Roe, Hammerschmidt, and Shuster, our Association supports the funding levels you have proposed. Increasing Federal transportation funding to $153 billion during the next five years more accurately reflects the Federal responsibility for meeting the Nation's mobility needs and returns trust to the Highway Trust Fund by employing user fee revenues for the purposes for which they were collected.

We agree that the time to rebuild America's transportation infrastructure is now. The American people are willing to pay the user fees to develop a safe and efficient transportation system. As you have clearly pointed out, if the Nation is to prosper in a global economy, we must stop amassing surpluses in transportation trust funds and use the money to restore our infrastructure and create a transportation system that improves our productivity and enhances our competitive edge.

Let me take this time and opportunity to thank you for the excellent article on this legislative issue you contributed to the April issue of Stone Review, our trade association's bimonthly magazine. As you noted, "We can differ about the final cost, but to me there is no more universal trust than this: How we spend the money is as important as how much money we spend."

This leads me to my second purpose in being here today, which is to tell the subcommittee about the new Aggregates Research Center that NSA is establishing in cooperation with the National Aggregates Association as a major private sector initiative. It will enhance the productive use of aggregates and ultimately the value they provide to travelers and taxpayers through their applications in the building, restoring, and maintenance of our Nation's roads, bridges, and highways. Our industry has currently raised some $3.4 million for an Aggregates Research Foundation that will fund the Center. The Center will be located at a major university and pro-

vide an independent focal point for the development and distribution of basic and applied research on crushed stone, gravel, natural sand, and other aggregates for all construction and highway uses.

The Center will work closely with public agencies— departments of transportation, public works organizations, and so forth—other academic and industrial research and educational institutions, architects, engineers, and leading corporations to ensure that the proper usage of aggregates, innovative end-use applications, durable construction, and cost-effective paving procedures will be utilized.

In addressing the Nation's infrastructure crisis, we face the issues of repairing the existing decay in our system, developing better methods for preserving our multi-trillion dollar investment in our roads and bridges and formulating new ways to build more road capacity with scarce dollars.

The Aggregates Research Center will provide a bold new approach to developing credible new information on the use of aggregates in all types of construction and highway applications. The Center will work to develop sound technical and scientific information about aggregate products, promote understanding of the factors influencing the properties of aggregates and of the mixtures in which aggregates are used, provide information to Federal and State users agencies for the design of improved structures utilizing aggregates, assist users in making knowledgeable choices in the marketplace, and to conduct educational programs for the transfer of research information to practicing engineers.

The bottom line for highway users will be better, more durable, hopefully safer road and bridges constructed in a more cost-effective manner. We believe this investment by our industry represents the essence of what deTocqueville called "self-interest properly understood."

In summary, Mr. Chairman, the Chairman of the House Committee on Public Works and Transportation, the honorable Robert Roe, summed up our situation very well when he said, "While the world has been changing around us and while our major economic rivals have been growing even stronger, we have not been preparing for the future."

The Surface Transportation Assistance Act provides Congress and the Administration with the opportunity to turn this situation around. The dynamic interaction between infrastructure investment, productivity, growth, and generation of new wealth will allow us to build the infrastructure this country needs based on user fee revenues.

In his book, "The Work of Nations," Robert Reich points out that investment in wealth generating assets such as transportation infrastructure produces an expanding circle of economic growth that can impact the future of America's standard of living and ability to compete in a global market.

As you may have seen in the Monday, April 15, 1991 edition of Roll Call, NSA has joined with over 85 other companies and associations in an open letter which recommends that Congress:

One, reauthorize the surface transportation program for four more years prior to September 30, 1991;

Two, provide the necessary funding to meet the identified highway and transit needs, and provide for the spend-down of the rapidly accumulating balance in the Highway Trust Fund;

Three, restore to the Highway Trust Fund the 2.5 cents increase in the Federal motor use fuel tax user fees enacted in last year's budget reconciliation act; and

Four, provide for the permanent independent reauthorization of the Highway Trust Fund.

As an individual association, we have endorsed the basic structure the Administration has proposed for Federal aid to the States through the National Highway System, the Urban-Rural Program, Bridge Program, the use of toll roads, and public-private partnerships to expand investment in infrastructure. In addition, we support the Administration's call for additional spending in the research and development area.

The U.S. Department of Transportation Secretary Samuel Skinner should be congratulated for the outstanding job he has done in developing a National Transportation Strategy and formulating his proposed legislation. Clearly, they have done an excellent job in framing the policy debate.

However, the financial component of the Administration's proposal does not meet the Nation's infrastructure needs or keep faith with the user fee concept. There can be no further build-up in the Highway Trust Fund. Existing surpluses should be used to finance needed projects. Further, overall funding levels proposed by the Administration are inadequate. As mentioned above, we support the levels proposed by yourself and the other leaders of the Public Works Committee which would provide $21 billion for highways next year, and $24.5 billion per year for the remaining of the authorization period. While we do not have a specific recommendation on matching ratios for each program area, long-term needs studies continue to show that even higher spending levels would be required to keep America's lead in mobility. Groups such as the American Association of State Highway and Transportation Officials have developed comprehensive multi-modal programs, that should be considered in establishing different infrastructure investment levels.

We do believe that the Federal share for meeting our highway needs is more than 22 percent currently provided. The long-term policy goal should be to restore the Federal share to the previous level of approximately 30 percent. This expanded Federal commitment needs to be matched by expanded efforts by State and local governments as well. DOT Secretary Skinner has raised valid points concerning the role increased State and local financial contributions make in improving project selection and construction management.

Pat Choate began a good deal of the debate on America's infrastructure crisis with his book, America in Ruins. Today, he notes that the criteria for competition in a global economy are price, quality, service, marketing, and innovation. Transportation infrastructure impacts all of these factors.

On behalf of the National Stone Association, I urge you and the members of the subcommittee to report out a bill that can move America into the 21st century and restore our competitive edge.

Thank you for your consideration of our views. The balance of our comments are included with my written statement which I'll submit for the hearing record.

Also, I might add, that in answer to one of your earlier questions to the previous panel, our executive board in a previous meeting has endorsed your proposed 5 cents a gallon increase in the motor fuels user fees with the stipulation that they be considered as entitlements as you proposed.

Thank you.

Mr. MINETA. Thank you very much, Mr. Mulzer.

I would like to ask the panel some general questions. I had one specific one. The Administration proposes to restructure the Federal-aid Highway by consolidating the categorical grant programs into a two-tier program—namely, the National Highway System and the Urban/Rural. Could you explain to the committee why there is a need to continue and then add a categorical grant program such as the Scenic Highway Program? Anybody wish to respond?

Mr. ARCHER. If I could take that, Mr. Chairman. I think what is contemplated by Congressman Oberstar, Senator Rockefeller is not an enormous categorical program anything like the size of the other programs you alluded to. This would be on the order of $30 million in the first year to perhaps as much as $100 million in the out years. Some 17 percent of travel today is recreational travel, increasingly it is done by older people looking for slower, more pleasant alternatives. I think there is an emerging consensus that we have to look to Scenic Roads, that that's an American treasure we have to preserve and improve on.

A number of political groups across the political spectrum support Scenic Roads. It is one of those issues that draws people together:

AAA, the American Recreational Coalition and their constituent groups, the Highway Users and their vast array of member groups, Scenic America and a number of environmental groups—all these groups support Scenic Roads. It seems to me that the Congress should respond to that.

Mr. MINETA. Mr. Goetz, in the Administration bill they talk about the commercialization of rest stops along the rights-of-way of the Interstate System. What kind of an impact would that have on the tax base of the communities that have already developed, that have had individuals, like yourself, who have developed these truck stops and travel plazas?

Mr. GOETZ. Mr. Chairman, I believe that it would be absolutely devastating and it would destroy the small businesses, like myself, that have built our facilities on the interchanges. The fact of the matter is that small businesses operating at the interchanges could not compete with right-of-way facilities. It is true in our business, location, location, location. And I believe that the many small communities would lose their tax base in lieu of funds paid to the State departments of transportation and, hence, a major source of employment. Many small communities have built out to the Interstate where we have built our facilities.

Mr. MINETA. Thank you.

Mr. Clinger.

Mr. CLINGER. Thank you, Mr. Chairman and I thank the panel for their very helpful testimony.

With regard to this question of the commercial use of rest stop areas on the Interstate System, can you, Mr. Goetz, give us an idea of what kind of an impact you really think that would have on your industry. Would it have dire economic implications?

Mr. GOETZ. Mr. Clinger, I am absolutely convinced that three years after that would occur you would not find the vast majority of us able to testify before you.

Mr. CLINGER. What's the trade-off? Obviously, the purpose of this is to enable States to realize some additional revenue through the permitting process that they would get from a franchisee or a permittee on the rest stop. But what you are suggesting is that the total loss to the State might be a great deal greater in the long run because of the failure of businesses off the Interstate.

Mr. GOETZ. Mr. Clinger, indeed it would. I think it is very clear to say that there is only so much money that is available from the operations. Putting facilities directly on the rights-of-way, will not sell one more gallon of fuel, nor will it sell one more hot dog, or repair one more flat tire. Sales made to the interstate traveller will not be increased. It will simply dislocate those who are making those sales today.

Clearly, the economics of the business are such, in my case, we pay $110,000 a year in property taxes to the local county which does provide us with the police and the fire protection and $77,000 of it goes to the local school district. If in Wisconsin they commercialized the rest area close to me and I went out of business, clearly that money, instead of going to the county and the local school district, would I assume go to the State Department of Transportation. So there is no more money available.

The other thing that can happen, as we find out on the tollways today, for example, the Illinois tollway is very close to us, we find that their prices, because they have a monopoly on the stretch of the System are 10, 12, 14 cents a gallon higher than ours.

Mr. CLINGER. Thank you. Mr. Lamm, in your testimony you oppose the management programs that are outlined in the Administration proposal that we have before us. Wouldn't these programs really help to ensure that the Federal dollar is expended efficiently? The objective of the program, obviously, is to try and make sure that they are managed in an economically efficient way. So I would like you to amplify a little of why you object to the management.

Mr. LAMM. I must have passed over that part of my verbal statement too quickly, Mr. Clinger, because we thoroughly support all of the proposed management processes that are in the DOT bill. We think it is long overdue to have anywhere from a $16 to a $20 billion Federal fund program and not be able to answer the very basic questions of where the money goes and what benefit you get back any better than DOT can today. I think it should not continue any longer.

Mr. CLINGER. Okay. Thank you. I'm glad to clear that up.

Mr. Mulzer, you have indicated, and I think to be commended for, undertaking the Aggregate Research Program. Is this sort of the first effort to be done in this area?

Mr. MULZER. It is a first step. We went through an extensive study to determine the feasibility of it and the need of it and the consultants indicated that it was necessary in our industry. Last fall we began the process of soliciting pledges for funding the Research Center. Initially, we felt with the downturn in the economy and the problems that we were having that it couldn't have come at a worse time because most of our members were suffering from an economic recession already. However, we went ahead with a $3 million minimum goal, which we have exceeded.

I think that typifies the interest that we have ourselves in finding uses for our aggregates that are quality. Here again, anything that you do you are never more than a stone's throw away from our product because it is used in concrete and everything else. But we're interested in problems that we have with rehabilitation of Interstates, the asphalt surface mix, the job mix formula of antiskid materials, durability of those materials, those are all items of interest that we want to do work on. I think that's why we've developed the interest we have in our Research Center.

Mr. CLINGER. I certainly commend you on that. I understand you are going to associate this with a university. I would just put in Penn State's bid for that.

Mr. MULZER. We've already been approached by several universities. We're in the process right now of developing our RFP which will be out probably within three months and at that point in time we'll go out to several universities. It's something about a little bit of money that people get awfully interested in at the universities, and, yes, Penn State is definitely in the running.

Mr. CLINGER. Thank you very much. Thank you, Mr. Chairman.

Mr. MINETA. Just to follow up on that. In terms of use of aggregates, how much is used in construction application, how much is used in highway application? That would be 75, you say, in construction generally, and 25 in highways?

Mr. MULZER. Right.

Mr. MINETA. Great.

Mr. Archer, evidently there was an article recently somewhere about the comment that Chairman Roe had made about trying to recover the 2.5 cents that was going to deficit reduction. AAA was quoted as saying, "AAA supports chairman Roe's efforts, but he doesn't have a prayer." The article went on to give Mr. Roe an A for effort.

So Mr. Roe's response was, "Oh, ye of little faith."[Laughter.]

Mr. ARCHER. Chairman Roe has it right, Mr. Chairman. AAA certainly believes that the 2.5 cents earmarked for deficit reduction should be used for transportation.

We applaud your personal efforts and the efforts of the Committee, and understand the difficulties of dealing with a budget committee confined by domestic caps. Nevertheless, I think that certainly should be the objective. It's certainly AAA's objective. Whether it's this year, or next year, or the year after, AAA won't change that objective.

Mr. MINETA. As well as the Administration because they just don't want to touch the budget summit agreement. So we got rebuffed at the Administration level as well as through the budget process here.

Mr. LAMN. May I just amplify that answer, too, Mr. Chairman. All of the highway user community totally supports recovering that revenue that is not coming into the Highway Trust Fund. I would point out that the December, 1990 5 cent per gallon tax increase, as we see it, will eventually result in 16 cents on the dollar ever coming into the highway program because only 40 percent will, under today's ground rules—2 cents out of 5—and it doesn't begin until the 4th year of a 5-year collection period. So .4 times .4 is 16 cents on a dollar. That's a shoddy way to treat taxpayers.

Mr. MINETA. Okay everybody. Thank you very, very much for your presentation here today and for your patience.

[Mr. Lamm's prepared statement appears on page 1761.]

[Mr. Goetz' prepared statement appears on page 1704.]

[Mr. Archer's prepared statement appears on page 1175.]

[Mr. Mulzer's prepared statement appears on page 1951.]

Mr. MINETA. At this time I would like to call forward a panel made up of Lana R. Batts, Senior Vice President, Government Affairs, American Trucking Association, accompanied by Mr. Robert Farris, Vice President for Policy, ATA; Gene Bergoffen, Executive Vice President, National Private Truck Council; and William M. Clifford, President, and CEO, Saint Johnsbury Trucking Company, Incorporated, Holliston, Massachusetts, and Chairman, Regular Common Carrier Conference, accompanied by James C. Harkins, Executive Director, RCCC.

So to all the panelists, your testimony is being made a part of the record, so we would appreciate your abbreviated oral presentation.

We'll start with you, Ms. Batts.

**TESTIMONY OF LANA R. BATTS, SENIOR VICE PRESIDENT, GOVERNMENT AFFAIRS, AMERICAN TRUCKING ASSOCIATIONS, INC., ACCOMPANIED BY ROBERT FARRIS, VICE PRESIDENT FOR POLICY, AMERICAN TRUCKING ASSOCIATIONS; GENE BERGOFFEN, EXECUTIVE VICE PRESIDENT, NATIONAL PRIVATE TRUCK COUNCIL, ACCOMPANIED BY EARL EISENHART, VICE PRESIDENT, GOVERNMENT AFFAIRS; AND WILLIAM M. CLIFFORD, PRESIDENT AND CEO, SAINT JOHNSBURY TRUCKING CO., INC., HOLLISTON, MA, AND CHAIRMAN, REGULAR COMMON CARRIER CONFERENCE, ACCOMPANIED BY JAMES C. HARKINS, EXECUTIVE DIRECTOR, REGULAR COMMON CARRIER CONFERENCE**

Ms. BATTS. Thank you, Mr. Chairman. We appreciate the opportunity to come before your Committee today. As you indicated earlier, I have with me Bob Farris, our vice president for policy.

As you know, ATA's membership includes 4,200 trucking companies as well as supplies. With our 51 affiliated State associations and our 10 conferences, we represent over 30,000 motor carriers nationwide.

More than 78 percent of the Nation's freight is carried on U.S. highways in commercial trucks. Those trucks pay over $22 billion a year in Federal and State taxes. The Federal share is $8.5 billion.

We use the roads and we pay for the roads we use. Without trucks, this country would come to a stand-still. Without our high-

way system designed to carry those trucks into the 21st century, America cannot hope to compete in a world-wide global economy.

With that in mind, we support the Department of Transportation's proposals. Specifically, we are in favor of the 5-year bill providing continuity to the highway system. We are in favor of giving the States greater flexibility in how to spend their highway and transit funds. We are in favor of establishing a 150,000 mile national highway system linking all the Nation's major population and commerce centers.

This national highway system will give the U.S. economy the access and the mobility that it needs to compete in a common market with Canada and Mexico, as well as to compete in the world-wide markets with Asia and Europe. We are disappointed with the level of spending in the DOT proposal. We urge Congress to spend-down the Federal Highway Trust Fund.

Like some previous speakers, ATA is strongly against plans to impose another 5 cent tax. Last October, the highway users were hit with a 5 cent fuel tax. None of that 5 cents is being spent on highways. Before Congress asks the highway users for another Federal nickel, spend the nickel that we gave you last year.

Even without an increase in Federal fuel taxes, truckers and other highway users will pay more in highway taxes. States will increase their taxes to match the increased Federal share. Tolls, which are an indirect and double taxation, are a major part of the Administration's proposals. Included in the Administration's energy bill is a proposal to donate 10 percent of the imported oil into this country into the strategic petroleum reserve. That, in essence, is a 10 percent oil import fee.

In addition to the questions of the highways of national significance and spending, we have four other major areas of concern. First, the State tax collection method must be simplified. The trucking industry today spends more than $1 billion a year just to complete the paperwork necessary to pay our State highway taxes. Congress should require the States to join the International Fuel Tax Agreement and the International Registration Plan.

This is a win-win situation. The administrative costs for the motor carriers will be greatly reduced and the States will not lose money.

The Administration's bill does not specifically request IFTA or IRP by name. We urge Congress to specify them by name so that new costly programs are not implemented in their place.

In addition, we ask that the so-called bingo card program be abolished. It is an outmoded method of enforcing interstate commerce commission operating rights and should be eliminated. If you haven't ever seen one of the bingo cards, we have to buy the card, go to the States, buy the stamps, and lick and stick them. It costs us $50 million a year to buy the stamps and $250 million to lick and stick them. It's an outmoded program and we should get rid of it.

Secondly, trucking productivity must be improved. Just as this Committee wants improved flexibility for the States to decide how to spend the highway and transit money, States should have the same flexibility to choose whether they want more productive trucks. ATA has not, and is not, asking for a Federal mandate forc-

ing States to adopt these more productive trucks. We are simply asking for the right for the States to decide whether they want them or not.

The congressionally mandated Transportation Research Board Study of Truck Weights and Productivity concluded that changing the Federal bridge formula and allowing the States to issue permits to trucks over 80,000 pounds would reduce the cost of moving goods in this country by $4 billion a year.

To answer a question that was asked earlier, if the State's ability to allow LCVs under current grandfather clauses were removed, according to the Transportation Research Board, it would cost the economy $1.2 billion a year, according to the Transportation Research Board. If all grandfathered weights were rolled back, it would cost the economy $8 billion a year. The recommendations in the TRB report would let the States enjoy the productivity benefits now enjoyed by 15 States.

Because Ms. Claybrook referred to the Oregon study, I would like to read testimony of the Oregon department of transportation in a hearing held in Oregon last month concerning triples in that State. The Oregon department of transportation says that it is their position that triples should be allowed to stay on Oregon's highways under the existing permit system. Because Ms. Claybrook referred to some of the findings, I think the ultimate conclusion should be in the record, and I would ask that their statement be entered.

[The referenced item appears in the record following Ms. Batts' prepared statement, see page 1369.]

Ms. BATTS. In addition, we also believe that the overweight container problem must be solved. DOT's proposal contains no references to the overweight containers. There are over 14 million containers that enter this country every year, 95 percent of which move by truck. Estimates are that a third of those containers are overweight and illegal on the U.S. highways. FHWA recognizes the problem, but does not have the authority to solve the problem. We urge this Committee to give FHWA the authority necessary to hold the party that loads the container be responsible when it is overloaded.

Finally, we believe that research funding for the trucking industry must be increased. Trucks carry 78 percent of the freight in this country. In the Department of Transportation's research and development budget, trucks get 1.4 percent of the research funds.

Starting in fiscal year 1992, $30 million should be earmarked each year for trucking related research. These funds should be aimed specifically at truck safety and truck productivity.

In conclusion, Mr. Chairman, as we enter the 21st century, we find ourselves in part of a changing very competitive world-wide marketplace. Without a comprehensive 5-year plan to improve and maintain our transportation systems, American business will be unable to keep up, let alone compete. Mr. Chairman, we ask you to build on the Department of Transportation's plans on the national highway system, to increase transportation productivity without increasing unnecessary taxes on highway users.

Thank you very much.

Mr. MINETA. Thank you very much, Ms. Batts.

Mr. Bergoffen.

Mr. BERGOFFEN. Thank you, Mr. Chairman and members of the Committee. I have with me Earl Eisenhart. He is our vice president for government affairs.

NPTC appreciates this opportunity to appear before you to give you the perspectives of the private trucking community. Private fleets represent a very significant part of trucking in this country, probably over half the freight that's carried on the road, and about two-thirds of the locations of trucks over 26,000 pounds.

As indicated in our full statement—which I understand will be printed in the record as read—we generally support the Administration's proposed Surface Transportation Assistance Act of 1991. We believe the Administration's proposal, if adopted, would go a long way to ensuring the future integrity of our national highway system.

Here are our principal views. First, a 5-year bill is essential. It will offer much needed stability and predictability to Federal highway funding. Secondly, the focus on Federal investment in highways of national significance, along with increased overall funding, offers the best opportunity to support the concept of national commercial corridors to facilitate the flow of goods and services.

Third, increases in funding for bridges is critical to maintaining their structural integrity. Fourth, the efforts contained in the Administration's proposal aimed at congestion relief are essential to the free flow of goods and services. And fifth, the proposed expansion of the national system will allow for more productive use of equipment.

In the balance of my oral statement, I would like to concentrate on the uniformity provisions of the legislation.

We support strongly and vigorously reform of State regulation of trucking. We support the legislation's approach to improving productivity by reforming also the current hodgepodge of inefficient, confusing, and often conflicting State regulations governing trucks and truck operations.

Specifically, the bill would eliminate anti-competitive economic regulation of trucking. Much efficiency was gained in trucking operations through the Motor Carrier Act of 1980. Much more needs to be done. Still approximately 35 States currently prohibit private fleets from engaging in compensated intercorporate hauling in intrastate commerce. This means a truck cannot haul, for its own corporation in intrastate commerce something that is allowed under the Interstate Commerce Commission provisions, in interstate commerce.

Approximately 30 States prevent single source leasing in intrastate commerce. Many States also continue to impose stringent artificial restrictions on the issuance of operating authority.

As an example of the high costs that result, one NPTC member currently pays $296 to ship 36,000 pounds of cherries from Grandview, Washington to Portland, Oregon. However, an intrastate shipment of the same load, over the same distance, from Grandview to Spokane, costs $597. That's twice as much or more than the interstate shipment because of intrastate regulation.

This is just one example, among many, of the ways in which the continued State regulation of truck rates, routes, and services causes nightmares for corporate logistics managers and prevents

American industry from making the most productive and efficient use of truck fleets.

Secondly—and this is very important, which Lana has brought out, and we are fully together on the requirement for States to implement uniform procedures for collection of registration fees and fuel taxes, and to grant to the Secretary authority to require the States to establish one-stop shopping, whereby an individual fleet operator could go to a single point of contact within a State for registering a commercial motor vehicle, paying fuel use taxes, and filing for and paying other fees or taxes associated with the purpose, use, and operation of commercial vehicles in interstate commerce. We also support the elimination of the bingo card requirement.

I serve on a group called Advantage I-75 Policy Committee. I want to relate my experience there to highlight what we mean about the elimination of these uniformity barriers.

This is a committee that is established through the support of the Department of Transportation. It's an IVHS project, intelligent vehicle highway systems. The idea is simple. Along Interstate I-75, a truck could check in at one weigh station and through technology pass the information about that truck's classification, weight, quality, and registration authority simply one stop down and maybe have to stop just once through that entire corridor.

That seems like a simple concept, and the technology is easy. You just put a transponder on the truck and you get a signal from the weigh station. It's very simple.

But for a number of us who sit on that policy committee—and we share that with the American Trucking Associations—we are just marking time. In the first meeting, one State had to send three people from three different agencies to determine which of those agencies had the authority to deal with the next State so that they could pass basic information down the line. The States are determining now how long it will take to figure out what information they're willing to share.

The Advantage I-75 project is an incentive, through the funding approach for this—and we applaud it and support it. We're going to stick with it as long as it takes. In another project in the States of California, Oregon, Washington, Arizona, New Mexico, and Texas is a similar project. It took them 5 years to work out those barriers so that they could simply implement these things.

I can go on about this and I have notes, but I'm going to stop this at this point. I will be happy to share more information with the Committee about these simple little tasks that are made difficult by the lack of these uniformity requirements.

But I would like to close by stressing our support for the commercial vehicle information system that the Administration has proposed in its bill to provide technological support to the States to be sure that they can implement these uniformity provisions.

In conclusion, we support most of the provisions of the Administration's proposed Surface Transportation Assistance Act of 1991. We believe it meets our longstanding objectives for an adequate, well-maintained highway system, reform of State trucking regulations, and improvements in motor carrier safety. We are opposed, however, to the proposal to combine the urban and rural programs

and to the provisions relating to toll financing and congestion pricing.

We look forward to working with you to make this a great bill and a great vision for transportation in the future.

Thank you, Mr. Chairman.

Mr. MINETA. Thank you very much.

Mr. Clifford.

Mr. CLIFFORD. Chairman Mineta and members of the Committee, I am William Clifford, president and chief executive officer of Saint Johnsbury Trucking Company located in Holliston, Massachusetts. Saint Johnsbury is the largest predominately less-than-truckload trucking company operating in the Northeast with annual revenue in excess of $300 million. I have been employed in the trucking industry for 34 years. Since joining Saint Johnsbury in 1968, I have held various corporate positions before becoming president and CEO in 1990.

I appear today, however, on behalf of the Regular Common Carrier Conference, of which I am chairman. The Conference and I appreciate this opportunity to testify on this highway legislation, which is of critical importance to our industry and the Nation.

The Conference is a national trade association composed of approximately 250 for-hire motor carriers with a combined annual revenue of $15 billion. Our member carriers transport commodities of all kinds in less-than-truckload shipments to shippers and communities throughout the United States. They represent the largest segment of the general freight industry and provide service for about 95 percent of that business.

The Conference is separate from but affiliated with the American Trucking Associations. We endorse the statement and testimony of ATA before this Subcommittee, however, we wish to emphasize several issues of critical importance to the less- than-truckload trucking industry.

Generally, we recommend as follows: greater Federal funding and matching ratios than proposed by the Administration; a Federal incentive for all States to establish trust funds which dedicate their revenue to transportation projects; no Federal funding for toll roads; that Congress adopt the recommendations of the Transportation Research Board in its Truck Weight Limits report to allow longer more productive equipment; and no Federal preemption of State economic regulation of trucking.

The Administration's bill establishes a sound framework for legislation to rebuild our Nation's highways, recommends a 5-year highway program, and recognizes a national highway system comprising of about 150,000 miles of highways of national significance. It also calls for the establishment of comprehensive, long-term bridge, pavement, safety, and congestion management programs. Such programs are needed and will improve our highways over time. However, Congress needs to go further in certain areas.

The Federal Government must increase the total amount of its highway program funding beyond the $87.7 billion proposed by the Administration. We recommend that the Federal Government authorize at least $104 billion over the 5-year program. Increased Federal funding for our highways and bridges is necessary to re-

verse the decline in our infrastructure and enhance our Nation's productivity.

Unfortunately, we have been under-funding our infrastructure for years. Time is of the essence. Each day that we delay in committing the necessary funds will only increase the costs in future years. A $3 billion a year increase in Federal funding above that proposed by the Administration is absolutely necessary. It can be achieved and sustained for 5 years by using the projected $16 billion surplus in the Highway Trust Fund.

To those who say the Federal Government cannot afford to spend more, we say that the Nation cannot afford to spend less. There is a direct correlation between our infrastructure and national productivity. If we want to remain competitive in a world market and maintain our standard of living, the Federal Government must spend more on our infrastructure.

Our recommendation is more in line with the House Public Works Committee reauthorization plan calling for a 5-year $119 billion highway program. Under that plan, Federal funding would be raised to $21 billion in fiscal year 1992 and $24.5 billion in each of the succeeding 4 years. It would be funded from the Trust Fund surplus and the receipts from the 1990 fuel excise tax increase.

The Administration proposes to restructure the highway programs, and in most instances reduce the Federal/State funding ratios. Shifting more financial burden to the States is ill-advised and unfair. It is ill-advised since the States have already testified before Congress that they cannot shoulder the increased burden. Being a resident of the Commonwealth of Massachusetts, I can testify that the deficit is close to $1 billion.

It is unfair because they already bear over 77 percent of the costs for our highways. Moreover, their share has been increasing steadily since 1980. We recommend that the Federal Government provide 90 percent of the funding for interstates and all the vital highways on the proposed national highway system. The Administration proposes to provide 90 percent of the funding for the interstates, however, they would provide only 75 percent of the funding for these other critical primary highways.

For urban and rural projects, the Administration proposes to provide only 60 percent of funding. This is a reduction in the current Federal commitment of 75 percent. We recommend that the Federal Government maintain its current 75 percent funding level.

Under the proposed bridge program, the Federal matching share would be 75 percent. We recommend that the current funding level of 80 percent be maintained. These increased Federal matching ratios can be managed under our proposed Federal highway authorization levels.

The Administration proposes to allow the States to use up to 35 percent of their Federal funds to construct new toll roads or toll existing roads. We are opposed to using Federal funds for either new or existing toll roads. The States should have the option to either use Federal funds for construction and maintenance of particular roads, or to forego the Federal funds and use tolls as the means to finance construction, improvements, or maintenance, but not both.

When a State is allowed to use both Federal funds and tolls, motor carriers and other highway users are subject to double taxation. They pay Federal highway user fees and also the State toll fees.

As a basic concept, we support a toll free national highway system. However, tolls can play a role in financing new construction and maintenance that might not otherwise occur. Tolls generally impact vehicle operators in proportion to their road usage, which is appropriate. Thus, local and regional highway users benefitting most from the toll road will pay a higher proportion of the fees. However, when Federal funds and toll fees are both employed, the out-of-State operators are subsidizing State and local road programs through their Federal highway user fees. This is unfair.

We also recommend that Congress provide a financial incentive for all States to establish either a highway or transportation trust fund and dedicate all such revenue to transportation programs. Currently, 34 States have highway trust funds and another 13 States have multi-modal transportation trust funds. The trust fund mechanism has proven to be a fair and effective mechanism to provide revenues for our highway and transit needs. The Federal Government should provide and incentive of all the States to establish trust funds and dedicate the funds to transportation programs.

Unfortunately, a significant number of States divert trust fund revenue to other programs. Currently, 30 States constitutionally dedicate highway revenues to highway programs, 6 states partially dedicate revenues, and 14 States and the District of Columbia have no dedication provision.

While it is difficult to quantify the exact amount of highway user revenue diverted to non-transportation programs, it is likely to amount to billions annually. Our infrastructure can ill-afford to have its precious revenue diverted.

Congress should consider providing full Federal funding under the various highway programs only to those States that comply with the trust fund requirement. Those States that do not comply could be given, for example, 5 percent less Federal matching funds.

Just as our infrastructure must change with time, so must our transportation equipment. The trucking industry and economy have realized significant productivity gains through the use of longer combination vehicles, including triple 28 foot trailers and twin 48 foot trailers. Currently, 20 States allow so-called LCVs to operate on the highways under a permit process, which imposes special requirements on the drivers, equipment, and roads.

This equipment has an excellent safety record. Moreover, it provides significant productivity benefits to the Nation. A national LCV network, administered by the States, would result in annual savings of over $4 billion to the economy. These higher productivity vehicles also consume less fuel, pollute less, and reduce highway congestion.

We call to your attention a bill, H.R. 1226, recently introduced in Congress and referred to this Committee. This bill seeks to undermine the existing grandfather rights of States, eliminating the use of heavier vehicles, including LCVs. TRB has calculated that the elimination of these grandfather provisions would increase truck transportation costs by nearly $8 billion annually, result in nearly

29,000 additional truck accidents annually, and increase truck travel by more than 4 billion miles. We believe H.R. 1226 is contrary to the Nation's needs and objectives.

We urge Congress to adopt the recommendations of the Transportation Research Board in its Truck Weight Limits report. TRB recommends that all States be allowed to establish special permit programs authorizing certain vehicles in excess of 80,000 pounds to operate. The issue is not whether the Federal Government should mandate their use in the States. Rather it is whether the current Federal impediments to their use should be relaxed to allow the States to decide whether their economic, safety, and productivity objectives warrant controlled use. This is a matter for the States to decide.

At a minimum, Congress should make permanent its authorization to the State of Wyoming to allow vehicles in excess of 80,000 pounds to operate on its interstates. The Wyoming Demonstration Project has improved transportation productivity and economic growth without an adverse impact on safety.

Moreover, Congress should authorize other States to establish similar demonstration projects for up to 3 years. Congress could establish minimum requirements pertaining to these vehicles, including gross weight, the drivers, and the carriers to ensure safety. The States would then impose such requirements through a permit process for motor carriers.

These demonstration programs would allow the States and the Federal Government to obtain empirical data on the productivity, economic impact, and safety of such vehicles. Congress could then make an objective decision on the impact of the TRB recommendations.

Last but not least, the Federal Government should not preempt the right of the States to regulate truck transportation within their borders. Currently, about 42 States regulate intrastate trucking. In varying degrees, they license carriers and regulate rates, and other practices, to promote safety, service, stability and fairness. Preemption would undermine the States' policy decisions.

As a practical matter, it is unwarranted because the States are continually reviewing and altering their policies regarding economic regulation to promote the public interest. Many States, particularly the rural ones, believe that effective trucking regulation promotes the service and rate levels necessary for their business climate. Others value its safety benefits and labor stability. They should have the right to chose a system to best fit their needs. Federal preemption is not appropriate.

Mr. Chairman, that concludes my testimony. I will be glad to respond to any questions.

Mr. MINETA. Very well. Thank you very much, Mr. Clifford.

Mr. Bergoffen, on page seven of your statement, you cite an example of rate differences on interstate and intrastate shipments of cherries. You indicate that shipment factors are the same, but that the price is twice as much for the intrastate shipment. Can you give any reasons for the price difference? Has anyone tried to effect a change in regulation within the State of Washington?

Mr. BERGOFFEN. The main reason for the difference is that the rates and routes of intrastate carriers is regulated by the State. In

other words, you would have to have a right of entry from the State. When you do, and you operate intrastate, you must comply with the rate schedule. That must be filed and posted.

Yes, efforts have been made, and they have not yet been successful in the State to eliminate that. Efforts are ongoing in other similar circumstances with varying approaches in the States of Michigan, California, Texas, and a few other States that do regulate rates, routes, and entry.

Mr. MINETA. Have you had any States—I think I just heard an example, which I think was Michigan—where a major company is now pulling all their facilities out of the State of Michigan—I think to have it in Ohio—so that they would then be able to truck to Ohio, and then truck from Ohio into Michigan?

Mr. BERGOFFEN. I don't know that there is a specific example there, but there is one I know a little closer to your home where people set up warehouses in Nevada so that they can effect interstate shipments as private fleets, or as leased fleets, and make the most efficient use of the logistics system. They could realize even more savings if they didn't have to do this routing. Additionally, it would probably benefit the State of California through more warehouses and more trucking within the State.

Mr. MINETA. We had an inventory tax in California that really did more to forcing the construction of warehouses in Nevada, but just within this last week sometime I was talking with one of your private truckers who said that they were pulling out of—oh, I know who it was. It was Georgia Pacific.

Georgia Pacific is pulling everything out of Michigan and putting it in Ohio because it would be less costly for them to do their shipments into Michigan than to keep their facilities. It seems to me that the State Legislature or the Governor ought to be responding to something like that.

Mr. BERGOFFEN. We would hope so. Logistics are a very important part of a company's total business advantage or competitive advantage. They're all looking for the most effective way to minimize their transportation costs. I think States ultimately would benefit in the long run if they eliminated these artificial barriers.

Mr. MINETA. We've heard from the National Governors Association about this whole issue of the preemption on the basis of what you call uniformity, and they don't want the collection of those registration fees and fuel taxes to by-pass them.

Could you give us an estimate of how much the current system costs the industry that you represent, and how does the bingo card requirement apply to private carriers?

Mr. BERGOFFEN. The bingo card requirement applies to any interstate carrier who has authority, private or for hire. I would go along with the estimate that American Trucking Associations has made that at least $1 billion a year is spent just to comply with the lick 'em and stick 'em and buy 'em and put 'em on.

The National Governors Association has really been a leader in promoting uniformity to this point. They have I believe an eight point program to effect uniformity among the States. It's a little puzzling when we get up to the brink and are able to get to the water that we can't get them to drink.

I would like to stress, though, that with respect to safety, the total trucking community is fully behind the motor carrier safety assistance program and other safety inspection programs. With respect to funding, it's not a question of paying our fair share, but rather a question of how efficiently that is done. We have registration fees, fuel taxes, and we would go along with some kind of proposals that would in effect hold the States fail safe in terms of funding, if that's what it takes, to make sure that we can eliminate their resistance or their concern about this.

Ms. BATTS. Mr. Chairman, if I can add to that, in terms of the International Fuel Tax Agreement and the International Registration Plan, the States do not lose any money. In fact, when Connecticut joined the International Registration Plan they were concerned that they would lose money. When they joined the program, and when they counted up the tax collections at the end of the year, they gained $1 million. Because it was easier for truckers to comply, the State collected more tax dollars.

The only place that the States will lose money is on bingo stamps. They're collecting $50 million from the trucking industry, but they're not using the money to regulate the trucking industry. They're using the money to regulate the other industries. Nobody is regulating whether a carrier has interstate authority in specific States because everybody now has 48 State authority.

There are, however, 12 States that use the proceeds of these funds to help fund their motor carrier safety assistance program. We will go hand in hand with the National Private Truck Council to those individual States to increase the registration fees to make up that money. We pay $50 million for these stamps and it costs us $250 million to lick and stick them. That's the most inefficient tax collection system in the country. It should not be allowed to continue.

Mr. MINETA. When you look at it from a State perspective, it seems to me that their controversy is between their public utilities commission and their departments of motor vehicles.

Ms. BATTS. That's true, but unfortunately, we're paying the dollars.

Mr. MINETA. And you're getting caught up in the crossfire between the regulatory agency and the departments of motor vehicles of all the States.

Ms. BATTS. Yes, but the bingo program is a Federal program. It is a creature of Public Law 89–170. This came about because of Federal law, therefore it is the responsibility of the Federal Government to get rid of this system.

Mr. MINETA. On page 11 of your statement, I was noticing that you were making reference to the European road system as being better. Is it also more costly?

Ms. BATTS. The European road system is more costly up front. What they have opted to do is minimize their life cycle costs, not their up front costs. As a result, they develop a system in which the roads last longer. They build the roads better.

It's too bad that question wasn't asked of Les Lamm or the AASHTO people who were before you earlier because they took the study trip to Europe. They came back from that trip and said, "Yes, they do indeed build the roads better in Europe, they build

them to last longer, they minimize the life cycle costs, and they do allow heavier trucks."

Mr. MINETA. In terms of the need for improving our accident data collection, does ATA believe that we should go ahead and do that?

Ms. BATTS. I'm glad you asked me that.

A study on data requirements truck safety was done by the Transportation Research Board. The initial funding came from the American Trucking Association, the Motor Vehicle Manufacturers Association and others in order to look at the question of truck data. We urge that there be more truck data. We only hope that when the data comes through, that those people that are opposed to LCVs will then step up to the bar and support them, because the data will show longer combination are more productive and safer vehicles.

Mr. MINETA. On page eight of your statement, you state that new taxes are not needed at this time to fund increased expenditures. Is there any circumstance that would cause the ATA to change their opinion as to the need for new taxes?

Ms. BATTS. Mr. Chairman, I've been in this town for 18 years, and I learned a long time ago to never say never, but I'm hard pressed to think of the circumstances under which we would support an increased fuel tax. We were asked to pay 5 cents last year, and we gave that. None of it is going into the highway system. Spend the 5 cents you got last year. Don't ask us for an additional 5 cents.

Remember, we're going to paying more in highway taxes anyway because of the States, because of toll roads, because of the energy policies that are being discussed today, and because OPEC will raise fuel prices sometime.

Mr. MINETA. That's right, and we're all going to be rebuilding Kuwait on that basis.

Ms. BATTS. That's a different hearing. [Laughter.]

Mr. MINETA. In your testimony, the ATA seems to take what I would consider dramatically opposing positions relating to States' rights and preemption. As it relates to permitting for overweight and intrastate economic regulation in allowing LCVs, do you propose individual States be allowed to decide the issue? On the other hand, for State registration and tax issues, you've proposed Federal preemption. I was just wondering how you rationalize the two distinct positions in these two different areas.

Ms. BATTS. Mr. Chairman, I think this Committee and certainly the Federal Government's interest is in how to promote interstate commerce and how to reduce the cost for interstate commerce. Our position is to supporet the International Registration plan, and the Fuel Tax Agreement because they will reduce the cost to interstate commerce.

The question of intrastate regulation is just that. It is intrastate traffic. It is not the purview of the Federal Government. The fact that it may be hauled by interstate carriers is irrelevant. It is intrastate traffic. I don't think there's anything to rationalize. It's two separate issues.

Mr. MINETA. The National Private Truck Council points out in their testimony that there is a price difference of twice as much

between interstate and intrastate shipments in some cases. How widespread is that problem in the States?

Mr. CLIFFORD. Mr. Chairman, the RCCC represents primarily the less than truckload carriers. In many States, there can be a disparity, but that disparity can be higher, lower, or in many cases the same. It's really a difference of cost in competition. For instance, in some of the smaller States, a smaller company that has a one terminal operation wouldn't have the cost of line hauling between terminals, the over-the-road costs, or the rehandling costs that a larger carrier might have. Therefore, they can structure their pricing differently.

So it's really a factor of cost in competition and really not the regulatory portion of it.

Mr. MINETA. Mr. Clinger.

Mr. CLINGER. Thank you, Mr. Chairman. I thank the panel for their testimony.

Ms. Batts, you have indicated that the bingo system is anathema to you, inefficient, outmoded, antiquated, and all those good things. Obviously it would represent a tremendous loss to the States, presumably, if it's done away with. Is there a way in which this could be done that would meet with your approval? In other words, is there some way to do this without the owner's burden that it imposes upon you?

Ms. BATTS. Congressman Clinger, we have been meeting with the National Associations of Regulatory Utility Commissioners for the last 4 years trying to reach some compromise. Those discussions went nowhere. They are wedded to the lick 'em and stick 'em.

If what they were doing with the money had anything to do with truck transportation—except those 12 States that use it for highway transportation—it would be a different story. But they don't even use the money to deal with motor carriers. They use it to deal with telecommunications, electrical utilities. Tax the industries that they're regulating. Don't tax the industry they're not regulating.

As I said, in the 12 States where they're using the money for roadside inspections as part of the motor carrier safety assistance program, we will go to those States and we will work with those States to raise their registration fees in order to pay for that increased cost. But under that system, we don't end up paying $5 to give them $1.

We have worked with NARUC. They were not willing to compromise.

Mr. CLINGER. The Administration's proposal gives trucks basically access to the entire 150,000 miles of highways of national significance network. It occurs to me that that might be excessive. Is there a circumstance under which you think there should be some limitation on trucks in that entire 150,000 mile system?

Ms. BATTS. We certainly think that where a State or a locality can demonstrate that there is a safety problem with those vehicles they shouldn't be allowed. But it must be a situation where a State can demonstrate there is a safety problem. Currently that's the process on the Designated Highway System. Now that DOT has finally come through and issued their final regulations, 8 years after

the law was passed, with the exception of a few States, it is working well.

It is important, therefore, in the Administration's proposal to also include the 4th R, rehabilitation, so that where for example, an interchange that cannot accommodate these vehicles, that interchange can be rehabilitated. We know that some of that money ends up going to rehabilitate interchanges for a local mall. I guess I would have to accept that in order to get the 4-R money also going to those interchanges to upgrade them.

Certainly, as we go into the 21st century, we must use money to rehabilitate roads to meet the trucks of the 21st century and not the trucks we were driving 50 years ago.

Mr. CLINGER. Mr. Bergoffen, only a few States have not joined the international registration plan and the international fuel tax agreement continues to grow. Is there a way to encourage greater participation, in your view, in these plans without preempting the States?

Mr. BERGOFFEN. We would certainly go along with incentive programs. In a sense, the bill has one through the support of the Commercial Vehicle Information System, the technology funding that would support it. Additionally, there are projects like the intelligent vehicle highway system, which encourages technology.

In addition to that, as I said earlier, whatever it takes. I think we need to create an element of trust. We need to understand the Governors' concern and of course they have to deal with several agencies within their State that have their own viewpoints. But whatever it takes, if it takes an incentive approach rather than a mandatory approach—and it looks like that's going to work—we could look into it.

Mr. CLINGER. You've indicated your support for increased motor carrier safety assistance program funding.

Mr. BERGOFFEN. Definitely.

Mr. CLINGER. You also support the proposal to use MCSAP inspectors for overweight truck enforcement.

Mr. BERGOFFEN. We go along with the Administration's approach on this, yes. They are doing that in some cases now. This formalizes it and it also provides increased funding for that purpose and identifies it. It wouldn't be essential, but it provides emphasis, and those are the areas of emphasis that we agree with.

Ms. BATTS. Mr. Clinger, if I could add using the motor carrier safety assistance program to inspect overweights is a good idea so long as it doesn't replace current State tax dollars that are already being used for overweight enforcement.

What we would like to see is new enforcement at non-fixed facilities where truckers are trying to by-pass fixed weigh scales, or places where there are specific problems. Let's use that increased MCSAP funding for increased weight inspection, not just to replace the dollars that are already being used.

Mr. CLINGER. But we do use them for drug interdiction, for example.

Ms. BATTS. Absolutely. It already is being done. The only question is to make sure that the inspectors are properly trained to recognize drug abuse. There are some long programs and short programs, but there are programs to train inspectors. Absolutely we

would support that. We also support the concept of drug-free truck stops.

Mr. CLINGER. You do?

Ms. BATTS. Absolutely.

Mr. CLINGER. Thank you very much.

Mr. MINETA. Let me thank the panel very much for their presentation here today. We appreciate it.

[Ms. Batts' prepared statement appears on page 1197.]

[Mr. Bergoffen's prepared statement appears on page 1264.]

[Mr. Clifford's prepared statement appears on page 1459.]

Mr. MINETA. Now I would like to call forward Keith Bissell, Commissioner of the Tennessee Public Service Commission, representing the National Association of Regulatory Utility Commissioners. Mr. Bissell, if you would introduce your colleagues, we would appreciate that as well.

Your statement will be made a part of the record. You can go ahead and make your abbreviated oral presentation.

**TESTIMONY OF KEITH BISSELL, COMMISSIONER, TENNESSEE PUBLIC SERVICE COMMISSION, REPRESENTING THE NATIONAL ASSOCIATION OF REGULATORY UTILITY COMMISSIONERS, ACCOMPANIED BY PAUL RODGERS, ADMINISTRATIVE DIRECTOR, AND GENERAL COUNSEL; CHARLES D. GRAY, ASSISTANT GENERAL COUNSEL; AND KATHRYN FALK, ASSISTANT DIRECTOR OF CONGRESSIONAL RELATIONS**

Mr. BISSELL. Thank you very much. I'm happy to be here today representing the National Association of Regulatory Utility Commissioners with our general counsel and executive director, Paul Rodgers and Chuck Gray on the staff and Kathy Falk.

I am Keith Bissell and I am the commissioner of the Tennessee Public Service Commission and a member of the Executive Committee of the National Association of Regulatory Utility Commissioners, commonly known as the NARUC, on whose behalf I appear here today.

NARUC members regulate the intrastate rates and services including safety of motor carriers of freight and passengers. In addition, under Public Law 89-170, we require interstate motor carriers to register their operations, provide proof of insurance, and designate local agents for the service of process.

If enacted, the legislation being considered here today would have a substantial, direct, and damaging impact on the State regulation of intrastate motor carriers and the enforcement of lawful interstate operations. Indeed, the provisions of this legislation leave little doubt as to their purpose: to abolish State economic regulation of intrastate motor carriers regardless of the policy decisions of State Legislatures; to limit the ability of the States to impose fees upon the carriers that profit from the use of State-provided highways and other facilities; and to undermine the ability of the States to ensure that carriers operate safety, lawfully, and in a financially responsible manner.

NARUC must strongly object to this plan to move regulatory policy-making from the State to Federal Government. First, traffic patterns vary greatly from State to State. Low volume markets will

have difficulty attracting adequate truck service without intrastate regulation. This could greatly increase the isolation and reduce economic opportunities for many of our small rural communities.

Second, many States believe that there is a direct link between economic regulation and carrier safety. In Tennessee, for example, we perform a thorough safety audit of every carrier seeking new authority and condition that grant of new authority, or increased authority, on full compliance with the Federal uniform safety regulations. These laws would preclude our commission from using this most effective tool to ensure safety.

We are also in the process in Tennessee of working with our intrastate regulated carriers to develop a safety rating program, which would include a full safety audit, equipment inspection, and analysis of road-side inspections. It would not be possible to develop such a program if intrastate regulatory requirements were eliminated.

The enactment of this legislation would repeal Public Law 89-170 and deprive the States of millions of dollars that are now being used to enforce safe and lawful carrier operations.

Tennessee has one of the toughest and best truck safety programs in the country. We have 143 safety inspectors that perform over 125,000 comprehensive safety inspections each year. We also have six drug dogs and a special safety audit team. We have breathalyzers at our major inspection station. Over the last 3 years, we have made over 1,000—on the average—drug and alcohol related arrests each year in our State.

Ladies and gentlemen, our program works. In 1985, we began expanding our truck safety program. Since 1987, we have reduced the number of deaths related to big truck crashes in Tennessee by one-third. In 4 years, we have reduced the number of people killed in Tennessee as a result of big truck crashes by one-third. The fact is that this program would be placed in serious jeopardy if Public Law 89-170 is repealed.

Over 60 percent of the $6 million required to fund Tennessee's safety program and economic enforcement program comes from revenues generated by this law. Federal grant funds from the motor carrier safety assistance program would only provide I believe about $1 million in Tennessee a year. The remainder of our funding comes from fines that we implement or impose against unsafe truck operations.

These bills would also implement a policy that converts intrastate carriers to interstate operators and remove all operations from the reach of State enforcement. There would be no new Federal inspectors to perform the functions. This legislation is a formula for unleashing—in my mind—a wave of uninsured unsafe carriers on the Nation's highways. Further, so long as Congress refuses to have the ICC issue certificates of permits to interstate carriers, the requirement should be enforced, or the law becomes a mockery.

I think that we all know that the primary reason that there is a provision before you to repeal Public Law 89-170 is because the big carriers are unhappy with the current registration system that requires them to deal with many States rather than just one. NARUC also recognizes that in today's environment, this is a

costly and time-consuming process. However, we don't believe that the answer is to repeal the law. Rather, NARUC proposes to amend the law to strengthen State safety enforcement, improve State accountability, and reduce the administrative burdens on the trucking companies through the implementation of a base State registration program.

I want to tell you here that just last year I was in a meeting of representatives of the American Trucking Association where we agreed as a group, subject to approval of our Executive Committee, to implement this base State program, but the ATA representatives would not agree to that. This way you would register in only one State and that State would assume the burden of sending the necessary information to other States, along with the fee.

The proposed amendments would ensure that all fees collected by the States under the program would be used for motor carrier enforcement purposes. It would ensure that. It would be a part of the act. It would have to be used for motor carrier enforcement purposes. It would authorize the ICC, or another agency designated by this Committee, to audit these funds, the use of these funds, and make sure that they were used for motor carrier economic or safety regulation.

While these provisions will greatly improve the program from the standpoint of the trucking companies while allowing the States to continue to effectively enforce Federal and State regulatory requirements, they address a concern that some States may use these registration revenues for programs other than the enforcement of motor carrier regulations.

Second, the establishment of a base State registration program would greatly reduce the administrative and paper work burdens on the industry.

In closing, on behalf of Tennessee and all the members of the National Association of Regulatory Utility Commissioners I would like to urge you to take a pragmatic and realistic approach as you examine this legislation. We at NARUC are anxious to work with you and the trucking industry to continue the progress that we have made to date. It is critically important that you remember, however, that the enforcement effort represented by the States cannot be replaced by the Federal Government. The ultimate losers are your constituents and mine.

Thank you.

Mr. MINETA. Thank you very much, Mr. Bissell.

Commissioner, do you know the number of States that now use the bingo card proceeds exclusively for motor carrier functions, such as enforcement of safety laws?

Mr. BISSELL. No, but I am aware of the fact that many of them do not. I can certainly say that the State of Tennessee does use all that money for economic and safety regulation. But our amendment that we're proposing to this Committee would require them to use all proceeds, and set up an audit provision to ensure that, for either economic or safety regulations.

Mr. MINETA. And if the Committee adopted NARUC's proposal for bingo card, could you estimate how much of the $250 million the trucking industry would save?

Mr. BISSELL. I don't know where they got that number, but let me say that under the base State approach, where they would register with only one State and pay all their fees to that one State and leave the burden of distributing that money to the other States to their base State, I think it would save a substantial amount of the current cost of that program.

Mr. MINETA. How do the States check and enforce insurance requirements and service of process requirements with motor carriers that are not covered by Public Law 89–170?

Mr. BISSELL. Your question again, sir?

Mr. MINETA. How do the States check and enforce insurance requirements and service of process requirements with motor carriers that are not covered by Public Law 89–170?

Mr. BISSELL. Many States have mirrored the same requirement for contract and common carriers that is required under Public Law 89–170 and some other program where they require the same information from private carriers. But we certainly would not object to compelling private carriers to also comply with Public Law 89–170 in this same regard.

Mr. MINETA. Mr. Clinger.

Mr. CLINGER. Thank you, Mr. Chairman. I have no questions.

Mr. MINETA. Congresswoman Norton.

Ms. NORTON. I have no questions, Mr. Chairman.

Mr. RODGERS. Mr. Chairman.

Mr. MINETA. Yes, Mr. Rodgers.

Mr. RODGERS. I just wanted to add that I don't see how this $250 million figure was arrived at by ATA. We should keep in mind that the Public Law 89–170 program has been around for 25 years, and the lick 'em stick 'em part has not changed in that 25 years. I don't think that the truckers have been making that kind of expenditure because I'm sure that this is the first time this Committee has ever heard that figure or that strong complaint.

Mr. MINETA. Right.

Mr. RODGERS. So I think it's an exaggerated figure. That's the reason that we have moved to get rid of the cab card and the lick 'em and stick 'em and switch it to a base State concept to avoid that argument, which of course apparently will save them $250 million, if you believe their figure.

Mr. MINETA. Commissioner Bissell, are there any other taxes that are being assessed against other commercial ventures as they are with the bus and truck areas by the State? Are there any other kinds of fees or other kinds——

Mr. BISSELL. In Tennessee we have a railroad safety inspection fee that the railroads pay us for the safety program that we implement in our State and other regulatory responsibilities.

Mr. MINETA. Do pipelines have anything imposed on them?

Mr. BISSELL. Pipelines have the same type of fee in Tennessee and the utilities have the same type of fee. I feel relatively certain that many States are like Tennessee. We are required to adjust these fees periodically and not one time in the 13 years that I've been a State-wide elected commissioner in Tennessee has the industry taken issue with paying their fair share. This year before the Legislature we have a bill to increase the rail fee. The railroads accept it because they realize that it's their just cost.

So I think this same fee structure is also applicable to other industries in most States.

Mr. MINETA. Very well.

Commissioner Bissell, we appreciate very much your testimony here on behalf of NARUC. Mr. Rodgers, Mr. Gray, and Ms. Falk, it was great to have you here with us as well.

Mr. BISSELL. Thank you, sir.

[Mr. Bissell's prepared statement appears on page 1279.]

Mr. MINETA. I would now like to call on Mr. Vernon McDougall, Acting Director of Safety and Health of the International Brotherhood of Teamsters.

You may begin. Your statement will be made a part of the record. Please also introduce your colleague.

**TESTIMONY OF VERNON McDOUGALL, ACTING DIRECTOR, SAFETY AND HEALTH, INTERNATIONAL BROTHERHOOD OF TEAMSTERS, ACCOMPANIED BY NORMAN WEINTRAUB, CHIEF ECONOMIST, INTERNATIONAL BROTHERHOOD OF TEAMSTERS**

Mr. MCDOUGALL. Thank you, Mr. Chairman.

With me today is Norman Weintraub, Chief Economist for the International Brotherhood of Teamsters. I am pinch-hitting today for Vice President and Freight Director R.V. Durham. He regrets that he could not be here this afternoon, but he had to fly to a previously arranged meeting regarding the ratification of our National Master Freight Agreement.

Mr. Chairman, I would just like to highlight with a few words three of the specific topics that we addressed in our detailed written statement, that I know are of great interest to this Committee: longer combination trucks; the Motor Carrier Safety Assistance Program; and intrastate deregulation.

The Teamsters' position on trucking deregulation has been stated several times before this Committee over the years. Deregulation has produced numerous trucking company bankruptcies, mindless price-cutting, forced early retirement, and unemployment for thousands of Teamster members.

The Administration's bill and H.R. 1064 would extend the ills of deregulation to intrastate trucking. We urge you to reject these ill-advised proposals.

Mr. Chairman, if you increase truckers fuel taxes, they have to find off-setting cost savings somewhere. This year, the industry's response, as you have heard, to the prospect of higher fuel taxes is productivity increases. Above all else, what they're really talking about here is bigger trucks. Elements of the trucking industry are plotting to expand the use of triples and turnpike doubles throughout the country. The Teamsters Union opposes any expansion beyond those States in which these trucks are now permitted.

Mr. Chairman, you will hear a great deal about the safety record of longer combination vehicles. Primarily, these vehicles now operate on lightly traveled highways. That same safety record will not be possible in States where there is more traffic, and highways may not be as modern. The handling characteristics of these trucks, which can be forgiven to an extent on wide-open, lightly

traveled roads, will pose a greater safety risk in more demanding environments where there is less margin for error.

One of these safety problems is rearward amplification. This is the kind of "crack the whip" effect where a small steering adjustment in the tractor is amplified with each trailer that follows it. This has been a safety issue with twin 28s, the standard twin tractor trailers that are on the road today. We have negotiated safety language on that in some of our contracts. This effect is much greater in triples.

Many tractors used to pull triples today do not have enough power to maintain the minimum speed on grades. This, too, will be a greater problem if longer combination vehicles are allowed into more densely populated States.

Mr. Chairman, brakes are a critical safety factor on all heavy trucks. The longer the vehicle and the more trailers, the more difficult brake maintenance is for the entire combination. Anti-lock brakes on both tractors and trailers are something that could reduce the safety concerns related to brakes for longer combination vehicles. But we are not optimistic that those who are seeking productivity increases would be willing to make the necessary investments.

Mr. Chairman, over the past few years, we have seen the truck size limits of the Surface Transportation Assistance Act almost completely undermined. The STAA provided a uniform trailer length of 48 feet. But today almost all States allow 53 foot trailers, at least. Shippers and trucking interests were able to go to State Legislatures one by one and achieve a kind of domino effect by using economic blackmail. These States were threatened with loss of business and jobs because shippers would locate in States that allowed 53 footers.

This is the same kind of approach that we can expect to see in the next few years, except that the object of industry's desire will be triples and long doubles. Please do not give the States the burden of trying to deal with these demands one at a time.

Mr. Chairman, the Motor Carrier Safety Assistance Program, MCSAP, is one of the biggest success stories in recent truck safety legislation. The Teamsters Union is proud of our consistent support for this program. We hope the Congress will provide additional funding to increase the number of roadside inspections across the country.

We know that there is some sentiment for giving MCSAP new tasks different from those at which it has proven so effective. This troubles us a great deal. If Congress wants more traffic enforcement, or more drug enforcement, those should be funded separately.

We see a role for MCSAP in enforcing certain commercial driver's license requirements. However, as MCSAP expands its look at the driver, we must remind you that the driver is only an extension of the motor carrier. We urge you to keep the enforcement on the motor carrier. Do not let an expansion of MCSAP slip into something that becomes punitive to drivers.

Mr. Chairman, we support DOT's efforts, through the MCSAP funding process, to get States to enforce safety regulations for intrastate trucking that are compatible with the Federal Motor

Carrier Safety Regulations. But sometimes when a State balks, DOT does not always use its funding leverage to get them to come into line.

In California, for example, intrastate drivers are allowed to drive 12 hours per day. They are allowed 16 hours on duty, and unlimited time on duty per week. The State has made almost no effort to come into line, and DOT has not pressed the issue very hard.

We also take issue with DOT's willingness to accept for intrastate drivers 12 hours of driving time instead of 10 for interstate drivers. That is more than just a technical difference. That is a safety hazard.

Mr. Chairman, there has been a little confusion in some circles about whether we are affiliated with another organization that appeared before you earlier today, the CRASH organization. I would just like to take this opportunity to clarify that we are not an affiliate, member, or associate of that group.

Mr. Chairman, that concludes my testimony today. Thank you for giving us this opportunity to share our concerns with you. If you have any questions, I will do my best to answer them.

Mr. MINETA. Thank you very much, Mr. McDougall, We appreciate your sitting in for Mr. Durham.

On page 6 of the testimony it says that the Teamsters have "negotiated safety language in our National Master United Parcel Service Agreement and our National Master Freight Agreement to reduce the problem of rearward amplification of twin 28 foot trailers."

Could you tell us what that language is and why it was inserted in these agreements?

Mr. MCDOUGALL. There are two aspects of the language. One has to do with placing, to improve the handling in general of twins or LCVs, the heavier trailer of the two in front in the combination. That improves the control and handling of the whole combination. We negotiated that in both the UPS agreement and in the National Master Freight Agreement. There is language in there about short hauls because the carriers want to have some flexibility on very short hauls to put the heavier trailer in the rear. But under our agreements, if handling problems then become evident to the driver, he has the authority to stop and have the trailers swapped around.

The other thing we've done to improve the handling of the twins a little bit is to put language in the new National Master Freight Agreement about snubbers, or slack adjusters that take some of the looseness out of the pintle hook connection in the doubles. Those devices are on the truck, but they don't always operate well. We put in language in our safety provisions to enforce the maintenance of those devices.

Mr. MINETA. In your statement, you discussed the state of hours of service laws and their relationship to driver fatigue. Have the Teamsters initiated any efforts to have the State Legislatures change those laws?

Mr. MCDOUGALL. I understand from our locals in California that they have taken this issue to the State Legislature on more than one occasion in recent years, and that they haven't met with very much success.

Mr. MINETA. But there are no limitations, you say, on the total number of hours per week that they are able to— there is no limitation on the maximum number of hours on a weekly basis.

Mr. MCDOUGALL. That's correct.

Mr. MINETA. Do you have any statistics on any accidents that have been caused by this kind of driver fatigue?

Mr. MCDOUGALL. No. Like Ms. Batts, we do not have very good truck safety data in a lot of areas. We have no specific statistics. We have a lot of anecdotal information because, basically, what happens is that we get our members in intrastate commerce simply complaining to their Locals that they are being put in a position that they consider to be hazardous.

Mr. MINETA. Thank you very much, Mr. McDougall. We appreciate your being here.

Mr. MCDOUGALL. Thank you, Mr. Chairman.

[Mr. Durham's prepared statement appears on page 1884.]

Mr. MINETA. At this time I would like to call on David G. Burwell, President, Rails-to-Trails Conservancy, Surface Transportation Policy Project.

Mr. Burwell, your statement will be made a part of the record, so you may go ahead and proceed in an abbreviated fashion.

## TESTIMONY OF DAVID G. BURWELL, PRESIDENT, RAILS-TO-TRAILS CONSERVANCY, SURFACE TRANSPORTATION POLICY PROJECT

Mr. BURWELL. Thank you, Mr. Chairman.

My name is David Burwell. I am president of the Rails-to-Trails Conservancy. RTC is a nationwide, non-profit organization that seeks to preserve the more than 150,000 miles of abandoned railroad corridor throughout the country as trails and greenways, and for possible future rail use. As a Nation, we simply cannot afford to allow our built rail system, built at an enormous cost in lives and money—much of it public—to wither away from neglect. We urge you to address this important issue in this reauthorization bill.

Equally important, I also appear on behalf of the Surface Transportation Policy Project, STPP, which is a broadly-based network of concerned organizations including public agencies, non-profits, and private companies involved in issues of transportation, energy, environment, planning, design, and community preservation. The steering committee of the STPP is listed on the first page of our testimony. We represent over 100 organizations now and I would be glad to submit a full list of our participants to this Committee, if desired.

Basically, the purpose of the STPP is to develop a broad package for transportation reform that seeks to establish a transportation program based on performance rather than on any particular modal solution. We feel that our transportation program should be based on what we call the 4- Es of performance goals for transportation. These 4-Es are: energy efficiency; a strong economy; environmental quality; and enhanced communities.

We feel that, although the Administration's bill does have some good initiatives in it, it does not go far enough to promote a performance-based program such as we would endorse. More specifi-

cally, we oppose the proposal for the creation of a national highway system, a system that will—under the Administration's bill—be assigned over 60 percent of all the highway authorizations in this bill.

We oppose it for two reasons. First, we do not feel that it will apply the funds where the needs are in our transportation system. Our calculations indicate that under the Administration's proposal Alaska will get approximately $400 per capita in transportation assistance, while your State of California will get approximately $25 per capita in transportation assistance. We feel that this is not applying the dollars where they are most needed.

Second, the Administration's bill imposes the burdens of transportation construction unduly on regional and local governments. We feel that the funding and the authority for planning should be directed and delegated more to the regional and local levels because these are the folks that have to solve these sticky problems, as Mr. Jim Beall and Lilla Richards from the National Association of Regional Councils indicated this morning.

Our proposal is included in a document called, "Acting in the National Interest: The Transportation Agenda", which has been submitted to this Committee and which we request to be made a part of the record. It is a comprehensive program of transportation reform. I would like to simply give you just a few highlights.

First, on the funding side, the STPP proposal creates a dedicated highway program of $36.7 billion, which primarily involves 3R and completion funds for the interstate system. It also creates a dedicated transit fund of approximately $26.6 billion, $10 billion over the Administration's proposal.

The remainder of the program would be approximately $50 billion in flexible funding that would go for two programs, one of which is the metropolitan mobility program, equivalent to the urban program, and a second program promoting rural access. Together these programs would be administered on an equal basis for new construction and reconstruction money in these areas. Our proposal also would withhold 10 percent of metropolitan mobility money for projects that promote clean air, growth management, transportation enhancement, and which would reduce VMT growth.

Second, the proposal equalizes funding ratios across all modes, 75 percent for new construction and the 4th R, reconstruction, and 90 percent for operational and management improvements.

Third, our proposal creates a performance-based planning program based on the 4-Es—which I mentioned earlier—which would require State plans based on these performance- based goals, and would also require regional governments, in cooperation with local governments, to establish long-range plans and transportation improvement plans that implement these substantive goals. There would also be resource constraints with the idea that a project, once it was in a Transportation Improvement Program (TIP), would have a chance of being implemented.

Finally, we would also increase planning funds substantially at the regional level, increasing HPR funding from 1.5 percent to 2 percent of apportionments, and PL funding from .5 percent to 1.5

percent. We would also set transportation planning at 1.5 percent of total apportionment.

As I mentioned earlier, the transit funding would be $10 billion over the Administration's bill, and it would restore transit funding to approximately the 1980 levels.

We would also support a change in the apportionment formula. We oppose the Administration's proposal where apportionments are based on the amount of fuel consumed. This simply encourages and rewards States that burn more fuel to get more money. We think an apportionment formula should be created that encourages States to reduce VMT, perhaps based on a VMT index, that would give a bonus apportionment to States that reduce VMT per capita.

Finally, there are particular sections of the Administration's bill that we do support, particularly their billboard control provisions. We do support the provision that no new billboards should be built on the interstate and primary systems. We support restoration of State amortization authority for existing billboards, and we would add a provision preventing tree cutting on the Federal Aid system solely for billboard visibility.

We also support the scenic byways provisions of the Administration's bill, and we feel a scenic byway program should focus on protection, not new construction, it should qualify Federal funds for scenic easements, and it should establish national eligibility standards for operation, management, signage, and resource protection.

That is my testimony, and I would be glad to answer any questions you may have.

Ms. NORTON [assuming chair].

Thank you very much, Mr. Burwell. I would like to ask you a couple of questions.

It appears that your proposal would mean that 69 percent of the flexible fund would go to urban areas over the life of the bill. Can you tell the Committee how you arrived at this percentage?

Mr. BURWELL. The amount of money assigned to the metropolitan mobility program, $34.5 billion, is established by basically taking the Administration's total pot of money for highway construction—which was about $87 billion—dedicating the amount needed to complete the interstate system and maintain the interstate system, using the Administration's figures, to those programs, plus some minor Federal programs like the Federal LANDS program. That came to $36 billion. We then took the amount needed for transit, at the Administration's level of $16.3 billion, added the $2 billion per year presently apportioned under section 9, formula grants, and set those aside as dedicated funds as well.

This left $50 billion remaining in the pot. We divided that up between the metropolitan mobility program and the rural access program. Basically, that was the rest of the money that was available, consistent with our proposal that all funding, to the maximum extent possible, should be flexible. It would have equal funding ratios of 75 percent for new construction and 90 percent for management. So the way those numbers were reached was simply by minimizing dedicated funds on both the transit and the highway side and putting the rest of the money into these flexible pots.

Ms. NORTON. Thank you.

Would you share with the Committee how you envision the State DOTs interacting with the metropolitan areas in order to generate a State-wide coordinate transportation planning and construction effort?

Mr. BURWELL. That's a very good question, and it's a crucial one. It addresses the planning proivisions in our proposal.

We propose that the State transportation agencies establish a State-wide transportation plan. Most of them do have such a plan right now called a 105 program of projects. However, it doesn't have any substantive goals. It's basically an accumulation of all projects that are in the pipeline. We would require that the States establish performance-based goals—clean air, clean water, community enhancement, mobility, safety, connectivity of projects within the State—and they would also be required to include in those plans the long-range plans established by the MPOs within each State.

So the States would not be free to simply ignore the plans created by the MPOs within their jurisdiction. Instead, it would be a conversation in which the State DOTs would sit down with the MPOs, incorporate the MPOs plans, and meld those with the State-wide objectives.

We also feel that the development of a State-wide transportation plan should be coordinated with other non- transportation agencies in the State including any State planning agencies and State environmental agencies that also have interests that are affected by transportation programs.

Ms. NORTON. Thank you very much, Mr. Burwell. I very much appreciate that excellent testimony.

Mr. BURWELL. Thank you.

[Mr. Burwell's prepared statement appears on page 1314.]

Ms. NORTON. I would like to call the next panel. Mr. Derrick A. Crandall, President, American Recreation Coalition, and Mr. Roy W. Muth, President and CEO, International Snowmobile Industry Association.

We have your statement as part of the record. I ask you to keep your remarks brief in light of that.

## TESTIMONY OF DERRICK A. CRANDALL, PRESIDENT, AMERICAN RECREATION COALITION; AND ROY MUTH, PRESIDENT AND CEO, INTERNATIONAL SNOWMOBILE INDUSTRY ASSOCIATION

Mr. CRANDALL. Thank you, Madam Chairman. I am Derrick Crandall with the American Recreation Coalition, and I'm here to talk about perhaps a good way to come to the conclusion of a long day of testimony. I'm here to talk about some of the wonderful opportunities to see America through our road network.

For 2 years, I had the privilege to serve on the President's Commission on Americans Outdoors, chaired by then Governor Lamar Alexander, now our Secretary of Education. Our panel included four distinguished members of the Congress, Senators Johnston and Wallop as well as Representatives Udall and Vucanovich. We conducted hearings across the Nation and asked people about their desire for opportunities to enjoy their leisure time outdoors and

looked for creative ways to making this quality opportunity base available through private and public efforts combined.

One of our core findings was that most Americans now live urban existences, yet seek ways to escape these environments during their leisure hours. We found that driving for pleasure and sightseeing from motor vehicles stood near the very top of the list of preferred recreational activities. In this regard, the results of our 1986 study differed little from a string of Federal surveys conducted since 1960.

However, little effort was underway by either transportation or recreation agencies to make this type of highway use more enjoyable. The commission called for new efforts by Federal, State, and local agencies and the private sector to identify, improve, and protect the roads that give travelers the real taste of America through scenic byways programs.

The commission's recommendation was warmly received by a large number of organizations, including the American Recreation Coalition. In fact, more than 30 national and regional organizations have now banded together to define an appropriate national scenic byways program, holding 3 national conferences and working closely with interested members of Congress and the Federal Highway Administration. We took an active role in the National Scenic Byways Study undertaken by the Administration, and generally applaud its findings and recommendations.

Our enthusiasm is matched by that of numerous Federal and State agencies. The United States Forest Service recognized the value of scenic byways in serving its customers, and moved to establish a byways system in May of 1988. That system now includes some 100 routes across the Nation, routes that have brought together Federal agencies and State highway and tourism departments, local businesses, and national corporate partners to help Americans and our visitors from other nations understand the wonderful legacy of our great outdoors.

And the Forest Service is not alone in its initiative. The Bureau of Land Management has created a wonderful network of back country byways through the west. It, too, has successfully recruited partners from the public and private sectors. The result is a tremendous increase in public opportunities to enjoy our shared legacy of Federal lands at an extraordinarily cheap price.

Many States, too, are embarked on the scenic byways path. Colorado, Utah, Tennessee, Oregon, and others are leading the way, enhancing existing roads through beautiful areas with safety improvements and interpretive centers. In fact, the breadth of support for scenic byways is astonishing, it is bipartisan, and it is found in every region of the land.

We recently released information regarding recreational activities in America, the result of a series of national surveys performed for us by Peter Hart Research Associates. Among the relevant findings were that driving for pleasure remains near the very top of our leisure pursuits, enjoyed by 8 in 10 Americans and that opportunities for outdoor recreation are important in the lives of 77 percent of the American public. Driving for pleasure, to see the Nation close-up at a slower pace, is especially popular with the

fastest growing segment of the population: mature Americans that are 65 and up.

We strongly urge this body to incorporate a scenic byways program into the 1991 Surface Transportation Act. Your actions can assure that we remain visionary in our highways policy, and that we help Americans remain in contact with our natural resources and history.

We recommend the following components for a national scenic byways program. First, the establishment of a permanent office within the Federal Highway Administration to coordinate Federal, State, and local scenic byways efforts.

Second, the creation of a National Scenic and Historic Byways Advisory Commission, with public and private sector members.

Third, a new National Scenic and Historic Byways Program administered by the Federal Highway Administration, which would assist in adding certain enhancements to scenic and historic routes, which improve opportunities for scenic and recreational travel, including wider shoulders to allow safe sharing of the roadway by differing vehicles and safe pull-offs at scenic sites.

Fourth, the creation of a new "All-American Roads" designation, as described in the FHWA National Scenic Byways Study for roads such as the Blue Ridge Parkway, those that clearly have a national and even an international role.

Fifth, a clarification of Federal aid eligibility to make clear that scenic byways improvements are an appropriate use of each State's highways money allocation.

Sixth, a requirement that States consider the need of leisure travelers in their urban and State-wide transportation plans.

And finally, support for Federal agency scenic byways efforts.

We certainly thank this Committee for its interests. We are delighted to be working shoulder-to-shoulder with so many members of the Committee on this important topic. If I might, Madam Chairman, in concluding my testimony, I would like your permission to insert into the record a separate statement on behalf of the American League of Anglers and Boaters dealing with yet another wonderful aspect of the Nation's surface transportation policy, in this case the Wallop-Breaux Trust Fund, to support fishing and boating.

Ms. NORTON. We'll be pleased to receive it, Mr. Crandall. We appreciate that testimony.

We now move on to Mr. Muth.

Mr. MUTH. Madam Chairman, I serve as the president and chief executive officer of the International Snowmobile Industry Association, which is the trade association for the snowmobile industry. ISIA's members are manufacturers of snowmobiles, suppliers to the industry, snowmobile distributors, and trail groomer manufacturers. I also serve as chairman of the American Recreation Coalition's task force on trails. We appreciate the opportunity to comment on a subject that is very important to us: integrating the establishment of a national recreational trails fund into the reauthorization of surface transportation programs.

Since I am chairman of the ARC task force, some of my comments will be generic in nature, while others will specifically reflect the experience of the snowmobile community. Other task force members, representing both motorized and non-motorized

recreation interests, will also be submitting comments to the Subcommittee.

In recent years, the growth of trail-based recreation has been phenomenal. However, providing adequate trails to accommodate this growth has become increasingly difficult. Let me use an example from snowmobiling.

Currently, funding for snowmobile trails comes from two sources: State snowmobile registration fees and State gasoline taxes. In those States with extensive trail systems, trail funding runs into the millions of dollars. As an example, last year Wisconsin's program was funded at $3.5 million, Michigan's was funded at $2.5 million, and Minnesota's was funded at $2.3 million. However, we are finding throughout the snowbelt that these funds are not sufficient to meet the increasing expenses associated with snowmobile trail development and maintenance.

As you know, H.R. 1155, the National Recreational Trails Fund Act of 1991, was introduced by Representative Thomas Petri to provide an additional source of funds for trail programs: a portion of Federal gasoline tax funds. A copy of H.R. 1155 is attached to my written statement, as is a copy of a series of questions and answers on the bill prepared by the ARC task force.

In view of the fact that Federal gasoline taxes are intended to be user fees, this legislation would allocate Federal gasoline tax revenues derived from trail-related activities to the construction and maintenance of trails rather than highways.

Under provisions of this legislation, a National Recreational Trails Trust Fund would be established and funds would be transferred to this fund from the Highway Trust Fund. The amount deposited would be that attributed to the use of gasoline for off-road recreation and back country camping. The amount is set at .5 percent of total annual Highway Trust Fund receipts, which would provide an estimated $75 million annually. The program would be administered by the Department of the Interior.

Grants from the fund would be allocated to the States. Those monies could be used for construction and maintenance of trails; acquisition of easements; acquisition of property from a willing seller; and development of trailside facilities.

In discussions about this legislation, the question that is raised invariably is, Will the fund aid all trail interests, both motorized and non-motorized? The answer is an emphatic yes. Motorized and non-motorized recreation must each receive the benefit of at least 30 percent of a State's allocated monies. In addition, 40 percent of a State's allocation must be spent in a manner which gives preference to project proposals providing for the greatest number of recreational purposes, and for innovative trail corridor sharing to accommodate both motorized and non-motorized uses.

It is also important to note that not all trails funded under this program must be open to some or all motorized recreational activities. We seek to create more and better trails for all uses while recognizing that mixing some trail uses can be unsafe and reduce the quality of the experience.

We think that H.R. 1155, the National Recreational Trails Fund Act of 1991, offers an important opportunity to improve trail-based recreation for Americans. In addition, because it involves the use of

Highway Trust Fund funds, we think it would be very appropriate to incorporate the bill's provisions in the final legislation reauthorizing the Surface Transportation Act.

Once again, thank you for listening to my presentation. I'll be happy to try to answer any questions you may have at this time.

Ms. NORTON. Thank you very much, Mr. Muth.

Let me go first to Mr. Crandall.

Mr. Crandall, could you describe briefly some of the kinds of enhancements you propose for scenic and historic routes?

Mr. CRANDALL. Madam Chairman, the improvements would be additions to allow people traveling the routes to pull off and enjoy the nature of the corridors through which they are passing. One of the ironies is that as you travel this beautiful land of ours, often times you reach a spot where you would love to pull off and gaze at the view—whether it's from a saddle on the mountain or along a river—you find that it's simply unsafe to be able to do that.

We're also talking about an active interpretive program so that in fact we use these safe pull-offs to tell about the cultural and natural history of the areas.

We are also looking at an opportunity to tie the road to the resource better. So, for example, as the scenic byway passes by a river or lake, we're looking for ways to expand public access to those waterways. After all, waters are a magnet for recreational activities in this country.

There are also some other safety improvements we feel are appropriate. For example, when you're mixing a variety of different kinds of uses—everything from bicycles up to large trucks—in many cases we need safe areas for people to pass. There are many times, especially in these scenic areas, where we find that the ability for the faster vehicles to pass by the slower moving vehicles safety is simply not there. So periodic passing lanes to reflect the difference in the mix of traffic would be appropriate.

Ms. NORTON. Is it possible that there could be a conflict between preservation of the environment along scenic routes an the enhancements or improvements your coalition is seeking and supporting?

Mr. CRANDALL. Madam Chairman, we don't believe that there would be significant difficulties and conflicts. In fact, by having a scenic byway designation there would be a management plan developed that would allow us to better manage those. In fact, whether they're designated or not, many of these routes already receive additional traffic, and those conflicts are now not able to be mitigated. The development of a scenic byways program would create the forum for the mitigation of those forces.

Ms. NORTON. Thank you, Mr. Crandall, for that response.

Mr. Muth, according to the IRS, it would difficult and costly to develop the database necessary to accurately determine the amount of fuel used off the road in order to appropriately allocate funds to the National Recreational Trails Trust Fund. Wouldn't it be possible instead to permit the Department of Interior, the Bureau of Land Management, and the United States Forest Service to have direct responsibility for recreational areas to finance trail improvements by levying fees directly on the users and beneficiaries of these trails?

Mr. MUTH. Madam Chairman, I would suggest that this user fee money, this tax that's collected on fuel purchased by motorized recreationists, is really not going where it belongs right now. Right now, it's going to highways. All we're asking for is that a portion of those funds be returned to those people that are paying the taxes, the recreationists. I think those estimates can be made relatively simply. I expect that the Treasury Department will use the same approach now used to calculate the federal fuel excise taxes attributable to recreational boating activities and the use of small gasoline engines for lawn mowers, chain saws, ect., which are being deposited in the Aquatic Resources Trust Fund (Wallop-Breaux Fund).

Ms. NORTON. Do you think that any fees collected would not go directly in that manner? Would fees be a better way of assuring how the money is spent?

Mr. MUTH. If you have a system where there is a closed loop on the fee going back to the entity that it's collected from, I think we have no disagreement with that. Unfortunately, that's not the case all the time.

Ms. NORTON. Thank you.

How does your proposal relate to the overall goal that is before us of targeting Federal funds to the preservation and enhancement of the highest-priority transportation system supporting interstate commerce, economic productivity, and national defense?

Mr. MUTH. I'm not sure that it goes to that precisely; however, I think it does address an issue that is timely. Recreation is becoming more and more important in the lives of all citizens. Outdoor recreation is certainly a major part of that, and trail-based activity a major portion of that. We feel that it is important that the Committee take into consideration what we believe to be a fair redistribution of those funds.

Ms. NORTON. Thank you very much, Mr. Muth.

I thank both of you gentlemen for that fine testimony. It's very helpful to the Committee.

[Mr. Crandall's prepared statement appears on page 1495.]

[Mr. Muth's prepared statement appears on page 1968.]

Ms. NORTON. I ask the next panel to come forward. Mr. William H. Dempsey, President, Association of American Railroads, accompanied by L. Lee Lane; Mr. Robert E. Harmon, Chairman and CEO, Harmon Industries, and Chairman of the Railway Progress Institute; and Mr. John A. McQuaid, Executive Director, Intermodal Marketing Association.

I'm pleased to welcome you gentlemen to the Committee. We have your written statements. It's very late, so we would appreciate a brief summary of your testimony so that we may be able to ask questions to clarify your testimony.

Let's begin with Mr. Dempsey.

**TESTIMONY OF WILLIAM H. DEMPSEY, PRESIDENT, ASSOCIATION OF AMERICAN RAILROADS; ROBERT E. HARMON, CHAIRMAN, AND CEO, HARMON INDUSTRIES, AND CHAIRMAN, RAILWAY PROGRESS INSTITUTE; AND JOHN A. McQUAID, EXECUTIVE DIRECTOR, INTERMODAL MARKETING ASSOCIATION**

Mr. DEMPSEY. Thank you, Madam Chairman.

I am glad to be here. I'm president of the American Association of American Railroads. I appeared here almost a year ago exactly to state the position of the rail industry on the highway reauthorization bill. It will come as no surprise to anyone to find that I haven't changed my mind in this past year. The principal issue that we're concerned with is the question of lifting of the weight limits from 80,000 pounds to whatever it might be to permit the operation of so-called LCVs, twin 48s and triples.

Our interest in it from an economic point of view is very clear. Our studies indicate that the wide-spread use of twin 48s would strip the industry of about 40 percent to 50 percent of its net operating revenue. That's a prescription for catastrophe for the rail industry, the shippers that it serves, the communities that it serves, and rail employees.

If that were all that were to it, then you would face the question of productivity improvements. That's a legitimate question, but it isn't really in our judgment legitimate as long as the heavy trucks are not paying anywhere close to their fair share of the costs they impose upon the interstate system. As you know, the latest FHWA study indicates that they're paying only in the range of 50 percent to perhaps 60 percent. We think it's actually less than that.

Beyond that, as I said last year, we hardly stand alone in our opposition to LCVs, and the list of opponents since that time has grown and grown on grounds not of economic concerns about the rail industry, but in terms of concerns about safety, the environment, fiscal responsibility, congestion, and other public interest matters of that sort.

I suppose that our research can be discounted or attacked as self-serving, but I think it's pretty hard to quarrel with the representatives of the public interest on these various other issues like AASHTO, the American Association of State Highway and Transportation Officials that, as you know, has written the Committee urging that nothing be done to change the weight limits until such questions as fiscal impact, safety, and environment are examined. They intend to do that and are set about doing that.

AASHTO, AAA, the National Conference of State Legislators, the National Taxpayers Union, the Consumer Federation of America, the Union of Concerned Scientists, the Center for Auto Safety; the insurance industry, the National Association of Governors, highway safety representatives— then on the environmental questions, we have the three biggest: the Sierra Club, the Friends of the Earth, and the National Wildlife Federation.

Not only that, we have such interesting additions to the bank of data as a recent poll taken by the AAA of trunk drivers in the west where these larger rigs are permitted in some circumstances and something in the way of 80 percent of those drivers opposed the legalization of triples and 83 percent of those truck drivers

thought that LCVs were less safe than single combinations, and strong majorities thought that they were much less safe.

So this is a pretty—it seems to me—strong consensus of people on the other side of this issue. I think, in short, that my friend Tom Donohue, the president of the ATA, was right when he said recently in a "USA Today" interview: "I don't argue that there is anybody in America who wants larger trucks anywhere on any highway."

I pass to the second issue—and I'll just take 60 seconds on that—but this is of enormous importance to us as well. This is the question of highway grade crossing financing.

Back in 1973, the Congress concluded that this was an enormously important question and that experience taught that if there were block grants in effect to the States that the grade crossing issue would receive relatively little attention when in contest with other traditional issues such as highway maintenance and expansion. I'm afraid that that program may be in jeopardy now. I think that would be a very, very bad thing for that to turn out that way. FHWA has estimated that since 1973 this program has prevented over 6,000 fatalities and 25,000 injuries. I just urge that it be continued as it stands.

In closing, there has been some suggestion that the railroads have not invested much in the way of their own resources, but that simply is not the case. In terms of maintenance of this system and other collateral expenses, we spend about $190 million a year. That, it seems to me, is a pretty good token of our commitment to safety at highway grade crossings.

Thank you.

Mr. MINETA. [resuming chair].

Thank you very much, Mr. Dempsey.

We now hear from Mr. Harmon.

Mr. HARMON. Thank you, Mr. Chairman.

I am Robert E. Harmon, chairman of the Board and chief executive officer of Harmon Industries of Blue Springs, Missouri. I appear before you as chairman of the Railway Progress Institute, the international trade association of railroad and rail rapid transit industries. Our association's members are well over 100 companies that provide everything that goes into making and operating railroads and rail rapid transit systems.

We greatly appreciate this opportunity to present our view on legislation to reauthorize the highway program. Our industry has supplied much of the new product development that has helped the railroads compete. In current railroading, I speak particularly of computer-designed lightweight flat cars for transporting intercontinental freight contains; more fuel efficient locomotives; and our current work toward developing components of an Advanced Train Control System that can permit far more intensive and efficient use of existing rights-of-way.

We also provide the grade crossing warning devices and surface materials that have made your rail/highway grade crossing safety program the most successful highway safety program in the Nation. All told, ours is a $5.7 billion industry employing over 150,000 people.

Mr. Chairman, for your Committee's consideration, I have brought two white papers. Both deal with aspects of the legislation before you. They are attached to my full statement, and I ask that the Committee accept these for the record so I may summarize.

Mr. MINETA. Without objection, it will be included in the record.

Mr. HARMON. I will also note parenthetically that our Committee on Passenger Transportation has submitted for your record a statement opposing the Administration's wish for authority to waive "Buy America" requirements.

Mr. Dempsey has enumerated the projected impact of LCVs nationwide upon the railroads' earnings; the public's subsidies for trucks; the dangers inherent in longer, heavier trucks; and the higher maintenance costs that would result from their use. We wholeheartedly support his comments.

Let me address the matter of LCVs from our industry's point of view. Cast your minds back, if you will, to the 1970s, before Congress gave us the Staggers Rail Act of 1980. While it is hard to believe now, just a little more than a decade ago many railroads were in bankruptcy and their track work was so deteriorated that some freight cars derailed while standing still. That's what happens when profits disappear and the railroads cannot afford to maintain their rights-of-way.

Clearly, for the RPI member companies that supply the ballast, ties, and rails, the nationwide advent of longer combination vehicles, the LCVs, would be a most devastating problem.

Suppliers' R&D would disappear. So, I fear, would the Transportation Test Center at Pueblo, Colorado, created by the Federal Railroad Administration—with significant help from railway suppliers, by the way—and now being managed by the Association of American Railroads also disappear.

The market for our car makers' container cars, one of the brightest spots in our industry over many, many dry years, would disappear. In fact, we believe that the intermodal traffic would end, this would spill most of the 6 million containers now moving by rail out onto the highways. Instead we urge the Committee to consider innovative uses of the Highway Trust Funds to improve access to rail intermodal facilities, thereby easing congestion in port cities and rail gateways.

Let me point out a severe adverse impact of diminished freight railroad profits that is not as obvious as the ones I have cited. Deteriorating rights-of-way would degrade the speed and punctuality of Amtrak, the Nation's only cross-country railroad passenger service, as well as the commuter railroads that serve 11 metropolitan areas of the United States. Those rail passenger systems run over the freight railroads' rights-of-way. Consequently, the financial health of the freight railroads is important to the passengers and to our member companies who sell equipment and supplies to those systems.

Speaking of rail passenger transportation, Mr. Chairman, we have long advocated a balanced transportation system. We urge the Congress to provide a 5-year, reliable funding program that will allow the infrastructure to accommodate increasing demands for urban public passenger transportation.

Earlier I alluded to the rail/highway grade crossing safety program, which you and we know as the section 130 program. Surely, records of your Committee document the success of the section 130 program, and I need not dwell on that here.

I do wish to state our position that categorical funding is essential. One of our member companies surveyed 163 State highway officials close to this program and 23 railroad officials on their view of block grants versus dedicated categorical funding and 83 percent replied. Only 25 respondents favored a block grant approach and the remaining 129 favor dedicated categorical funding.

What's wrong with the block grant idea? The vast majority of those favoring categorical funding said they foresaw severe cutbacks in the rail/highway grade crossing safety program. As you have heard, grade crossing needs would frequently lose out to more traditional highway needs such as capacity improvement and maintenance.

Now let me draw this to a close. Insofar as the rail/highway grade crossing safety program is concerned, we recommend that: section 130 be reauthorized; authorized funds be earmarked specifically for the section 130 grade crossing safety program; the authorized funding level be high enough to continue the excellent improvements in safety; existing permission for States to transfer up to 40 percent of section 130 funds to other safety programs be eliminated; and Operation Lifesaver, Incorporation continue to receive support from the Highway Trust Fund.

As to the longer combination vehicles issue, Mr. Chairman, I have noted that their advent would devastate our industry.

Now let me speak as the person at the wheel of our car when my family goes on trips. I believe the majority of Americans join me in my fear of being tailgated or passed in rain and snow by the 40 ton rigs that are out there on the highway right now. Trucks are long enough, heavy enough, and dangerous enough as they are.

Segments of the trucking industry hope to use trucks weighing over 130,000 pounds. That is 65.5 tons. Mr. Chairman, the Abrams Main Battle Tank that our military used in Operation Desert Storm weighs 2.5 tons less than that. Please don't allow the trucking equivalent of the Abrams Tank out on the highways with us—with your family and mine.

Thank you for the Committee's time and attention, Mr. Chairman. I will be pleased to respond to any questions.

Mr. MINETA. Thank you very much, Mr. Harmon.

Mr. McQuaid.

Mr. MCQUAID. Thank you, Mr. Chairman.

I might say, as one that has been the pleasure of being in this room since the opening gavel this morning, I wanted to commend the Chairman and the staff for their perseverance today, and also their commitment to this very important subject.

Mr. MINETA. I noticed that your statement does start off with "Good morning." [Laughter.]

Mr. MCQUAID. But you will also notice that it's written in pencil. [Laughter.]

I appreciate the opportunity to appear before you today to share the views of the Intermodal Marketing Association on the vital

issue reauthorization of the Federal highway program. My name is John McQuaid and I am executive director of the association.

The IMA is a national association comprised of major railroads, stack train operators, shippers' agents, intermodal truck operators, and intermodal equipment manufacturing and leasing companies. Our organization primarily is involved with domestic intermodal operations, with our members handling virtually all such shipments. However, the burgeoning growth of the global marketplace also has required our members to become increasingly involved in international transportation.

My being here today to discuss the highway bill represents a significant advancement for domestic intermodal transportation—a coming of age, of sorts. While international transportation is recognized as being predominantly intermodal in scope, the U.S. during the last decade also has developed an extensive domestic intermodal network. This network often is viewed as an extension of rail or truck service rather than the viable, expanding segment of the transportation it has become.

Both Transportation Secretary Skinner and Public Works Committee Chairman Roe have recognized the growing importance of intermodalism to U.S. transportation and logistics needs. At an earlier hearing on the highway bill, Chairman Roe noted, "It is time for us to make an intermodal transportation system a national priority so we can improve our productivity."

Secretary Skinner, meanwhile, has provided much-needed leadership within the Department of Transportation by breaking down traditional barriers among the numerous modal administrations. These administrations previously had fostered the development of policy with minimal, if any, view toward its intermodal impact.

Both of these developments, Mr. Chairman, are enthusiastically welcomed in the intermodal community. To us, they represent validation from the highest levels of government, that intermodalism no longer is the stepchild of the other surface modes, but rather represents an industry segment which relies on the strengths of each to deliver the Nation's goods.

However, the Government's acknowledgement of the vital role intermodal plays in moving the Nation's goods comes long after the marketplace has recognized its efficiency and flexibility. Since the last comprehensive look at our highway needs in 1982, the approach shippers and receivers take in moving their goods has changed drastically as they faced the challenge of assuring U.S. competitiveness, particularly from abroad.

The increasing importance of integrated logistics in meeting our competitive coals requires an intermodal approach to transportation issues. Modal resources need to be highly coordinated if we are to meet the Nation's transportation needs in the most efficient and cost effective manner possible. Our research and development efforts should be geared to fostering this overall goal.

Mr. Chairman, the IMA has two concerns about the highway bill. First, the highway bill should facilitate intermodal growth, particularly through the funding of infrastructure improvements, port, and major rail intermodal facilities. Second, the highway bill should not be used as a means of authorizing broader use of longer combination vehicles on our highways.

In identifying and providing adequate funds for major highways to facilitate the flow of commerce, it is important to remember the significant role our roadways play in intermodal transportation. Most of the discussion about intermodal that I have heard in relation to the highway bill focuses on the need to improve port access for international intermodal shipments. However, just as poorly designed, decaying, and congested roadways around ports contribute to the inefficient movement of import and export traffic and adversely impact the quality of life in nearby communities, they similarly impact the domestic intermodal network.

Remedies that focus on improving truck access to port facilities and terminals also should address similar problems affecting our domestic intermodal system. Our goal should be to make access to intermodal facilities and terminals more efficient by creating modern, dedicated roadways to handle truck traffic which presently overburdens a crumbling system of urban streets and highways. This macro approach to our facilities access problems is essential to achieving dividends of reduced congestion and pollution, greater energy efficiency, improved quality of life, and lower cost of operation.

While improved access to ports and rail intermodal facilities is essential to the continuing growth of intermodalism, widespread use of longer combination vehicles on the Nation's highway system is not. Indeed, if there is one issue on the horizon that threatens the rosy future of domestic intermodalism, it is LCVs.

Much of the business railroads handle in domestic intermodal service is extremely susceptible to truck diversion. Consequently, any congressional action allowing LCVs would have a devastating economic impact.

Mr. Dempsey earlier alluded to some of the numbers associated with that diversion for the railroad industry as a whole, but intermodal would be hurt far worse than average. Railroads would lose 23 percent of intermodal traffic and 27 percent of intermodal gross revenues if twin 48s were legalized.

Mr. Chairman, this is not a pretty scenario for an industry that was one of transportation's success stories of the 1980s. We believe that our Nation's highway policy should promote the most efficient use of limited energy and environmental resources and encourage greater use of our under-utilized railroad assets.

Domestic intermodal transportation should be promoted by Government policy, not threatened by it. Intermodalism involves the best combination of the Nation's surface transportation resources—the economy and efficiency of long-haul rail and the flexibility of short haul truck. And it does it all on less energy and while reducing highway congestion and air pollution.

Intermodalism must continue to play an essential role in our transportation network in the next century to assure the Nation's position as a leader in world trade. It is time for Government and industry to break with the conventional approach toward transportation policy-making and funding, which impedes its growth.

As currently structured, the system fosters infighting among modes and detracts from the goal of assuring that we have the world's most efficient and reliable transportation system. We need to avoid the strain of modal one-upmanship that our present Feder-

al subsidy system fosters. Our unwillingness to meet these vexing challenges will undoubtedly erode our efficiency and productivity at a time when both are needed to enhance our competitive position domestically and internationally.

Mr. Chairman, we look forward to working with the Congress in fashioning a bill that promotes better coordination among the Nation's transport modes and recognizes the critical impact our highways have on our ability to compete.

Thank you.

Mr. MINETA. Thank you very much, Mr. McQuaid.

Mr. Dempsey, on page six of your statement, you quote your friend Tom Donohue. "I don't argue that there is anybody in America who wants larger trucks anywhere on any highway." You attribute this to an interview in "USA Today."

That's a great statement. I'm just wondering what comes before and what comes after. [Laughter.]

Mr. DEMPSEY. Probably after comes "except me". [Laughter.]

We'll fill in the context, Mr. Chairman.

Mr. MINETA. You indicate in your statement that new safety research shows that current 28 foot trailer combinations have fatal accident rates of 66 percent greater than tractor trailers for 100 million miles traveled. Is there any research that indicates that triple trailers are over-involved in fatal crashes?

Mr. DEMPSEY. No, but I would like to ask Mr. Lane to respond to that. Let me just say that as a general matter the difficulty with triples—that's the reason we had the research done on doubles, and maybe there's nothing more to said about it than this. The data with respect to triples is simply too scant. As you know, they operate under very limited circumstances and restricted conditions and that sort of thing.

We asked our consultant to go to the best source that he could. There are reliable data with respect to doubles because doubles, of course, operate generally. These are the results of that.

If you look at those figures and see that there is a great disparity of fatal accidents with respect to doubles, the only logical assumption is to go with FHWA when they identify the characteristics of triples and twin 48s that would lead them to be suspect with respect to safety and come to the conclusion that triples and twin 48s would be even more dangerous than doubles.

Mr. MINETA. You point out that rail/highway crossing programs have been successful in reducing fatalities and injuries. In fact, I've been told that the number of fatalities has been reduced by one-half to just under 600 per year. That was one of the reasons that the Secretary felt that the section 130 program should continue to be funded, or that it should be block granted in terms of the program. Why do you feel, given this kind of reduction in terms of fatalities, that this program ought to be continued at its current $160 million program?

Mr. DEMPSEY. It's one of the most successful safety programs in collaboration with Operation Lifesaver. I think there's about $250,000 that's been given since 1988 to Operation Lifesaver. It's one of the most successful safety programs that I know of. The difficulty here that the Congress saw before 1973 was that if the States are given the discretion as to where to put this money,

they're simply not going to put it nearly as much in highway grade crossing investments as they would otherwise have to do.

The data are given in my statement. During the 40 years between 1934 and 1973, less than $95 million in Federal funds was spent on crossings by the States. We had a continued escalation in fatalities and casualties at grade crossings. Since 1974, nearly $1.3 billion in section 130 program funds have been spent, and as you indicated, casualties and fatalities have dropped dramatically.

That's the background of experience against which this question, it seems to me, ought to be tested.

Mr. MINETA. Mr. Harmon, you recommend continuation of a separate rail/highway crossing program, funded again at a level that's high enough to continue safety improvements. Could you tell us where priorities should be placed in terms of the rail/highway crossing needs?

Mr. HARMON. There's already a priority system in place today that attaches a hazard index to each crossing. We're already on a program where we're addressing and solving the problems on the most hazardous crossings first. That's been in effect for some time and continues at this point.

Mr. MINETA. You state that the market for container cars would disappear and you believe that intermodal traffic would end if LCVs were permitted in all States. Apparently, what percentage of containerized shipments travel by rail?

Mr. HARMON. Mr. Chairman, I'm not sure that I have that figure. We can find out for you and get that for the record.

Mr. MINETA. That would be fine for the record.

[Subsequently, the following was received from Mr. Harmon:]

HARMON Industries Inc.

April 24, 1991

The Honorable Norman Y. Mineta
Chairman
Surface Transportation Subcommittee
Committee on Public Works & Transportation
B-376 Rayburn House Office Building
Washington, D.C. 20515

Dear Mr. Chairman:

During last week's hearing on the Surface Transportation Reauthorization bill you posed a question to Bill Dempsey, President of the Association of American Railroads, as to whether or not there was still a need for the Section 130 Rail-Highway Grade Crossing Safety Program. You also mentioned that Secretary Skinner had indicated to you that the reason the Administration's bill did not continue the Grade Crossing Program was because it did not believe there were specific needs to justify a separate program.

I did not interject at that point because you did not ask the question of me, but also due to the very late hour of the day. I, like Mr. Dempsey, believe there are still significant grade crossing needs. More to the point, the Department of Transportation has clearly stated that there are grade crossing needs well beyond what the current Section 130 Program is able to fund. Thus, I find the Secretary's position confusing and I would like to take just a moment to explain why.

The Surface Transportation Assistance Act of 1987 (P.L. 100-17) directed the Department of Transportation to conduct a study of rail-highway grade crossing needs in addition to reauthorizing Section 130 at a level of $160 million per year. In due course, the Department conducted this "needs study" and in a report issued in April, 1989 titled: Rail-Highway Crossing Study concluded the following:

> Total grade crossing needs in the 1988-2005 time period will be approximately $853 million.

The needs are subdivided into structure needs and warning system needs. For warning system needs alone the study found:

> ... an estimated annual investment of $185 million is necessary to maintain current overall safety performance. An additional $105 million is needed to adequately maintain and operate the system. An initiative to cost-effectively reduce current accident levels would require another $30 million annually, for a total of $320 million annually in potential needs for warning systems.[1]

I would note parenthetically that railroads are already supplying almost $100 million in maintenance and operation funds as they bear the full responsibility in most states for maintaining crossing devices and surfaces, although there are a handful of states which assist in maintenance expenses.

The DOT study goes on to identify the need for an additional $390 million in grade crossing structure improvements to maintain traffic services and structural condition for both highway and railway structures.

Consequently, I am puzzled by the Secretary's indication to you that there are no longer grade crossing needs on our highways particularly in light of the fact that the Grade Crossing Needs Study was both completed and issued under his stewardship of the Department of Transportation.

You also ask the question as to the percentage of containers that are shipped by rail, and we estimate that figure to be approximately 30%.

On a personal note, let me congratulate you on your perseverance and that of your staff. Despite the late hour of my testimony yesterday, you were kind enough and interested in both my views and to ask important questions my testimony raised. You are to be congratulated for the intense interest you have taken in this legislation.

---

1 Report of the Secretary of Transportation to the United States Congress, Rail-Highway Crossing Study, FHWA-SA-89-0001; April, 1989, p.6.

If it is appropriate, I would ask you to enter this letter in the record of the hearing as a supplement to my statement. Thank you for your consideration of the additional views I have offered in this letter.

Sincerely,

Robert E. Harmon
Chairman of the Board and Chief
Executive Officer
Harmon Industries, Inc.
Chairman, Railway Progress Institute

REH:bb

Mr. MINETA. Mr. McQuaid, in your testimony, you note the number of overweight containers is increasing and that this is becoming a major problem, both in terms of highway safety and road damage. I agree with you.

What solution or solutions would you propose to address this problem? When I say that we have to deal with this—container comes off the ship, gets put on a truck bed, and then we have a 120,000 pound container on a truck bed going down the highway. So I say, "Carrier, stop it."

They say, "Wait, it's not our fault. We just took it off the ship over here."

"All right, APL, what are you doing?"

"We're not doing anything. We were just given this load in Bangkok by a shipper. It's not our problem."

I can't grab the shipper in Bangkok. If I go to the consignee in Detroit and shake that person by the earlobes they say, "Hey, it's not my fault. The guy in Bangkok shipped it to me that way."

Who do I go after?

Mr. MCQUAID. To paraphrase an old statement that was made a lot by an esteemed Senator from Louisiana many years ago, "Don't fine you, don't fine me, fine that guy beyond the sea."

The problem, as you said, is to reach there.

At the risk of agreeing with Tom Donohue, I think one of the solutions there—and in one of my prior lives I worked at ATA with the intermodal trucking group they have over there, who of course are the guys with the least leverage. When the problem first arose Tom took it on as a result of truckers being stuck with substantial fines.

It seems to me that there's a fairly plausible solution, but the problem with every solution is that there is a cost attached to it. One thing we do know, for instance, is that on export loads there is a requirement because of OSHA provisions that export containers be weighed. As I understand it, that's for the safety of the longshoremen, the ILA, and the people that work on the port.

It seems to me that a fairly simplistic approach to this thing would be to have some kind of mechanism where you either have governors on cranes or scales at ports to weigh inbound containers. In instances where they come in and they violate the bridge or they're over on gross or whatever, then *ipso facto* you try to set that aside and perhaps you have more for the——

Mr. MINETA. And then the port says to me, "But I don't want to have 200,000 square feet over here reserved for these containers and the break-down of the loads that then have to occur."

On the other hand, do I go over to the FMC and say, "You ought not to be leasing these containers by container. These things ought to be by weight." Someone leases that container and they can fill it with feathers or they can fill it with steel.

Mr. MCQUAID. Fundamentally, of course, the whole issue is driven by economics. I think one of the real things that we can do—and I'm not sure that it's really been done to the extent it can—is that buyers and sellers in the United States could certainly do a greater degree of educating their overseas vendors in terms of what the laws are in the United States. I do understand that at least in terms of our present rate structure you're obviously buying

volume and you're going to fill it to the max, if you can, and get the economies of scale associated with that if you're shipping bricks or whatever.

It is a very intractable problem. But I think a combination of enforcement and education are probably two of the best approaches we can take to dealing with it. Beyond that, it is a question of cost and logistics in terms of either flagging the overweights for stripping and restuffing or going after, as you mentioned, some of the parties in the United States that might be culpable.

Mr. MINETA. Are you familiar with the intermodal planning that's incorporated in the Administration's bill under its urbanized area planning and State-wide transportation planning and research program?

Mr. MCQUAID. No, I'm not, Mr. Chairman.

Mr. MINETA. Well, Mr. McQuaid, Mr. Dempsey, Mr. Harmon, Mr. Lane, it's been good to see you all. I appreciate your patience and forbearance to wait until this late hour in the day to testify and help enlighten us as we try to craft our legislation that is going to be very important for the balance of the 1990s as we prepare for the 21st century.

Thank you for helping us.

[Mr. Dempsey's prepared statement and letter supplementing testimony appear on page 1509.]

[Mr. Harmon's prepared statement appears on page 1717.]

[Mr. McQuaid's prepared statement appears on page 1931.]

Mr. MINETA. Earlier, I was going to call on Wayne L. Ducheneaux, President of the National Congress of American Indians. Mr. Ducheneaux had a previous commitment that he had to make, so I would like to call him forward now to the witness table.

## TESTIMONY OF WAYNE L. DUCHENEAUX, PRESIDENT, NATIONAL CONGRESS OF AMERICAN INDIANS, ACCOMPANIED BY EMILY SEGAR, LEGISLATIVE ASSISTANT

Mr. DUCHENEAUX. Good afternoon, Mr. Chairman. It is indeed an honor to be here to testify before the Committee and put the concerns of the National Congress before this Committee. I have with me today Ms. Segar, who is a staff person for the National Congress and is going to keep me on track and tell me what I'm supposed to say here.

As you already know, I am Wayne Ducheneaux, president of the National Congress of American Indians. We came here to today to urge Congress to consider the Indian tribes when the reauthorize the Federal Aid Highway Act.

Since 1982, the Indian reservation road system has been covered by the Federal Highway Act and funds for our highways have been steadily going down since 1982 because although they appropriated $80 million a year—which is not enough, $95 million would just hold the current poor condition of the roads—there was no inflation factor figured in. So although we stayed even, in reality we are taking a cut in this.

But we would like to bring out five major points that we would like to see. We would like to see authorization of funding for Indian reservation roads out of the Highway Trust Fund at $227

million for each of the fiscal years 1992 to 1996. This is based on a needs study that the Bureau of Indian Affairs conducted back here in 1990 of the needs of reservation road systems.

We would like you to amend the Surface Transportation Act to mandate that, in designation by States of Federal aid primary, secondary, and urban systems, States shall cooperate with the appropriate Indian tribal government officials in selecting and designating such systems. The Bureau of Indian Affairs has authorized to use the funds appropriated to the Indian reservation for road systems to supplement the State Federal Aid secondary road monies, but the States don't always consider the Indian road systems.

Back home on my reservation, the States say, "Well, that's the Bureau of Indian Affairs. They have money for it, so they can fix it." That's not withstanding the fact that the States receive money for Indian trust lands in the particular States that are supposed to go toward construction of Indian road systems.

We would like to ask that you amend the act to designate bridges on the Indian reservation roads system as being eligible for funding. Section 6 of the act funds bridges and replacement rehabilitation, but the act doesn't include bridges on the Indian reservation road system. The BIA focused on what we already knew, that tribes are in desperate need of new bridges. The bridges that are there are totally outdated and dangerous. Some of the approaches to them are undercut by the streams and creeks that run underneath them. Some of them have been washed out and haven't been rebuilt since the early 1980s.

We need to have this bridge problem corrected because our people are totally isolated out there. Emergency vehicles can't get there. They are delayed when they do try to get there, and some of them don't have any access at all. We ask that you incorporate language that makes bridges on the Indian reservation road system eligible for this funding.

We would like you to amend the act to clarify that tribal officials are eligible for training provided through the National Highway Institute.

Finally, we want you to amend the act to mandate Indian preference within the hiring procedures of any contractor awarded a project on or near reservation lands.

You might think that we're stretching it a little bit to ask that, but these funds are appropriated by the Congress for the reservation road systems. As Congressman Miller said in a recent article in the Washington Post, he said that in order for us to attract private industry that we need in the reservation, we have to invest in the reservations first—for example, to build roads, provide clean drinking water, et cetera. The reservation road system is a national disgrace, Mr. Chairman.

I would like to mention a little thing that happened there on my own reservation back in 1986 when we had a terrible winter. It looked like Alaska there in South Dakota for awhile. My children ride the bus some 50 miles to get to Eagle Butte to go to school. After the snow started melting in the spring, when it did finally warm up—the road system there is supposed to be all weather roads and they were all but impassable. In one place there for about a quarter of a mile, the bus had to get off the road and plow

through the ditch then swing back up on the road after he got through the bad part because the road was worse than the ditch that was built alongside of it.

These things have been going on for years, Mr. Chairman. They have a standard joke throughout the country where they talk about "res" cars. These are reservation cars that are just beat to hell because of the roads that they have to travel.

Excuse my language, sir, I probably shouldn't have talked like that, but occasionally I get a little bit angry when I talk about this stuff.

Ms. Segar noticed this morning that when the National Association of Counties testified, they said that the current law calls for fair and equitable treatment of local governments and in cooperation and consultation with local officials—we need a process to back it up.

Let me make several suggestions. First, there is to be a State level commission attached to the State department of transportation or highway department consisting of representatives nominated by State associations and counties and the State Municipal League of Governors to approve the systems that would be constructed under this.

Mr. Chairman, again, if this is allowed to happen, tribes are going to be left out of this thing, although these folks are deciding what the tribal funds are going to be used for, too. I think that if this is going to happen, I think a tribal official should sit on one of these commissions in the States that do have Indian reservations. If they don't, Mr. Chairman, the Indians are going to be left out again, and we're going to be back here hollering and crying again next year to get this done.

We aren't asking a whole lot like some of these folks, and our needs may be kind of small, but because we are small, we tend to be forgotten a lot when the Congress passes an act.

Assuming that the States will treat everyone in the State fairly—and that doesn't always happen, Mr. Chairman—and we request that we be allowed to present this testimony and supplement it because we do have all the facts and figures to back this up, but we can't put it all in one little document.

Thank you, Mr. Chairman.

Mr. MINETA. Thank you very much for your testimony.

I was wondering—and maybe you can educate me on this—is a road built on a reservation by the BIA or by the Indian nation?

Mr. DUCHENEAUX. By the Bureau of Indian Affairs, sir.

Mr. MINETA. By the BIA?

Mr. DUCHENEAUX. Yes, sir.

Mr. MINETA. Are those roads built to any different standards, let's say, on Indian lands than they would be on non-Indian lands?

Mr. DUCHENEAUX. Well, sir, again, using my own reservation for an example, Federal Highway 212 runs through the middle of our reservation east and west, the State—with the Federal Aid secondary money and other things—is required to keep the road up. They just went through and reconstructed it last year. We have a saying in Sioux Country. We talk about the "good red road" and—excuse me, sir—the "bad black road". But in our tribal religion, it goes back as the red and the black. If you look at a State highway map,

you will notice that all the good red road runs right up to the reservation border, and that's where it stops and the road turns black.

The road system is no good. They reconstructed the highway off the reservation east of us and then on the reservation about 30 miles. If you'll come onto 212 from the eastern side on the reservation and start driving through, you will find about every 50 feet that there is a bump in the road. This road just got rebuilt 2 years ago. But it's poor construction. I don't know whether the State is going to come back and fix it or not, but if you go out, the road is just as level and flat as this floor.

So, yes, I think they use poorer standards when they build on Indian reservations.

Mr. MINETA. Does the matching share for Federal Aid projects contribute to the lack of suitable roads on Indian lands?

Mr. DUCHENEAUX. Excuse me, sir?

Mr. MINETA. Does the matching share contribute to the lack of suitable roads on Indian lands?

Mr. DUCHENEAUX. The States are to take into consideration that we can use the funds that are appropriated for the Indian reservation road system to supplement State highways. The problem is that not all of our roads are part of the Federal Aid secondary road system. Just those roads that are on there are eligible for the Federal Aid secondary funds that the States have.

I don't know what it takes to get them on there. I think they're all Federal highways. The Bureau of Indian Affairs builds them all, and I think Congress should mandate that they be part of the Federal Aid secondary roads.

If you'll pardon me, sir, the Bureau of Indian Affairs constructs about half the roads on the reservations. The rest are constructed by the States and the Federal Government and the few road systems by tribal governments. Ms. Segar just corrected me.

Mr. MINETA. Thank you very much for being with us and for coming back after you had been here earlier. We appreciate it very much.

Mr. DUCHENEAUX. Thank you very much.

[Mr. Ducheneaux's prepared statement appears on page 1640.]

Mr. MINETA. I would now like to call on Howard Messner, the executive vice president of the American Consulting Engineers Council.

Mr. Messner, I appreciate very much your patience in waiting until this late point. Please extend to Mr. Kinstlinger my apologies for going this late. You may proceed in your own fashion.

**TESTIMONY OF HOWARD MESSNER, EXECUTIVE VICE PRESIDENT, AMERICAN CONSULTING ENGINEERS COUNCIL, ACCOMPANIED BY LORI MORAN**

Mr. MESSNER. Thank you, Mr. Chairman. Good evening to you. It's a privilege to appear before you and this Committee at any hour.

I would like to take just a moment to introduce you to Lori Moran, who is one of the finest staff of ACEC, who specializes in transportation.

I am executive vice president of the American Consulting Engineers Council. ACED is the largest national organization of independent consulting engineering firms. Its membership represents more than 5,000 firms with some 175,000 employees, who annually design over $100 billion in constructed public and private works.

Needless to say, the consulting engineering community is extremely interested in the future direction of transportation in the United States. We have a stake in it because often we are the professionals that design new facilities, as well as develop the technology to cost effectively maintain and expand a wide variety of highway and transit facilities.

I know your Committee has heard scores of facts and statistics supporting a need for transportation infrastructure in our country. While I don't have time this evening to review some of these findings, I encourage the Committee to review our written testimony. We have included some interested material, sir.

This evening I would like to focus on two specific concerns that consulting engineers face when working with State departments of transportation on Federal Aid highway projects. First, the engineering and design community appreciates the key role you played, Mr. Chairman, in successfully including a provision in the 1987 Highway Act that requires the States to use qualifications-based selection, and to negotiate a fair and reasonable cost to perform the work with the selected firm, when procuring A/E service under the Federal Aid highway program.

To many, this procurement process is better known as the Brooks A/E Law. We continue to advocate the qualifications-based selection of A/E services that provides for the most cost effective, timely, and technically competent design work possible. We continue to be disappointed that the Federal Highway Administration has not issued the final regulations to implement this provision 4 years after it was passed.

Following the selection process, however, consulting engineering firms are continuously faced with numerous and duplicative audits and arbitrary restrictions on indirect cost rates. In many cases, these practices are affecting the ability of our firms to do work for the State highway departments.

Millions of dollars are being wasted on multiple audits of A/E firms by State highway agencies, because one agency is reluctant to accept the audit results from another agency. Many of our firms work in several States and are audited several times a year for the same information. Having each State separately audit the same firm is a financial and administrative burden to both the engineering firm and the State agencies.

ACEC, with the support of the broader design community, has developed a legislative proposal to address the problem of multiple audits. We urge this Committee to include language in the bill to establish a uniform auditing process requiring State and local agencies to negotiate and audit design service contracts in accordance with the cost principles in the Federal Acquisition Regulations.

Under the proposal, agencies would also be required to accept current audits performed by other States, Federal agencies, or an independent certified public accountant. The uniform audit ap-

proach would provide valuable cost savings to the Government, allowing resources, both time and dollars, currently being wasted on redundant audits to be directed toward tasks that are truly crucial in protecting Government interest. Again, we strongly urge the Committee to include language in the bill to achieve these objectives.

Problems of financial management for our firms are further aggravated when State highway agencies establish arbitrary limits, or caps, on overhead rates and refuse to accept the firm's audited rates. Agencies should focus the negotiation stage on total cost, rather than individual cost estimates, such as overhead rates. The misplaced belief that overhead is a true measure of efficiency results in the Government spending an excessive amount of time and money evaluating an illusory indicator of cost, since the classification of many costs as direct or indirect is primarily a decision of business management based on established accounting principles. Flexibility inherent in the accounting procedures can lead to substantial changes to a firm's overhead rate, yet its total costs to provide services can remain the same.

For example, computer costs and premium pay for overtime work could be billed as direct expenses or direct labor by one firm and as overhead by another firm, and yet the total cost of service for each firm remains the same. Under QBS, the contracting officer negotiates a "fair and reasonable cost" to the Government. As noted, a firm's overhead rate may not affect the determination of said "fair and reasonable cost".

The second important ACEC concern I wish to bring to this Committee relates to seeking the Committee's support for expanded reliance on the private sector for engineering and design services. Quality, cost effectiveness, and timely completion of transportation projects are in direct relation to the extent to which public agencies contract out engineering, surveying, inspection, and design services to the private sector.

A public/private sector partnership in delivering transportation programs benefits the transportation agencies, the private sector, and most importantly the general public. Contracting out provides public agencies with greater flexibility. The agency does not have to increase staff for the peaks associated with the cyclical nature of transportation work. It also provides the public agency with a wide spectrum of experts, which may not necessarily be readily available with in-house personnel, and gives a State access to expensive computer and mapping equipment without having to purchase it.

Contracting out helps the private sector by providing work to the many firms offering transportation design expertise. It also benefits the general public because it delivers transportation programs on a timely and more cost efficient basis. Finally, by contracting out work to tax paying companies, the tax receipts of local, State, and Federal governments will be enhanced.

ACEC urges this Committee to include an additional provision in the 1991 Surface Transportation Act that would establish a private sector involvement program to provide an incentive for State transportation agencies to rely on the private sector for design and other engineering and technical services necessary for the development, operation, and maintenance of roads and highways.

Our proposal would not impose a new Federal mandate on the States. Rather, a grant reward would be established for the most innovative and aggressive States in their utilization of private firms for design services. The Secretary of Transportation would select those outstanding State private sector involvement programs for grants from the Secretary's discretionary funds. Since the grants would come from an existing program and funds already authorized and appropriated, the awards would not have an adverse budgetary impact. We welcome your endorsement of this concept as part of the Committee's bill.

In conclusion, the American Consulting engineers Council strongly urges the Committee to endorse legislative language on uniform audits and contracting out as I have testified today. ACEC looks forward to working with this Committee to develop legislation that will shape the future of our Nation's highway and transit programs for the 21st century.

Mr. Chairman, I know the hour is late, and I particularly appreciate the courtesy you've always shown us.

Mr. MINETA. Thank you very much, Mr. Messner, for your fine statement.

I'm wondering if you could give me some other examples, or additional explanation, of how current State transportation practices would change under your proposal to examine actual overhead costs in order to reform the way State and local agencies negotiate, perform, and audit design service contracts. I'm also wondering, Are there any other national transportation interest groups that have voiced support for your recommendations?

Mr. MESSNER. Mr. Chairman, we would hope that the State agencies would rely on the negotiation that is inherent in the quality-based selection process to first pick the most technically competent firm available to do the work, and then to sit and negotiate the full cost package to the satisfaction of the State agency, not the firm. As you know, under the Brooks procedures, the client—the State or the Federal agency, for that matter—has a full right to ask questions and examine any aspect of cost, and to arrive at what the client judges to be a fair and equitable cost estimate.

By putting caps on a particular element of the cost statement, it distorts the process, it causes anxiety particularly to our smaller firms, of which we have many. Of our 5,000 firms, 80 percent of them are 30 people or less. We do believe that if the States would endorse the Brooks Act and follow it, the overhead cost problem would go away.

In terms of support of other groups, I think you would find that the American Institute of Architects, who also are covered by this law, very much support our position.

Ms. MORAN. Also, Mr. Chairman, we've been working with a representative from ARTBA and they have also reviewed our proposal and have indicated support for it.

Also, in answer to your previous question, many of the States already do comply with the FAR. Basically, when they audit they use the FAR as a basis. But they all have deviations that make it very difficult for a firm, particularly a larger firm that works in several different States. He's having to keep his books—first, if he works for a Federal agency, he keeps it according to the FAR, and then

he has to keep another set of books to comply with varying state procedures—these books are separately audited under each State. So he is being audited several times a year. That's why we're proposing that States follow the FAR and the firm could be just audited once. They would all be performing on the same basis.

The States wouldn't necessarily have to change their practices dramatically to comply with the FAR. They all have just a few individual differences.

Mr. MINETA. The ACEC is supporting the use of toll financing to design and build highway facilities. Why are you so strongly in support of that provision?

Mr. MESSNER. Mr. Chairman, we support a broad range of financing mechanisms. The first love that we have for choice of financing would be user charges, which the consuming public would pay and then see spent on the goals they paid it for. We recognize that the constraints and the realities are that the size of the bill coming due for infrastructure requires imaginative financing, private/public partnership financing, and we're willing to see that done.

We are very concerned that we not mislead the public into thinking that they are paying for transportation improvements and then see that money go elsewhere, or even worse, perhaps, languishing and not being spent.

Mr. MINETA. Howard, thank you very, very much.

Ms. Moran, we appreciate your first appearance and patience until the end of the day like this.

Mr. MESSNER. Thank you.

[Mr. Kinstlinger's prepared statement appears on page 1937.]

Mr. MINETA. There being no further business before this subcommittee, the subcommittee stands adjourned.

[Whereupon, at 6:42 p.m., the subcommittee adjourned, to reconvene at the call of the Chair.]

American Automobile Association

Government Affairs

Testimony of

John Archer
American Automobile Association

Before the

Subcommittee on Surface Transportation

Re the

Reauthorization of the Surface Transportation Program

April 18, 1991

The American Automobile Association is the largest motoring and travel organization in the world. AAA's more than 1,000 affiliated club and branch offices are located throughout the United States and Canada. AAA, a fully tax-paying not-for-profit organization, offers a wide range of member services and works for the improvement of motoring and traveling conditions.

The American Automobile Association, serving more than 32 million members, appreciates this opportunity to comment on the reauthorization of the federal highway program and the current reexamination of U.S. surface transportation.

The public including AAA members expect Congress and the Administration to act responsibly by reauthorizing the Federal-Aid Highway Program before it expires on September 30, 1991.

When contemplating possible changes in transportation it is essential to focus on one simple but critical fact: **Americans depend on cars to get to work and to lead their everyday lives. Indeed, the entire economy depends on the motor vehicle.**

This perspective strongly influences AAA's views on the ten issues AAA will address today:

- **timely reauthorization or extension of the Federal-Aid Highway Program**
- **opposition to a gas tax increase for deficit reduction**
- **highway funding**
- **highway system expansion**
- **scenic roads**
- **traffic congestion**
- **Intelligent Vehicle/Highway Systems**
- **highway safety**
- **maintenance of truck size and weight limits; and**
- **toll financing**

## ACT RESPONSIBLY - REAUTHORIZE EXPEDIENTLY OR EXTEND THE FEDERAL-AID HIGHWAY PROGRAM

The worst case for the motoring public would be for Congress and the President to fail to agree on reauthorization legislation.

The practical realities of a working Federal, State and local partnership require a steady and reliable flow of revenues. The problem is not the availability of funds - the highway user has already paid. **Highway users, your constituents, deserve a bill signed into law prior to expiration of current law on September 30, 1991.**

AAA joins practically every state and surface transportation group in seeking a multi-year reauthorization of the Federal-Aid Highway Program. AAA, at the national, state and local level, supported extensive multiyear funding in the so-called "2020 process"--that of looking at highway planning to the year 2020- and through the Transportation Alternatives Group, a dozen public and private organizations with transportation interests.

**AAA continues to believe that a long-term visionary surface transportation legislation is needed to help guide the U.S. into the 21st century. But if attempts to enact a multi-year bill bog down or lead to a sustained veto, a simple two-year extension must be enacted prior to this year's Congressional adjournment. Allowing the federal program to lapse with highway user taxes already extended for 5 years would be inexcusable.**

## OPPOSE ANY GAS TAX INCREASE FOR DEFICIT REDUCTION

**President Bush** should return to his campaign pledge to AAA and oppose any increase in the gasoline tax for deficit reduction. In a 1988 letter to AAA he stated the following:

> **"A gas tax increase to balance the budget would particularly hurt lower wage earners, families with both spouses working, and farmers and residents of Western states who have to drive long distances... Let me say it one more time: As President, I will oppose any attempt to raise taxes to balance the budget. That means gas taxes, too."**

Diverting user fees to the general operating expenses of the Federal Government is wrong and will ultimately destroy the dedicated funding process that has brought the U.S. a highway network that is the envy of the world.

## HIGHWAY PROGRAM

The Administration's proposal (H.R.1351) to establish three major funding categories--the National Highway System (NHS), Bridge and Urban/Rural--is a good start and deserves serious consideration. But if separation of the rural or urban category into two categories will help alleviate urban/rural conflicts, the two should be separated to avoid unnecessary political squabbles.

AAA also agrees with the Administration's proposal to provide a higher percentage of federal funds (a higher match) on routes of national significance--the system the Administration calls the National Highway System.

AAA has long cared about the Interstate Highway Program and where feasible would like to see it expanded. AAA particularly would like to see more bypasses around congested urban areas, and outer beltways.

Whether those roads would be designated as part of an expanded Interstate system or labeled part of a "National Highway System" or a "system of national significance" is not really important. But they should be built to the safe design standards of today's limited access highways. Of course that is going to take more money.

HIGHWAY FUNDING

The Federal Highway Trust Fund now annually produces approximately $17 billion in tax revenues and interest income earmarked for road and bridge construction and repair. Let's restore trust in the trust fund concept by spending that money on roads -- not on making the deficit look smaller.

AAA supports spending all available Federal trust fund revenues, including the interest, and recapturing the 2.5 cent portion of the federal gas tax now earmarked for deficit reduction. Spending the revenue road users have already paid will help restore the efficacy of the basic user fee concept.

Last year forty-seven of the nations' Governors urged the Appropriations Committee "... not to deprive taxpayers of some $3 billion worth of transportation improvements they are paying for at the gas pump this year." AAA strongly agreed with those 47 Governors that "... at a time when highway and bridge needs are critical and expenditures inadequate, gas tax revenues continue to accumulate in the Highway Trust Fund."

Unfortunately, under the Administration's proposal, Trust Fund balances would continue to increase. In the first year alone the cash balance in the Trust Fund earmarked for roads and bridge construction and repair is forecasted to grow from $11.1 billion in FY '91 to $12.6 billion in FY '92.

The authorizing committees should continue to exercise leadership by forcefully pressing the Administration and other Congressional Committees at every opportunity to spend all the revenue paid by the motoring public on needed transportation improvements. Obligation ceilings should be set no lower than total annual federal revenues derived from highway user taxes, including revenues from the new 5-cent gasoline tax and all of the interest.

TRAFFIC CONGESTION

Highway funding concerns relate directly to another key issue: traffic congestion. The rallying cry for roads used to be "Get the farmer out of the mud!" Today it's "Get the commuter out of gridlock!"

That's obviously of great interest to AAA. Our members comprise about 20 percent of the U.S. adult driving population. They want a better planned, more efficient transportation system.

But better planning means more realistic planning that emphasizes incentives, not penalties. For example, if the federal government wants to encourage public transportation it could make the cost of commuting to work by public transportation tax deductible. It should not tax free parking, as some suggest.

Successful intermodal planning emphasizes linkages to the automobile because the auto is the dominant mode of travel. If you want to improve transit ridership, increase parking at subway stops, especially end-of-the-line stations.

AAA supports all reasonable efforts to reduce congestion that preserve personal mobility and don't discriminate against the motorist.

Examples include some of the old reliables, such as:

- synchronized traffic signals;
- fringe parking for transit;
- car and van pools;
- separately constructed car and van pool lanes;
- staggered work hours; and
- realistic land use planning.

We also support some approaches that are more controversial, including:

- restrictions on large trucks and other delivery vehicles to refrain from using crowded urban beltways and streets during rush hours;
- and for the future, intelligent cars and highways.

As noted earlier, bypasses around congested urban areas and outer beltways--where feasible--also would help relieve traffic congestion, particularly in suburban areas with disbursed housing patterns.

Commuting to work increasingly is suburb-to-suburb and suburb to exurb; in these areas the solution to traffic congestion is more roads -- not more fixed rail transit. Fixed transit simply does not and cannot follow shifting population patterns. And even more importantly, transit typically is not compatible with today's commuting patterns, which often include essential child care and school stops prior to and after work.

AAA takes strong exception to those who contend new roads do not help alleviate traffic congestion. While new development obviously brings new traffic to an area, social and economic changes have had a more far-reaching effect on travel growth.

Growth in the number of jobs, especially growing numbers of women in the workforce, increased disposable income and more cars per household; and a low density suburban lifestyle all substantially contributed to increasing vehicles miles traveled.

In the U.S. these trends came together during the 1970s as the baby boom generation entered the prime working years. Between 1969 and 1983, total highway travel increased 56 percent -- more than three times the growth in U.S. population, and twice the increase in the number of persons of driving age. Census data show that even in areas of the United States where population declined, vehicle miles traveled increased substantially.

**The bottom line is traffic congestion mushroomed because road construction did not remotely keep pace with economic, social and demographic changes which dramatically increased vehicles miles travelled -- especially in burgeoning suburban/exurban areas.**

Alleviating that congestion will require expanded highway capacity. High occupancy vehicles (HOV) lanes particularly have the potential to carry large members of people and therefore help alleviate congestion.

Realistically, transit--except possibly for rubber tired transit--cannot appreciably help; it is largely incompatible with suburban-exurban disbursed housing patterns.

## INTELLIGENT CARS/HIGHWAYS

Advanced technologies offer potential for reducing urban congestion in the future through more efficient use of the freeway and roadway system. Artificial intelligence is currently being tested in various areas associated with driver safety, travel information and routing systems, all designed to make the task of getting from point A to point B a less aggravating experience.

Advanced technology researchers are experimenting with computers, digital maps, and telecommunications, searching for high-tech systems that will manage traffic and keep it flowing. The goal is to integrate roads with vehicles into a smoothly running, efficient transportation system. AAA supports this futuristic technology and has backed that support with active and extensive participation in the Orlando "TravTek" project.

## HIGHWAY SAFETY

Intelligent cars/highways relate to another paramount concern: Highway Safety. Traffic safety was one of AAA's founding fathers' prime concerns. It remains a paramount AAA concern.

AAA believes it is essential to focus on highway safety when considering national transportation policy. As Secretary Skinner has repeatedly stated, **safety should be transportation's number one concern.**

**More than 44,000 people are killed and 3 million injured in traffic accidents each year. Because vehicle miles traveled are expected to double by the year 2020, fatalities would increase to close to 90,000 in 2020 if the fatality rate is not reduced.**

In addition to continued growth in motor vehicle travel, other charges in the travel environment threaten to intensify highway safety concerns. More older drivers and pedestrians, more large-truck travel, possibly greater disparity in vehicle size and weight, and a more congested and aging highway infrastructure -- all threaten to increase the number of deaths and injuries on the highways in the coming decades.

In light of these harsh realities, **it is essential to implement all reasonable highway safety measures.** Although there is no single "magic bullet" countermeasure to eliminate highway deaths and injuries, substantial safety improvements are possible.

The vehicle can be designed to protect occupants better in a crash; more can be done to pinpoint, and then relieve, the instances in which the driver makes an error, and the highway itself can be designed to be less hazardous. Specific examples includes:

- **Development of a more "forgiving" highway environment;**
- **Automatic passenger restraints in all passenger vehicles;**
- **Universal adoption of effective safety belt laws and motorcycle helmets;**
- **Improved bicycle safety, especially bikeways and bike paths to separate bikes from motor vehicles;**
- **Increased emphasis on pedestrian safety, especially universal traffic safety education for younger children.**

- Application of all federal motor vehicle safety standards to vans, minivans and pick-up trucks;
- Strengthened laws against drunk and drugged driving;
- Anti-lock brakes in all vehicles, especially large trucks;
- Disc brakes in all vehicles, especially large trucks;
- Automatic slack adjustors in large combination trucks;
- On-board recorders in large "over-the-road" combination trucks;
- A variety of other truck safety measures, particularly continuing and effective implementation of improved licensing and testing standards, and the single license requirement; and
- increased highway safety funding.

The highly successful results of drunk driving and safety belt legislation and public use campaigns attest to the public interest in improving highway safety. **The public demands and expects significant improvements in highway safety.**

Today's population of more than 160 million motorists and 180 million motor vehicles are sure to increase. **The number of annual traffic fatalities must be decreased! More than 120 people killed each day on the nation's highways, roads and streets is a national disgrace.**

**Congress should intensify its interest in demanding improved highway safety.**

## AAA OPPOSES GREATER USE OF LONGER COMBINATION TRUCKS

Large, heavy combination vehicles are a fact of life on America's roads. They are a necessary fact. The trucking industry employs 7.2 million Americans and serves every community in the United States. Two-thirds of all American communities are served by no other mode of freight transportation.

More than 191 million motor vehicles are registered for use on America's highways. Truck combinations alone represent more than 1.5 million vehicles.

Serious problems result from this vehicle mix. Trucks are over-represented in fatal accidents. Over the past several years, combination trucks have experienced a fatal accident rate twice that of passenger cars.

In 1989, according to National Safety Council (NSC) data, passenger cars constituted 75 percent of the registered vehicles and were involved in a much smaller percentage of the fatal accidents, (53.5 percent). Trucks had the opposite experience. **Trucks constituted 22.6 percent of the vehicles registered and were involved in 38 percent of the fatal accidents.**

Additional data from the NSC indicates that combination trucks represented 0.8 percent of vehicle registrations but experienced 5.6 percent of all accidents.

**In fatal crashes involving passenger cars and tractor-trailers, car occupants are killed 38 times as often as truck occupants.**

A passenger car can stop in 140 to 150 feet from 60-miles-per-hour on a dry road. However, a loaded, tractor-trailer combination truck under similar conditions, takes 250 to 300 feet to stop. An empty combination can take up to 400 feet!

Those stopping distances are for vehicles with properly adjusted brakes. Your car and mine have self-adjusting brakes. But brakes on most large trucks are not self-adjusting, a technological deficiency reflected in alarming truck inspection results: **approximately 30 percent of large trucks inspected are put out of service because of deficient brakes.**

**No wonder motorists feel intimidated by the increasing numbers of large trucks in the traffic stream.**

And now, the trucking industry wants to run even bigger trucks on our highways! Longer combination vehicles, or LCVs. As you are aware, LCV's consist of a truck-tractor pulling:

- three 28 foot trailers (known as triples), that can be almost 110 feet in overall length, and weigh in excess of 110,000 pounds; or,
- a 48 foot trailer and a 28 foot trailer (known as a rocky mountain double), which can be over 90 feet in length and weigh in excess of 100,000 pounds; or,
- two 48 foot trailers (known as a turnpike double), which can be almost 120 feet long and weigh in excess of 120,000 pounds.

Although these trucks have been used for years, primarily in Western states, they are operated by the industry's best drivers under very tightly-controlled conditions on some of the safest roads in the world. In more normal traffic environments, LCVs pose grave potential safety hazards.

For instance, it takes longer to pass them, and their heavier weights cause more trouble maintaining constant speeds on grades.

The additional distance necessary to pass a 110 foot truck as opposed to the traditional 65 foot truck would vary depending on the speed differential between the truck and the passing motorist. At a speed differential of 5 mph, it would take a motorist an additional 494 feet to pass these larger vehicles. A speed differential of 15 mph would reduce that distance but still require 165 additional feet to safely pass the truck.

A 1984 study undertaken by the California Department of Transportation (CALTRANS) tested LCV use over a 1,200 mile route. The study disclosed several disturbing findings. Triples had a continual sideways sway of four to six inches while traveling over open road segments. This swaying at times increased to well over one foot and "had a noticeable effect on adjacent traffic."

Triples also had a noticeable impact on urban arterials, roadside rest areas and at truck weighing scales because of their longer lengths.

Turnpike doubles were the least maneuverable of the combinations tested. They had problems with interchanges, intersections and off-tracking tests. They even had problems maneuvering through the latest design interchanges in rural areas. A survey of state highway departments by American Association of State Highway and Transportation Officials (AASHTO) found that only about 25 percent of the interchanges on the Interstate System could safely accommodate turnpike double combinations.

Information contained in the Model Driver's Manual for Commercial Vehicle Driver Licensing, developed for use by the Essex Corporation, further underscores the potential safety problems associated with increased use of LCVs.

The manual states, "Trucks with trailers have a dangerous 'crack-the-whip' effect. When you make a quick lane change, the crack-the-whip effect can turn the trailer over. There are many accidents where only the trailer has overturned."

The **"crack-the-whip"** effect is caused **by rearward amplification.** This is the condition that was apparent in the CALTRANS study mentioned earlier.

The manual also details the degree of risk for trailer rollover because of rearward amplification. Triples have a rearward amplification factor of 3.5, the highest of the eight vehicle combinations rated, which means the last trailer of a triples combination can be rolled over 3.5 times as easily as a five-axle tractor semitrailer with a 45 ft. trailer.

THE HUMAN FACTOR

The driving population is getting older. According to a Transportation Research Board report on Transportation in an Aging Society, a growing percentage of the U.S. population is over 65 years of age. Improvements in medicine and health care are prolonging usable years. With an increasing number of older people living in the suburbs, fewer will want to give up access to their automobiles. As it is, more than 80 percent of trips made by those 65 and over are made in an automobile, and that reliance is growing.

Information from the Federal Highway Administration discloses that licensed drivers 55-59 increased in number by 22.3 percent between 1970 and 1989. Licensed drivers 60 and over increased by 105.1 percent over the same period, and for the group 70 and over, the growth was a whopping 180.7 percent!

In 1989, licensed drivers 55 and over accounted for 24.3 percent of the driving population. According to University of Florida research, by the year 2000, one-third of American drivers will be over 55 years of age.

In 1989, a Conference on "Research and Development Needed to Improve Safety and Mobility of Older Drivers" was held at the National Library of Medicine in Bethesda, Maryland. In a keynote address, Dr. Patricia Waller, Director of the Transportation Research Institute at the University of Michigan, explored the trade-offs between mobility and safety for older drivers:

> As a group, older drivers are more likely to be seriously injured or killed in a motor vehicle crash. Older drivers who survive a crash are more likely than younger drivers to succumb later.

Older drivers have slower reaction times. They may be on medications that adversely affect their driving. They tend to drive slower. They may have diminished eyesight and physical strength.

AAA MEMBER CONCERNS

Our highway transportation system was not designed with the older driver in mind, but increasing older drivers are the ones who use it. A 1988 legislative survey of AAA members in five states prepared by AAA's Department of Market Analysis and Research found that 89 percent of the respondents were strongly opposed to increasing truck lengths. Members 55 and older were significantly more opposed: 92 percent of this group said "NO!"

AAA is particularly sensitive to older driver concerns: 50 percent of AAA master members (the primary member in a family membership) are more than 55 years of age and 33 percent are more than 65 years old.

AAA legislative surveys are consistent with a study released early in 1990 by the AAA Foundation for Traffic Safety entitled **"Older Drivers' Perceptions of Problems in Freeway Use." That study found that older drivers have particular problems interacting with large trucks.**

> **"Trucks received the overall highest rating of importance regarding dislike of freeways among the factors in the questionnaire, and focus group discussions confirmed the prominence of this concern. 'Large' trucks came up as a major discussion point in virtually every group, and the intensity of feeling expressed left little doubt about the significance of this concern to the older driver....**Sharing the freeway with large trucks, ... made many of the people in the focus groups uncomfortable and very nervous. Several indicated that this was the reason for avoiding freeways, and some timed trips to avoid periods of heavier truck traffic. A number of specific problems or complaints about trucks were mentioned repeatedly. These included: being tailgated by large trucks; trucks blocking the view of traffic and signs, both forward and to the sides; blinding truck headlights (either

approaching or in rear view mirror); speeding, rudeness, and recklessness of some truck drivers; spray and wind from trucks....Whatever the specific reasons, it is clear that interacting with truck traffic is quite anxiety provoking for many older drivers, and a major concern on freeways."

**AAA club poll after club poll consistently find heavy trucks on our members' list of things they hate to face on our roads today. And they don't want them getting bigger.** Our members do not want to face combination vehicles that could run 110 to 120 feet long -- especially when the average automobile is only about 2,700-3,000 pounds.

**INDUSTRY CONTENTIONS:**

The trucking industry contends increased use of LCVs would lower the number of trucks on the roads, thereby reducing energy use, air pollution and highway congestion.

This same argument was used by the industry back in the 1970's during the energy crisis when trucks were allowed to carry cargo in excess of existing weight limits. The same line was also used during the debate on the 1982 Highway Act, which mandated the 80,000 pound weight limit; the use of twin trailers; and, the use of 48 foot semi-trailers.

But larger trucks did not lead to reduced combination truck registrations according to FHWA's Highway Statistics. Nor was there any reduction in vehicle miles traveled (VMT).

For every year since 1981 (except for a small downturn in 1986) there has been an annual growth in the number of combination vehicles registered and in the number of vehicle miles traveled. **Between 1981 and 1989, combination truck registrations have increased 26% and VMT 38.2%.** The exact figures are these:

| | Combination Trucks | |
|---|---|---|
| | Registrations | VMT (millions of vehicle miles) |
| 1981 | 1,261,202 | 69,134 |
| 1982 | 1,265,321 | 66,668 |
| 1983 | 1,304,041 | 69,754 |
| 1984 | 1,340,144 | 77,367 |
| 1985 | 1,403,266 | 79,600 |
| 1986 | 1,398,937 | 81,833 |
| 1987 | 1,418,514 | 86,064 |
| 1988 | 1,476,241 | 90,149 |
| 1989 | 1,589,285 | 95,657 |

Most of the trucking industry is not now asking Congress to require states to allow use of LCVs. Not yet!

Now a segment of he industry is asking the states be given the discretion to allow the use of LCVs having gross weights in excess of 80,000 pounds. But this change would be much greater than it initially seems: many states have mandated state acceptance of the federal weight limits. Thus, removal of federal limits would immediately require use of LCVs in more states.

Such a change also would be the first step in obtaining an extensive network for the operation of LCVs. It would not be long before the industry would conduct an all-out campaign in the states to convince legislatures that their laws should be in compliance with the more permissive states.

Not long thereafter, the industry would be back at Congress's door asking for a national network for LCVs in the interest of nationwide "uniformity" and greater productivity.

Past history confirms this industry strategy. The Federal-Aid Highway Act of 1974 gave the trucking industry permissive "productivity" increases in truck weights to 80,000 pounds from the legal maximum gross vehicle weight of 73,280 pounds. By 1982 the industry was back at Congress' door successfully asking that the 80,000 pound limit be mandated since not all states had adopted the permissive 80,000 weight standard.

In summary, AAA members consistently express outrage that they might be forced to share the road with even bigger and heavier trucks.

AAA will oppose any efforts to liberalize the use of LCVs. There are just too many safety issues to resolve before expanding their use, particularly because such a change would be an irrevocable decision. Practically speaking, once mandated, LCVs would never be banned regardless of their safety problems.

If the shipping and trucking industries want huge trucks so desperately why doesn't industry support separate truck roads? Separate highways designed specifically to carry huge trucks would eliminate inherent safety conflicts and reduce the deterioration of auto roads (truck-related pavement damage is approximately 10,000 times worse than car-related damage). The estimated $4 billion in "productivity increases" which LCV proponents often contend would result from nationwide use of LCV's could be used to build separate roads for those immense vehicles.

Our current highway system isn't designed for LCVs. Other users of that system shouldn't be abused by LCV's or indirectly forced to pay for them.

Congress -- and particularly this subcommittee -- is to be commended for the leadership it has demonstrated in truck safety issues in recent years. But in those years Congress has also curtailed state authority to place limitations on truck dimensions. Congress should not turn its back on the potential dangers of LCVs and throw the decision back into the laps of states while preempting the states' powers to address these issues.

SCENIC ROADS

AAA endorses the three key recommended options included in FHWA's recent excellent scenic roads study:

- Launching an "All-American Roads" program to designate roads with unique scenic, cultural, or historic value and to identify them with special signs.
- Dedicating an office in the Department of Transportation to help federal, state, and local agencies with their scenic roads program and to serve as a clearinghouse for news about the design, operation, maintenance, and marketing of scenic roads.
- Making federal highway funds available to states to start or expand their scenic roads.

Increasingly, AAA has members who want more pleasant alternatives to Interstate travel. They want to travel on roads that take them through the most scenic, historic, or culturally interesting areas.

To satisfy that desire, AAA has designated approximately 30,000-miles of U.S. scenic roads. To be included, a road must meet at least one of five criteria:

- **quintessential scenery** (the best of the characteristic features or scenery of a state or region)
- **natural beauty** (strikingly scenic, natural features)
- **cultural beauty** (architectural, historic, or economic activities)
- **uniqueness** (usually a limited area unique to a region), and
- **scenic roads on public land** (byways designated by the federal government)

Scenic roads also have significant economic potential because of the synergistic relationship between scenic roads, tourism and the economy:

- Approximately 17 percent of all personal driving by Americans is for vacations or other forms of recreation;
- Tourism is one of the top three employers in more than 37 states;
- Approximately 70 percent of foreign visitors use a car at least part of the time when visiting the U.S.;
- More than 80 percent of U.S. vacation travel is done by car, truck or recreational vehicle; and
- Foreign tourism has become the nation's number one "export", accounting for $34 billion, which helps to alleviate the U.S. balance-of-payments deficit.

A scenic roads program has the potential to benefit vacationers and at the same time produce substantial revenue for states and private interests alike. For the highway program it has added potential: expanded political support for transportation at a time when it needs it. Organizations that care about tourism may actively support the highway program if scenic roads are a part of the bill.

A national (not federal) scenic roads system should be designated and eligible for federal funding. States also should be allowed to use federal funds to plan and improve their own scenic roads system.

An office of scenic roads in the U.S. Department of Transportation could substantially aid implementation of a scenic roads program. It could serve as a central clearinghouse for information about state and local programs, help guide state and local governments in designating and marking their scenic roads, issue maps and publications about the national "All American" scenic roads system, and work with the United States Travel & Tourism Administration in marketing U.S. scenic roads overseas.

## TOLL ROADS

Understandably scarcity of road funds is driving the call for greater use of tolls. **But AAA remains opposed to toll financing for a number of reasons.**

**Excessive Cost:** Toll roads will probably cost 3 to 4 times as much as toll-free roads, primarily because of bond interest charges and toll collection costs.

**Double Taxation:** If gas taxes are used to construct new toll roads, motorists will be paying twice -- once at the pump, once at the toll booth.

**Breach of Trust:** Highway users have paid literally hundreds of billions of dollars to construct the nation's highway system; they should not now be charged a toll to use it.

**Inefficiency:** Currently, fifteen percent of toll revenues are needed for the collection process while only one percent of motor fuel taxes are devoted to tax collection.

**Inconvenience:** Toll roads often provide few exits in order to minimize the number and therefore the costs of toll personnel. Users can't get off the road at convenient places and people living in some small communities cannot use toll roads built right next to them.

In taking an anti-toll stance, **AAA doesn't minimize today's serious funding problem. But there are better ways than toll financing to solve it, such as spending down the Highway Trust Fund balance, impact fees, and traditional taxing methods.**

## CONCLUSION

AAA strongly urges prompt enactment of long-term highway legislation funded by all currently available highway user revenues. Obligation ceilings should be set no lower than total annual federal revenues derived from highway user taxes, including revenues from the new 5-cent gasoline tax and all Federal Highway Trust Fund interest.

Particular emphasis should be placed on highway safety and alleviation of traffic congestion. Congress should resist calls for longer and heavier trucks (LCVs) and excessive reliance on toll financing. Research and scenic roads also should be supported.

Thank you for the opportunity to express AAA's views on these important issues.

## I. INTRODUCTION

Chairman Mineta, members of the committee, my name is Lana R. Batts. I am Senior Vice President of the American Trucking Associations, the national trade association of the trucking industry. With me is Bob Farris, Vice President for Policy. ATA's membership includes more than 4,100 carriers and suppliers of all sizes and types. ATA is the national federation of the trucking industry with affiliated associations in every state and the District of Columbia and 10 conferences. In aggregate, ATA represents every type and class of motor carrier in the country, and combined with ATA's direct membership, we are an association of over 30,000 member trucking companies.

I appreciate this opportunity to present the views of the trucking industry concerning the Department of Transportation (DOT) proposal for the Surface Transportation Assistance Act of 1991 (STAA-91) an Act of critical importance to the nation and its trucking industry. I will concentrate my remarks in seven areas:

- The Highway Program
- Productivity
- Intermodal Transportation
- Taxation
- Safety
- Weight Enforcement
- Research

Let me begin by explaining the role of the trucking industry, the importance of highways to the industry and to the economic health of this country, and the new global marketplace.

- Over 78% of this Nation's freight and your states' produce, goods and materials, as measured by value, move on the nation's highways in commercial trucks.
- The trucking industry, as a whole, earns some $257 billion in annual gross freight revenues, and generates fully 5% of our Gross National Product.
- We employ over seven and a half million Americans who earn over $169 billion annually in wages.
- The trucking industry pays over $22 billion annually in state and federal taxes. Over $8.5 billion go into the Federal Highway Trust Fund to maintain the roads we use. Trucks use every stretch of highway in the nation and companies pay user taxes for the roads they use.

Highways -- their location, availability and general condition -- impact on the trucking industry's productivity. Without a sound highway system everyone suffers, trucks cannot do their job effectively, and both business and the consumer must pay for the inefficiencies. With quality highways, mobility and flexibility increase, in turn permitting and encouraging U.S. industry to consider management innovations. For example, "just-in-time inventory delivery" which reduces inventory cost and improves capital resource management, is implicitly tied to the highway and transportation infrastructure, and relies on the ability of that infrastructure to meet the demands of the nation's commercial traffic. The increased productivity benefits improve the position of business and consumers and therefore the economy of the nation. Nations without a sound highway system and an efficient and productive trucking industry cannot begin to implement a just-in-time logistic systems.

But the nation's economy cannot be considered in isolation. We now find ourselves in a rapidly changing worldwide marketplace. We already face stiff economic competition from within our global village. But, when we look to the

east, we see a continent with arguably the best transportation infrastructure in the world and one that is constantly improving. Japan just recently announced a multi-billion-dollar infrastructure investment program focusing on highway improvement that will continue to make her a strong competitor into the next century.

The United States must challenge foreign competitors by becoming more effective in moving its goods to the international markets. A federally coordinated, state-managed system of highways, tailored and shaped to meet the needs of the states and their industries, will provide the centerpiece this nation needs to compete in a global economy. In this regard, the Department of Transportation (DOT) has assembled a comprehensive five-year Surface Transportation Assistance Act proposal that establishes a highway supportive framework which the trucking industry is very pleased to support. We particularly commend the DOT for committing to a five-year federal program designed to provide adequate funding and technical support for a restructured National Highway System for the nation. This National Highway System will strengthen the abilities of individuals and industry to manage resources, capital and time in the most efficient, flexible and productive manner. However, we are disappointed in the level of funding included in the proposal. We believe the funding level should be increased but without any new taxes. The surplus in the Trust Fund should be spent on highways before any new taxes are proposed. We oppose the additional five cents being proposed by some in Congress. To paraphrase an old saying, "We gave at the office" last October.

## II. THE 1992-1996 FEDERAL AID HIGHWAY PROGRAM

The American Trucking Associations (ATA) believes the Department of Transportation's (DOT) proposal for the Surface Transportation Assistance Act of 1991 (STAA-91) is sound in concept and provides a basis for the development of a good bill by the Congress. Major elements of the DOT's legislation directly compare with the recommendations and proposals by several surface transportation groups that have been developed over the past two years. These include passage of a 5-year bill to provide:

- o No new taxes
- o Continuity to the highway program,
- o Consolidation of highway programs,
- o Greater flexibility for the states in the use of federal highways and transit funds, and
- o Increased expenditures for research and development.

The Administration's bill calls for gradually increased expenditures, without any new taxes. ATA supports this approach. Last October, highway users were hit with a five-cent fuel tax increase -- half of which went into the General Treasury for non-highway purposes. The other half was directed to the Highway Trust Fund -- but could not be spent. We believe that October's five cents should first be spent before highway users are asked to give again. As a result, we are opposed to any new taxes such as those being proposed in Congress.

The DOT proposal includes many of the concepts previously outlined by ATA. In testimony to this committee on March 15, 1990, President Tom Donohue stated:

> "...ATA believes that the preservation, expansion, and reconstruction of the National System of Interstate and Defense Highways and major Primary highways of national concern should be the cornerstone of a new federal highway program."

This remains one of the major objectives of the trucking industry as the Congress works toward a new federal aid highway program to replace the Interstate system program which has been the focus of federal action since 1956.

While construction of the Interstate system, as now defined, is now essentially completed, reconstruction and rehabilitation of that system and some expansion of capacity in certain areas should remain a major part of the federal aid highway program for many years to come. The nation has now, however, reached the point where, in order to meet the mobility needs of our economy and the challenges of international competitiveness, good highways must be provided to many more points of industry, commerce and population. To provide these needed roads, a system broader than just the Interstate; a truly National Highway System is needed and is strongly supported by many national groups, including the American Trucking Associations.

National Highway System

To meet pressing infrastructure needs and to adequately develop a new National Highway System, increased federal highway funding is clearly necessary. The new National System should consist of a minimum of 150,000 miles to effectively connect all of the nation's population centers and centers of commerce and industry. It should include the Interstate System and other arterial routes necessary to develop a network national in scope. Routes critical to energy and national security, like those in Alaska and else where, should be added. The federal government must continue to assume primary responsibility for financing, construction and reconstruction of this new National System. STAA-91, as proposed by the Department of Transportation, provides for such a system of highways of national significance now labeled "National Highway System." The basic system as outlined

45-155 O—91——39

by DOT meets the requirements of ATA. The proposal calls for increased funding for this system over the five-year authorization period with substantially higher levels in later years. However, the funding provided by the proposal does not propose to draw down the balance in the Highway Trust Fund. In fact, it will result in a somewhat higher balance in the Trust Fund at the end of the period. ATA considers this spending level inadequate and agrees with the committee leadership proposal to spend all of the funds coming into the Highway Trust Fund and to draw down the balance to a reasonable operating level. New taxes are not needed at this time to fund increased expenditures.

The scope of the National Highway System as envisioned by DOT fulfills the promise made by the Congress in 1982 -- the promise of improved productivity by access to communities and facilities previously limited by arbitrary rules. ATA applauds the proposal to open up the National Highway System to vehicles of the length and configuration authorized under the Surface Transportation Assistance Act of 1982, and urges the committee to include this language in its legislation.

Additionally, as these arterial routes are incorporated into the National Highway System they should be systematically upgraded to standards that are adequate for the traffic volumes and vehicle populations using such routes. These National Highway System routes will carry 45% of all vehicle traffic, including more than 70 percent of the nation's commercial freight. It will require increased funding to meet these higher highway standards. Some may need to be upgraded to near Interstate System standards, but many may simply need to be rehabilitated to provide for modern geometric design and adequate traffic movement. Relieving congestion in urban areas on these arterial connectors should also be a priority for the National Highway System. This may be accomplished by applying traffic management systems, or by adding lanes, or in other instances, new routes. The objective must

be to improve mobility for all intercity traffic as efficiently as possible, not restrict it!

Urban/Rural Systems

The proposed STAA-91 replaces the current Interstate program, and the federal aid primary programs with the new NHS program. The federal aid secondary and urban programs and some smaller programs are combined into new federal aid urban/rural highway package. Any public road except those functionally classified as a local road or rural minor collector would become eligible for funding from this new urban/rural program. States, in conjunction with urban and rural areas within these states, may allocate these funds in the way which best meets the economic and access needs of the business, counties and cities served by these highways. ATA believes that it is imperative that federal funding continue for routes of local and regional interests. America's industry must have unimpeded commercial highway travel ability if America's business is to be served efficiently, productively and cost effectively.

There will continue to be highway projects on routes which connect with the National Highway System where the cost will be beyond the resources of localities or the states. For this reason, the trucking industry believes that major federal aid funding for the urban/rural system must continue throughout the five-year program.

ATA urges that states, in the utilization of these funds as well as National Highway System funds, carefully consider the excellent cost-benefit ratios which can be achieved through modernization of traffic management, geometric design and pavement widening, and the traffic flow benefits of incident management programs. For example, a study recently conducted for the Trucking Research Institute of incident management programs in several major cities revealed the opportunity to

programs. Such programs do entail costs to states and localities, but benefits far outweigh the limited costs by almost 17 to 1! Similar major benefits have been achieved through innovative traffic management techniques and removal of built-in bottlenecks on poorly designed routes.

**Bridge Program**

The proposed STAA of 1991 provides for a continued federal aid bridge program for major bridges and for secondary and urban road bridges off the Nation Highway System. This program is necessary to support and improve urban, suburban and rural mobility. Many interstate freight movements begin or end on lesser rural and urban routes. Federal aid programs are needed for major construction projects on these routes.

The Transportation Research Board estimates that 120,000 of the 550,000 bridges on non-Interstate and non-federal aid highways are posted, indicating inadequate load-bearing capacity to accommodate legal vehicles. These restrictions place communities and their businesses at a competitive disadvantage by limiting the productivity of motor carriers using these bridges, and force their vehicles to take longer, more costly routes. ATA recommends that states be permitted to use federal-aid funds to strengthen the load-limiting features of non-Interstate and non-federal aid system bridges without concurrent upgrading of bridge functional and geometric features. Many substandard bridges can be strengthened with low-cost retrofits.

**Management Systems**

The Administration's proposal provides that each state must establish a bridge, pavement, safety, and congestion management system. ATA endorses the basic

concept of such systems within the overall context of efficient and productive management of the highway system.

ATA supports a pavement design policy that minimizes long-term life-cycle construction, maintenance and highway user costs for major highways -- a policy that requires the construction of stronger pavement structures with better draining base courses. Built right the first time, our highways will hold up better, rehabilitation and maintenance costs will be less, direct user costs will be lower. The trucking industry and other highway users pay for these highway engineering problems. We are all learning that doing it right the first time pays off in increased benefits at a lower total cost.

In the fall of 1990, a group of Federal Highway Administration officials, American Association of State Highway and Transportation Officials, and Strategic Highway Research Program officials conducted a study tour of Europe to review European asphalt road building techniques. Basically the group found:

- o European pavements are better, more durable, and designed to last longer;
- o trucks are heavier and traffic volumes are higher;
- o more emphasis is placed on quality and effectiveness; and
- o better technology is implemented rapidly.

This country needs a program that takes advantage of these findings now. If we do not, European businesses will gain a competitive advantage simply because their logistics cost will be lower.

FHWA is also encouraging states to adopt cost-effective strategies for rehabilitating and maintaining highway bridges. These systems will evaluate alternative investment strategies and optimize agency bridge expenditures. ATA supports these requirements.

alternative investment strategies and optimize agency bridge expenditures. ATA supports these requirements.

Traffic congestion impedes the free flow of commerce in, around, and through urban areas. Long a problem for local pick-up and delivery services, congestion has rapidly spread to urban beltways and other through routes, adversely affecting the efficiency of line-haul goods movements.

Highway agencies can take a number of actions to increase the supply of highway facilities in urban areas that go beyond the traditional methods of new highway construction and freeway widening to alleviate congestion. These have come to be known as transportation systems management strategies -- improvements such as coordinated traffic signals, ramp metering, freeway surveillance and control systems, driver information systems, and coordinated response plans to incidents and accidents. ATA strongly supports these developments.

Our industry faces major daily delays caused by freeway incidents and accidents. To address this problem, the Trucking Research Institute initiated a research project to determine better ways to deal with non-recurrent congestion caused by freeway incidents and accidents, involving both cars and trucks. The study developed a program of initiatives -- grants, policies, model legislation, information and demonstrations -- that can expand and improve incident management programs in urban areas.

The study recommends that states:

- mandate the development of comprehensive metropolitan incident management programs;
- assign responsibility for implementation of these programs;
- establish clear lines of authority for the management of
- states adopt quick-clearance policies and require uniform annual reporting of incidents.

The study recommends that STAA-91 make capital and operating funds available to the states to set up or expand comprehensive incident management programs. We support funding in the initial two years at a ratio of 95 percent federal funds to 5 percent state matching funds, stepping down to a lower ratio in succeeding years. The study recommends further that federal transportation policy explicitly recognize the role and importance of incident management, and traffic management generally, in reducing congestion.

Trucks must have the freedom to move at all times on the nation's highways, roads and bridges in order to provide essential transportation between American communities, businesses, and industry.

Management systems of the type described previously can only do so much for the free flow of traffic. We must see an end to the arbitrary state and local restrictions that threaten the improvements to traffic management.

Tolls

The proposed DOT legislation contains several sections relating to innovative highway financing programs, including proposals for use of federal aid highway funds in conjunction with tolls. ATA commends the DOT for its initiative in bringing forward creative approaches to highway finance. In principle, however, ATA holds to its long-standing opposition to toll roads. We have in the past and will in the future support toll roads that are fully funded by toll revenues and that provide additional highway capacity in heavily congested areas. Tolls imposed for the purpose of "congestion pricing" as not, in our opinion the proper use of tolls.

ATA supports the basic concept of a toll-free National Highway System. Financing of highway improvements should rely on highway user taxes and receipts, exclusive of tolls.

- o The payment of tolls by motor carriers and other highway users constitutes double taxation. Motor carriers pay highway user taxes for the use of the facility and then must pay an additional charge in the form of a toll.

- o Congestion pricing is not a viable alternative to highway improvements to provide new capacity. Programs designed to reduce congestion through assessment of fees during peak travel periods attempt to discourage travel rather than increase mobility. The goal of a forward looking federal highway program should be to seek positive solutions to transportation problems, not to institute barriers or tolls to discourage or prevent mobility.

Toll roads tend to be self-perpetuating and foster conflicting highway systems. Because tolling authorities usually have independent bonding authority, there is no impetus to sunset these agencies after the bonds have been retired. This leads to toll road expansion without coordination with other transportation systems solely to expand or continue the bonding authority.

ATA objects to the Administration's proposal for a limited operational congestion pricing test for severe clean air non-attainment areas. Congestion pricing, when instituted as a form of rationing, distorts the marketplace and punishes those least able to pay. The economic gains to the economy of both just-in-time delivery as well as the low inventory stocking method would be significantly curtailed. Additionally, trucks, where possible, effectively self-regulate themselves. They tend to avoid morning and evening rush hours as long as it does not conflict with their customers delivery and pick up needs.

Foreign examples have only marginal application to larger American cities. Modern toll collection techniques are of little assistance to the occasional driver, the tourist, and the longer distance trucker. Manual collection practices fail to capture the occasional driver, the tourist, and the longer distance trucker. The lines of trucks and cars idling at toll booths would only contribute to air pollution. Should the Administration wish to pursue the "stick" approach, one might consider adding

parking surcharges in downtown lots and meters. ATA would much rather see an investment of scarce funds in the "carrot" of incident management programs, that was discussed earlier, that enhance mobility of people and goods.

Rail-Highway Crossings

Nationwide, the number of deaths and injuries occurring at rail-highway crossings has risen each year for the past five years. According to the Federal Railroad Administration, fatalities in 1989 increased to 801 -- 33% higher than the 1988 level of 600 -- the largest increase in five years. In contrast, the highway fatality rate involving heavy trucks has declined consistently over the last decade, according to data provided by the National Highway Traffic Safety Administration.

For the past 20 years, the response of the nation's railroads to the problem of grade crossing safety has been abysmal. The railroads' primary approach has been to suggest that highway users should pay for the entire cost of federal-aid grade crossing projects despite the obvious benefits of these improvements to the railroad industry. Since 1974, almost $5 billion of federal Highway Trust Fund money has been spent on grade crossing projects, to which the trucking industry has contributed a proportional $1.5 billion of highway user taxes. Exact information is unavailable on the corresponding railroad contributions, but our best estimate is that the railroads have contributed $55 million, or roughly 1% of the total costs of these projects. Prior to 1975, the congressional mandate then was for a minimum 10% contribution.

Despite the railroads' meager financial support and the record profits, the Administration bill goes one step further and repeals the final vestiges of required railroad participation. ATA strongly opposes this approach. We do not oppose rail crossing safety implements and, unlike the railroads, agree to pay our share. The railroads should be required to do no less.

To continue improving grade crossing safety and to achieve equity, ATA suggests that Congress enact legislation imposing a 10% cost-sharing requirement on railroad companies for the costs of all rail-highway grade crossing projects.

## III. THE PRODUCTIVITY OF THE TRUCKING INDUSTRY

The performance of the nation's economy in increasingly competitive international markets depends in large measure upon an effective and efficient transportation system. To achieve efficiency, the trucking industry must be able to operate its most productive equipment to serve the facilities of shippers and receivers throughout the nation.

As the nation's premier mover of freight, the American trucking industry has long recommended reasonable size and weight standards consistent with highway capability and the need for efficient, intelligent, and productive use of our country's vital resources. Alternative bridge formulas or modifications of the current federal bridge formula provide greater efficiency, safety, and mobility in the movement of goods without undue harm to roads and bridges or a decrease in safety.

### Truck Weight

In the Surface Transportation and Uniform Relocation Assistance Act of 1987, Congress directed the Transportation Research Board to conduct a study of federal axle and gross weight limits and the federal bridge formula. In response to that directive, the Transportation Research Board submitted to the Congress in July, 1990, Special Report 225 entitled **Truck Weight Limits, Issues and Options**. This scientific study found that considerable benefits would accrue to the nation's economy by allowing a change in the current federal weight limits through the issuance of special permits. The TRB study made six recommendations to Congress that promote the public interest, provide productivity gains to the economy, and improve the nation's international competitiveness. They are:

- o Replace the current H-15-based federal bridge formula with a new formula based on the HS-20 bridge design standard.
- o Allow states to establish special permit programs for vehicles over 80,000 pounds.
- o Take no action to restrict grandfather rights already claimed by states, but prevent future expansion of grandfather rights claims.
- o Set state special permit fees equal to increased highway costs.
- o Increase enforcement of truck weight laws.
- o Pursue regional cooperation in standardizing limits and permit practices.

The study found that implementing these recommendations on truck weight limits will reduce consumer costs by reducing the cost of moving goods by $5.48 billion per year. These benefits can be achieved by adopting the two major recommendations of the Transportation Research Board study, namely (1) changing the bridge formula for trucks under 80,000 pounds and (2) allowing states to establish special permit programs for vehicles weighing over 80,000 pounds gross weight. This proposal is simply to allow the states, if they choose to do so, to issue special permits for heavier vehicles without changing federal axle or gross weight limits now in the federal statute. As stated by Lester Hoel, former Chairman of the TRB Committee and Chairman of the Department of Engineering at the University of Virginia, this recommendation is simply to provide a level playing field so that all states may issue long-term special permits for vehicles over 80,000 pounds, similar to the permit programs allowed in 14 states. States would control the operating conditions, routes, and maximum weights allowed, all within the present federal axle and bridge formula requirements.

Allowing the states to exercise their own judgment in issuing these long-term special permits is in many ways similar to allowing the states to exercise their own judgment in allocating transit funds and urban/rural funds as proposed in the

legislation presented by the Administration. ATA is not proposing that any states be forced to permit heavier or longer trucks. If the state wishes to do so, it should do so under the controlled conditions outlined by the Transportation Research Board study.

Evidence presented in the study also showed that adoption of these recommendations would result in fewer trucks on the roads, fewer accidents and less traffic congestion. In fact, evidence suggests that allowing gross weights to increase in accordance with the federal bridge formula will reduce accidents by 2,360 per year. In addition, with fewer vehicles carrying more freight on more axles, the total number of miles traveled by heavy combinations will decrease by 3.2 billion miles per year and pavement damage would be reduced. Bridge costs would rise moderately over a period of time but the benefits to consumers in the form of lower transportation costs would be at least 10 times the increased bridge costs.

In response to the carefully reasoned arguments of the Transportation Research Board recommendations, the railroads and several railroad-sponsored organizations have mounted a massive campaign contending that the trucking industry seeks nationwide operation of all types of Longer Combination Vehicles (LCVs) on all roads and streets to be mandated upon the states. No trucking industry organization has ever proposed such operation for Longer Combination Vehicles nor does ATA do so. No state allows the longer combination vehicles on all roads and streets. No state allows the widespread operation of longer combination vehicles except under controlled and special permit arrangements. Every state has specific rules and regulations governing drivers, equipment specifications and operating conditions under which longer combination vehicles may be operated. Every state requires strict adherence to federal axle weights and bridge formula specifications.

Various types of LCVs, including triples and turnpike doubles, have been operating in a number of western states and five turnpikes for more than 30 years under all of the conditions described above. [See map on page 21.] In state after state and company after company, LCVs have compiled a better safety record in terms of accidents and fatalities per million vehicle miles than any other equipment on the highways. That's the way it ought to be. These units are operated by the best drivers, are allowed only on the best roads, have the best equipment and equipment maintenance, and are not permitted to operate in congested areas or in severe weather conditions. The trucking industry has not only supported these requirements but, also, state trucking association executives working with the state highway departments have reached agreements concerning regional standards for the operation of these LCVs.

The railroads and their friends contend that any change in the federal statute will have the nation soon flooded with huge numbers of longer combination vehicles creating enormous safety hazardous and tying up traffic in already heavily congested metropolitan areas. None of these claims is credible. In the states where LCVs have operated for over 30 years, these units remain specialized vehicles representing a relatively small portion of the truck traffic in those states.

LCVs generally consist of three basic configurations, each with a specialized mission to provide improved transportation service to selected shippers and receivers. Triples combinations consisting of three short semitrailers of 28 or 28 1/2 feet in length are operated between terminals by carriers handling small packages and small shipments. These units are disassembled at motor carrier terminals and then dispatched as short tractor-semitrailer combinations for local pickup and delivery.

Intermediate doubles or Rocky Mountain doubles consist of many different combinations of two medium size trailers which are often configured to meet the

special needs of shippers of bulk commodities or other full trailer load types of freight. These units are generally dedicated to a limited number of shippers and travel a limited highway network directly from shipper to receiver.

Turnpike doubles originated on turnpikes in the eastern half of the United States, and now consist of two long semitrailers (generally 42-48 feet in length), have operated for 30 years on turnpikes and on designated intercity highways in other states shown on the attached map. Such combinations usually contain a truckload shipment in each semitrailer with the units disassembled at designated sites for movement to shipper or receiver locations.

Despite the 30+ years operation of all of these types of combinations in these grandfather states and toll roads, the railroads operating in these states continue to carry tremendous volumes of traffic and achieved record profits in 1990. Meanwhile, many motor carriers in the region have suffered heavy losses or merely broken even, attesting to the fact that it is the shippers and the receivers of freight who benefit from these combinations through lower transportation costs and lower prices for the goods that they sell.

It has been alleged that more study of the effects of longer combination vehicles is needed, in the face of 30 years of safe operation of these vehicles. Appendix A contains a list of 21 recent studies of LCV operations and testing which have carefully considered all of the issues now being raised anew by the railroads and others. The records of hundreds of trucking companies attest to the outstanding safety record achieved by these vehicles operating on toll roads and carefully designated highways. The equipment is thoroughly tested and reliable. The great economic benefits to the nation's economy are uncontested. There is no need to wait. Now is the time to allow states which wish to do so to gradually expand the operation of these productive trucks under carefully controlled conditions.

Finally, the Transportation Research Board study also recommended that no further expansion of state "grandfather" rights be allowed with respect to vehicle weight. States must increase enforcement of state truck weight laws and efforts toward regional cooperation in standardizing weight limits and permit practices must go forward. ATA supports all of these recommendations, as does the National Motor Carrier Advisory Committee. The TRB study was requested by Congress, funded by Congress and we simply ask that Congress consider the findings contained in its mandated study.

**Access for STAA-Approved Vehicles**

Since 1982, when Congress passed the Surface Transportation Assistance Act, trucking companies have had to face a series of inexplicably restrictive interpretations of two small words found in that legislation: reasonable access. The STAA of 1982 specifically required states to provide reasonable access for vehicles with the trailer lengths approved by the Act. While most states responded to this initiative, some states, however; have interpreted these two words in ways which have made it impossible for many motor carriers to reach their customers with these STAA-approved vehicles. In 1990, the FHWA issued a rulemaking to establish workable access provisions by June 1, 1991. This is an important first step in resolving the trucking industry problems in gaining the productivity benefits which were expected to result from the increased taxes imposed on this industry in the 1982 Act.

The second critical step in resolving this issue, however, is to expand the National Network provided for STAA vehicles to a larger designated system. The Administration's proposal does so by providing that the entire new National Highway System will be designated for all STAA approved vehicles. Access to terminals

where freight originates or terminates must be allowed unless there are clear safety factors which can distinguish these vehicles from any other combinations.

We urge Congress to adopt the criteria set forth in the FHWA rulemaking as the minimum criteria for access to and from the National Highway System. Designation of the entire National Highway System as the network of highways available to STAA-approved vehicles is also urgently needed. This will finally conclude a 10-year effort to allow trucking companies to adequately serve America's producers and consumers.

## IV. INTERMODAL TRANSPORTATION

Historically, Congress and federal regulatory agencies have viewed trucking as a domestic transportation mode, influenced little by international trade, competition, and transportation trends. However, the rapid growth of domestic and international containerization of freight in recent years has resulted in increasing numbers of maritime and rail shipping containers and trailers being transported over America's highways. As a result, the trucking industry finds itself an integral part of international commerce and intermodal transportation.

In order for the intermodal transportation industry to function in a manner permitting rational use and expansion of our intermodal structure in furtherance of the National Transportation Policy, which calls for a "balanced approach that recognizes the advantages provided by each mode ... and benefits that can be derived from intermodal linkages," Congress must address existing and evolving obstructions to such uses.

### Overweight Intermodal Containers

According to a recent study by the FHWA, one-third of all inbound and outbound containers are carrying cargoes at weights that could cause the transporting vehicle to violate federal vehicle weight laws. These overweights have the potential to cause damage to highway pavements and bridges and to impair vehicle performance resulting in safety problems.

Overweight containers -- import, export, and domestic -- have traditionally been considered as a truck weight enforcement problem, not an international or modal competitiveness problem. This is primarily because they become illegal only when they are transported over the highway. Tickets for overweight containers are issued

to the motor carrier even though the trucker has no control over the weight or loading of the container and may not be aware of the cargo weight.

The FHWA took the lead on the overweight container issue in recognizing that the trucker is not responsible for the overweights, and that culpability must be borne by the parties responsible for loading the freight. Unfortunately, FHWA, as do other regulatory agencies, lacks jurisdiction and, as a result, direct authority to solve this problem. Consequently, the overweight issue, although increasingly important, falls through the "bureaucratic cracks." For example, federal agencies cannot:

- Issue regulations that make the shipper and/or his agent responsible for overweight containers;
- Require shippers, both domestic and international, to indicate the actual weights of individual containers on standardized shipping documents;
- Require state uniformity for issuance of overweight container permits;
- Require ports and/or marine terminal operators to confirm declared shipment weights before import containers leave port property; and
- Require owners of intermodal equipment, chassis and piggyback trailers, to provide inspected, well-maintained and appropriate running gear in accordance with new federal annual vehicle inspection requirements.

The overweight issue will not go away. The problem is becoming worse and is affecting the competitiveness of U.S. manufacturers and motor carriers vis-a-vis their international counterparts. Before we can compete internationally, we must find a solution to the overweight problem at home.

Congress held preliminary, fact-finding hearings on the overweight container problem in June and September of 1990. Testimony was received by the

Investigations and Oversight Subcommittee of the House Public Works and Transportation Committee, resulting in the introduction of H.R. 5964, a bill authorizing a DOT study to "investigate the need for the U.S. to adopt laws pertaining to the allowable weight of intermodal containers..." The 101st Congress adjourned without taking action on this bill. Additional studies on the issue of overweights are not needed. Remedial legislative action is.

It is the goal of the trucking industry to find a means to more equitably share the responsibilities of overweights. Therefore, we urge Congress to enact laws that place the burden of illegal overweight container shipments on the importer/exporter of record and/or the beneficial owner of the cargo.

ATA believes there are three principles that should guide the solution to the overweight issue:

- Motor carriers have the right to know container and axle weights before they leave the ports, rail ramps, or shipper's docks;
- If given incorrect weight information which results in fines, penalties or civil liabilities, motor carriers should be entitled to recoup their losses from the importer/exporter of record and/or beneficial owner of the cargo, and;
- Carriers who refuse to carry unsafe loads should be protected from retaliation.

**Ports and Rail Terminal Access**

Directly affecting the policy goal of establishing an integrated and productive intermodal infrastructure is the issue of connectivity. These linkages entail highway access to ports and rail ramps and the availability of intermodal transfer facilities.

Ports and rail terminals are, for the most part, outdated and located in densely populated urban areas. Symptomatic of the facility location problems facing intermodal motor carriers are recent local government attempts to regulate interstate

commerce by imposing various types of truck bans, such as the proposed plan in Los Angeles. Restrictions on truck movements have a more than proportional impact on intermodal service due to the costs and integration required in scheduling trains and ship calls.

Another, often-cited example of intermodal access problems is the situation that exists in New Jersey. Port Elizabeth, one of the largest Atlantic container ports and the Newark International Airport, are divided by the New Jersey Turnpike, which, itself, crosses over a major rail yard. On the average, it takes a truck 30+ minutes to travel the one-quarter-mile distance between the facilities.

Because both rail and port connectivity are integral to intermodal productivity and the U.S.'s ability to participate in international commerce, truck access to existing terminals and ramps must be facilitated now. In the longer term, new highway facilities should be designed that would permit maximum access to ports and rail ramps, while permitting minimal intrusion on neighborhoods and avoiding contribution to urban congestion. Congress should take a lead in seeking a cure to the symptoms prompting the emerging truck bans, and proactively attempt to facilitate greater intermodal productivity through research and financial support of improved port and rail access roads.

Intermodal Transfer Facilities

Modern and efficient freight transfer terminals are crucial to the ongoing growth of the intermodal industry. Federal, state, local and regional planning programs should coordinate development of intermodal transfer facilities with transportation programs and projects funded by the Act.

Once considered a panacea to intermodal transfer problems, on-dock rail facilities continue to raise operational and political issues. Given the finite amount of

space available at most U.S. container ports, on-dock, rail transfer facilities are a relatively inefficient use of land. Additionally, transit time advantages associated with on-dock operations have not consistently materialized, often due to the aforementioned access problems.

The Intermodal Container Transfer Facility (ICTF) at Long Beach, California, is an example of an effective intermodal cargo transfer terminal. Containers are moved by truck off the port property four miles inland, where they are loaded onto rail cars. It is a seamless flow effected by the cooperation of all the modes. Such a facility, although self-financed, would not have been possible without the cooperation of the local government. Similar intermodal access projects should be eligible for funding from established highway user fee programs.

Intermodal growth is dependent upon the removal of obstacles, such as the overweight container issue and the facilitation of access and cargo transfers among the modes. Congress must be aware of the need for integrated planning, financial support and cooperation required in resolving these issues. Laws should be enacted where appropriate, and direction and support provided in the development of a responsive intermodal infrastructure to make the best use of our assets and to enhance the global competitiveness of the U.S.

## V. SIMPLIFYING THE STATE TAX SYSTEM

### IRP and IFTA

All states levy highway taxes on the interstate motor carrier industry. However, there is no uniformity in state licensing, reporting, and compliance regulations, which are burdensome and enormously expensive for carriers to comply with. These difficulties were documented in the FHWA Report to Congress required under Section 19 of the Motor Carrier Act of 1980.

In 1984 the DOT estimated that the motor carrier industry pays $1 billion every year in administrative paperwork just to comply with state highway tax laws and regulations. Recently DOT has stated that the figure may be as high as $3.2 billion. This enormous sum represents little more than wastepaper, for which the transportation consumer must pay and which has a harmful effect on the international competitiveness of the U.S. economy.

In 1985, through the National Governors' Association, the states began a project, funded in large part by the federal government, to voluntarily create a uniform system of administration for state highway taxes on the motor carrier industry which would reform the current burdensome system. The most important of the results from the project included the endorsement of the International Registration Plan (IRP) and International Fuel Tax Agreement (IFTA).

IRP and IFTA are agreements developed by the states for the administration of commercial vehicle registration fees and fuel taxes, respectively. IRP and IFTA are "base-state" agreements in which a carrier's home state collects the taxes for all states, audits the return, and redistributes the revenue based on carrier operations. Membership in IRP and IFTA does not affect a state's authority to impose taxes at any level it needs to raise highway funds. A state does not lose revenue from joining these agreements.

Unfortunately, the NGA recommendations are being implemented far too slowly: only 16 states belong to IFTA. At the current rate it will be 12 years before all states belong. In the meantime, a minimum of $12 billion will have been spent by the trucking industry with no benefit to anyone.

Recognizing the need to accelerate progress in this area, the highway reauthorization bill submitted by the Administration proposes to mandate state participation in these two interstate agreements which would go a long way toward reducing the multi-billion-dollar paperwork burden on the U.S. transportation system.

ATA supports mandatory state participation in IRP and IFTA and commends DOT for proposing to do so in the legislation. However, ATA believes the time period for mandatory state participation needs to be shortened from the DOT proposal of October of 1996 for IRP and October of 1997 for IFTA to 1993 and 1995, respectively.

We believe these target dates are both realistic and necessary. The target dates are realistic because IFTA and IRP are both well developed programs and, due to the NGA project, states are very familiar with how they work. The shorter target dates are necessary to stay within the life of the highway bill, and to ensure that motor carriers and ultimately the American consumer are rid of these billion-dollar plus compliance costs as quickly as possible.

In addition, as drafted, the statutory language mandating IRP and IFTA in the Administration bill is insufficient to accomplish this goal. Both IRP and IFTA have some rather technical terms and the language in the proposed bill does not take account of these provisions. ATA recognizes that this is a drafting oversight and suggests that this can be corrected during the legislative process.

**Bingo Cards and Stamps**

ATA also supports the Administration's proposal to repeal the "bingo card" program originally enacted in 1965 by P.L. 89-170. The bingo card program is a federal program through which state Public Service Commissions enforce Interstate Commerce Commission operating rights. States are authorized to participate in the program by federal statute. Therefore, repealing the program is a matter solely within the purview of Congress.

The program was developed to prevent motor carriers which did not hold ICC authority from hauling interstate freight. The need for the program ended in 1980 when Congress passed the Motor Carrier Act which essentially deregulated the trucking industry and opened nationwide authority to thousands of new carriers.

The current program is a paperwork nightmare which adds many millions of dollars annually to consumer transportation costs and prevents the efficient movement of freight. In order to comply with this program a motor carrier holding ICC authority must:

- Purchase a bingo card for each truck from (the National Association of Regulatory Utility Commissioners (NARUC) -- the association of state public service commissions). Under ICC regulations, NARUC has a monopoly to sell the card.
- Assign the card to a specific vehicle by placing the vehicle's serial number on the card.
- Purchase individual stamps for up to $10 from each state in the program. A completed card costs over $200. (Note: all states do not currently participate in this program).
- Lick each of the state-identified stamps and affix each in the appropriate state box on the card. (Hence the term bingo!)
- Put a truck-specific bingo card in each vehicle.
- Repeat the above procedure for <u>each</u> vehicle in the fleet.

This program should be eliminated because it no longer serves a federal regulatory purpose, it increases consumer transportation costs, and it is a prime example of useless paperwork.

Some states may claim that the bingo stamp program funds highway safety programs. To a very limited extent, this is valid. However, safety funds can be raised in a much more efficient and equitable manner and ATA would work with any state that wishes to seek other funds to support its safety program.

There are 12 state public service commissions that belong to the Commercial Vehicle Safety Alliance and hence have substantial responsibility for truck safety enforcement. ATA believes these states may turn to fuel taxes and registration fees to support their safety programs. This is not only more efficient but also a fairer solution. Under the bingo card program only ICC-regulated carriers pay, while under a fuel tax and registration fee system all carriers make a contribution to paying for truck safety.

General Business Taxes

Most carriers' problems with state and local general business taxes are relatively new, but they are serious and growing fast. The United States Supreme Court has ruled that interstate motor carriers doing business in a state may be asked to pay a fair share of the state's general business taxes, such as corporate income or gross receipts taxes, provided the carrier has a taxable connection with the state.

Many states now say that mere travel on their roads constitutes a taxable connection causing income tax liability for carriers. This is their only connection in many cases, and these carriers also pay for use of the highways in these states through state fuel taxes and registration fees. Merely passing through a state should not, ATA believes, trigger income tax liability for an interstate trucking company.

ATA believes that interstate motor carriers should not be subject to income or gross receipts taxes in any state in which they do not have real property or permanent employees, or to any local taxes in a locality in which they do not maintain both real property and permanent employees.

Regrettably, the DOT bill does not address this issue of "nexus." There is an urgent need for Congress to establish guidelines for states in this area for motor carriers. Congress has already recognized the need to give interstate transportation relief in the area of state taxable nexus, as follows:

1. Congress has already recognized the need to give interstate transportation relief in the area of state taxable nexus. In 1980, Congress responded to the concerns of airline employees by enacting P.L. 96-193, codified at 49 U.S.C. 1512. This provision preempts state taxation of interstate airline employees except (1) by their state of residence, or (2) by the state in which more than half their compensation (measured by flight time) is earned.

2. Last year, Congress took note of concerns of workers in the trucking and rail industries when, as part of the Amtrak Reauthorization and Improvement Act of 1990 (P.L. 101-322), Congress provided that these workers would be subject to income taxation only in the worker's state of residence. This law was enacted when states began to claim an apportioned share of personal income taxes from truck drivers and train crews who traveled across the borders of several states.

3. Finally, in the Omnibus Budget Reconciliation Act of 1990, Congress enacted a provision limiting state authority to tax interstate airlines. This provision was intended to eliminate state efforts to include "overflight" as a mechanism to collect income, sales and property taxes from interstate airlines.

It is imperative that Congress address the problem of state-imposed general business taxes on the trucking industry, a growing problem that is already nearly as widespread and costly as the problems long associated with state-imposed highway taxes.

**Access to Federal Courts**

The trucking industry is restricted to state courts in its legal challenges to burdensome and discriminatory state and local taxes. Motor carriers cannot take these cases to federal court. Railroads can.

Federal law permits railroads to challenge any discriminatory state or local tax in federal district court. The trucking industry can only go to federal court with respect to discriminatory property taxes, an area where our problems have not been great.

It was feared by some that this authorization to the railroads would serve only to clog the federal court system with obscure and technical issues of state taxation. That has not proven to be the case. Federal courts have successfully handled the cases that have arisen under the 4R Act without having to neglect their other business; and the results have been of very considerable benefit to the nation's railroads -- and thus to the nation itself.

The establishment of a similar system of relief for motor carriers burdened by harmful and illegal state taxes would also be of benefit not only to the industry affected, but also to the continuing struggle to maintain the global competitiveness of the U.S. economy. No one would lose by this step. All, even the states most directly affected, would gain by the institution of a truly equitable state tax treatment of interstate motor carriers.

In the interest of intermodal equity and to eliminate duplicative and expensive litigation, Congress should permit interstate carriers access to federal court in order to challenge discriminatory state taxes of all kinds.

**Federal Tax Information System**

While, as we have outlined, ATA feels that it is fully appropriate for the federal government to take the above actions with respect to state taxation of the motor carrier industry, we feel that the state tax information system as proposed in the Administration bill is unnecessary.

The bill proposes that $6 million be spent to establish what appears to be a centralized computer system for motor carrier state tax information and $25 million authorized in the form of grants to states to participate in this information system. The Administration proposes to fund this system from the MCSAP program. This system is unnecessary for the successful implementation of IRP and IFTA. IRP and IFTA are base state systems and a central data bank serves no purpose for either agreement.

This information system appears to be designed to support the FHWA initiative to create state standards for the collection weight-distance taxes and sales taxes. ATA opposes the creation of these standards and a computer system to support them. A more detailed explanation of ATA's view of this issue is found in the following section titled "Base State Agreements."

ATA would support federal funding to assist individual states to develop or upgrade their computer systems and software to support IRP and IFTA under the "base state concept." ATA believes that continued automation of state administrative procedures and electronic data interchange protocols will provide greater administrative efficiencies to the motor carrier industry and to the states. However, ATA believes that a funding source other than MCSAP should be found.

Finally, the Administration's bill provides $3 million for a demonstration project to determine the feasibility of linking safety fitness to vehicle registration. ATA believes this idea has merit. Again, however, we believe that the integrity of

MCSAP demands that funds not be diluted for other initiatives, no matter how worthwhile. ATA would support this demonstration project if another funding source were found.

**Base-State Agreements**

The DOT-proposed bill requires the Secretary to establish standards for the establishment of a base-state system for state weight-distance and sales taxes. ATA believes this is unnecessary and unwarranted. In the last two years weight-distance taxes have been repealed by Wyoming, Colorado, Nevada, Ohio and Arkansas, and replaced with the two-structure system of registration fees and fuel taxes. Only six states remain with weight-distance taxes. Why spend millions of dollars on a tax system which is declining in use? DOT should expend its efforts in implementing IRP and IFTA rather than creating an agreement to collect a type of tax which has been thoroughly discredited as an unfair and efficient means of taxing the motor carrier industry.

The creation of an agreement to collect sales taxes is also unnecessary. More than half of the states have sales tax exemptions for interstate motor vehicles. In addition, sales taxes are generally reciprocal rather than apportioned, further eliminating any necessity for the creation of a base-state agreement for sales taxes.

ATA believes that DOT should concentrate its efforts on the establishment of IRP and IFTA, two agreements which when fully implemented will save the motor carrier industry half a billion dollars annually in compliance costs.

**Intrastate Regulation**

Section 508 of the Administration's bill addresses two different state processes that relate to interstate carrier operations. One addresses the interstate procedures

used in collecting fuel taxes, truck registration fees and the continued sale of "bingo" stamps originally used to identify ICC authority. The second deals with the state's ability to regulate strictly intrastate economic issues.

ATA supports federal uniform rules where it is necessary to prevent the states from discriminating against interstate carrier operations. The taxation of an interstate carrier based solely on that carrier's traversing a state, the confusing array of state fuel tax laws and regulations, and the myriad of indicia that states require of carriers engaged in interstate operations, all are issues of state imposition and interference with interstate operations of motor carriers and are within the proper purview of the federal government.

Federal preemption of a state's long recognized right to economically regulate the transportation of goods solely within its borders is not a matter of a state attempting to pass off the tax burden to out-of-state business. Intrastate transportation is a matter of state concern. Just because an out-of-state carrier wishes to engage in the intrastate transportation business does not change the nature of the transportation or of the state's legitimate interest in regulating or not regulating it. ATA takes no position on whether an individual state should or should not engage in economic regulation. However, ATA opposes any attempt to federally preempt the ability of states to regulate intrastate transportation.

## VI. HIGHWAY SAFETY PROGRAMS

**Motor Carrier Safety Assistance Program**

Since the passage of the STAA in 1982 by Congress which authorized funding for the Motor Carrier Safety Assistance Program (MCSAP), ATA has actively supported this federal-state partnership to reduce commercial vehicle accidents and improve highway safety, and to foster the compatibility of state safety laws governing interstate and intrastate commerce. MCSAP has proven to be one of the most effective mechanisms for enhanced commercial vehicle safety ever mandated by Congress, with states having conducted more than 1.6 million safety inspections and 8900 carrier reviews in 1990. The proof of MCSAP's success is ultimately borne out in statistics involved in the fatal and serious injury accident rate, a rate which is on a 10-year decline. Because of the documented success of the program, ATA believes that MCSAP should continue in operation and that Congress should increase the funds to the levels proposed in the Administration bill.

While the current MCSAP inspections focus primarily on the tractor-trailer population, ATA has always believed that the inspections should cover all commercial vehicles, including those in the 10,001-26,000-pound classes and those that operate within former exempt zones. With the exception of the Commercial Driver's License and drug testing programs, the federal motor carrier safety regulations apply to all vehicles with a weight rating in excess of 10,000 pounds. Some 13.3 million commercial vehicles travel the nation's roads and highways, including approximately 1.6 million tractor-trailer combinations, but the vast majority of that 13.3 million number are straight trucks. Including the 10,001-26,000 pounds vehicles obviously represents a significant expansion of the safety inspection mandate of the program. This fact alone almost assuredly requires an increase in resources available to

45-155 O—91——40

MCSAP. That is why we ask Congress to consider increasing funding to authorized levels.

Of equal concern to the need for safety inspections for all commercial vehicles is the possible diversion of MCSAP funds to non-safety-related projects. The previous section of this testimony explains ATA's objection to the use of MCSAP funds for the creation of an information system to serve as a clearinghouse and depository of state tax information. ATA has no objection to federal assistance to states to develop and upgrade their individual IRP and IFTA computer systems. However, these federal funds should not come from MCSAP, which is intended to promote safe commercial vehicle operations. Congress should only allow programs or projects to receive MCSAP funding that expressly contribute to the safety objectives of MCSAP.

The funding for MCSAP should be channeled, as it is now, toward enforcement of the motor carrier, vehicle and driver compliance requirements that make up the federal motor carrier safety regulations. While other goals are worthy to consider -- traffic safety enforcement or size and weight enforcement -- with thousands of un-rated motor carriers and vehicles being placed out of service for unsafe operations, we must carefully consider the expenditure of scarce dollars to non-traditional MCSAP activities.

Size and weight enforcement requires facilities, expensive equipment and additional personnel to staff those facilities. Facilities require maintenance and upkeep, and the locations adjacent to major traffic arteries are expensive to purchase and construct. Technology to quickly and accurately weigh vehicles is constantly changing and improving, necessitating expensive replacement and/or purchase of equipment. The same people who conduct motor carrier inspections and terminal audits cannot be effectively utilized to weigh and measure vehicles.

ATA supports increased federal funding for truck size and weight enforcement. To include this effort under MCSAP funding, however, might jeopardize the increased safety functions that we anticipate under the program envisioned in MCSAP reauthorizing legislation. Some have indicated that they want size and weight activities as long as the added activities do not reduce the overall level of the safety inspection funding of MCSAP. But we see what would result as simply a status quo inspection program. ATA wants the number of safety inspections to increase, not decrease or stay level.

In light of this, the Committee also should look hard at the use of MCSAP funds for other purposes. Two specific points need to be made if this committee decides to allow states to use MCSAP funds for size and weight enforcement: (1) that funding be restricted to non-fixed scale facilities, and (2) that the funds be limited to new inspections over and above the current 1.6 million inspection level.

Another aspect being discussed that could have a negative impact on the success of MCSAP involves the expansion of the program to allow county and city enforcement programs to participate in MCSAP. The existing program allows a state to subgrant to local jurisdictions to conduct motor carrier inspections. ATA tacitly supports this effort, as long as the persons conducting the inspections meet the same qualifications as other state inspectors and the program is subject to the same strict federal oversight. ATA urges that any person who inspects a commercial vehicle should meet the training standards that have been established by the Commercial Vehicle Safety Alliance and FHWA for MCSAP.

## Commercial Driver's License Program (CDL)

ATA pushed hard for legislation that Congress passed to mandate a single driver's license for operators of commercial motor vehicles. We have been a

participant at every step of the regulatory path in the development of the CDL program. We believe the CDL program will improve the quality of commercial vehicle operators and improve safety on the nation's highways.

As states have implemented the CDL program, ATA has closely monitored all phases of the process in order to expedite program implementation and provide assistance to motor carriers.

Some states have encountered difficulties with certain aspects of the required CDL program components such as standardized violation codes, link-up to the Commercial Driver's License Information System (CDLIS), and effective testing methods. We believe FHWA has dedicated the necessary resources to assist states in meeting the April 1992 required implementation date. Congress should closely monitor the state implementation process through FHWA to ensure that all states will meet the required CDL program implementation date.

We are concerned that as the April 1992 deadline approaches, states that were late in passing implementing legislation will seek to short-circuit some of the basic goals of the program. For example, we opposed DOT's decision to allow truck drivers in New York to take home the written test. We oppose the current proposal by Massachusetts to waive the written portion entirely. If these states need more time to test all drivers, they should be given an extension, not an exemption.

ATA is also very concerned that no biometric identifier has been found by DOT to be satisfactory as a unique identifier for CDL purposes. We continue to believe that the drivers must have only one driver's license. Accordingly, Congress needs to reevaluate this issue in future legislation.

55 MPH Speed Limit

The trucking industry believes that a 55 mph speed limit saves lives, fuel and is more efficient than a 65 mph speed limit. We oppose the 65 MPH speed limit and urge Congress to again consider a rollback to the 55 MPH speed limit. To facilitate this rollback, we request that DOT be required to gather accurate data on accident experience of the states since the change to the higher limit. This data will document the increased loss of life and injury to the American public and provide a basis for decreasing the speed limit to 55 MPH. We believe that these statistics along with the undeniable fuel savings of a lower speed limit should be the basis for a congressional effort to again reduce the national speed to 55 MPH.

Rest Areas

The trucking industry is becoming increasingly aware of the lack of sufficient parking at roadside rest areas which will serve the needs of increased truck traffic.

In the last decade, the number of trucks on the road has increased 24% and the average annual miles each truck travels has increased 27%. Annual truck volume on urban and rural interstate highways has increased by 8% and 5%, respectively.

However, in the same period of time there has been little or no new construction in truck stop rest area facilities. This lack of expansion has led to overcrowding of present facilities, and has forced drivers as a result to either find other parking arrangements or face violations of hours of service regulations. In order to relieve overcrowding in rest areas many states have resorted to allowing drivers a maximum of four hours in rest areas. As a result, drivers are at times parking in less-safe locations such as highway shoulders or on exit/entrance ramps to interchange or violating hours-of-service rules.

Fatigue has been cited as a major factor in as many as one-third of the fatal accidents which were studied in a recent National Transportation Safety Board (NTSB) investigation. Drivers need safe areas to take rest breaks to prevent fatigue-related accidents and to comply with hours-of-service regulations. Inadequate rest area facilities are a serious problem for all highway users which should be dealt with in the traditional fashion through highway user funding at the state and federal level.

Congress should provide additional funding to states to develop new roadside rest-stop areas or expand current facilities to handle the expanded needs of motor carriers and car owners.

## Off-Ramp Signing

Unlike most aspects of highway design, off-ramp designs do not generally make adequate allowance for the special requirements of trucks. This was indicated in a review of the Federal Highway Administration accident file for 1980 which revealed that 9% of all jackknife accidents and 17% of all rollover accidents occurred on off-ramps, while only a very small percentage of commercial vehicle travel was on off-ramps. Truck dynamics must be given greater consideration in future construction.

Although there is a need to identify and reconstruct a number of existing off-ramps to make them safer for trucks, there is a low-cost project which can be done relatively quickly without excessive construction or land acquisition costs. This is to develop and implement (including driver training) a signing program to provide truck drivers with appropriate information to judge the speed they should utilize in negotiating off-ramps.

Off-ramps today are generally posted with one speed normally based on passenger car, rather than truck, performance. A University of Michigan study points

out that the safe speed of passenger cars on ramps is limited by tire traction, whereas for loaded trucks safe speed is limited by the truck rollover characteristics. Loaded trucks will usually roll over before their tires skid.

Trucks also have problems with off-ramps that incorporate curves having different radii. If the driver does not realize that the second curve in a ramp is tighter than the first, the driver may, after conservatively negotiating the first part of the ramp, increase speed to obtain a safer and more effective merge speed, only to lose control in the tighter, second-half curve.

Another problem for trucks is that they do not accelerate and decelerate in the same amount of space as passenger cars. Therefore, some acceleration and deceleration lanes need to be longer for trucks.

Congress should require DOT to implement a signing policy that indicates the ramp speed for trucks as well as for passenger cars.

Downgrade Signing

In addition to the need for an effective method of signing off-ramps for trucks, there is a need for the signing of downgrades to advise drivers of the proper speed and gear selection for the descent. This problem is widely recognized, and the FHWA has already developed an excellent new signing method (Grade Severity Rating System) to address the problem.

This new signing procedure, however, has not been universally implemented because of the lack of funds. Funds are needed not only for the signs, their construction and installation but also for the training of drivers as to how to properly interpret them. Congress should require states to implement the downgrade signing program developed by FHWA.

## VII. WEIGHT ENFORCEMENT

**Weight Enforcement**

States and the federal government currently spend millions of dollars on activities involving size and weight enforcement. We support increased federal funding directed towards highway size and weight enforcement. However, we do not believe size and weight enforcement should be a primary focus of other safety programs such as the Motor Carrier Safety Assistance Program (MCSAP).

No one can argue that size and weight violations do not have safety implications. As we have pointed out in past testimony to Congress there is a need for increased enforcement of size and weight laws.

We believe that if additional funding is provided and strict controls are established, specialized size and weight enforcement not conducted at fixed site locations could be included in the MCSAP. However, any such program must be in addition to the current state size and weight enforcement program funding level. States should not be allowed to reduce their current program and replace that funding with additional federal dollars.

Size and weight enforcement activities conducted under MCSAP should be directed at specialized problems. These could include enforcement to detect motor carriers that are circumventing existing fixed site weight facilities, or in areas where because of geographic conditions such as steep grades or mountains the operation of overweight vehicles can compromise safety. Enforcement could also be directed at specialized problems such as overweight intermodal containers.

Any such program to expand MCSAP activity into this area requires sufficient additional funding to hire, train and equip the personnel necessary to implement this type of enforcement. Let's not jeopardize the success of MCSAP by adding mandates but not increasing financial support. Rather, size and weight enforcement

should be done only after it can be shown that the number of safety inspections have increased to cover the increased number of vehicles.

**Weight Measurement**

An additional concern regarding truck size and weight limits is the issue of inadvertent overloading of axles and/or scale error. Many motor carriers load vehicles at sites where scales are not available and thus may inadvertently overload an axle or tandem axle. Frequently, small differences in scales exist at high weights even when properly calibrated. Even greater problems exist in the accurate calibration of portable scales used regularly by state enforcement personnel.

Limits of scale error or scale tolerances have been developed by the National Institute of Standards and Technology with the assistance of the Office of Weights and Measures of the National Institute of Standards and Technology. Their publication, Specifications, Tolerances and other Technical Requirements for Weighing and Measuring Devices as adopted by the National Conference of Weights and Measures, 1990 (1991 edition), provides detailed standards for testing all types of scales from postal scales to train weight scales.

Concerning scales for weighing trucks or combination vehicles as single units or for fixed scales weighing axles, the standard is based on the manufacturer's specifications and scale denominations. For weights in this range, scale differences of up to a maximum of 2/10% of the maximum weight are allowed in the certification process. This means that for a scale certified to weigh 100,000 pounds there may be differences of up to 200 pounds, if the scale is to be certified as accurate. This is based on testing scales at temperatures within an acceptable range. Specifications are established for minor changes in zero balance resulting in temperature changes of 9°F or more.

Based on the information contained in this publication, it appears that a scale error provision of up to 200 lbs. is entirely justifiable based on the accepted tolerances for certified public scales.

ATA requests that Congress allow the states to levy no fine or a low fine for axle or gross weight overloads of less than 200 pounds. This is particularly needed at this time since several states have greatly increased overweight fine structures to establish minimum fines as high as $200. In addition, several states add administrative or court costs that may greatly exceed the overweight fine. Large fines for inadvertent overloads of a few hundred pounds appear to be excessive and Congress needs to provide guidance to the states and localities on this problem.

## VIII. THE NEED FOR TRUCKING-RELATED RESEARCH & DEVELOPMENT

The fiscal year 1992 federal budget for all agencies includes $75.6 billion in budget authority for research and development. DOT's share of the $75.6 billion is just $435 million -- less than 0.6% of the total.

The $435 million for DOT R&D includes the following proposed expenditures:

- o $210 million for research, engineering, and development at the Federal Aviation Administration;
- o $53 million for research and analysis at the National Highway Traffic Safety Administration;
- o $29 million for Coast Guard research, development, test and evaluation;
- o $26 million for railroad research and development expenditures by the Federal Railroad Administration,
- o $50 million for the Federal Highway Administration to develop intelligent vehicle/highway systems (IVHS) to address congestion; and
- o $6.2 million for motor carrier safety research and development work within the Federal Highway Administration.

Given that more than 40% of intercity freight tonnage is carried by trucks, and that 77% of national expenditures on freight movements go for trucking services, there is something seriously amiss in the allocation of federal transportation-related R&D expenditures. The $6.2 million in direct expenditures on trucking-related R&D amounts to 1.4% of the DOT total R&D budget. To make matters even worse, we are informed by FHWA staff that the $6.2 million figure is in error and that the Administration actually intends to seek only $3.6 million for motor carrier safety research and development. Assuming that the trucking industry benefits, to some undetermined degree, from R&D expenditures at NHTSA and on IVHS to address

congestion, total R&D expenditures benefiting trucking might reach $10 million or so -- still less than 2.5% of the DOT total.

Moreover, of the small amount being spent on trucking-related R&D, the vast majority is being spent on research designed to serve the regulatory agendas of DOT agencies. While research in support of regulatory activities is a necessary and legitimate expenditure of federal resources, R&D devoted to enhancing transportation productivity and international competitiveness should be an equal priority.

Indeed, federal R&D expenditures benefiting other transportation modes are often targeted expressly at improving productivity and competitiveness, the $15.5 million budgeted for maglev and high speed rail research during FY 1992, for example. The FY 1992 budget document notes that: "$3 million is available until expended for grants to specific states to conduct detailed market analyses of potential maglev ridership and determine the availability of right-of-way use..."

Furthermore, the FY 1992 budget includes the following description of the Federal Railroad Administration's "contractual support" program: "Contractual support is used to develop positions regarding structural industry changes such as mergers and to conduct internal studies dealing with traffic, economic forecasting, financial condition, labor-management activities and other factors that contribute to an efficient national freight railroad network." The budget estimates that FRA spent more than $10.7 million on such "contractual support" activities during FY 1991.

Nowhere within the federal government are such expenditures being made to advance trucking productivity and technology. The trucking industry, however, is already committing its own resources to conduct important research on safety and productivity issues. The ATA Foundation and its Trucking Research Institute, for example, are spending in excess of $1 million per year researching issues such as:

- o the causes of truck driver fatigue, and appropriate countermeasures (being jointly funded by FHWA);
- o the impacts of axle weights on pavement wear;
- o finding better ways to manage highway incidents and incident-related traffic congestion;
- o the feasibility of using alternative fuels in various types of trucking operations;
- o truck cab crashworthiness; and
- o the role of trucking in the U.S. economy, state by state.

This research has been funded by scores of relatively small, voluntary contributions from trucking companies and their suppliers. To date, federal funding of these projects has been made available only in support of the truck driver fatigue research. The upcoming reauthorization of the Federal-Aid Highway Program presents an ideal opportunity to correct these funding inequities.

The Long Term Pavement Performance Program of the Strategic Highway Research Program was designed to address the total range of pavement information needs, including the contribution of non-load effects to pavement deterioration and development of improved design methods aimed at reducing or eliminating environmentally-induced pavement distress. Due to state funding constraints, however, proposed research on non-load and environmental effects may be scaled back or eliminated altogether. Significant curtailment of this phase of the LTPP research is inconsistent with the original objectives of the program and is not in the public interest. We urge the Committee to monitor this phase of the LTPP program and to consider additional funding to obtain the desired degree of state participation.

We are pleased to see the inclusion of language in the Administration's highway reauthorization bill giving the Secretary of Transportation specific authority to "engage in research, development and technology transfer activities on motor

carrier transportation..." (Section 110(a)). We believe that authority should be vigorously exercised.

Beginning in FY 1992, $30 million should be earmarked each year for trucking-related R&D expenditures within the Department of Transportation. These funds should be employed for research, development, and demonstration programs aimed specifically at enhancing trucking safety, productivity and international competitiveness. These programs should be pursued cooperatively between government and industry, so that each has a say in the conduct of the research and a stake in its outcome.

In many ways, the research expenditures being made by the Federal Railroad Administration on behalf of the nation's railroads can serve as a model for future government-sponsored trucking research. For example, many long-time FHWA officials will admit, at least informally, that the agency seriously miscalculated future levels of truck traffic when it began funding the construction of the Interstate System. Consequently, pavements were suboptimally designed and wore out much sooner than predicted. Society in general has suffered from the results of these poor forecasts; so, too, has the trucking industry, which is now having to pay higher road user taxes to repair prematurely deteriorated highways. Had FHWA been carefully monitoring economic trends in trucking, these early miscalculations could have been corrected or, perhaps, eliminated entirely.

Likewise, FRA research on emerging rail technologies (maglev and high speed rail) should be emulated by FHWA. Who at FHWA (or anywhere else in DOT) is carefully analyzing the national safety and productivity gains that may be had from innovative trucking equipment coupled with improved braking and handling systems; advanced driver information systems for commercial vehicle operators; etc.?

Many of these technologies can be researched and tested only through cooperation between the public providers of the roadway infrastructure and the private operators of the more productive trucking equipment.

## IX. CONCLUSION

If this nation is to remain economically strong and compete and win in the worldwide economic marketplace, we must have a comprehensive, five-year Surface Transportation Assistance Act structured as provided for in the bill put forward by the Department of Transportation.

The next STAA must be flexible, allowing states to initiate provisions and programs that best meet their needs. The Act should allow the trucking industry and states the flexibility to be the most productive they can be by allowing States to permit heavy trucks on the National Highway System and allowing the trucking industry to use those trucks when and where appropriate. The Act should spend down the Highway Trust Fund balances. It must not impose any new taxes and should simplify existing tax reporting procedures. The STAA must promote better highway research programs; highways must be built and designed better, using better materials and improved geometric designs particularly for off-ramps. Safety research and promotion must get greater emphasis, especially the MCSAP. Illegal overweight shipments must be stopped from moving on our highways. The STAA should seek ways to provide innovative financing of highway infrastructure projects without placing a toll burden on the existing Interstate and free highway network.

A strong, flexible federal highway program is essential to the efficient and productive operation of the nation's trucking industry and the Nation's economy. The Surface Transportation Assistance Act is a vital link to economic growth and international competitiveness. In the face of expanding competition, maintaining and improving the U.S. highway infrastructure is of critical importance.

TESTIMONY ON SENATE BILL 561
March 19, 1991

Oregon
DEPARTMENT OF TRANSPORTATION
Highway Division
Permits and Weighmasters Section
FILE CODE

MADAM CHAIR & MEMBERS OF THE COMMITTEE:

MY NAME IS STEVE JOHNSTON. I AM THE MANAGER OF THE PERMITS & WEIGHMASTERS SECTION, OF THE HIGHWAY DIVISION. TODAY, I AM HERE TO PROVIDE SOME DATA ON TRIPLE TRAILERS. THE OREGON TRANSPORTATION COMMISSION'S POSITION IS THAT TRIPLES SHOULD BE ALLOWED TO STAY ON OREGON'S HIGHWAYS UNDER THE EXISTING PERMIT SYSTEM. I AM SURE YOU WILL HEAR A GREAT DEAL OF STATISTICS TODAY. I WILL LIMIT MY TESTIMONY TO FOUR AREAS; (1) ROAD WEAR, (2) SAFETY, (3) CONTROL, AND (4) ADDITIONAL VEHICLES ON THE ROAD.

1. ROAD WEAR. DUE TO THE CONFIGURATION OF TRIPLE TRAILER COMBINATIONS, WHICH CONTAIN MORE AXLES THAN MOST VEHICLE COMBINATIONS, THE ROAD WEAR OF A TRIPLE TRAILER IS LESS THAN MOST OTHER COMBINATIONS. THE TYPICAL 18 WHEEL TRUCK, WHICH INCLUDES A STEERING AXLE AND TWO TANDEM AXLES, IS THE MOST COMMON TRUCK. THIS VEHICLE HAS AXLE WEIGHTS OF APPROXIMATELY 12,000 POUNDS ON THE STEERING AXLE AND 34,000 POUNDS ON THE TANDEM DRIVE AXLE AND THE TRAILER'S TANDEM AXLE. THE MAXIMUM ALLOWED ON TRUCKS WITH SINGLE AXLES, NOT COUNTING THE STEERING AXLES, IS 20,000 POUNDS.

   TRIPLE TRAILERS ARE LIMITED TO 105,500 POUNDS GROSS OVERALL WEIGHT. DUE TO THEIR CONFIGURATION, A TYPICAL TRIPLE TRAILER HAS A 10,000 POUND STEERING AXLE, A 20,500 POUND TANDEM DRIVE AXLE, AND FIVE SINGLE AXLES WITH AXLE WEIGHTS OF 15,000 POUNDS. ADDITIONAL WEIGHT CANNOT BE ADDED SINCE THE OVERALL WEIGHT OF THE VEHICLE CANNOT EXCEED 105,500 POUNDS BY LAW. GENERALLY, TRIPLES CARRY FOOD ITEMS AND OTHER LIGHT WEIGHT COMMODITIES DUE TO THE VEHICLE WEIGHT LIMITATION.

2950 State Street
Room 219
Salem, OR 97310
(503) 378-6666
FAX (503) 373-7777

THE MAJOR CAUSE OF ROAD DAMAGE IS NOT THE GROSS VEHICLE WEIGHT, BUT THE AXLE WEIGHTS. THE HIGHER THE AXLE WEIGHT, THE MORE ROAD DAMAGE. DOUBLE THE AXLE WEIGHT DOES NOT MEAN DOUBLE THE ROAD DAMAGE; DOUBLING THE AXLE WEIGHT CAUSES A SUBSTANTIALLY HIGHER DAMAGE RATE. THE CHART I PROVIDED INDICATES THE RELATIONSHIP OF ROAD DAMAGE TO AXLE WEIGHT. THIS CHART WAS PRODUCED BY THE AMERICAN ASSOCIATION OF STATE HIGHWAY AND TRANSPORTATION OFFICIALS, COMMONLY KNOWN AS AASHTO. ONE EXAMPLE ON THE CHART SHOWS EIGHT TIMES MORE ROAD DAMAGE IF YOU WERE TO INCREASE AN 18,000 POUND AXLE WEIGHT TO 30,000 POUNDS. WHILE I AM NOT SAYING THAT OTHER VEHICLE COMBINATIONS CAUSE EIGHT TIMES MORE ROAD DAMAGE THAN A TRIPLE TRAILER COMBINATION, I DO BELIEVE THAT THE CHART CLEARLY ILLUSTRATES THAT ROAD DAMAGE IS LESS WITH LOWER AXLE WEIGHTS. ONE OF THE HIGHWAY DIVISION'S CONCERNS IS THE COST OF MAINTAINING OUR HIGHWAYS. THE LOWER THE ROAD DAMAGE, THE MORE MONEY IS AVAILABLE FOR OTHER ROAD PROJECTS.

2. SAFETY RECORD. THE SAFETY RECORD OF TRIPLES IS BETTER THAN NON-TRIPLE TRUCKS. BASED ON PERMITS ISSUED AND ACCIDENTS REPORTED FOR TRIPLES, THERE IS AN ACCIDENT RATE OF APPROXIMATELY 1/4 OF 1% PER YEAR FOR TRIPLES. THE OVERALL ACCIDENT RATE FOR NON-TRIPLES IS APPROXIMATELY 1%. THE ACCIDENTS REPORTED FOR TRIPLES AND NON-TRIPLES IS FROM ACCIDENT REPORTS THAT ARE REQUIRED TO BE FILED WITH THE OREGON PUC, DMV, AND THE OREGON STATE POLICE. THE SOURCE OF THE DATA FOR NON-TRIPLE AND TRIPLES IS THE SAME. I HAVE BEEN TOLD THAT A REVIEW OF THE TRIPLES ACCIDENT REPORTS FOUND THAT ACCIDENTS COUNTED AS TRIPLES DID NOT INVOLVE TRIPLES. THIS WOULD MAKE THE TRIPLES ACCIDENT RATE EVEN LOWER THAN INDICATED BY THE HANDOUT. THE DATA INDICATES THAT TRIPLES ARE A VEHICLE COMBINATION THAT IS SAFER THAN OTHER TRUCK COMBINATIONS.

THE PUBLIC UTILITY COMMISSION, WEIGHMASTERS, AND POLICE ORGANIZATIONS DO ROUTINE SAFETY INSPECTIONS OF TRUCKS. THESE INSPECTIONS ARE CONDUCTED AT TERMINALS, WEIGHSTATIONS AND THE ROADSIDE. ALL OF THE INSPECTION REPORTS ARE COMPILED BY THE PUBLIC UTILITY COMMISSION. TRIPLES IN EACH OF THE YEARS 1985 THROUGH 1989 HAD FEWER SAFETY AND OUT-OF-SERVICE VIOLATIONS PER VEHICLE THAN

TRUCKS OVERALL. THEIR SAFETY RECORD, LIKE MOST SAFETY RECORDS, CAN PROBABLY BE IMPROVED, HOWEVER, THEIR EQUIPMENT SAFETY RECORD IN EACH OF THE YEARS INDICATED HAS BEEN BETTER THAN OTHER TRUCK COMBINATIONS! IT IS MY UNDERSTANDING THAT THE PUC WILL BE SUBMITTING A REPORT TO YOU.

3. CONTROL. TRIPLE TRAILERS MAY ONLY BE OPERATED UNDER A PERMIT ISSUED BY THE HIGHWAY DIVISION. THE LOSS OF A PERMIT COULD BE VERY COSTLY TO A CARRIER. THE PERMIT RESTRICTS TRIPLES TO APPROXIMATELY 1/2 OF OREGON'S STATE HIGHWAYS. THEY MUST HAVE SPLASH AND SPRAY DEVICES DURING RAINY WEATHER AND ARE NOT ALLOWED TO OPERATE IN ICE, SNOW OR WHEN VISIBILITY IS UNDER 500 FEET. THEY MUST ALSO HAVE LONG LOAD SIGNS ON THE LAST TRAILER. IT HAS BEEN MY OBSERVATION THAT TRIPLE TRAILERS TEND TO DRIVE AT LOWER SPEEDS THAN OTHER TRUCKS. I HAVE NEVER BEEN PASSED WHILE TRAVELING 65 MPH BY A TRIPLE TRAILER COMBINATION. HOWEVER, I HAVE BEEN PASSED BY NON-PERMITTED 18 WHEELERS AND DOUBLE TRAILERS AT 65 MPH. I BELIEVE ONE OF THE REASONS FOR BETTER SPEED CONTROL, MAINTENANCE AND SAFETY IS THAT MOST OPERATORS DO NOT WANT TO JEOPARDIZE THEIR PERMIT AUTHORITY. A PERMIT THAT CAN BE REVOKED OR NONRENEWED. THE LOSS OF THE PERMIT COULD RESULT IN A LARGE INCREASE IN THE COST OF OPERATION FOR THE MOTOR CARRIER. I HAVE BEEN TOLD THAT DRIVERS OF TRIPLES RECEIVE A HIGHER RATE OF PAY. IN ADDITION, THE EQUIPMENT IS USUALLY THE NEWER AND BETTER.

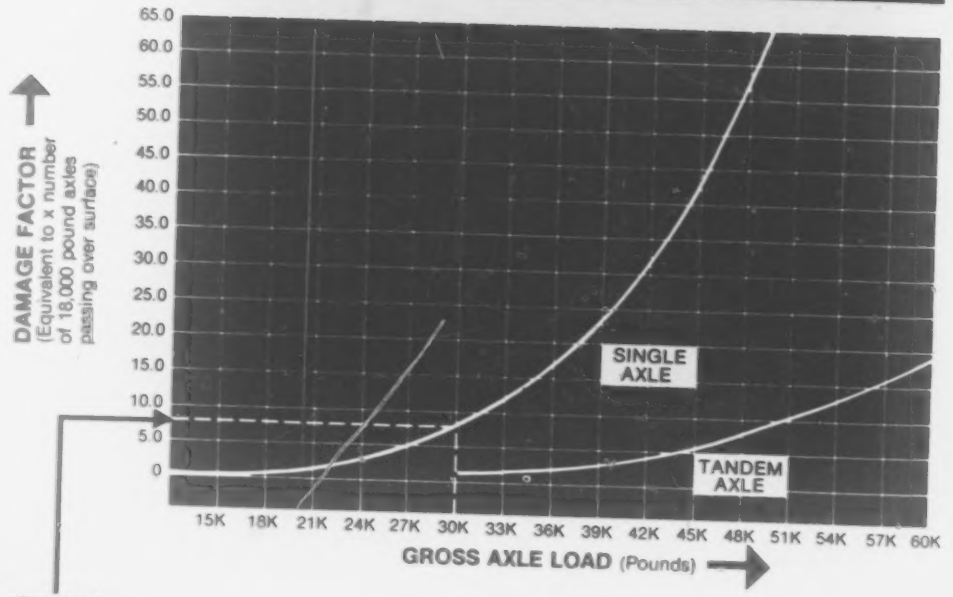
4. NUMBER OF TRUCKS. CURRENTLY THERE ARE OVER 4800 PERMITS ISSUED FOR TRIPLES. IF YOU WERE TO TAKE TRIPLES OFF THE ROAD, THERE WOULD BE APPROXIMATELY A 50% INCREASE IN THE NUMBER OF TRUCKS NEEDED TO CARRY THE SAME AMOUNT OF CARGO. THE LOSS OF TRIPLES COULD RESULT IN AN ADDITIONAL 2400 TRUCKS ON THE HIGHWAY. THESE VEHICLES WOULD NOT BE CONTROLLED BY PERMIT. THEY COULD RUN IN ANY WEATHER AND WOULD NOT HAVE ANY SPLASH AND SPRAY SUPPRESSANT DEVICES.

TRIPLES, WHICH HAVE BEEN OPERATING IN OREGON SINCE 1967, ADMITTEDLY CAUSE SOME PEOPLE CONCERN. HOWEVER, THE LOSS OF THE TRIPLES WOULD RESULT IN THE LOSS OF A VEHICLE THAT HAS ONE OF THE BEST ACCIDENT AND SAFETY INSPECTION RECORDS. THERE WILL BE AN INCREASE IN THE NUMBER OF

VEHICLES ON OREGON'S HIGHWAYS THAT ARE NOT CONTROLLED BY PERMIT. THESE ADDITIONAL VEHICLES WOULD NOT BE REQUIRED TO HAVE SPLASH AND SPRAY SUPPRESSANT DEVICES OR HAVE TO MEET ANY OF THE PERMIT REQUIREMENTS PREVIOUSLY DISCUSSED. IT IS OUR BELIEF THAT IF WE HAVE TO HAVE LONG VEHICLES TO ECONOMICALLY MOVE GOODS, THAT THE TRIPLE IS THE BEST COMBINATION.

ON FEBRUARY 19, THE TRANSPORTATION COMMISSION UNANIMOUSLY REAFFIRMED THE STATE'S PRESENT POLICY TO ALLOW TRIPLE TRAILERS ON THE HIGHWAYS AND DOES NOT RECOMMEND A CHANGE AT THIS TIME.

THANK YOU FOR ALLOWING ME TO TESTIFY ON THIS MATTER. THIS CONCLUDES MY TESTIMONY.



*EXAMPLE
1 each 30,000 lb. single axle is equivalent to 8 each 18,000 lb. axles passing over surface

NOTES: 1. Residual Performance Value P=2.5
2. Slab thickness for rigid pavement D=9"
3. Reference—these curves derived from A.A.S.H.T.O. data

OREGON TRUCK ACCIDENTS

| | Non-Triple Trucks | | | Triples | | |
|---|---|---|---|---|---|---|
| Year | # Trucks | # Accidents | Rate | # Triples | # Accidents | Rate |
| 1980 | 145,558 | 2,074 | 1.42% | 4,056 | 12 | 0.30% |
| 1981 | 163,447 | 1,760 | 1.08% | 3,756 | 11 | 0.29% |
| 1982 | 156,408 | 1,365 | 0.87% | 3,699 | 7 | 0.19% |
| 1983 | 166,271 | 1,504 | 0.90% | 4,067 | 14 | 0.34% |
| 1984 | 178,545 | 1,768 | 0.99% | 4,051 | 3 | 0.07% |

1-3-91

STATEMENT OF THE HONORABLE JAMES T. BEALL, COUNCIL MEMBER,
CITY OF SAN JOSE, CALIFORNIA
on behalf of
THE NATIONAL LEAGUE OF CITIES
before the
HOUSE SUBCOMMITTEE ON SURFACE TRANSPORTATION
Thursday, April 18, 1991

Mr. Chairman and members of the Subcommittee, the National League of Cities is pleased to have this opportunity to share our views on reauthorization of federal highway and public transportation programs. I am Jim Beall, Council Member from San Jose and Chairman of NLC's Transportation and Communications Policy Committee. I am pleased to join my local government colleague, Mayor Peggy Rubach, representing the U.S. Conference of Mayors.

As the local link in the federal-state-local partnership that built our nation's highway and public transportation systems, the local elected officials represented by the National League of Cities look forward to working with you. This Subcommittee has always led the way in seeking a federal commitment to maintaining and improving our infrastructure resources. We commend you for your leadership and urge your continued initiative.

We also are pleased to see Secretary Skinner and President Bush recognize the grave importance of investing in our

transportation systems. Lack of investment in our infrastructure threatens our economic future, resulting in congested roads, aging transit facilities, and deteriorating bridges. We believe DOT's highway and public transit reauthorization proposal is a good starting point. The DOT plan acknowledges that our needs are great and our federal resources limited. However, we believe that much more can and should be done to met current and future needs.

Local officials believe the federal government needs to play a substantial role in improving urban mobility. Cities and towns are key to our nation's economic future. The National League of Cities endorses a separate, flexible urban/suburban program targeted at strengthening our cities' function as economic centers -- moving people to and from their jobs and moving goods to their intended destination.

An urban/suburban program should deliver federal funds directly to metropolitan areas with local responsibility for selecting and programming projects. Local officials are most familiar and committed to local needs and should be responsible for decision-making on these projects. Funding directed to local or regional bodies brings the transportation community together to develop and agree on priorities, plans, work programs and improvement schedules.

Cities have assumed more and more financial responsibility in funding transportation programs as federal support has declined. Local financial support must be accompanied by increased decision-making over the expenditure of federal funds. In turn, cities will seek innovative solutions in transportation programs to further stretch local, state and federal dollars.

Federal funds under a new urban/suburban program should be flexible for use on highway or public transportation programs that meet a region's mobility needs. Federal matching ratios should be the same across modes so that planning decisions can be made based on the best option for meeting transportation needs.

We also seek a separate, flexible rural program to meet the needs of small communities. The Administration proposal would pit urban/suburban centers against rural areas within a state. We believe large and small communities have different needs and spending decisions are based on different criteria. Spending and programming decisions should be treated separately and funded at appropriate levels.

Local officials support federal funding for preservation and maintenance of the interstate system. We do not support the National Highway System outlined in the DOT proposal. We are concerned that the NHS envisioned by the Administration would

absorb the bulk of federal transportation funds which may not be the best use of limited transportation resources. The NHS does not consider the best way to address mobility needs in a particular corridor and makes no effort to tie in highway projects with other transportation modes. Further, local governments have played a minor, if any, role at all in the planning of the system.

Local officials strongly oppose the Administration proposal to end general federal funding for public transportation programs and depend on the penny gas tax to fund the entire program. We believe the Administration is going in the wrong direction in reducing federal support for public transportation. Public transportation enhances mobility and meets environmental goals. Compliance with the Clean Air Act and the recent passage of Americans with Disabilities Act will most definitely increase local responsibilities for transit expenditures. While commendable goals, local governments cannot replace shrinking federal dollars and meet new financial responsibilities imposed by the federal government.

We believe federal support for public transportation should be enhanced rather than diminished. Funds should be flexible both ways -- from highway to public transportation programs and from transit to highways. Further, we urge your support for correcting an inequity in the federal tax laws which favor employer-provided

parking benefits over employer-provided public transportation. Currently, parking benefits are not taxable, while mass transit passes provided by employers are capped at $15 per month. Although the Treasury Department is considering an increase to $20 per month, we do not believe that this small increase sends the important message that public transportation is as worthy a tax expenditure as free parking.

Local officials are particularly pleased with the provision in the Administration proposal on billboard reform. We believe that the Highway Beautification Act should be amended to prohibit new billboard construction along federally-aided highways, prohibit tree cutting on public-rights-of-way for the purpose of improved billboard visibility, and restore the rights of cities and states to amortize billboards.

Mr. Chairman and Members of the Subcommittee, we greatly appreciate your leadership on these issues and look forward to working with you to pass a surface transportation measure before the September 30 expiration date. You have always been strong supporters of the needs of local governments, and we urge you to continue that support in your deliberations on this bill.

SUMMARY

VIEWS OF THE NATIONAL PRIVATE TRUCK COUNCIL
ON THE ADMINISTRATION'S PROPOSED
"SURFACE TRANSPORTATION ASSISTANCE ACT OF 1991"

NPTC is the national organization representing companies that operate truck fleets in support of their primary business whether it be manufacturing, distribution, warehousing, retail or service. These are the truck fleets that feed, fuel and provide products and services to America's consumers.

NPTC strongly supports most provisions of the Administration's proposed "Surface Transportation Assistance Act of 1991." We believe this proposed legislation basically responds to surface transportation needs and represents a very promising beginning.

The proposal meets NPTC's three long standing primary objectives for a national transportation policy. These are:

1) an adequate highway system that fosters movement of goods and services to stores, warehouses, factories, distribution centers, and ultimately, consumers;
2) elimination of artificial barriers between states that slow trucking and increase costs of operation;
3) improvements in highway safety.

NPTC does, however, have some concerns with the Administration proposal. First, we oppose combination of urban and rural

programs. Second, we oppose use of toll financing of federal aid highways, except in the most limited circumstances. Third, we oppose provisions relating to congestion pricing.

STATEMENT OF GENE BERGOFFEN
EXECUTIVE VICE PRESIDENT
NATIONAL PRIVATE TRUCK COUNCIL

MR. CHAIRMAN AND MEMBERS OF THE SUBCOMMITTEE:

I am Gene Bergoffen, Executive Vice President of the National Private Truck Council (NPTC). NPTC appreciates this opportunity to appear before the Subcommittee to present our views on the Administration's proposed highway bill.

Private fleets represent a significant, and perhaps the largest segment of the total universe of truck operators. Collectively, they have been estimated to operate as much as two-thirds of the 1.2 million trucks in this country over 26,000 lb. gross vehicle weight.

NPTC fully represents this extremely important group of motor fleet operators. We represent large fleets operated by Fortune 500 companies and the small fleets of local businesses. Our members operate virtually every type of equipment, from tractor-trailer combinations using tank trailers or 48 or 53 foot long trailers, to straight trucks used in local delivery operations by bakeries and dairies.

The physical integrity of our highway system is of critical importance to NPTC member-companies. Our national economy depends on well constructed and well maintained roads and bridges that

45-155 O—91——41

foster and encourage the efficient movement of goods in commerce. The ability of NPTC member-fleets to support their companies' transportation needs directly depends on it also. Retailers, distributors, warehousemen, manufacturers and service companies alike must have good roads to move raw materials and finished products.

NPTC GENERALLY SUPPORTS THE ADMINISTRATION'S PROPOSED "SURFACE TRANSPORTATION ASSISTANCE ACT OF 1991"

NPTC believes the Administration proposal, if adopted, would go a long way to insuring the future integrity of our national highway system. This position is based on the following:

1) A 5-year bill, such as the one proposed by Secretary Skinner, will offer much needed stability and predictability to federal highway funding;

2) The focus on federal investment in "highways of national significance" along with increased overall funding, offers the best opportunity to support the concept of national commercial corridors to facilitate the flow of goods and services.

3) The increases in funding for bridges is critical to maintaining their structural integrity. According to some estimates, 40 per cent of bridges are in need of

repair or replacement. This problem is particularly acute in rural areas where fully one-half of the bridges are believed to be below standard;

4) The efforts contained in the Administration's proposal aimed at congestion relief are essential to the free flow of goods and services.

5) The proposed expansion of the national system will allow for more productive use of equipment.

NPTC SUPPORTS REFORM OF STATE REGULATION OF TRUCKING

NPTC vigorously supports the Department's efforts to improve productivity by reforming the current hodgepodge of inefficient, confusing and often conflicting state regulations governing trucks and truck operations.

As a result of highly restrictive regulation of routes, rates and services in some states, as well as tax systems which lack procedural uniformity, interstate fleet operators are confronted with a blizzard of unnecessary paperwork and other administrative burdens. NPTC members can not make the most efficient use of the highway system unless there is greater uniformity and simplicity in state trucking regulation and free access to the highway transportation system.

For this reason, NPTC supports the Administration proposals to:

1) Eliminate anticompetitive economic regulation of trucking. This regulation offers no safety, environmental or consumer benefit, and its removal will allow our member-companies to make far more productive use of the highway system.

While efficiency in trucking operations was greatly enhanced by the Motor Carrier Act of 1980, much more needs to be done to eliminate artificial economic restrictions. These restrictions result from outmoded state regulation of rates, routes and services. Such regulation is inherently anticompetitive. Private carriers in particular have been prevented from undertaking many efficient operations because of the failure of a number of states to allow, within their own jurisdictions, the opportunities provided under federal law since 1980. For example, approximately 35 states currently prohibit private carriers from engaging in compensated intercorporate hauling in intrastate commerce, and approximately 30 states prevent single source leasing in intrastate commerce. Many states also continue to impose stringent artificial restrictions on the issuance of operating authority.

As an example of the high costs imposed by intrastate regulations of truck operations, it currently costs one NPTC member company $296.00 to ship 36,000 lbs. of cherries from Grandview, Washington to Portland, Oregon. However, an intrastate shipment of the same load, over the same distance, from Grandview to Spokane, costs $597.00.

This is just one example, among many, of the ways in which the continued state regulation of truck rates, routes and services causes nightmares for corporate logistics managers and prevents American industry from making the most productive and efficient use of truck fleets.

2) Require the states to implement uniform procedures for collection of registration fees and fuel taxes. Lack of uniformity in this area is a major stumbling block to efficient highway use.

3) Grant the Secretary authority to require the states to establish "one-stop shopping" whereby an individual or fleet operator could go to a single point of contact within a state for registering a commercial motor vehicle, paying fuel use taxes, and filing for and paying other fees or taxes associated with the purpose, use and

operation of commercial vehicles in interstate commerce.

4) Eliminate state "bingo card" requirements. There is no legitimate purpose for these state programs which require duplicative filing of operating authority, and require cab cards and decals in every tractor.

NPTC is aware that there is significant opposition form some states to federal action to bring about the reforms outlined above. The National Governors Association (NGA), while professing to support uniformity in registration and fuel tax procedures and implementation of one stop shopping, has opposed the congressional "intervention" necessary to bring them about in a timely fashion. It has taken literally decades for most states to voluntarily become parties to the International Registration Plan. With our international competitiveness, and ability to efficiently use our highways at stake, America can not afford to wait any longer for productivity reforms in the areas of economic regulation, fuel taxes and one stop shopping and "bingo cards."

NPTC SUPPORTS INCREASED FUNDING FOR MCSAP

NPTC believes that the Administration's proposal to increase the level of funding for the Motor Carrier Safety Assistance Program (MCSAP), if adopted, will represent a significant contribution to improvements in motor carrier safety.

Safety is the priority concern of our membership. Safety is good business. A safe operation is a productive operation. Goods will be delivered, and services offered, only if these are done in a safe and healthy way. For these reasons, NPTC supports the Administration's proposed increase in funding for the Motor Carrier Safety Assistance Program (MCSAP).

The Motor Carrier Safety Assistance Program has become the centerpiece for federal-state cooperation in truck safety enforcement. MCSAP has caused states to reevaluate, and in many cases, significantly improve, their policies and practices affecting motor carrier safety. MCSAP has dramatically increased inspections by state safety officials, increased compliance with safety requirements, promoted uniformity of federal and state legislation, and enhanced industry's awareness of the importance of safety.

For this reason, NPTC strongly supports increased funding for the MCSAP program. We believe the levels in the Administration's proposed Surface Transportation Assistance Act will move the program along aggressively.

NPTC SUPPORTS FUNDING FOR A COMMERCIAL VEHICLE INFORMATION SYSTEM

The Administration's proposal includes provisions relating to information systems utilized by one or more states pertaining to collection of fees and taxes for vehicle registration, motor fuel

use and related purposes. Funds authorized for the Motor Carrier Safety Assistance Program would be available to assist states to upgrade their existing information systems supporting information exchange and transfer of funds.

As indicated above, NPTC strongly supports the uniformity provisions of the Administration's proposal relating to the International Registration Plan, and the International Fuel Tax Agreement. Further, we have no objection to the use of MCSAP funds for the development and initiation of the information systems needed to support these plans.

We see this funding approach as strengthening MSCAP and not as diluting MCSAP objectives. We believe there is a direct link between effective administration of the MCSAP program and a reliable, and frequently updated, database of motor fleet operators. Although many states have adequate records of carriers who operate within their states, there is no one reliable source of information on interstate operators, and on all intrastate operators. The Safety Audit and Roadside Inspection Programs of MCSAP could logically be related to base state registration information. This will insure a reliable source of information for planning inspections, and for inclusion of critical information in the "Safety Net" system, which currently inventories those fleets with documented safety problems.

While we may question the scope and degree of direct federal and state grant funding anticipated for system reviews and implementation, the basic approach in the Administration's proposed Commercial Vehicle Information System is sound, and the system will clearly facilitate the entire MCSAP effort.

NPTC OPPOSES CONSOLIDATION OF URBAN/RURAL PROGRAMS

The Administration's plan calls for a consolidated Urban and Rural highway program, replacing urban, secondary, primary, safety construction and transit discretionary programs. NPTC opposes this proposal to combine the urban and rural program components. The need for repair and maintenance of rural road systems is as great or greater than that of urban transportation facilities. Fully 80 per cent of America's roads pass through rural areas. According to the Highway Users Federation one-half of rural bridges are below standard. Traffic congestion is now growing faster in outlying and rural areas than in metropolitan communities. Maintaining the physical integrity of rural roads is critical to local and national economies and is necessary to the efficient movement of products to and from farms, forests and mines.

NPTC fears that the highway transportation needs of rural areas will lose out in competition with politically powerful urban interests seeking transit and urban highway dollars from the same pot of money. To assure equity and protect the needs of users of non-urban roads and highways, NPTC urges that distinct metropolitan

and rural programs be maintained and separately funded.

NPTC OPPOSES DOT PROVISIONS RELATING TO TOLL FINANCING

NPTC opposes the provisions in the Administration's proposal relating to the use of toll financing and "congestion pricing."

The Administration proposes to allow tolls to be applied to non-Interstate federal-aid highways if the road is upgraded to a controlled-access facility. It would also permit Federal-Aid funds to be used to create new toll facilities and permit tolls to be collected after a facility has been paid off.

NPTC members generally view tolls on publicly-financed highways as a form of "double taxation" requiring massive administrative effort and cost to implement. However, we are prepared to concede that there may be extremely limited circumstances, where the needs are very great and other financing options are unavailable, where it may be appropriate to utilize technologically-efficient toll financing. In no circumstance, however, should tolls be used on existing highways constructed with public funds; should toll fees be used for non-highway purposes; or, should tolls be used to limit or discourage the use of publicly-funded highways.

NPTC OPPOSES CONGESTION PRICING

With respect to congestion pricing, the Administration's proposal would open the door to local restrictions on highway mobility.

While NPTC members are acutely aware of the problems caused by increasing traffic congestion, we also know that the ability to use the highway system to the fullest extent possible is an important element in economic prosperity, and that full access is necessary to support American industry's transportation logistics needs. Therefore, NPTC opposes the Administration's proposal relating to congestion pricing.

NPTC SUPPORTS STUDY OF COMMERCIAL MOTOR VEHICLE DEFINITION

The Administration's proposal continues current definitions of commercial motor vehicles. Under this definition, a commercial motor vehicle includes all vehicles with a gross vehicle weight rating of 10,001 lbs or more.

In late 1989, the Federal Highway Administration (FHWA) issued an advance notice of proposed rulemaking, asking whether the 10,001 lb. gross vehicle weight rating used to define commercial motor vehicles should be changed for MCSAP purposes. Many believe it should, including some members of NPTC. FHWA received a number of comments urging the 10,001 lb. threshold be raised to 26,001 lbs.

Although we did not recommend a change in the threshold definition, NPTC did support the right of individual states to exercise discretion over their enforcement of MCSAP safety laws on vehicles weighing less then 26,000 lbs., without jeopardizing their eligibility to receive MCSAP monies. A number of NPTC members

operate medium and light duty vehicles. These companies, principally those involved in the delivery and service industries have excellent safety records, and believe they are impeded by a number of unnecessary requirements relating to these smaller vehicles. For that reason, NPTC urged FHWA to initiate a study of medium vehicle operations to determine whether, and, or to what extent, the gross vehicle weight rating threshold could be raised to exempt medium vehicles from Motor Carrier Safety Assistant Act requirements, without undermining safety. We continue in our belief for the need for such a study, and believe in the long run, ways can be found to increase the productivity of medium weight vehicles, without undermining the purposes and impact of the Motor Carrier Safety Assistance Program.

CONCLUSION

NPTC supports most provisions of the Administration's proposed Surface Transportation Assistance Act of 1991. We believe it meets NPTC 's long standing objectives for an adequate, well maintained highway system, reform of state trucking regulations, and improvements in motor carrier safety. We are opposed, however, to the proposal to combine the urban and rural programs and to the provisions relating to toll financing and congestion pricing. NPTC looks forward to working with the Subcommittee and Congress to insure timely enactment of comprehensive highway legislation.

UNITED STATES HOUSE OF REPRESENTATIVES
PUBLIC WORKS AND TRANSPORTATION COMMITTEE
SUBCOMMITTEE ON SURFACE TRANSPORTATION

TESTIMONY OF

THE HONORABLE KEITH BISSELL
TENNESSEE PUBLIC SERVICE COMMISSION

ON BEHALF OF THE

NATIONAL ASSOCIATION OF REGULATORY UTILITY COMMISSIONERS
1102 INTERSTATE COMMERCE COMMISSION BUILDING
TWELFTH STREET AND CONSTITUTION AVENUE, N.W.

ON

# H.R. 1351, THE SURFACE TRANSPORTATION ASSISTANCE ACT OF 1991

APRIL 18, 1991

Mr. Chairman and Members of the Subcommittee:

Good morning. My name is Keith Bissell and I am a commissioner of the Tennessee Public Service Commission and a member of the Executive Committee of the National Association of Regulatory Utility Commissioners, commonly known as the NARUC, on whose behalf I appear here today. I am accompanied by Paul Rodgers, NARUC Administrative Director and General Counsel, Charles D. Gray, NARUC Assistant General Counsel, and Kathryn Falk, NARUC Assistant Director of Congressional Relations.

The NARUC is a quasi-governmental nonprofit organization founded in 1889. Within its membership are the governmental bodies of the fifty States engaged in the economic and safety regulation of carriers and utilities. The mission of the NARUC is to serve the public interest by seeking to improve the quality and effectiveness of public regulation in America. More specifically, the NARUC contains the State officials charged with the duty of regulating the intrastate rates and services of motor carriers of goods and passengers operating within their respective jurisdictions. These officials have the obligation under State law to assure the establishment and maintenance of such intrastate motor carrier services as may be required by the public convenience and necessity, and to ensure that such services are provided safely at rates and conditions which are just, reasonable, and nondiscriminatory for all consumers.

The NARUC is also the "national organization of the State commissions" described in 49 U.S.C. sec. 11506(c)(1). Under this

statute, which the legislation proposed by the Administration would effectively repeal, the NARUC certifies to the Interstate Commerce Commission (ICC) uniform standards and procedures by which the States implement a registration process for interstate motor carriers. Under these standards, which are codified at 49 C.F.R. Part 1023, 39 States have implemented a uniform process whereby interstate carriers provide States with evidence that they are operating in a lawful, financially responsible manner.

The NARUC and its members greatly appreciate the opportunity you have given us to present our views on H.R. 1351, The Surface Transportation Assistance Act of 1991, proposed by the Bush Administration, and H.R. 1064, The Safe and Competitive Trucking Act of 1991. It is readily apparent that if enacted, these pieces of legislation would have a substantial, direct, and damaging effect on State regulation of the intrastate motor carrier industry and enforcement of lawful interstate operations. Indeed, the provisions of this legislation leave little doubt as to its purpose: to abolish State economic regulation of intrastate motor carriers regardless of the policy decisions made by the respective State legislatures, to limit the ability of the States to impose fees and taxes upon the carriers who profit through the use of the highways and other facilities that these States and their respective citizens provide, and to undermine the ability of the States to ensure that carriers operate safely, lawfully, and in a financially responsible manner. In short, this legislation constitutes a frontal assault on the States and their legislative,

administrative, and law enforcement obligations to their citizens.

The irony of all this is that in its legislation, the Bush Administration has created a blueprint for the Federal government to reduce its role in the funding and rehabilitation of the Nation's transportation infrastructure in favor of greater demands on State and local government. The logic behind legislation such as H.R. 1351 appears to be that while the Federal government reduces its role in paying for a national transportation system, that same Federal government will limit, preempt and dictate State regulatory, tax, and licensing policies and procedures. With all due respect, this kind of reasoning appears to turn the old expression -- He who pays the piper, calls the tune -- on its head.

It has been the NARUC's long and consistently held view that decisions affecting citizens where they live, work, and travel are best made by the level of government closest to them. And, of course, it is not just the view of the NARUC: it is the framework of government embodied in the Constitution. Accordingly, regardless of the wishes of some for "greater uniformity" and the demands of others for an end to "burdensome regulation", the operation of interstate carriers has undeniably local impact which, under our system of constitutional Federalism, State and local governments have every right to consider and address through the reasoned exercise of their inherent police powers.

The legislation you are considering here today would change all of that. States would effectively lose the power to regulate economically the operations of carriers profiting from the

privilege of using State and local highways to transport goods within the borders of a State. States would lose the ability to require that interstate carriers also enjoying the use of State and local facilities prove that they are operating lawfully, are properly insured, and are subject to the legal process of the State's judicial system. States would find their authority to collect taxes and fees limited and subject to the continuing threat of Federal court injunction.

These are all important issues. The first two -- intrastate economic regulation and removal of State enforcement of interstate carrier operations -- directly affect the NARUC, since in most States, these functions are performed by the independent regulatory commissions who comprise the Association's membership. Therefore, I intend to devote the rest of my remarks to these two elements of the legislation.

## PREEMPTION OF INTRASTATE ECONOMIC REGULATION

Section 303 of the Administration's bill and section 3(a) of H.R. 1064 would amend Chapter 5 of Title 23, U.S. Code to exempt all interstate carriers from State economic regulation of their intrastate operations.[1] While this appears to leave some room for

---

[1] Specifically, section 303 would add a new section 508(a) to Chapter 5, Title 23 which would preempt State economic regulation of "any motor carrier providing transportation of passengers or property in interstate commerce." The legislation does not deregulate interstate truck operations, however. Interstate carriers would remain subject to the regulatory authority of the Interstate Commerce Commission, whose jurisdiction would be expanded to cover the intrastate operations of "interstate" carriers, including carriers who in practice only provide

State regulation in that wholly intrastate carriers are not covered by the bills, as a practical matter, the enactment of these provisions would inevitably result in the end of State economic regulation. The reason is obvious: given the ease with which any carrier can become an "interstate carrier", this legislation would provide carriers the opportunity to simply opt out of State regulation. And given that carriers who did not opt out would be forced to compete for intrastate traffic with carriers who would be free from any State economic regulation, it should be obvious that carriers now quite content to provide solely intrastate service would have no choice but to apply to the Interstate Commerce Commission for interstate operating authority in order to exempt themselves from State regulation.[2]

Therefore, we must make no mistake concerning the purpose and effect of this section. The legislation will reach beyond the operations of carriers who now operate in interstate commerce. It will result in the conversion of all intrastate carriers to interstate status, whether or not such carriers ever intend to provide for-hire service in interstate commerce.[3] And, of

---

intrastate service.

[2] H.R. 1351 and H.R. 1064 only remove State regulation of intrastate commerce. Interstate carriage would remain subject to ICC regulation under the Interstate Commerce Act, as amended.

[3] Of course, carriers now content to provide intrastate service who become "interstate" in order to opt out of State regulation will inevitably be forced to compete for interstate traffic. Perhaps such enhanced interstate competition would be beneficial. Given the increased financial distress of the interstate motor carrier industry, however, the effect of more carriers chasing the same amount of interstate traffic may

course, this will occur without the approval or involvement of State legislatures, regulatory commissions, or intrastate shippers and carriers.

With great respect, the NARUC must strongly object to this plan to move regulatory policymaking from the States to the Federal government. Simply put, these decisions -- whether to regulate, deregulate, or reform regulation of intrastate motor carriage -- must stay where they belong, in the hands of State legislatures and regulatory commissions. It is simply false to claim that the States cannot be trusted to develop and implement regulatory policies necessary to provide safe, adequate, and efficient intrastate motor carrier service. In the last ten years, some States have chosen to entirely remove economic regulation of intrastate carrier operations.[4] Other States have chosen to reform their regulatory programs without completely deregulating.[5] A third group of States has retained the basic shape of their preexisting programs, but many have found that programs for the economic regulation of carriers can provide important safety-related benefits.[6] My point is that the majority of the States have reviewed their regulatory policies and laws in the last decade and made a variety of decisions, based on geographic, demographic,

---

exacerbate the industry's current financial plight.

[4] The States which have deregulated since 1980 include Arizona, Florida, Maine, and Vermont.

[5] Notably, Georgia, Texas, California, and Illinois.

[6] Tennessee is such a State.

economic, and yes, political factors, to tailor their regulatory programs to the interests of their shippers and passengers, intrastate carriers, and the public at large.

The proponents of preemption/deregulation often make the point that States who restrict intrastate motor carrier operations or establish excessive rate levels only hurt themselves because shippers locate their plants, warehouses and distribution facilities outside State borders. The point appears to be that this loss of instate economic activity far exceeds any benefit that restrictive regulatory policies may provide. If this is true, it is only a matter of time before State legislators and regulators reform the regulatory process on their own to avert such economic losses. In effect, any penalties a State pays for its regulatory programs will result in corrective action by State policymakers.

Moreover, we would submit that there is substantial disagreement that preemption of State trucking regulation would result in the magnitude of cost savings often cited by the proponents of preemption/deregulation. Last year, the United States Department of Transportation issued a report entitled The Impact of State Economic Regulation of Motor Carriage on Intrastate and Interstate Commerce by W. Bruce Allen et al. (May 1990) which purported to show that intrastate deregulation would "save" $2.863 billion for the U.S. economy. Attached to this statement is an analysis of this report conducted by William Pollard, an economist at our affiliated research institute, the National Regulatory Research Institute (NRRI), which concludes that these "savings" are

overstated by a factor of twenty when more traditional economic methodologies are applied to the data collected in the DOT report. In addition, the NRRI analysis notes that in twenty States, conversion of intrastate LTL rates to comparable discounted interstate rates would lead to rate increases which would offset any "savings" in intrastate markets in other States. My point is that inflated claims of substantial cost reductions through preemption of intrastate motor carriage must be viewed very skeptically.

Why then is it more appropriate for the States to develop and implement a variety of regulatory policies, rather than have the Federal government impose a deregulated uniformity nationwide? Different State commissions offer a number of reasons: First, traffic patterns -- the movement of goods and passengers between a series of intrastate points -- vary greatly from State to State and market to market. Between some city pairs, traffic is heavy and competitive service is ample. In other markets, there is simply not enough traffic to support large numbers of carriers. Indeed, some States have determined that some low volume markets will have difficulty attracting much common carrier freight service at all without the demands and incentives that regulation provides intrastate carriers.

Second, many States believe that there is a direct link between economic regulation and carrier safety. The linkage is this: carriers who have some regulatory protection from deep rate discounting on high volume traffic will have greater financial

ability to provide proper maintenance for their vehicles, training and pay for their drivers, and insurance for the protection of the traveling public. I fully recognize that many respected observers of the transportation industry, including some State regulatory commissioners, deny that any such linkage exists. In their view, economic deregulation does not end the need for vigorous enforcement of all safety rules and regulations, a point with which I fully agree. However, in the view of many, including many members of Congress, the deregulatory policies implemented in the last decade have weakened air and motor carriers financially in ways that have directly affected safety. I do not intend to resolve this debate here tod. . My point is more modest. By enacting this legislation, the Congress would in effect be saying that this debate doesn't matter, that States who firmly believe that a deregulated motor carrier industry is a less safe industry should have no say in the matter, and that if safety deteriorates in intrastate carriage, it is somebody else's fault. Respectfully, we submit that until there is a consensus that safety will not be affected by these bills, Congress should leave the resolution of this issue where it belongs -- with State legislatures and regulators.

REPEAL OF STATE ENFORCEMENT OF LAWFUL INTERSTATE CARRIAGE

Section 305 of the Administration's bill and section 3(b) of H.R. 1064 would revise 49 U.S.C. sec. 11506 to prohibit States from

enforcing the lawfulness of interstate carrier operations. This means that the States would no longer be permitted to require interstate common and contract carriers to provide evidence that they possess ICC operating authority. The legislation also would prohibit State requirements that carriers be adequately insured, and that they have an agent for the service of legal process within each State in which they operate. In so doing, the bills would repeal a program begun twenty-five years ago to enlist the States in ensuring that the carriers who use their highways are lawful. Even if insurance and agent process registration would not be abolished, the bills would cut off the States' sources of revenue necessary to perform these functions.

If Congress removes State inspection and enforcement authority through the enactment of these bills, there will be no meaningful enforcement at all. In this era of continuing Federal budget crises, there are no Federal motor carrier inspectors equipped to provide nationwide coverage of interstate carrier operations. As it now stands, it has become Federal policy to rely on the States to ensure that interstate carriers are operating safely, lawfully, and with adequate insurance. The enactment of these bills could place many aspects of motor carrier enforcement efforts entirely off limits to the States. Let me list the areas which a State policeman or other patrol officer approaching an "interstate carrier" at a weigh station or roadside inspection could well have no jurisdiction to enforce if this bill passes. Since this legislation would convert virtually all for-hire carriers to

"interstate", these limitations would of course apply to formerly intrastate carriers who would be able to opt out of not only State intrastate regulation but also State enforcement of interstate rules and standards.

> First, the officer would be precluded from determining if the carrier had adequate insurance as required by law.
>
> Second, the officer would be precluded from asking for proof of the carrier's ICC operating authority.
>
> Third, the officer would be unable to determine if the carrier had, as the law requires, subjected itself to the jurisdiction of the State's legal process through the designation of an in-State agent.

Despite claims to the contrary, it appears clear that the bills would remove State enforcement jurisdiction over these three elements, which are specified in section 11506. Given the breadth of these sections of the two bills, the legislation could also be read to preclude the officer from enforcing the lawfulness of any other "interstate transportation activity" covered by "a regulation issued by the [ICC]." Such ICC regulations cover many areas, placing State enforcement of at least the following matters at risk:

1. Examination of bills of lading. 49 C.F.R. Part 1051.
2. Lawful operations within commercial zones [49 C.F.R. Part 1048] and terminal areas [49 C.F.R. Part 1049].
3. Presence of external identification on vehicles. 49 C.F.R. Part 1058.[7]

---

[7] It is ironic that the ICC has a proceeding now pending to abolish its external identification rules on the grounds that such requirements are redundant. The ICC finds these requirements unnecessary because the States require interstate carriers to carry internal identification in the form of cab cards. H.R. 4261 would of course prohibit the States from implementing such a requirement.

4. Enforcement of carrier fitness, including safety fitness. 49 C.F.R. Part 1067.

The sweep of this legislation is startling. Reading its two preemptive provisions together, these bills would implement a policy which converts intrastate carriers to interstate operators, and then removes all interstate carrier operations, including operations between intrastate points, from the reach of State safety and insurance enforcement. Given the fact that there will be no new Federal inspectors or enforcement officers to perform these functions, this legislation is a formula for unleashing a wave of uninsured, unsafe carriers on our Nation's highways.

Given increasing public concern with press reports of unsafe and uninsured carrier operations, including the operation of hazardous materials transporters who would also be freed from State jurisdiction by these bills, it seems to us a particularly inappropriate time to even consider, let alone pass, legislation which expands the number of such interstate carriers while preempting State enforcement activities. Yet, that would be the result of the enactment of these bills.

Earlier, I mentioned that the Administration's highway bill would shift responsibility for rebuilding the Nation's transportation infrastructure from the Federal government to States and localities. The policy also recommends increased reliance on user fees as a replacement for general revenues, which in the current anti-tax environment, are increasingly scarce. The Subcommittee should be aware that the proposed amendments to

section 11506 contained in this legislation would remove an important funding source for State motor carrier enforcement which is quite consistent with the user fee approach. Currently, the States participating in this registration program collect a modest annual registration fee for each interstate vehicle that crosses their respective borders. These funds are then used by the States to supplement other funds used to employ safety inspectors, weigh vehicles, investigate accidents, and maintain the important insurance files. The bills would, of course, prohibit the collection of these user fees, leaving the States with less money to enforce the law, even if they still had jurisdiction to do so.

Since 1965 when Public Law 89-170 [codified at 49 U.S.C. sec. 11506] was enacted, the NARUC has been directly involved with the implementation, operation and revision of the registration program established by that statute. As I noted in the opening of my statement, the NARUC acts as the agent of the States in certifying to the ICC the standards and procedures under which the program operates. Throughout the history of the program, we have been ready, willing and indeed eager to work with carriers and their representatives to ensure that this program operates efficiently. We recognize that carriers do complain about the occasional administrative problems that arise under the program. On behalf of the States, the NARUC has always sought to be responsive to legitimate carrier complaints. Accordingly, the NARUC proposes to amend section 11506 to strengthen State safety enforcement, improve State accountability of funds raised by the program, and reduce

administrative burdens on the carriers through the implementation of a base-State registration system.

Our proposals are contained in the amendments to section 11506 attached to this written statement. Specifically, we propose amendments which would (1) ensure that all fees collected by the States under the program be used for motor carrier enforcement purposes, including safety enforcement; (2) authorize the Interstate Commerce Commission or its designee to audit the use of these fees by individual States; and (3) convert the current State-by-State registration program to a base-State system by 1994.

In our view, each of these three provisions will improve the program from the standpoint of carriers. First, earmarking revenues for regulatory and safety purposes, subject to ICC audit, will directly respond to public concern over motor carrier safety, which according to reports recently issued by the Federal Highway Administration, has not improved in recent years despite substantial Federal and State spending on safety enforcement, including grants to the States under the Motor Carrier Safety Assistant Program (MCSAP). Our amendments would employ user fees to fund intensified State safety enforcement and reduce the pressure on the MCSAP program.

Second, the establishment of a base-State registration program, which would allow each carrier to register once in its own jurisdiction, will greatly reduce paperwork burdens on the trucking industry. Our goal is to develop and implement a base-State system by 1994 which preserves the enforcement benefits of the current

program, ensures full State revenue recovery and eliminates the requirement that each motor carrier register in each State in which it operates. We are fully confident that the adoption of our base-State proposal will provide important public benefits at reduced costs to the industry.

We firmly believe that as a matter of public policy, it is far better for the States to develop solutions -- either individually or through organizations such as the NARUC -- than for the Congress to enact the sort of excessively preemptive legislation that is now before this Subcommittee. Frankly, we do not understand that even the most committed advocates of deregulation support an increase in the operations of unsafe and uninsured interstate carriers. Yet, that is precisely the result you will get if you enact these bills.

## CONCLUSION

Mr. Chairman and members of the Subcommittee, the NARUC greatly appreciates the opportunity you have given us to address these important issues. As you examine this legislation, we urge you to be pragmatic and realistic. There is simply no problem concerning State regulation of motor carrier operations that these bills would fix that cannot be addressed through actions by the States acting individually and through their participation in the activities of the NARUC. However, there are many problems the bills would create that would lead to serious deterioration in safe and financially responsible carrier operations.

Thank you for your time and attention. I and my colleagues would be happy to answer any questions you have.

MEMORANDUM

TO: KATHERINE FALK

FROM: TOM MYERS

DATE: APRIL 2, 1991

SUBJECT: U.S. DOT STUDY ON THE COSTS OF STATE TRUCKING REGULATION

You may have already received a copy of the attached material, but it is the comments of the Ohio State University's Regulatory Research Institute regarding the U.S.DOT study of state economic regulation of trucking. I think the OSU economists do a good job of pointing out the questionable validity of the U.S.DOT document.

From Illinois' standpoint, the DOT report completely mischaracterizes the nature of trucking regulation in this state, and its conclusions are based on totally incorrect assumptions about the extant of rate regulation here. The report calls Illinois a "strictly regulated" state, when in reality the opposite is true. We do not regulate rate levels, discounting is allowed, and we have had an extremely liberal entry policy for twenty years or more.

The report claims that Illinois' regulated intrastate rates are 25% to 35% higher than interstate rates, certainly a strange conclusion insofar as Illinois has not regulated rate levels for so many years. If a credible study revealed Illinois intrastate rates actually were 25% to 35% higher than interstate rates, it would lead inevitably to the conclusion that we should begin to more strictly regulate unreasonably high intrastate rates, not deregulate totally! In addition to the fact that the rate level here is unregulated, we have perhaps the largest terminal area rate exempt zone in the country in which more than 50% of all for-hire traffic moves. Carriers don't even file their rates with us, much less seek approval, for traffic in these zones.

Our assumption has always been that unregulated Illinois intrastate rates have been at parity with unregulated interstate rates. We have been concerned about this from the standpoint that the interstate rate level is hardly a standard of worthy of emulation. It has become a concoction of numbered account codes encouraging discriminatory practices, set at such depressed levels as to cause countless bankruptcies. Nevertheless, Illinois' central geographic position has compelled this agency

527 East Capitol Avenue, P.O. Box 19280, Springfield, Illinois 62794-9280
Telephone (217) 785-4869 Fax (217) 782-9244

to allow intrastate carriers to compete with interstate rates or lose traffic to interstate carriers with terminals in neighboring states who offer interstate rates.

We have begun a study of comparative rates, using actual rate data rather than theoreticals, to demonstrate the "parity assumption". While it is too early to reach any conclusions, some initial data suggests that Illinois class rates are much lower than we first thought, and may be even lower than- not at parity with- discounted interstate rates. I will convey the results of our study to you when it is completed in a few weeks.

The net result, in my view, is that the U.S.DOT study of state regulation does not accurately assess state programs, and certainly should not be the basis for a change in national transportation policy, especially where state preemption is concerned.

The Honorable Thomas P. Harwood, Jr.
Commissioner
Virginia State Corporation Commission
Jefferson Building
P. O. Box 1197
Richmond, Virginia 23209

Dear Tommy:

Your letter of February 5, 1991 asked if we could "take a look at" the methodologies used in the May 1990 DOT Final Report on motor carriage. In my reply of February 19th I said we could make some critique and commentary for you, but suggested that you might want to engage others as well who are closer to it. Enclosed is our assessment--a memorandum from Bill Pollard, one of our senior staff economists, to me.

In addition to Bill Pollard's analysis there are a number of scattered observations that come to mind for me in scanning the report.

- chapter 2 in reviewing the history of motor carrier regulation, falls into the trap of comparing imperfect commission regulation with idealized perfectly functioning markets. Of course, the only fair comparisons are either imperfect regulation with imperfect markets or perfect regulation with perfect markets.

- market solutions are presumed to involve few oversight costs, though this surely hasn't been true in banking, securities, natural gas, and telecommunications deregulation.

- while necessary to the analysis, the problem of isolating "different regulatory schemes" as the single variable on which the outcome is dependent is a formidable one. Simplification may come at the price of necessary accuracy.

- the consistent theme is that "the 42 states that still maintain some form of . . . economic regulation" are misguided at best and that at least 20 of these are injuring their shipping public and those of the other states with no redeeming features to the stricter regulation. Such a conclusion is somewhat counterintuitive and in all events denies the "states as laboratories" theory of dual regulation.

- the finding that nearly half of the 37 states analyzed (17) did not have higher interstate rates than intrastate rates would seem to be more notable than the study suggests. And the explanation that "This may be because the latter (17) states practice liberal regulation or use the regulatory process to hold rates down (emphasis added)" would seem to acknowledge that both a market solution and a regulatory one could reach the same result.

- some acknowledgement should be given to "the other side" of the trucking industry, and that is the undue effect that monopsony or near-monopsony shippers can have on freight rates and ultimately trucking company survival. One gathers that in the case of truck load lots anyway (not the subject of this study) much traffic moves under deeply discounted rates that often might fail the traditional test of not being unduly discriminatory.

- the argument that business will gravitate toward states that have deregulated trucking is probably generally overstated in the same way that "favorable tax treatment" is supposed to be determinative in industrial location decisions. Freight rates would have to be a major portion of total operating costs; they might occasionally be a factor at the margin, but in any event would seem to only apply in this context if most of the traffic of the firm is intrastate in character.

- the "public interest theory" of regulation is dismissed, and the (largely discredited) "capture theory" is assumed to be true and (strangely) incorporated into "a composite theory of regulation."

- contestability theory seems to be believed in by the authors, though a not insignificant part of the economics profession doesn't.

- there seems to be the implication that antitrust can be relied upon as a workable alternative to current regulation.

- if the analysis is correct in estimating a $611 million burden that the non-deregulated states are annually placing on the deregulated ones, two comments are (1) an average of $20 million per state is a rather small number, and (2) that "burden on interstate commerce," as it is phrased in the last line of the Executive Summary, would probably not be enough to allow federal preemptive regulation of this intrastate commerce under the 1923 decision in North Carolina vs. United States treating unjustly discriminatory inequalities. While federal use of the interstate commerce clause has few limits, one of them is, I believe, that the mere existence of inequality is not necessarily proof of an undue burden which would allow federal supremacy to be invoked. And, of course, if the Pollard analysis is closer to the welfare losses experienced, the case for federal preemption (at least on these grounds) would be still less persuasive.

We hope this adds to discussion of the matter. As you know, the usual disclaimer applies--these are merely two sets of comments by two economists here.

Best regards,

Douglas N. Jones
Director and Professor
of Regulatory Economics

To: Douglas N. Jones, Director

From: William Pollard, Senior Research Specialist

Subject: Request from Judge Thomas Harwood, Virginia State Corporation Commission

As requested, I have reviewed the research methods used in The Impact of State Economic Regulation of Motor Carriage on Intrastate and Interstate Commerce by W. Bruce Allen et al. The analysis in the report combines a Posner welfare model and a multiregional input-output model to estimate the Posner welfare gains resulting from the instantaneous adjustment of the economy to the simultaneous deregulation of less than truck load haul (LTL) prices in 40 states.[1] The authors consistently assume throughout the report that the effect of regulation on LTL rates is to increase the price for this service. Deregulation is modelled as a decrease in LTL rates in twenty states to the discounted interstate level.[2] In states with rates lower than the interstate level, deregulation is assumed to leave rates unchanged at their regulated levels. I have two main observations on the general methodology to share with you.

1. Much of the analysis and quantitative results depend heavily on the Posner welfare model and its assumed and implied behavioral assumptions. The Posner welfare model is not a traditional economic welfare analysis and tends to overstate the changes in economic welfare by a substantial amount. Reworking the example found in chapter 4, the welfare loss the authors estimate is overstated by a

[1] To account for the fifty states and the District of Columbia, eight states have deregulated motor carriers and two states and the District of Columbia are not included in the study.

[2] Intrastate discounts, where applicable, were deducted from the LTL rates for comparison. A national average 40 percent discount was applied to published interstate rates.

factor of twenty when compared with traditional economic welfare analysis.

2. The multiregional input-output model is a static model rather than a dynamic model with lagged adjustment to equilibrium. Couple this with the assumption that deregulation occurs simultaneously in forty states, and the annual welfare loss the authors estimate would be larger than that estimated by a dynamic model which would distribute the deregulation by the states and the economy's subsequent adjustment over a period of years.

In the remainder of this review, I briefly explain my reasoning behind these two observations and offer some summary analysis of the authors' findings on the relationships between intrastate rates and interstate rates.

## The Posner Welfare Model

The analysis in the report relies heavily on the behavioral assumptions on the Posner welfare model. This welfare model differs from traditional economic welfare models in that it assumes excess profits are converted to costs through nonprice competition. Consequently, in addition to counting traditional measures of economic welfare, the authors add the income transfer between producers and consumers as a social cost of intrastate motor carriage regulation. Welfare economists would find this inclusion peculiar. Furthermore, the assumptions of the Posner welfare model lead the authors to ignore in their analysis the twenty states that had prices lower (seventeen states discounted and three states undiscounted) than the 40 percent discounted interstate level. The hypothesis that regulation is holding down rates in these states is never tested. If this hypothesis is true, deregulation is presumed to increase rates in these states and offset the welfare gains of lower prices in some other states. Instead, the authors assume that deregulation in these states would not have any effect on the rates in the states with lower LTL rates. Stated succinctly, if the discounted interstate rate is a performance measure in the twenty states with higher rates, why is it not a performance measure for states with lower rates?

In order to get an idea of the extent to which the Posner welfare model overstates the traditional measure of economic welfare, I reworked the example the authors employ in chapter 4 of the report. They use a two-region, two-sector model to demonstrate the linkage between the Posner welfare model and the multiregional input-output model. They estimated a total social cost of $351.34 from a 20 percent decline in the price of one good in sector 1. Reworking this same example, I found the welfare

loss to be only 5.05 percent of the Posner welfare measure ($17.76 vs. $351.34) using a traditional welfare model. The supporting calculations are shown in Table 1.

Table 1
Recalculation of Example
in Chapter 4

| Good Area | New Quantity | Old Quantity | Change in Quantity | Change in Price | Traditional Welfare Measure |
|---|---|---|---|---|---|
| 11 | 30 | 24 | 6 | $3 | $9 |
| 12 | 45 | 41.16 | 3.84 | $1.92 | $3.69 |
| 21 | 55 | 54.1 | .9 | $.45 | $.20 |
| 22 | 85 | 81.6 | 4.94 | $1.97 | $4.87 |
| Total | | | | | $17.76 |

Source: Author's Calculations and Chapter 4 pp. 179-184.

The $17.76 welfare loss calculated in Table 1 is 5.05 percent of the $351.34 the authors of the report calculate using the Posner model. The extent to which this is representative of the ratio of the traditional welfare measure to the Posner welfare measure of the $2.363 billion aggregate national savings that the authors estimate is not apparent. I would guess it is close. If one assumes it is representative, the traditional analysis would predict a $144.6 million savings. However, I cannot predict how this might be spread among the states.

As noted, twenty states had LTL rates higher than the discounted interstate LTL rate, while twenty states had rates lower than the discounted LTL rate. I examined whether there was any relationship between discounting and the findings that rates were higher or lower than the discounted interstate rate. Furthermore, I examined whether there was any correlation between discounts and the regulatory ratings presented in the report. To answer these questions I duplicated two pieces of information in the report and compiled information on whether intrastate LTL rates were found to be higher or lower than the discounted interstate rate. This information is presented in Table 2.

The first column of Table 2 has the state's abbreviation in alphabetical order. The second column reproduces information of the regulatory rating found in column 2 of Table 1-4.[3] The third column of Table 2 duplicates column 2 of Table 5-21[4] which indicates whether a state has LTL rates and, if not, whether discounts apply to LTL rates and the amount of the discount. The fourth column of this report summarizes the estimated relationship between intrastate rates and discounted interstate rates. If a state has deregulated rates, it is assumed that deregulation in the other forty states does not change rates in the deregulated states (denoted by "no change"). The "yes" entries indicate that intrastate LTL rates were higher than the corresponding discounted interstate LTL rates while "no" entries indicate the intrastate rate was lower than its interstate counterpart. The entries "w/o discount" indicate the intrastate rates were higher than the discounted interstate rates only when the discounts were not used. This table discloses some interesting findings.

As noted, the first question I asked was whether discounting had a significant impact on whether intrastate rates were found to be higher than the discounted interstate rate. I believe the answer to this question is yes. Of the twenty states with rates higher than the discounted interstate rate, eleven had no provision for discounting, while the other nine had discounts less than the 40 percent discount applied to interstate LTL rates. Of the twenty states with LTL rates lower than the discounted interstate rate, three states had lower rates whether or not the discount was considered or not, while seventeen states had LTL rates lower than discounted interstate rates only when the discount was considered. Of these seventeen states, four states had discounts larger than 40 percent, and twelve had discounts less than the 40 percent interstate discount. (The remaining state, Nebraska, had a contradiction in the information contained in the report. Referring to Table 2, column 3 indicates that discounts are not allowed, while column 4 indicates the intrastate LTL rates were lower when the discount was applied. The report did not offer any other information to reconcile this apparent contradiction.) In summarizing this information, 55 percent of the states with rates higher than the

interstate rate did not allow discounting, while 45 percent had discounts less than the interstate discount of 40 percent. Of the seventeen states allowing discounting and having lower LTL rates when the discount is applied, 71 percent had a discount less than the interstate discount, while 23 percent had a larger discount. Recall also that three states had rates lower than the interstate LTL rate outright and one state did not allow discounting while the other two had discounts less than 40 percent. Consequently, it is not clear that level of the discount had a significant effect on the price relationships between intrastate LTL rates and discounted interstate LTL rates. It is, however, clear that the existence of discounts did have an effect on the relationship.

The second question I asked was whether there is a correlation between the discounting schemes and the regulatory rating. I found some correlation here. Of the twenty states with higher LTL rates, 65 percent were rated as "strict," 20 percent as "limited," and 15 percent as "very little." When the existence of discounting schemes was considered, the strict rating skews toward states not allowing discounting. Of the eleven states with higher rates that did not allow discounts, eight states or 73 percent were rated as strict. The remaining nine states with higher rates and having discounts less than the 40 percent interstate discount, five states were rated as strict, another five states rated as limited, and one state as very little. Apparently one of the criteria for the rating was the existence of discounting schemes.

When the states with intrastate LTL rates lower than the discounted interstate rates were examined, no particular correlation could be found as the ratings were evenly spread across the strata.

In conclusion, the Posner welfare model has a significant impact on the path of the analysis taken by the authors and has a profound and substantive impact on the quantitative results. If the assumptions of the Posner welfare model can not be shown to hold in intrastate LTL markets, then a welfare gain of about $150 million is more likely than the $2.863 billion reported by the authors. Furthermore, the Posner welfare model leads to an asymmetric treatment of states with rates lower than the discounted interstate rate. If the public interest theory of regulation has any validity, one could hypothesize that regulation is holding rates below the discounted interstate rate. If this is the case, the $150 million welfare gain I estimated would be offset by welfare losses in these other states. The simple fact that there are twenty states with LTL rates lower than the discounted interstate LTL rates and twenty state with rates above the discounted interstate rate is information that merits further investigation. As my brief

analysis demonstrates, the existence of discounting schemes is important, while the level of the discount has little effect.

**Static versus Dynamic Models**

The model in the report is a static model. This means that all effects of deregulation and deregulation are assumed to occur instantaneously and nothing else in the economy changes. Dynamic models seek to incorporate more information on the adjustment to a new equilibrium position by including variables or modelling change in the process in such a way that the predictive power of the estimate is improved. In choosing a static model rather than a dynamic model, it is important to recognize the limitations of this analysis and appropriately qualify the results. In the case of this report, the assumption that deregulation occurs instantaneously in forty states and the economy instantaneously adjusts to a new equilibrium means that both the $2.863 billion annual figure the authors calculate and the $150 million I computed probably overstate the annual effect of regulation.[5]

In summary, the model used by the authors has limitations not recognized explicitly in the report. The assumptions that all forty states deregulated simultaneously and that the economy instantaneously adjusts are obviously unrealistic. I would note however, that the prices the authors are comparing seem to be "apples to apples," and the static multiregional input-output model is a respectable research tool.

---

[5] Recall that I pointed out that the asymmetric treatment of states with lower rates makes even the $150 million somewhat further suspect.

**Resolution on the Amendment of the Uniform Motor Carrier Standards**

**WHEREAS**, The Congress in 1965 enacted Public Law 89-170 (49 U.S.C., Sec. 11506) authorizing State agencies to require interstate motor carriers to register their operations under the Uniform Motor Carrier Standards developed by the National Association of Regulatory Utility Commissioners (NARUC) and promulgated by the Interstate Commerce Commission (ICC) [49 C.F.R., Part 1023]; and

**WHEREAS**, The P.L. 89-170 Program permits State agencies to require registration of an interstate carrier's operating authority issued by the ICC, its current insurance status and its designated local agent for the service of legal process; and

**WHEREAS**, The States are permitted to collect a one-time registration fee of up to $25 per carrier, and an annual fee of up to $10 per vehicle for registration renewal -- a form of user fee consistent with recent legislation enacted by the Congress and supported by the Administration to fund Federal regulatory programs; and

**WHEREAS**, Such fees generate over $55 million in annual revenues nationwide for the thirty-nine States now participating in this Program, which use these funds to enforce ICC operating authority requirements, insurance coverage, designation of local agents for service of process, and safety of operation; and

**WHEREAS**, The Congress and the American people have expressed continuing concern about motor carrier safety, which according to recently issued reports of the Federal Highway Administration, has not improved in recent years despite substantial State and Federal spending on safety enforcement, including grants to the States under the Motor Carrier Safety Assistance Program (MCSAP); and

**WHEREAS**, The American Trucking Associations, Inc. (ATA) has requested that the NARUC amend the Uniform Motor Carrier Standards to substitute carrier for vehicle registration, eliminate cab cards and State stamps evidencing compliance with the Standards, reduce State fees collected for the administration of the Standards, and use all fees collected for motor carrier purposes; now, therefore, be it

**RESOLVED**, That the National Association of Regulatory Utility Commissioners, convened in its 102nd Annual Convention in Orlando, Florida, determines, with respect to the Uniform Motor Carrier Standards, that:

(1) The Committee on Transportation shall investigate the feasibility of substituting carrier for vehicle registration;

(2) The Committee on Transportation shall investigate the

feasibility of eliminating cab cards and State stamps, and if other means are found to assure compliance with the Standards and the collection of State fees, the cab cards and State stamps should be eliminated after a three-year transition period to afford an opportunity for State law changes;

(3) State fees should not be reduced, but should be increased from time-to-time to reflect inflation; and

(4) All State fees collected under the Standards should be used for motor carrier regulatory and safety purposes; and be it further

**RESOLVED**, That the Committee on Transportation shall report its recommendations to the Executive Committee at its 1991 Winter Committee Meeting.

---

Adopted by the Executive Committee November 13, 1990

April 3, 1991

**NARUC Proposed Amendments to**
**H.R. 1351, a Bill Proposing the**
**Surface Transportation Assistance Act of 1991**

The National Association of Regulatory Utility Commissioners (NARUC) respectfully requests that H.R. 1351 be amended by:

(1) Striking: lines 17 through 24 on page 265, and lines 1 through 2 on page 266; and by redesignating subsections (b), (c), (d) and (e) on pages 266 through 268 as (a), (b), (c) and (d), respectively;

(2) Striking lines 1 through 4 on page 273; and

(3) Striking lines 12 through 25 on page 273, and lines 1 through 10 on page 274, and inserting in lieu thereof the following:

"Section 11506 of title 49, United States Code, is amended by redesignating subsection (e) as (g) and inserting between subsections (d) and (g) two new subsections to read as follows:

"(e) All fees collected by a State under this section shall be used to carry out the purposes of this section and to enforce Federal and State safety laws governing motor carriers. The use of such fees shall be subject to audit by the Commission or by other federal agency designated by the Commission.

"(f) The national organization, within one year after the effective date of this subsection, shall amend the standards to implement a base State system of annual registration whereby a motor carrier shall register with one State participating in the standards (base State) and thereby satisfy the registration requirements for all States participating in the standards. The motor carrier shall pay the required fees directly to the base State for equitable allocation among all States participating in the standards with respect to the motor carrier. If the national organization shall fail to so amend the standards within such year, the Commission shall so amend the standards within eighteen months after the effective date of this subsection. The standards, whether so amended by the national organization or the Commission, shall become effective three years after the effective date of this subsection."

April 3, 1991

**NARUC Proposed Amendments to**
**H.R. 1064, a Bill Proposing the**
**Safe and Competitive Trucking Act of 1991**

The National Association of Regulatory Utility Commissioners (NARUC) respectfully requests that H.R. 1064 be amended by:

Striking lines 2 through 26 on page 3 and lines 1 through 24 on pages 4 and 5, and inserting in lieu thereof the following:

"Section 11506 of title 49, United States Code, is amended by redesignating subsection (e) as (g) and inserting between subsections (d) and (g) two new subsections to read as follows:

"(e) All fees collected by a State under this section shall be used to carry out the purposes of this section and to enforce Federal and State safety laws governing motor carriers. The use of such fees shall be subject to audit by the Commission or by other federal agency designated by the Commission.

"(f) The national organization, within one year after the effective date of this subsection, shall amend the standards to implement a base State system of annual registration whereby a motor carrier shall register with one State participating in the standards (base State) and thereby satisfy the registration requirements for all States participating in the standards. The motor carrier shall pay the required fees directly to the base State for equitable allocation among all States participating in the standards with respect to the motor carrier. If the national organization shall fail to so amend the standards within such year, the Commission shall so amend the standards within eighteen months after the effective date of this subsection. The standards, whether so amended by the national organization or the Commission, shall become effective three years after the effective date of this subsection."

**PUBLIC LAW 89-170**

The relevant portion of Public Law 89-170, 79 Stat. 648, approved September 6, 1965, amended Subsection (b) of Section 202 of the Interstate Commerce Act and, as recodified by Public Law 95-473, 92 Stat. 1448, approved October 17, 1978, 49 U.S.C., Sec. 11506, reads as follows:

Section 11506. Registration of motor carriers by a State

(a) In this section, "standards" and "amendments to standards" mean the specification of forms and procedures required by regulations of the Interstate Commerce Commission to prove the lawfulness of transportation by motor carrier referred to in section 10521 (a)(1) and (2) of this title by--

(1) filing and maintaining certificates and permits issued to the motor carrier by the Commission;

(2) registering motor vehicles operating under the certificates and permits;

(3) filing and maintaining proof of required insurance coverage or qualification as a self-insurer; and

(4) filing the name of a local agent for service of process.

(b) The requirement of a State that a motor carrier, providing transportation subject to the jurisdiction of the Commission under subchapter II of chapter 105 of this title and providing transportation in that State, register the certificate or permit issued to the carrier under section 10922 or 10923 of this title is not an unreasonable burden on transportation referred to in section 10521(a)(1) and (2) of this title when the registration is completed under standards of the Commission under subsection (c) of this section. When a State registration requirement imposes obligations in excess of the standards, the part in excess is an unreasonable burden.

(c)(1) The Commission shall maintain standards and amendments to standards (A) prepared and certified to it by the national organization of the State Commissions, and (B) prescribed by the Commission. If the national organization determines to withdraw entirely standards prescribed by the Commission, the Commission shall prescribe new standards by the end of the first year after the national organization determines to withdraw the standards.

(2) An amendment to the standards prepared and certified by the national organization and prescribed by the Commission is effective when the amendment is prescribed or at another time as determined by the national organization.

(d) The national organization shall consult with the Commission and representatives of motor carriers subject to the State registration requirement when preparing amendments to the standards. Different amendments may be prescribed for each class of motor carriers as warranted by the differences in the operations of each class.

(e) This section does not--

(1) authorize standards in conflict with regulations of the Commission; or

(2) affect the authority of the Commission to interpret its regulations and certificates and permits issued under section 10922 or 10923 of this title.

(f) All fees collected by a State under this section shall be used to carry out the purposes of this section and to enforce Federal and State safety laws governing motor carriers. The use of such fees shall be subject to audit by the Commission or by other federal agency designated by the Commission.

(g) The national organization, within one year after the effective date of this subsection, shall amend the standards to implement a base State system of annual registration whereby a motor carrier shall register with one State participating in the standards (base State) and thereby satisfy the registration requirements for all States participating in the standards. The motor carrier shall pay the required fees directly to the base State for equitable allocation among all States participating in the standards with respect to the motor carrier. If the national organization shall fail to so amend the standards within such year, the Commission shall so amend the standards within eighteen months after the effective date of this subsection. The standards, whether so amended by the national organization or the Commission, shall become effective three years after the effective date of this subsection.

# SURFACE TRANSPORTATION POLICY PROJECT

1350 Massachusetts Avenue, N.W. Washington, D.C. 20036

STEERING COMMITTEE
[illegible]

EXECUTIVE COMMITTEE
[illegible]

HOST ORGANIZATION
[illegible]

Testimony of David Burwell, President
Rails-to-Trails Conservancy
on behalf of
Surface Transportation Policy Project
Before the Surface Transportation Subcommittee
House Public Works and Transportation Committee
on the Surface Transportation Assistance Act

April 18, 1991

Mr. Chairman, my name is David Burwell. I am President of the Rails-to-Trails Conservancy (RTC), a nationwide, non-profit membership organization that seeks to preserve the more than 150,000 miles of rail corridor that presently lay abandoned throughout our nation as trails and greenways, and for possible future rail use. We have more than 50,000 members in all 50 states and chapter offices in Pennsylvania, Ohio, Illinois, Michigan, Florida and Washington. As a nation we simply cannot afford to allow this existing system of transportation corridors, constructed at an enormous cost in lives and money (much of it public), to wither away from neglect. We urge you to address this important issue in this reauthorization bill.

I also appear on behalf of the Surface Transportation Policy Project (STPP), a broadly-based network of concerned organizations--including public agencies, non-profits, and private companies--involved in issues of transportation, energy, environment, planning, design and community preservation. RTC is one of more than 100 organizations participating in the STPP with the objective of ensuring federal support for attainment of such national transportation goals as energy security, environmental quality, a strong economy, and enhanced communities.

For the last twenty years the Executive Branch of the federal government has repeatedly advanced proposals to turn back major portions of

federal-aid transportation programs to state and local governments.[1] By and large, these proposals have met with little success in Congress due to (1) state and local opposition to shouldering more of the burden of these programs, and (2) the perception that a broad range of national interests require a strong and continuing federal role in the delivery of transportation services. While Congress has taken specific measures to expand the role of local elected officials in both transportation planning and funding decisions, federal oversight of this program has remained strong.

The Administration proposal before this committee is yet another attempt by the Executive Branch to sharply restrict the federal role in transportation. While containing some initiatives to promote better planning, flexible funding, system preservation, and operational improvements, these initiatives will be under the control of state highway agencies, most of which have demonstrated little historical interest in meeting the real transportation needs of congested urban areas and isolated rural areas. Meanwhile the costs of the system will fall disproportionately on regional and local governments. Mr. Chairman, you yourself have characterized the Administration proposal as "The Shift and the Shaft." We do not dispute this characterization.

In our view, the major failing in the Administration proposal is its unwarranted focus on building systems rather than improving performance. It defines the federal interest in transportation primarily in terms of one system--the National Highway System--and assigns more than 60% of the entire highway program to this one initiative.[2] Under this program the amount of Interstate-Standard highways would quadruple--from 42,500 miles to somewhere between 150,000-160,000 miles, all tied

---

[1] An excellent summary of these proposals is an article by Elizabeth Parker, Senior Policy Analyst in the Office of the Secretary of the U.S. Department of Transportation, entitled "Major Proposals to Restructure the Highway Program," Transportation Quarterly, Vol. 45, No. 1 (January 1991) at 55-66.

[2] $43.536 billion is authorized directly for the NHS. Another $7.220 billion is authorized for Interstate Completion, all of which will be included in the NHS. Even a modest amount of the $10.685 billion bridge program, combined with that portion of Interstate substitution dollars assigned to the NHS, will cause total NHS dollars to exceed $53 billion, or 60.9% of total highway authorizations.

together with new connectors, by-passes, and beltways.[3] As for the rest of our transportation system, including urban and rural transit, maintenance of existing urban and rural systems, promotion of non-motorized modes and transportation demand management--that's where "the shift and the shaft" is applied.

We can--and must--do better. We need to enhance the liveability of our cities that must now watch helplessly as their tax base erodes in waves of suburban sprawl. A more sensitive and focused approach to transportation planning and funding is essential. Our national security interest in energy efficiency demands that more attention be paid to total transportation energy demand. Our national interest in environmental quality demands that more attention be paid to integrating transportation, clean air and land use planning, through an enhanced and accountable MPO process, to fight global warming, ozone destruction, air pollution, and habitat loss. And our overriding national interest in economic competitiveness requires much more national attention to urban congestion, rural isolation, a commitment to inter-modalism, and the preservation of choice in consumer selection of transportation services.

These performance standards; (1) enhanced communities, (2) energy efficiency, (3) environmental quality, and (4) economic competitiveness--the "4E's,"--are the standards by which, in the judgment of the STPP participants, transportation programs must be measured. To achieve these goals, the STPP encourages this committee to adopt the following principles for shaping our future surface transportation program:

1. The STAA should ensure that limited federal resources are first directed to preserve and make efficient use

---

[3] The Administration has not yet proposed design standards for the NHS and, in discussions, asserts that primary system standards will prevail for that portion of the primary system included in the NHS. However, the Interstate portion of the NHS will qualify for lane additions as "operational improvements" at a 90% federal share, and beltways and by-passes in the NHS serving urbanized areas over 200,000 population must provide for their "ultimate development as multi-lane divided highways with separate roadways for through traffic." Titlt I, Section 102(h). With almost 44,000 miles (the Interstate System) expanding using 90% federal funding, and with beltways and by-passes connecting segments of the NHS designed to super-Interstate standards of divided roadways as well as divided highways, it takes little imagination to calculate the result on the ultimate design of the rest of the system. In order to avoid bottlenecks throughout the NHS where Interstate and non-Interstate segments connect and to encourage free traffic flow, pressure will inevitably mount to build the entire NHS to Interstate standards.

of existing systems before new capacity is provided. Programs should be structured so that these decisions can be made in terms of the most effective means of moving people and goods rather than on the basis of funding availability for any single mode of transportation.

2. The STAA should encourage development of alternative, energy efficient modes of transportation through research, plans, and funding programs. The important relationships among transportation investments, land use patterns, air quality and energy use should be addressed in the planning process and incentives provided for transportation projects that support efficient land use development.

3. The STAA should promote planning and investments developed in harmony with the maintenance and improvement of our air, water and land resources. Transportation plans should be consistent with federal and state plans for resource conservation and historic preservation, including air quality plans and 208 water quality plans, land use and historic preservation plans.

4. The STAA should ensure that the mobility needs of communities are developed in conjunction with other important considerations including affordable housing, access for the elderly and disabled, and linking jobs to the jobless. An increased role for local officials in planning and programming of federal funds is essential to meeting the mobility requirements of urban, suburban and rural communities.

The importance of local and regional participation in the scheduling of project implementation cannot be overstated. Some of the standards outlined above have objective criteria for measurement; such as clean air standards. Some, such as community enhancement, are inherently subjective. Therefore, more participation and accountability at the regional and local levels--where "the rubber meets the road" to use a modal metaphor--must be a cornerstone of the federal-aid transportation program.

Unfortunately, regional and local governments fare poorly in the Administration proposal in both (1) the funding of projects that meet their 4E needs, and (2) the planning function--the authority to tie project funding to specific national and community objectives. Specifically:

A. Highways

The Interstate Highway Program has its boosters and detractors, but one conclusion from a review of the 35-year history of the program is irrefutable: it has hurt central cities. In retrospect, we should have seen it. The new urban arterials constructed under the Interstate Program lead to the creation of "bedroom communities" circling our central cities. However, as suburban population grew, so did the demand for public services: schools, police, fire departments, sewers, streets etc.--far more demand than could be supported by the residential tax base. County governments did whatever was necessary to attract the commercial and retail activity needed to expand the tax base.[4] Enticed by new roads, underserved population centers, relaxed zoning laws and attractive public incentives packages, commerce and industry moved out of our central cities. Lewis Mumford's dire prediction in 1958 that the recently-enacted Highway Act of 1956 would result in "a tomb of concrete roads and ramps covering the dead corpse of the city" has been at least partially verified by experience.[5] A price has been paid.

The Administration's proposal to create a National Highway System (NHS), though superficially logical, is a bad idea. It will perpetuate and exacerbate the unforseen unhappy side effects of the Interstate System--tax base flight, suburban sprawl, urban blight and environmental degradation--while contributing little or nothing to reduced congestion, intermodalism, clean air or economic competiveness.[6] It's primary economic advantage will be to facilitate the movement of big trucks, a mode which already is subsidized at a level of at least 35% of the direct costs they impose on the system, while hurting rail freight.[7] It makes little sense to spend billions of dollars to shift freight

---

[4] One popular strategy is "fiscal zoning,"--zoning to maximize tax revenues, not create communities. Ironically, the land use with the capability of yielding the greatest total tax revenue per square foot is the automart--strip-zoned car dealerships and repair services.

[5] Mumford, Lewis, The Highway and the City, (Harcourt, Brace & World, Inc. 1963) at 238.

[6] A major justification for the NHS is that it carries 40% of total traffic on 3% of the total highway system. Yet, this is not the 3% that has the most significant congestion and air pollution problems. Indeed, construction of much of this system was initially justified on the ground that it would solve congestion and pollution problems created by non-Interstate highways.

[7] U.S. Department of Transportation, Federal Cost Allocation Study, May 1982.

transport from a highly under-utilized rail system to a highly-overutilized and subsidized highway system, particularly when the adverse social and environmental side effects are substantial.

The Administration appears to anticipate resistance to its highway-dominated proposal by promoting flexibility among programs. Under the Administration proposal you can switch rather than fight. But closer analysis reveals less of a shift and more of the shaft for regional and local governments. Of the total five-year highway authorization of $87.7 billion, some $65 billion is not transferable to transit. However, of the $16.3 billion allocated for transit, the majority is transferable to highways. And, with decision-making power over transfers resting primarily in state transportation agencies with little or no responsibility for transit you don't have to be a genius to figure out which way the money will flow. This is not a "level playing field" proposal.

The STPP seeks to correct this imbalance. Under our proposal dedicated highway funding would be capped at $36.7 billion--what is necessary to complete and maintain the interstate system, preserve and rehabilitate our bridges, and provide for highways on federal lands and other specialized programs. Dedicated transit funding would be set at $26.6 billion, the minimum necessary to restore the program to 1980 levels. The remainder of the funds--$50 billion--would be truly flexible, to be available for all forms of transportation to serve the needs of the communities in which they are spent. "Truly flexible" means that funds would be made available to all modes on precisely the same terms: 75% for new construction and reconstruction (the "4th R"), 90% for 3R projects and operational improvements.[8] A comparison between the Administration Proposal and the STPP proposal is attached as appendix A.

Just how out of touch Administration funding priorities are with state and local needs is demonstrated by a study of state and local behavior when flexibility is provided in the use of federal highway funds. A good program to analyze such behavior is the Interstate Transfer Program which gave state and local governments the option of using funds for non-essential interstate segments on substitute highway or transit projects. Despite the fact that localities which chose transit often had to

[8] Operational improvements mean non-capital improvements to control VMT growth and improve traffic flow. They include Transportation Demand Management (TDM), Transportation Systems Management (TSM), and Congestion Management Projects. New bicycle and pedestrian projects are also included in this definition. However, it does not include "the 4th R"--Reconstruction, including lane additions. Lane additions and new capacity should be funded at the 75% level with all other new capacity projects.

convince Congress to appropriate funds out of general revenues while substitute highway projects could be funded out of the Highway Trust Fund, of more than $12 billion in interstate transfer funds obligated through FY 1990, fully 48% went to transit programs.[9] Given this clear "market signal" in favor of transit from the recipients of federal transportation assistance, and the strong connection between national energy and environmental objectives and transit services, the sharp federal withdrawal from transit funding proposed by the Administration is a total mystery.

The Administration proposal to combine the Urban and Rural Programs into one pot under the control of state transportation agencies is also deficient:

First, at $22.2 billion over five years it is grossly underfunded. In addition, with reduced federal share of 60% the opportunity for state and local government to take advantage of this program is greatly reduced. The greatest share of federal transportation assistance should be assigned to this program for the simple reason that this is where the real problems are located.

Second, it is not clear that metropolitan and rural areas should be asked to compete for the same funds; their needs are different and they should each be given control over their own transportation destinies.

Third, more control over planning and project funding must be delegated by the states to the areas most directly affected.

Fourth, the program should provide clear incentives to take care of the existing system before funding new capacity. On this point the Administration bill does make some good suggestions. For example, it would require that urban areas over 200,000 prepare Congestion Management Plans (CMPs) and implement these plans before projects providing significant new capacity. It also establishes a "Metropolitan and Rural Innovative Bonus Project" program in areas over 200,000 population or rural areas. This bonus program would increase the obligation ceiling for such projects if they addressed problems of congestion or air quality. Our main objection is the limitations on eligibility contained in the bill. If reducing congestion, cleaning up the air, and increasing operational efficiency is a good idea, why not qualify all geographic areas for such programs?

The STPP proposes to significantly increase assistance to our urban and suburban areas by authorizing $34.5 billion for a

---

[9] The figures through FY 1990 are $6.306 billion for highways, $5.923 billion for transit. See Appendix B.

Metropolitan Mobility program. In addition, a separate Rural Access program would assign $15.5 billion to our rural areas. All new capacity on any system would be funded out of these two programs and would compete with all other possible uses of such funds on equal terms: 75% for new capacity and 90% for 3R and management improvements. This is a truly level playing field approach to transportation investments.

B. Transit

Transit, including buses and paratransit services in rural areas, take a big hit in the Administration proposal. While there is a nominal increase of 3% in authorizations (from $3.2 Billion to $3.3 billion per year), the actual transit share of total federal surface transportation capital and operating assistance declines over the life of the program. Whereas in 1982 transit represented 30% of total federal surface transportation assistance, under the Administration proposal it falls to 17% in FY 1992 and further to 15% by FY 1996. Yet transit is the mode with the highest ability to promote national objectives such as clean air and energy security while unclogging our streets and arterial highways. It makes absolutely no sense to withdraw federal assistance from transit programs just when our national commitment to clean air and energy security takes a seat in the front rank of our national policy objectives.

More than 50% of all Americans now live in urban and suburban areas of greater than one million total population. Here is where the majority of our transportation needs--and transportation-related social and environmental problems--are located. A study of local transportation referenda in these areas reveals a sharply different funding profile than is offered by the Administration's proposal. In recent referenda in Houston, Dallas, Portland (Ore.), San Diego and San Francisco, the lowest amount of total revenues approved for transit was 33% in San Diego. In last June's statewide transportation referendum in California fully 45% of total receipts qualify for transit use.[10] The argument that these results demonstrate that transit is a local issue that will be supported by those who directly benefit is wrong-headed. It is in these same areas that the problems of congestion, air pollution, and lack of choice (economic efficiency) are greatest. The same people who are paying the highway taxes are voting for more transit.

Our concern over the Administration's proposed transit funding levels is magnified by it's proposed transit funding

[10] Of the $16.5 billion 10-year program, $7.5 billion qualifies for transit use. In addition, referenda totalling $1 billion each for rail transit will be presented to the voters in 1992 and 1994.

strategy. Under the Administration proposal all transit funding comes out of the mass transit account of the Highway and Mass Transit Trust Fund--not general revenues. Over the life of the administration's bill, the mass transit fund would be virtually exhausted. Yet the Administration proposal makes no provision to replenish that account to fund transit programs beyond FY 1996. We strongly urge the Committee to retain funding for the Section 9 formula grant program out of general revenues at its present level of $2.0 per year ($10.0 billion over the life of the Act) while retaining support for the transit program from the Trust Fund at the administration's proposed level of $16.318 billion over five years. This would bring total transit funding to a minimum of $26.6 billion. In addition, we support increased funding for the rural and small urban programs and the elderly and handicapped program.

C. Planning

Planning is another big defect in the administration proposal. While the Administration bill qualifies all federal assistance to be used for planning, the decision to do so remains with the states--not the metropolitan areas that are in most need of planning funds. We recommend (1) that Metropolitan Planning (PL) assistance be increased from 0.5% to 1.5% of total apportionments, (2) that Highway Planning and Research (HPR) assistance be increased to 2.0% of total apportionments, and (3) that planning assistance for the transit program be increased to 1.5% of transit trust fund apportionments. Moreover, more control over planning funds must be delegated from the states to regional and local planning agencies.

But planning, to be effective, must be connected to project funding. It is not. Projects endorsed by regional Metropolitan Planning Organizations (MPOs) and included in their Transportation Improvement Plans (TIPs) are regularly ignored by state highway and transportation agencies in developing statewide funding priorities.

A study of state apportionments for all highway programs in comparison to actual obligations for FY 1987-FY1990 reveals how grossly regional and local needs are being ignored by the majority of state transportation agencies. For this four-year period actual obligations for the major programs--Interstate, Interstate 4R and Primary Programs--averaged 105% of program apportionments.[11] At the same time only 82% of Federal Aid Urban apportionments were obligated, and obligations under the Secondary (rural) program amounted to only 76% of total apportionments.

---

[11] The actual figures are 118% for Interstate projects, 102% for Interstate 4R projects, and 96% for primary projects.

There is much talk in transportation circles about "freeing the highway trust fund," meaning that the federal government must draw down the unobligated balance in the fund by increasing total authorizations. Certainly, more funding for our deteriorating transportation infrastructure is needed. But, as that is done, equal concern must be given to assigning these funds where they are most needed. Presently, states are starving the cities and communities that need funds to deal with congestion, dirty air, lack of mobility, and deteriorating roads and bridges while overfeeding programs that increase capacity on the major arterial systems. Yet, as they do so, they simply generate more traffic, more pollution, and more deterioration of the urban and local support system.

This must stop. Cities and suburban communities must have more control over federal-aid transportation funding. The STPP proposes that regional, accountable agencies develop TIPs that (1) are resource constrained, and (2) implement state and national performance-based transportation objectives. States would then be required to base their state transportation plans on these TIPs and schedule projects for implementation on the basis of these plans. In this fashion control over project selection and scheduling would be shared between local, regional and statewide agencies and would be performance-based, meaning they would be designed to meet measurable objectives such as clean air, reduced congestion, and community enhancement.

But this is not what is proposed. Instead, the Administration bill places control of urban and rural funds at the state level and delegates all environmental and other oversight responsibilities to these same agencies. States will be able to simply certify that they have done everything they can to avoid using parks, wildlife refuges, historic properties or wetlands for transportation projects with "minimal" (the term used by the Administration) supervision. Regional and local agencies that are under legal obligation to meet national clean air goals through improved transportation planning and funding must go--hat in hand--to state agencies for the necessary funding. This simply won't work.

D. Other Provisions

The STPP participants also wish to go on record in opposition to two finance-related provisions in the Administration bill:

First, 70% of the NHP apportionment formula and 100% of the urban/rural apportionment formula is based on fuel use: the more fuel consumed the greater the state apportionment. This is not the way to encourage energy conservation. A formula that provides incentives for fuel conservation while meeting the "85%

rule" for redistribution of funds back to the states must be developed.

Second, with almost 40% of our highways and bridges in below-standard condition, and transit needs expanding far faster than our ability to finance these needs, the Administration's proposal to eliminate five cents from the federal gas tax in FY 1996 makes no sense. As a nation we are not paying the full costs of transportation on a pay-as-we-go basis. We are consuming now and letting future generations pay the consequences in poor health, deteriorating infrastructure, polluted air, global warming, ozone destruction and many other externalized costs of transportation. We are also crippling our economy; witness the high productivity rates of countries that impose gas taxes in the area of $1.00-$2.00 per gallon. No reduction in the federal gas tax should be considered in this bill.[12]

While the STPP participants have many serious problems with the Administration Bill, we do want to give credit for action taken in two important areas: Billboards and Scenic Byways/Scenic Easements. The STPP participants support the Administration's proposal to defer to state law in the area of billboard control, and to qualify billboard removal for federal assistance. We also support qualification of scenic easements and development and improvement of scenic byways for federal funding. While the Administration bill proposes a special set aside for scenic byways out of the urban/rural program, we suggest applying this set aside requirement to total apportionments and qualifying a wide array of transportation enhancement activities for federal funding as well, such as:

existing section 138 enhancement set aside funding that is now funded under program);

--demonstration projects to encourage design excellence in the construction, rehabilitation and use of transportation facilities;
--rehabilitation of historic transportation structures;
--preservation of abandoned rail corridors and their conversion to pedestrian, equestrian and bicycle trails;
--construction and maintenance of pedestrian and bicycle ways;
--archeological planning and research;
--acquisition of scenic, recreational and historic areas or

[12] An excellent book on the benefits of gas taxes is Gas Tax Advantages by Dr. Ernest J. Oppenheimer, Ph.D. (Pen & Podium Press, 1986). A list of 15 reasons to increase gas taxes summarized by Dr. Oppenheimer is attached as Appendix C. We encourage this committee to give close study to the gas tax issue.

easements; and
--control and removal of billboards;

In addition, we would prohibit the cutting of trees on federal-aid highways for the sole purpose of increasing billboard visibility.

Finally, I would like to end by putting on my Rails-to-Trails Conservancy hat and address the problem I outlined in the outset of my testimony: preservation of our national system of unused rail corridors. It would be a national tragedy if we let this system disappear just at the time that the value of preserving existing transportation corridors intact is increasingly obvious. The Administration proposal does provide for 100% federal funding for bicycle and pedestrian trails under Title 23 in conjunction with highway rights-of-way. We request three improvements to encourage the preservation of our built rail system for trails, and for possible reconversion to rail use:

First, add the phrase "or unused railroad rights-of-way" as eligible for Title 23 funding. This would make it clear that any rail-trail project qualifies for funding under Title 23 as long as it serves a transportation purpose.

Second, we ask that Section 203(d) of Title I, which requires states acquiring a right-of-way to actually build a highway within 20 years or reimburse the federal government for its share of the cost, be amended to provide that states acquiring abandoned railroad corridors for future transportation uses can "railbank" them indefinitely as trails. This would give states an incentive to acquire abandoned rail corridors under Title 23 without fear of this penalty.

Third, we request that Section 303(j) of Title I be amended to delete the word "major" in the description of non-motorized transportation routes that could not be severed by a Title 23 project without providing a reasonable alternative route. We also ask that this sentence be amended to clarify that underpasses or overpasses shall be included in the project at the request of the non-motorized trail manager, and shall be eligible for federal assistance at the 100% federal rate provided for other bicycle and pedestrian facilities under Section 314 of Chapter 3 (Section 106), Title I.

The time for transportation reform has arrived. The STPP represents more than 100 organizations, each of which stands ready to work with this committee to develop a new Surface Transportation Assistance Act that serves the needs of all Americans. A performance-based program that focuses on the 4Es--energy efficiency, economic competitiveness, environmental quality and enhanced communities--is, in our judgment, a long

first step in the right direction.

That concludes my remarks. Our full proposal is attached and I would be happy to answer any questions you may have about it. Thank you.

Appendix A

## SURFACE TRANSPORTATION ASSISTANCE ACT
## 5-YEAR FUNDING (in Billions)

### Surface Transportation Policy Project (STPP) Proposal:

| Program | Funding | Federal Share |
|---|---|---|
| Highway Account | | |
| Interstate 3R | 14.2 | 90 |
| Bridge | 12.166 | 90 |
| Interstate Completion | 7.220 | 90 |
| Interstate Substitution | .960 | 85 |
| Other Highway | 2.179 | 75/100 |
| Metropolitan | 34.5 | 75/90 |
| Rural Access | 15.5 | 75/90 |
| Transit Account | 26.618** | 75/90 |
| Total* | 113.343 | |

### Department Of Transportation (US DOT) Proposal:

| Program | Funding | Federal Share |
|---|---|---|
| Highway Account | | |
| National Highway System | 43.536*** | 75/90 |
| Bridge | 10.685 | 75 |
| Interstate Completion | 7.220 | 90 |
| Interstate Substitution | .960 | 85 |
| Other Highway | 2.179 | 75/100 |
| Urban/Rural | 22.245 | 60 |
| Transit Account | 16.318*** | 60 |
| Total* | 103.143 | |

NOTES:

*Neither table includes Title II Highway Safety Program funds. However, the STPP proposal reduces Title I Highway funds by $100 million and increases the Title II funding proposed by US DOT by $100 million.

**The $26.6 billion transit program is proposed as a minimum level; we would seek additional revenues for operators to be able to meet air quality and Americans with Disabilities Act requirements.

***Up to $6.5 billion of the NHS could be transferable to the Urban/Rural Program with a 60 percent share. The majority of transit funds would be flexible under the Administration proposal.

Federal Highway Administration

# Memorandum

Appendix B

Washington, D.C. 20590

Subject: Status of Interstate System Withdrawals and Substitution Under 23 U.S.C. 103(e)(4) as of September 30, 1990

Date: DEC 8 19xx

From: Chief, Federal-Aid and Design Division

Reply to Attn of: HNG-13

To: Regional Federal Highway Administrators

Two summaries of information through September 30, 1990, relating to Interstate System withdrawals and substitution under 23 U.S.C. 103(e)(4) are attached for your information. The first listing is a summary of withdrawal actions to date. The second listing summarizes, for each withdrawal area, the base costs, the withdrawal values after deducting obligations, the amounts obligated for substitute mass transit and highway projects, and the total amounts made available.

A column, entitled "Reserved Transit Amount," is included in the second listing. This column represents the additional transit withdrawal value distributed in accordance with Section 103(c) of Public Law (PL) 100-17. The additional $100 million was distributed using apportionment factors contained in revised Table 4 of House Committee Print 100-2. This additional withdrawal value is considered to be reserved for transit obligations. Accordingly, transit obligations after the date of enactment of PL 100-17 (April 2, 1987) will be continually deducted from the reserve column until that column is depleted.

Copies of the status report have been sent directly to all FHWA Division Offices for States with approved withdrawals. The summaries are mailed to you on a quarterly basis. Please contact the Interstate and Program Support Branch, Federal-Aid and Design Division, if you find discrepancies between the Headquarters' records and your records.

NOTES:

1. All amounts are in Federal funds.
2. The "Base Costs" column represents the cost of the withdrawn routes as they were reported in the Estimate applicable to the specific action.
3. Remaining withdrawal values were computed in accordance with 23 U.S.C. 103(e)(4), as amended by Section 107(c) of the 1982 STAA.
4. The "Total Amounts Being Made Available" column is the sum of the "Total" column plus obligations through the current quarter.
5. The "Reserved Transit Amount" column represents the additional transit withdrawal value added by Section 103(c) of Pub. L. 100-17. The column also includes, in Portland, $16,366,223 made available by the withdrawal of eligible Interstate lanes under Section 142 of the 1987 STURAA. Transit obligations after April 2, 1987, are deducted from this column first to assure these portions of withdrawal values are used for transit purposes. Obligations used towards the Portland substitute project associated with the Section 142 withdrawal will be deducted from Portland's "Reserved Transit Amount."
6. Project substitute obligation figures reflect net obligations to date, that is, total obligations less total deobligations.

# Gasoline Tax Advantages

by Ernest J. Oppenheimer, Ph.D.

From the Foreword by **Dr. Lester C. Thurow**, Professor of Management and Economics, Massachusetts Institute of Technology:

"If one is serious about curing America's federal budget deficit or its international trade deficit, gasoline taxes have a very high place, perhaps the highest, on any list of possible solutions. . . .

*Gasoline Tax Advantages* by Ernest J. Oppenheimer gives us a comprehensive summary of the pros and cons of gasoline taxes and the pros clearly dwarf the cons.

The economic case for a gasoline tax is clear and made even clearer by Dr. Oppenheimer."

ISBN 0-9603982-5-2

# GASOLINE TAX ADVANTAGES

- ☑ Strengthens energy security
- ☑ Reduces federal budget deficits
- ☑ Lowers interest costs
- ☑ Improves foreign trade balance
- ☑ Boosts automobile business
- ☑ Stimulates natural gas industry
- ☑ Assists domestic petroleum producers
- ☑ Creates more jobs
- ☑ Provides for fairness to poor
- ☑ Restores soundness to U.S. economy
- ☑ Helps clean the environment
- ☑ Avoids pitfalls of oil import tax
- ☑ Excels all other government options
- ☑ Fosters statesmanship in policy making
- ☑ Serves the best interests of Americans

**Ernest J. Oppenheimer, Ph.D.**

45-155 O—91—43

responsible for the federal deficit. The president can blame the congress, the congress can blame the president, the Democrats can blame the Republicans, the Republicans can blame the Democrats, oil patch representatives can blame rust belt representatives, rust belt representatives can blame farm state senators. Each elected politician can promise to deliver to his district what it would most desire, fail to deliver on the promise in Washington, yet get re-elected on the grounds that he is working hard to get the rest of Washington to see the wisdom of his platform. Failure and unrealistic promises are seldom punished.

Part of the problem lies with an administration that does not believe that a big federal deficit or a big trade deficit is a problem. In their view given time the market will by itself cure the trade deficit (lending will eventually stop, the dollar will go down, and American exports will expand while imports fall) and the large federal deficit has not led to a disaster (the crowding out so confidently predicted by the critics in early 1981 has not occurred). What this analysis ignores is the nature of the problems created by the trade and federal budget deficits. Neither produces a crisis; both produce a long run hemorrhaging of economic potential.

Federal budget deficits represent negative savings. Funds that could otherwise be used for investment have to be borrowed to finance public consumption. As long as this money can be borrowed from abroad there is no immediate crowding out of investment. What there is is a growing international indebtedness that will at some point in the future lead to a reduction in the American standard of living. Every $40 billion owed to the rest of the world in annual interest payments means one percent less of the GNP available to be divided among Americans. Problems may be serious without being crises.

The economic case for a gasoline tax is clear and made even clearer by Ernest Oppenheimer. The question then becomes how can Americans be made to clearly see that their long run self interest is served by imposing a gasoline tax upon themselves?

## Summary

Unsound government policies in relation to energy, taxes, and budgets have undermined the U.S. economy. Currently, the nation's wealth is being dissipated to pay for budget deficits and foreign trade imbalances totaling more than $1 billion a day. To rectify this alarming situation, it is recommended that the federal gasoline tax be increased by 25 cents a year until it reaches $1 per gallon, a level similar to that prevailing in other industrial countries.

The gasoline tax would have the following advantages:

**(1) It would strengthen energy security.** The more than 130 million automobiles registered in the U.S. consume over 6.5 million barrels of gasoline each day. It is estimated that the proposed gasoline tax would gradually reduce consumption by one million barrels a day, thereby lessening dependence on oil imports.

**(2) It would reduce federal budget deficits.** Over a ten year period following enactment of the tax, the U.S. Treasury would collect an estimated $750 billion. Most of these funds would reduce federal budget deficits.

**(3) It would lower interest costs.** The sharp reduction in federal borrowing requirements which would follow in the wake of the gasoline tax would have a salutary effect on interest rates. It is estimated that interest costs would drop by about two full percentage points. Interest savings by all borrowers would eventually reach $160 billion annually on the $8 trillion total debts outstanding. The federal government alone would save about $40 billion a year on interest payments, thereby further reducing budget deficits.

**(4) It would improve the U.S. foreign trade balance.** The U.S. competitive position in the international marketplace has been handicapped by excessive business taxes and interest costs. Major competitors, such as West Germany and Japan, rely heavily on consumption taxes, notably on gasoline, to reduce budget deficits, interest rates, and taxes on business. The U.S. would be well advised to emulate these policies. The gasoline tax would be an important step

1331

in the right direction.

**(5) It would boost the automobile business.** The gasoline tax would provide strong incentives for millions of car owners to switch to fuel-efficient vehicles. To meet this demand, the automobile industry would be operating at full capacity for years to come. Suppliers to automobile manufacturers, such as producers of steel, aluminum, plastics, chemicals, tires and electrical equipment would also enjoy increased business.

**(6) It would stimulate the natural gas industry.** Lower interest costs would benefit all capital-intensive industries, including natural gas producers, pipelines, and utilities. The natural gas industry would also gain from increased demand by industrial customers. Compressed natural gas (CNG), which should be exempt from fuel taxes, would find increased acceptance as a vehicular fuel. This development would stimulate demand for domestically produced natural gas.

**(7) It would assist domestic petroleum producers.** The comments that were made about natural gas also apply to petroleum producers, who produce both oil and natural gas. Any stimulation in demand for natural gas will boost the income of domestic petroleum producers. Lower interest costs would be helpful to oil companies, which depend heavily on borrowed funds. Finally, some of the proceeds from the gasoline tax could be utilized to put a realistic floor under domestic oil prices and/or to expand the Strategic Petroleum Reserve to include domestic oil resources for future use.

**(8) It would create more jobs.** The improved competitiveness of U.S. industry, the increased demand for fuel-efficient vehicles, and the stronger markets for domestic energy, notably natural gas, would create many new job opportunities. It is noteworthy that these jobs would be primarily in the manufacturing and energy sectors, which have hitherto been the most depressed.

**(9) It would provide for fairness to the poor.** It is estimated that at least 25 million automobiles are owned

by individuals who are economically disadvantaged. Most of these vehicles are old gas-guzzlers, which average less than ten miles to the gallon. Some of the proceeds from the gasoline tax should be utilized to enable the poor to acquire more fuel-efficient vehicles. This recycling procedure would enable the poor to cope with higher gasoline taxes without creating a burden on society as a whole.

**(10) It would restore soundness to the U.S. economy.** In recent years the U.S. economy has been beset by a host of interrelated problems, including $200 billion federal budget deficits, $150 billion foreign trade imbalances, the unsolved energy problem, inadequate savings/investments to nourish the private sector, high interest rates, and chronic weakness in manufacturing and employment. All of these problems would be reduced by the gasoline tax.

**(11) It would help clean the environment.** In most urban areas, vehicular emissions are the largest source of air pollution. By providing financial incentives for reducing gasoline consumption, the tax would have a beneficial impact on the environment.

**(12) It would avoid the pitfalls of the oil import tax.** An oil import tax is a disguised price support scheme. It would raise domestic energy prices by the amount of the tax. It would be unfair to consumers. It would be inflationary and raise interest costs. It would undermine U.S. competitiveness in the international marketplace. It would jeopardize U.S. relations with oil producing countries. All of these problems could be avoided with the gasoline tax.

**(13) It would excel all other government policy options.** The gasoline tax is the only policy option that has a positive impact on federal budget deficits, foreign trade imbalances, the energy problem, and the general economy. No other policy option has a positive effect on more than two of these four variables.

**(14) It would foster statesmanship in policy making.** Hitherto, U.S. energy policy has been dominated by interest groups who placed their selfish objectives above the national interest. This orientation has led to harmful consequences

[illegible] gasoline tax would place the national interest ahead of all other considerations, thereby restoring statesmanship to its proper place in policy making.

**(15) It would serve the best interests of the American people.** Wrong energy policies have cost the American people more than $1 trillion since 1973, without giving them fair value in return. In contrast, the gasoline tax would generate multiple benefits. This tax would have a positive multiplier effect that would produce several dollars of benefits for each dollar of cost. The gasoline tax makes good economic sense.

## Preface

I have spent the past seven years doing research on the energy problem. My studies have convinced me that the U.S. government has failed to deal realistically with this important issue. Wrong government policies concerning energy and related matters have brought this nation to the brink of financial disaster. The time to implement corrective action is long overdue.

The most important single step in the right direction is to impose a substantial tax on gasoline. Such a tax would improve energy security, reduce federal budget deficits, lower interest rates, strengthed U.S. competitiveness in the marketplace, and stimulate the economy. Each dollar of gasoline tax would generate an estimated three dollars of tangible benefits to the nation. No other policy option would accomplish so much good on such a favorable basis. The case for the gasoline tax is supported by the experience of countries in Western Europe and Japan, which levy more than $1.25 per gallon, compared with nine cents collected by the U.S. Treasury.

It is hoped that this book will provide the readers with a sound perspective on the gasoline tax, including obstacles that must be overcome to implement this policy. I want to appeal to those who find the book of value to share the information with others. You can play a most valuable role in the educational effort that is essential for proper understanding and action. It would be very helpful if you passed copies of the book along to your friends and contacts, as well as to your representatives in government. To facilitate this effort, the publisher will make the book available at generous quantity discounts. In addition, special bonus offers await quantity purchasers. For details, please see the back of the book.

TESTIMONY BY

JOAN CLAYBROOK

ACCOMPANIED BY

DR. GERALD DONALDSON

CO-CHAIRS

CITIZENS FOR RELIABLE AND SAFE HIGHWAYS

(CRASH)

BEFORE THE SUBCOMMITTEE ON SURFACE TRANSPORTATION

HOUSE COMMITTEE ON PUBLIC WORKS AND TRANSPORTATION

APRIL 18, 1991

Mr. Chairman and Members of the Subcommittee, we appreciate the opportunity to appear before you today. I am Joan Claybrook, President of Public Citizen; and I am accompanied by Dr. Gerald Donaldson of Advocates for Highway and Auto Safety. We share the privilege of serving as co-chairs of Citizens for Reliable and Safe Highways, or CRASH.

Formed by safety advocates and a broad coalition of medical experts, state safety officials, former governors, insurers, shippers and railroad suppliers, CRASH has spent the past year working at the grassroots level for improved truck and highway safety. Now we are turning our attention to the Congress because the decisions this Subcommittee makes in drafting the Surface Transportation Assistance Act will determine the future safety of the public on our highways.

In view of the number of witnesses appearing before the Subcommittee, I will be summarizing the materials before you which have been submitted for the record.

First, I will address the safety of longer combination vehicles -- Twin 48's, Rocky Mountain Doubles and Triples -- weighing up to 135,000 pounds and covering up to 120 feet or more in length -- the equivalent of a ten story building.

An analysis of the scientific literature from sources including the California Department of Transportation and California Highway Patrol; the transportation research centers of the Universities of Michigan, North Carolina, Pennsylvania State, and Texas; the Congressional Office of Technology Assessment; the Transportation Research Board; the Federal Highway Administration and the National Transportation Safety Board; show longer combination vehicles, or LCVs, to be unsafe for the following reasons:

1. Their engineering (which for a Triple includes 5 articulation joints to permit turning on corners and highway ramps) makes them inherently unstable, prone to sway and more likely to jackknife, overturn and separate than a single trailer truck;

2. By virtue of their size, weight, difficulty in accelerating, serious braking problems, and prolonged splash and spray, LCVs are incompatible with passenger cars in traffic;

3. As a result of their engineering, LCVs are involved in crashes that would not occur with a single trailer truck;

4. All multi-trailer trucks are disproportionately involved, or overinvolved, in accidents compared to single trailer trucks; and

5. Crashes involving LCVs will be more severe than single trailer truck accidents, with higher probabilities of deaths and injuries.

While we were pleased that President Bush and Secretary of Transportation Skinner did not request an increase in truck sizes or weights in the Administration's surface transportation assistance bill, doing nothing in the highway reauthorization will only serve to allow continued increases in the sizes and weights of trucks on our highways.

We recognize the hard and fast deadline facing the Congress: authority for the surface transportation assistance programs ends on September 30, 1991. But because the safety implications of truck size and weight are so important -- facing so many drivers on a daily basis, I do not believe that the Members of this or any other Committee will walk away from your responsibility to protect the safety of those using the Interstate highway system and the other federal-aid highways by taking action on the truck size and weight issue.

Consequently, as safety advocates, CRASH now asks this Committee to include in its highway reauthorization bill a provision which limits the cargo portions of multi-trailer trucks operating on the Designated National Network to 65 feet. Only through such clear and direct action will you be able to assure your constituents and the American public as a whole, that unsafe Triples, Rocky Mountain Doubles, and Turnpike Doubles will not be running along side them on the Interstate System and on portions of the Federal-Aid Primary system designated by the Secretary (or any successor system of highways).

This action will also serve to reduce road and bridge damage on our most heavily traveled highways -- roadways that are already experiencing serious deterioration. I know that I don't need to remind the Members of this Committee that 15.9 percent of the bridges on the Interstate are already classified as functionally obsolete or structurally deficient by the Federal Highway Administration, while 22.7 percent of the pavement on the Interstate system has been assessed by FHWA as needing immediate improvement.

The cost of these repairs is estimated to be $88.6 billion through 2005, or an average of $4.7 billion annually. In addition, over the same period, the costs for needed repairs on Interstate bridges are estimated to be $24.6 billion.

I know that I cannot answer the question of whether we can afford these repairs. That is a question with which this Committee and the Congress continue to wrestle. But I do know that we cannot afford to take a chance of subjecting our highways to heavier abuse and costlier deterioration from LCVs, as well as their serious threat to safety, in the name of productivity.

The obvious question to ask CRASH at this point, is why do we need to impose a federal length limit when there is already in place a federal limit of 80,000 pounds gross vehicle weight, 20,000 pounds single axle weight and 34,000 pounds tandem axle weight for the Interstate?

The answer is that 19 states already permit unsafe LCVs on their Interstates and other Federal-Aid highways, and LCV proponents are already working on lobbying campaigns in many other states. The National Governors Association has concluded, in their adopted highway transportation policy statement, that we need uniformity in allowable truck sizes and weights.

We are a mobile society. The crossing of state lines has become an every day event for more and more of our population. In view of this reality, only a federal truck length limit can fully and equally protect our highway users when they are driving at home and when they travel in other states.

Finally, with regard to weight, our response here takes us into the intricate workings of the grandfather provisions of Title 23's infamous Section 127.

To refresh your memories, when the Interstate System was created in the 1956 Federal-Aid Highway Act, federal limits were set for overall and axle weights and for the width of vehicles using the new System. At the same time, provision was made to allow states that had previously established higher weight and width limits for their public highways by law or regulation to continue them on the Interstate.

We understand that the 1956 provisions grandfathered three states for gross vehicle weights higher than the 73,280 pound limit contained in the 1956 Act. A larger number of states were similarly grandfathered in 1956 for higher axle weights. The gross vehicle and axle weight limits to this day apply only to the Interstate System, and not to other Federal-Aid Highways despite their lesser capability to safely handle even larger vehicles. The public is rightly confused by these arbitrary distinctions.

The 1974 Federal-Aid Highway Amendments added the federal bridge formula governing the spacing of axles and increased the federal vehicle and axle weight limits to their present levels. It also allowed for the continued operation of vehicles on the Interstate which violated the new bridge formula but had operated lawfully in the state prior to January 4, 1975 (date of enactment of the 1974 Amendments).

Until the Surface Transportation Assistance Act of 1982, compliance with the federal gross vehicle and axle weight limits and determination of whether a state had grandfathering rights to permit heavier vehicles on the Interstate were the purview of the Federal Highway Administration. The Symms Amendment changed that by totally removing the federal government -- the Secretary of Transportation and the FHWA -- from the administration of what is supposed to be a federal standard. I would like to note here that the Committee and House-passed position in 1982 was to involve both the states and the FHWA in the determination of grandfather rights.

The result has been chaos. The Federal Highway Administration can no longer provide authoritative information on the weights of trucks allowed by states to use the Interstate. Nor can DOT tell you the basis of some states' grandfather claims, claims which allow vehicles to exceed the 80,000 pound statutorily-established federal weight limit for the Interstate highways by as much as 49,000 pounds.

Since 1982, a number of states have claimed the right to exceed the federal weight limits on the Interstate through the haphazard issuance of permits for divisible loads. Section 127, however, makes only one specific exception for:

> those vehicles and loads which cannot be easily dismantled or divided and which have been issued special permits in accordance with applicable State laws. [Emphasis added.]

We would respectfully suggest to the Committee that this explosion of permitting over the past several years for overweight divisible loads is the direct result of tying the federal government's hands in the enforcement of the national gross vehicle and axle weight limits. Therefore, to bring some badly needed clarity and consistency to the law , CRASH asks that you amend Section 127 to put the Secretary of Transportation and the Federal Highway Administrator back in the driver's seat by restoring their clear legal responsibility for determining whether a state has a legitimate claim to grandfather rights under the existing requirements of Section 127 and, in particular, whether any state's grandfather rights allow the regular and routine issuance of trip permits for loads that are easily divisible.

This means that Congress should direct the Federal Highway Administration to review the grandfather rights claimed and exercised by states since passage of the Symms Amendment. Only those states found to not meet the existing requirements of Section 127 would be subject to question by FHWA.

I would now like to turn to a third safety item -- the accident record of LCVs and the limited data available for evaluating their performance. While the proponents of wider usage of LCVs will claim lower crash rates for longer combination vehicles than for semi- and twin-trailers, their position is not supportable. First, they extract favorable data from a number of sources, pour them into a cauldron, and extract a witches' brew of confused conclusions.

Second, they don't explain that in almost every state, LCVs have been operated primarily under optimal conditions -- mostly on the very best roads, with the best drivers, under the best weather conditions, during specified hours of the day -- and on short trips where driver fatigue is less of a problem.

Moreover, it is currently impossible to do accident rate studies for LCVs for two reasons:

First, national truck crash reporting by truck configuration is unreliable. Many, if not most accident reports do not note whether a crashed truck had one trailer, two trailers or three. A letter written by the Montana Department of Highway Safety only six weeks ago illustrates the problem:

> Prior to 1982, Montana had no distinction between types of semi-trucks. Recently, we have found major problems on reporting of triples, which are coded incorrectly about half the time during the last three years.

Second, no reliable national data base exists to determine vehicle miles travelled by truck configuration. In a recent study of Triples crashes in Oregon, the Oregon Public Utilities Commission (PUC) stated categorically:

> ...we do not know the mileage nor the proportion of miles travelled by these vehicles in triple combination.

The Oregon PUC denied that it was possible to determine or compare accident rates of Single, Double or Triple trailer trucks by stating:

> Mileage information is not available on the various combinations; therefore, it is not possible to compare accident data on a statistically valid basis.

By the way of background, you should be aware that the State of Oregon has very extensive experience with LCVs. Both Triples and Rocky Mountain Doubles have operated in Oregon since 1967. At the start, Triples were limited to specific portions of the Interstate. This was soon expanded, however, allowing Triples to run on some two-lane, two-way state highways, but only in fair weather. In 1989, the weather restriction was lifted, permitting Triples to run in the rain on two-lane, two-way state highways.

Today, Triples run on 3,526 miles of Oregon roads -- including certain city streets and country roads -- while Rocky Mountain Doubles may be found on 4,065 miles of roadway.

As the Oregon experience shows, there is a tendency for LCVs to expand beyond the Interstates and outside of limited conditions over time with no guarantees that any of the original limitations would continue. And the results are predictable as the Oregon Public Utilities Commission study reveals:

- Of the 65 crashes occurring in Oregon during the 5 years studied, 30 percent of the Triples accidents took place off the Interstates, with 20 percent occurring on city streets;

-- While only 1.3 percent of Single trailer truck crashes resulted in trailer separation, 4.6 percent of Rocky Mountain Double crashes and 6.4 percent of Triple crashes involved trailer separation; and

-- The crash data between 1985 and 1990 illustrates what the Oregon PUC calls "the speed problem," the difficulty of Triples climbing upgrades: 14 percent of the Oregon Triples' crashes involved motorists striking the rear of the LCVs at night and more than half of these night-time, rear-end accidents occurred on uphill grades.

In sum, the reporting of truck crash data is incomplete and wholly inadequate. The FHWA's Office of Motor Carriers data system is voluntary, relying on interstate motor carriers to report their own crash involvements. The other prime source of crash data is the National Highway Traffic Safety Administration's Federal Accident Reporting System (FARS) which covers crashes with fatalities. While more complete than the Office of Motor Carriers data, FARS coverage is limited to fatal accidents. Although FARS can be used be with additional refinement to generate a comparison of all multi-unit trucks vs. single-trailer trucks for fatal crashes, it does not accurately distinguish each specific LCV combination.

To remedy this current lack of accurate truck crash and vehicle miles travelled data, CRASH is asking this Subcommittee to establish an accurate and uniform national truck safety monitoring system as part of its reauthorization of the Motor Carrier Safety Assistance Program. Such a system would provide transportation safety specialists with the kind of broad and reliable information base needed to analyze the causes of truck crashes and to develop preventative measures. The inadequacies of the U.S. Department of Transportation's two data bases have been well documented, most recently by the Transportation Research Board and the National Governors Association.

The final issue that we want to raise concerns truck maintenance and an increasing amount of evidence that numbers of motor carriers may be skimping on maintenance to save money. Since 1984, under the Motor Carrier Safety Assistance Program (MCSAP), ever-increasing numbers of roadside inspections have been performed.

However, the percentage of trucks with out-of-service violations has not gone down. Inspections of trucks during the annual, three-day "Roadchecks" sponsored by the U.S. Department of Transportation every May have shown the same basic results, with 32 percent of the trucks ordered out-of-service in 1989 and 30 percent of the inspected vehicles receiving out-of-service orders during the 1990 Roadcheck. Moreover, random inspections conducted in four different states (California, Michigan, Washington State and Wisconsin) produced out-of-service orders for more than 25 percent of the randomly inspected trucks.

The Motor Carrier Safety Assistance Program has brought about a nearly tenfold increase in truck inspections since its creation in 1984. Moreover, MCSAP has served as a model for intergovernmental coordination and cooperation. To make MCSAP even more effective as a truck safety guarantor, CRASH recommends that the Committee's reauthorization bill strengthen the Motor Carrier Safety Assistance Program by requiring the Secretary of Transportation to work with the states to:

(1) establish more uniformity in vehicle inspections;

(2) set minimum fines for safety violations so the cost of state fines serves as a deterrent to potential violators and encourages better maintenance, safer operations and compliance with MCSAP; and

(3) improve the enforcement of out-of-service orders for trucks outside their state of residency by covering all out-of-service orders in the Non-Resident Compliance Contract.

To close, I would like to thank the Subcommittee for holding such extensive hearings on the surface transportation assistance reauthorization, both in Washington and around the country. CRASH has been pleased to participate in your deliberations not only today, but also in Long Beach and San Jose.

Finally, I want to reiterate that you have a great opportunity before you in this legislation to make a major difference in the safety of our highways.

1991 could be the time that we hold the line and reverse the dangerous trend of unending increases in truck weights and lengths, increases which threaten our lives and destroy our highways and bridges.

I hope you will agree that 80,000 pound trucks with a maximum of 65 feet for their trailers is big enough, long enough, and heavy enough. Certainly, the people who use the highways, the vast majority of drivers who operate heavy trucks, state transportation officials, insurers, medical professionals who must treat the victims, and the state and local police who must deal with crash-generated traffic jams and severely injured motorists all agree with need to limit these behemoths on the public roadways.

Thank you. We would be pleased to answer any questions you may have.

CRASH CITIZENS FOR RELIABLE AND SAFE HIGHWAYS

## POOR TRUCK MAINTENANCE -- OVERVIEW

Studies confirm that a large number of trucking companies skimp dangerously on truck maintenance to cut costs. As a result, more than **25%** of the trucks on the road today have mechanical defects so severe that they should immediately be ordered out-of-service -- that is, ordered not to move until the dangerous mechanical defects are corrected. One study found that big trucks with out-of-service defects are **twice** as likely to be involved in a crash as are big rigs with no equipment defects.

The Motor Carrier Safety Assistance Program ("MCSAP") has brought about a nearly tenfold increase in truck inspections since taking effect in 1984. Nevertheless, the increased truck inspections have not solved the defective truck problem, for two reasons:

1. Penalties imposed on trucking companies caught with defective vehicles are so low as to constitute nothing more than a license to ignore the law.

2. Violations for out-of-service trucks are not included in the Non-Resident Compliance Compact (a reciprocal agreement between member states to honor each other's traffic citations and aid in enforcement). Thus, citations issued for defective trucks are difficult to enforce on non-residents of the citation-issuing state.

2

## TRUCK INSPECTIONS AND SURVEYS OF TRUCKING COMPANY CEOs

Despite hundreds of millions of dollars spent by federal and state governments under MCSAP on roadside truck inspections, the percentage of inspected trucks with out-of-service violations has not improved:[1]

| Year | Truck Inspections | Out-Of-Service Trucks | % Out-Of-Service |
|---|---|---|---|
| 1984 | 159,294 | 49,604 | 31% |
| 1985 | 374,885 | 107,583 | 29% |
| 1986 | 559,300 | 218,144 | 39% |
| 1987 | 1,003,794 | 370,088 | 37% |
| 1988 | 1,254,385 | 470,836 | 38% |
| 1989 | 1,301,868 | 473,919 | 36% |

Semi-random inspections of trucks throughout the country during a three-day period in May of each year (Roadcheck '89, Roadcheck '90, etc.) have found the percentage of out-of-service trucks to be almost as high as the MCSAP out-of-service percentages. During Roadcheck '89, 31,000 trucks were inspected over a three-day period at 160 locations in 47 states. Inspectors ordered **32%** of the trucks out-of-service.[2] During Roadcheck '90, **30%** of inspected vehicles were ordered out-of-service.[3]

[2] Memorandum from Stephen Crane, Regional Director, Office of Motor Carrier Safety, Federal Highway Administration, Albany, New York, to John Hibbs, Director, Office of Motor Carrier Safety, Field Operation, Washington, D. C., May 26, 1989.

[3] Interview with Milt Schmidt, Inspection Coordinator, Regional Office, Director of Office of Motor Carrier Safety, Albany, New York, August 1990.

Not all MCSAP and Roadcheck inspections are completely random. Indeed, some states' inspections are selective. Those trucks in apparently poor condition or with obvious safety defects are inspected first.

The recently published results of a survey of 202 chief executive officers (CEOs) of trucking companies underscores CRASH's conclusion that a frightening number of trucking companies are not properly maintaining their vehicles.[4]

The CEOs were asked: "What single factor most surprised you about what happened to the intercity trucking industry between 1980 and 1989 as a result of deregulation?" The biggest surprise for a significant number of CEOs was how safety standards have been compromised since 1980. Some representative comments:

- "Today I fear to drive the Interstate because I know how unsafe many 18-wheelers are. They are typically operated by firms that can't be making any money because rates, in most cases, are not compensatory. They have undoubtedly skimped on preventive maintenance and it scares the hell out of me to have one of those giant trucks bearing down on me. I always wonder if their brakes will work. I don't want to sound melodramatic, but I have often thought how ironic it would be if I were killed by a tractor-trailer unit after spending my entire career in the trucking industry."[5]

- "Carrier safety is a joke today. It is pure and simple economics for the great majority of carriers. Their rates are too low, so what expense item is deleted? The obvious one is preventive maintenance. I am really chagrined that both state and

[5] Id. at 349.

federal safety inspections in this country are so lax. . . ."[6]

The CEOs were also asked to peer into the future. "What do you believe will be the single largest change in the intercity trucking industry between now and the year 2000?" A significant number of CEOs predicted the single largest future change would be the further deterioration of safety in the coming decade. Two representative comments:

- "Rates have become so low that many trucking companies, mine included, do not perform the preventive maintenance that we should or that we did just 5 years ago. I am outraged at myself that I must go to our VP of maintenance and constantly ask him where we can cut back to get our cost of operations lower. This is wrong, wrong, wrong, but it is also an economic fact of life that I must live with. If we maintained our equipment at the levels we should and if we replaced our rolling stock when we should, we would no longer be in business. Isn't that sad?"[7]

- "The trucking industry is cannibalizing itself. We can't afford to replace equipment, so we are running tractors that have way too many miles on them — some of ours have over 2 million miles and they shouldn't be on the road. No amount of maintenance would render these vehicles safe. We are not providing anywhere near enough maintenance for our vehicles, even if they were relatively new, which unfortunately most are not. This is the ticking time bomb for the trucking industry."[8]

## TRUCKING INDUSTRY REBUTTAL:

The trucking industry contends that the out-of-service statistics from the MCSAP inspections and the Roadcheck '89 and Roadcheck '90 inspections are unreliable because the inspections were not completely random. The trucking industry asserts that if truck selections were done on a truly random basis, the percentage of trucks ordered out-of-service would be lower.

The spokesman for a major trucking company claims that one cannot rely on the representative comments by trucking company CEOs quoted in the *Transportation Quarterly* article since the CEOs were quoted anonymously.

## CRASH RESPONSE:

The U. S. Congress' Office of Technology Assessment found that "even in states where efforts are made to perform completely random inspections, 30 percent of inspected vehicles are being put out-of-service."[9] California, for example makes only completely random truck inspections. The percentage of out-of-service violations found ranges from a low of 20% at the fixed site inspection locations (that drivers of poorly maintained vehicles can avoid by careful route planning) to a high of 40% at the surprise inspections conducted by mobile inspection teams.[10]

Carefully controlled random inspection of trucks in four states confirms the findings of the Office of Technology Assessment. All found that at least **25%** of the randomly selected trucks had out-of-service violations.

---

[9] Congress of the United States, Office of Technology Assessment, "Gearing Up for Safety," 100th Congress, p.14.

[10] Interview on January 3, 1991 with Captain Larry Rollin, Chief, Commercial and Technical Services Section, California Highway Patrol.

1. **California and Michigan**

   In 1987, Michigan and California Highway Patrol inspectors randomly selected a total of 604 trucks for inspection. **Twenty-seven percent** (166 trucks) had out-of-service violations.[11]

2. **Wisconsin**

   Random truck inspections at Kegonsa and Utica near Madison found that **25%** of the inspected trucks had out-of-service violations.[12]

3. **Washington State**

   The Washington State Patrol randomly selected trucks on Washington interstates for inspection over a two-year period from 1984 to 1986 as part of a study designed by the Insurance Institute for Highway Safety. **Thirty-one percent** of the randomly selected trucks were ordered out-of-service.[13]

---

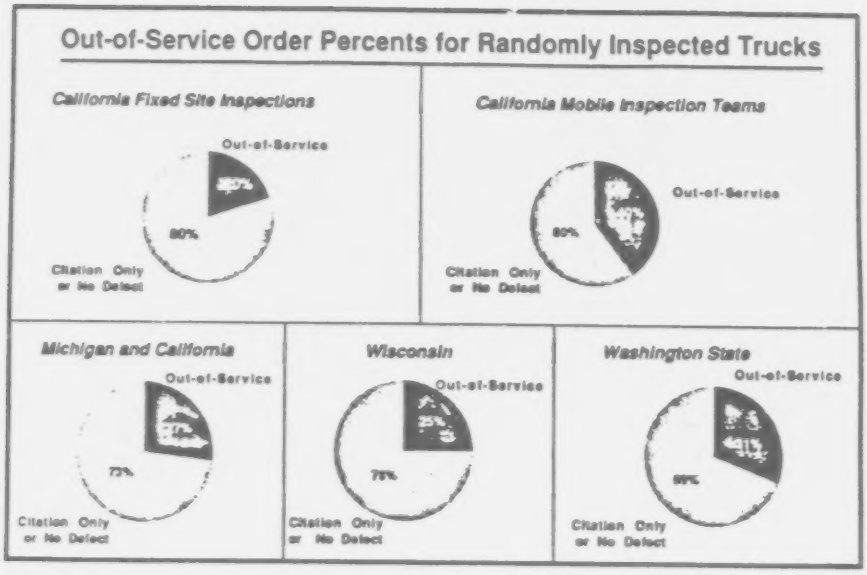
[12] B. Davis, "Preliminary Results of MCSAP Random Sample Inspections at Kegonsa and Utica Scales Southeast of Madison on Interstate 90, Wisconsin State Patrol, 1986.

[13] I. S. Jones and H. S. Stein, "Defective Equipment and Tractor-Trailer Crash Involvement," *Accident Analysis and Prevention*, Vol. 21, No. 5, 1989, pp.469-81.

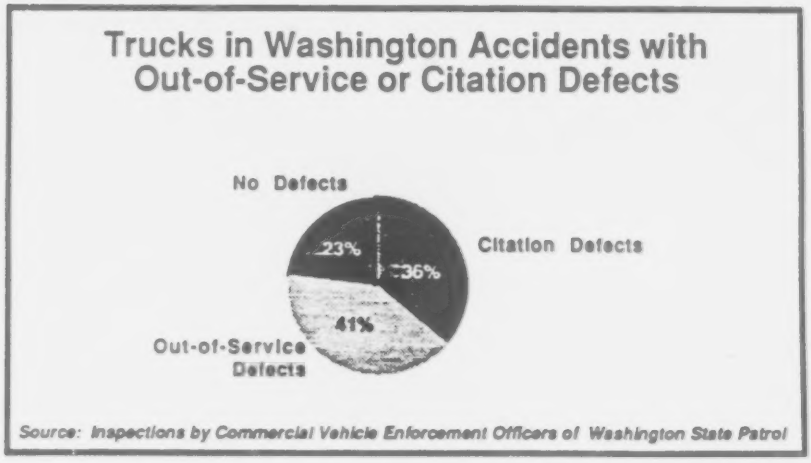


The attack on the university professors who surveyed 202 trucking company CEOs and published the results in *Transportation Quarterly* is without merit. It is customary in surveys of this type to afford the respondents anonymity. In fact, the study deserves even greater credence because anonymity allows respondents to be completely forthright in their answers.

## EQUIPMENT DEFECTS IN TRUCKS INVOLVED IN ACCIDENTS

A large percentage of trucks involved in accidents have mechanical defects.

The specially-trained Commercial Vehicle Enforcement officers of the Washington State Patrol carefully investigated crash-involved trucks on Washington interstate highways over a two-year period as part of the Washington State Truck Study. Commercial Vehicle Enforcement officers found that **77%** of the crash-involved trucks had citable maintenance violations and **41%** of the accident-involved trucks had equipment violations so severe that they should have been ordered out-of-service.[14]



---

[14] I. S. Jones and H. S. Stein, supra note 13, p.473-74.

## TRUCKING INDUSTRY REBUTTAL:

"The US Department of Transportation reports that, of those accidents reported to the Office of Motor Carriers on an annual basis, approximately 97% of the involved trucks have no visible defect."[15]

## CRASH RESPONSE:

The accident statistics reported by the Office of Motor Carriers ("OMC") are based on self-reporting by motor carriers. This system of voluntary self-reporting is so inadequate that the Office of Motor Carriers statistics are considered unreliable. Even when trucking companies report accidents to OMC, they almost always fail to report maintenance violations.

Moreover, elementary logic tells one that if 25% or more of trucks on the highway have out-of-service type maintenance defects, based simply on random occurrence it would be expected that significantly more than 3% of trucks involved in accidents would have vehicle defects.

### 1. Trucking Companies Report Only a Small Percentage of Their Accidents to OMC.

Messrs. Campbell and Carsten at the University of Michigan's Transportation Research Institute ("UMTRI") analyzed the accident data provided by trucking companies to OMC. That analysis led to the following conclusion:

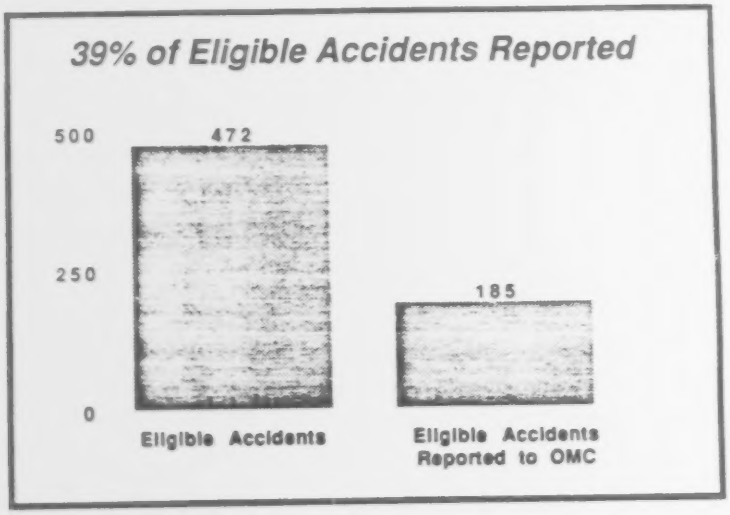
> Many fleets, fearing damage to their reputations if data were leaked, were clearly reluctant to report all their accidents. Others found the collection of the data to be too much of a burden on their time. But whatever the reason, the data were clearly too unreliable to perform their intended purpose.[16]

---

[15] ATA White Paper delivered to House and Senate staffs of Public Works subcommittees responsible for surface transportation in August, 1990 (hereinafter "ATA White Paper").

[16] K. L. Campbell and O. Carsten, "Fleet Accident Evaluation of FMVSS 121," Report UM-HSFI-81-9, University of Michigan Highway Safety Research Institutes, Ann Arbor, March 1981.

In 1983, the Office of Motor Carriers estimated before Congress that only 60% to 70% of all truck accidents required by law to be reported to OMC ("eligible accidents")[17] are actually reported.[18] Subsequent research done for OMC has shown that that estimate is probably high. The later research showed that only 39% of eligible truck accidents involving interstate carriers that the Commercial Vehicle Enforcement Officers of the Washington State Patrol investigated on interstate highways during a two-year period were actually reported to the Office of Motor Carriers.[19]



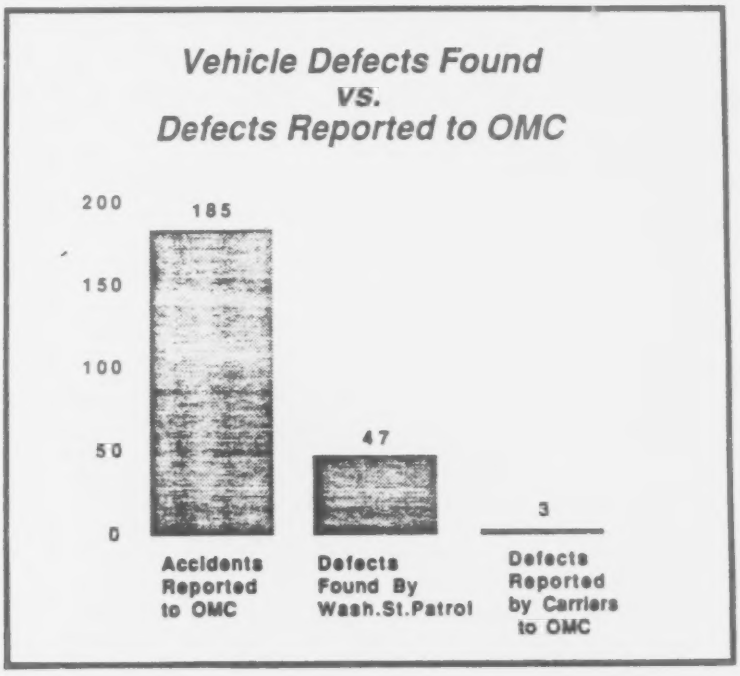
[17] An "eligible accident" is one resulting in an injury where treatment was received away from the site and/or causing property damage of at least $2,000 (before 1986) or $4,200 (1986 and after).

[18] Twenty-First Report of the House Committee on Government Operations, "Improving the Effectiveness of the Bureau of Motor Carrier Safety and Its Enforcement of Hazardous Materials Regulations," House Report 98-562, Washington, DC, November 17, 1983, p.10.

[19] H. S. Stein, "Comparison of OMC Accident Data with Independent Data From Washington State," As Part of OMC Contract DTFH61-88-2-00094: Accident Reporting System Augmentation, Task E, Feasibility of Expanded Safetynet Accident Module, Reston, VA, December 1989, p.9.

**2. Even When Motor Carriers Report Accidents, They Almost Always Fail to Report Maintenance Violations to OMC.**

The study done for OMC found that only 185 out of 472 (39%) eligible accidents that occurred during the study period were actually reported by trucking companies to OMC. Of the 185 that were reported, 47 accident-involved trucks were found by the Washington State Patrol to have out-of-service defects. However, only 3 of those 47 trucks (6%) were reported to OMC as having any equipment defects.[20]



One can understand why the trucking companies prefer not to report defective equipment violations to OMC. Admitting violations might lead to liability in a lawsuit or might result in a negative report by OMC about the trucking company's maintenance practices.

---

[20] H. S. Stein, supra note 21, p. 10.

A large percentage of accidents are not reported by the trucking companies to the Office of Motor Carriers at all. Almost all of the companies who report their accidents to OMC fail to report serious equipment defects in accident-involved trucks.[21]

### 3. Elementary Logic

More than 25% of the trucks plying our nation's highways at any one time have maintenance defects so severe that they should be ordered out-of-service. One intuitively suspects (and the Washington State Truck Study proves) that accident-involved trucks will have a higher proportion of vehicle defects than will trucks not involved in accidents. Yet, the ATA would have us believe that only 3% of accident-involved trucks have any equipment defects. If 25% of trucks on the road have out-of-service defects, elementary logic tells one that, based simply on random occurrences, significantly more than 3% of trucks involved in accidents will have vehicle defects.

---

[21] A researcher retained by OMC criticized an equipment defect question on the OMC form, which asks, "Were mechanical defects or failures apparent on your vehicle at the time of the accident?" The researcher noted:

> This question is not specific and can be misinterpreted. For example, how is apparent defined? Although the OMC instructions go into this issue in detail, requiring that each defect known to exist before the accident, brought to light by the accident, or discovered by investigation of the accident should be recorded, few people probably review these additional instructions. A more direct question would be: Were any equipment defects present on your vehicle at the time of the accident? On the other hand, it would be difficult to believe that a substantial portion of the drivers with trucks having out-of-service brake and steering defects are not aware of the problems. H. Stein, supra note 21, p. 11.

## EQUIPMENT DEFECTS AS A CAUSE OF ACCIDENTS

Proof that about 25% of the trucks on the road have severely defective brakes, tires or steering apparatus does not necessarily mean that those defects cause accidents. The question remains:

**Does defective truck equipment increase the odds of an accident?**

Truck accidents are complex events involving a series of related causal factors. The condition of the driver, the environment and the truck equipment frequently interrelate. It is often difficult to identify a simple primary cause. Nevertheless, the evidence indicates that equipment defects do significantly increase the risk of truck accidents.

A 1987 National Highway Traffic Safety Administration (NHTSA)[22] study concluded that vehicle-related factors "play a critical, if somewhat unrecognized and under-reported role" in truck accidents. NHTSA estimated that faulty brakes could be involved in as many as one-third of all truck accidents.[23]

The Washington State Truck Study by the Insurance Institute for Highway Safety with the assistance of the Commercial Vehicle Enforcement Officers of the Washington State Patrol, concluded that big rigs with out-of-service defects have **two times** the risk of being involved in a crash as do big rigs with no equipment defects.[24]

---

[22] NHTSA is the branch of the US Department of Transportation responsible for vehicle and human factor aspects of highway safety.

## TRUCKING COMPANY REBUTTAL:

"The University of Michigan Transportation Research Institute's five-year study of large truck fatal accidents found that in 92% of the cases no factor related to the physical condition of the truck was identified."[25]

## CRASH RESPONSE:

1. **False Assertion About University Of Michigan Transportation Research Institute's Findings**

Dr. Kenneth Campbell, who heads the statistical analysis section of the University of Michigan's Transportation Research Institute ("UMTRI"), stated in an interview that UMTRI has **not** "found" that in 92% of fatal large truck fatal accidents no factor related to the physical condition of the truck was identified.[26]

UMTRI prepared a five-year analysis (from 1980 to 1984) of Federal Accident Reporting System (FARS) data. In its analysis, UMTRI notes that FARS collation of data from FARS sources—police reports—shows that police reports specify equipment problems as the cause of truck accidents in 8% of the accidents. UMTRI, however, does not make any attempt to verify the accuracy of the FARS data or the conclusions in the police reports.

Since the FARS data is based on police reports, Dr. Campbell points out, FARS data tends to undercount the number of incidents where truck equipment defects played a role.

Dr. Campbell explained that police personnel who investigate truck accidents rarely perform rigorous or thorough investigations on truck equipment defects. Most police officers simply are not trained to observe vehicle defects and, consequently,

---

[25] Joseph M. Clapp, Chairman of Roadway Services, quoted in *Transport Topics*, "Riding the Rails," October 8, 1990, p.6.

[26] Interview with Dr. Kenneth Campbell, October 26, 1990.

the majority note only the most catastrophic equipment failures on their accident reports.

**2. Detailed Truck Inspection Necessary to Determine Role of Vehicle Defect in Accidents**

To assess whether defective equipment is a casual factor in any truck accident, a detailed inspection must be made of the vehicle. Such an inspection is rarely made after a truck accident.

Not having the information about the vehicle that would be produced by a thorough examination of the vehicle, the police officer who investigates the accident generally writes in his police report that the accident was caused by driver error.

For example, when a truck rear-ends a car, the investigating officer will frequently code the accident as caused by "driver inadvertence" when it was really caused by defective brakes.

**CONCLUSION:**

Truck maintenance problems are dangerous and need to be addressed by Congress.

The Motor Carrier Safety Assistance Program ("MCSAP") has brought about a nearly tenfold increase in truck inspections since taking effect in 1984. Nevertheless, the increased truck inspections have not solved the defective truck problem, for two reasons:

1. Penalties imposed in trucking companies caught with defective vehicles are so low as to constitute nothing more than a license to ignore the law.

2. Violations for out-of-service trucks are not included in the Non-Resident Compliance Compact (a reciprocal agreement between member states to honor each other's traffic citations and aid in enforcement). Thus, citations issued for defective trucks are difficult to enforce on non-residents of the citation-issuing state.

# OREGON PUBLIC UTILITY COMMISSION

## TRIPLE-TRAILER COMBINATIONS
## ACCIDENTS AND INSPECTIONS
## IN OREGON
## 1985 THROUGH 1990

MARCH 1991

## EXECUTIVE SUMMARY

This report provides raw data on accidents involving triples and all other heavy truck combinations. It also compares results of inspections conducted on triples and all vehicle combinations.

Triples operate under different conditions and routes than other heavy truck combinations. Mileage information is not available on the various combinations; therefore, it is not possible to compare accident data on a statistically valid basis.

On-highway inspections are generally conducted on vehicles that inspectors consider most likely to have safety violations. Therefore, the inspection informaton contained in this report does not represent the condition of all vehicles operating in Oregon. The results may be used to compare the various combinations because the selection criteria for inspections is the same for all vehicle combinations.

During the six-year period 1985 through 1990, there were a total of 65 accidents reported to the PUC involving triple-trailer vehicle combinations. Triples account for 0.6 percent of the total number of accidents. It is estimated that 2.2 percent of the power units registered in Oregon are permitted to operate with triples. While the proportionate accident rate of triples is less than 2.2 percent of the truck power units registered in Oregon, this analysis lacks significance because we do not know the mileage nor the proportion of miles traveled by these vehicles in a triple combination.

The types of accidents we see with triples are the same as all other combinations. However, there seem to be two areas where triple accidents stand out. These are unit separations (separation of one unit from another) and incidents of nighttime rear-end accidents involving another vehicle striking the rear of the triple combination. The rear-end accidents may indicate a nighttime visibility and speed problem on uphill grades. (Five of the nine nighttime rear end accidents occurred on uphill grades.)

Results of triple combination inspections indicate that the overall number of violations per inspection are less for triples than for all combinations. The average number of violations per inspection of triples over the five-year period was 2.97, whereas for all combinations it was 3.54. The average percentage of vehicles placed out-of-service based on these inspections was 8.14 percent for triples and 25.56 percent for all vehicles. This comparison is based on 229 inspections conducted on triples versus 82,946 conducted on all vehicle combinations.

Because triples are restricted to certain routes, we have provided at the end of this report a map showing those routes currently authorized for triple trailer travel under permits issued by the Oregon State Highway Division.

# INFORMATION ON ACCIDENTS AND INSPECTIONS INVOLVING TRIPLE-TRAILER COMBINATIONS IN OREGON

## 1985 THROUGH 1990

This report presents the accident and inspection information on triples currently available to the PUC. Information on the miles traveled by triples in Oregon is not available so staff cannot calculate accident rates. This makes any direct comparison of the relative safety between various vehicle configurations difficult.

The operation of triples on Oregon highways is restricted by special transportation permits controlled by the Oregon Highway Division. Triples are restricted to designated highway routes, are prohibited from using those routes in inclement weather conditions, and have several other limitations on their operation. These operational limitations also make direct, accurate comparison difficult.

This report should be read with those limitations in mind.

During the period, 1985 through 1990, there were a total of 65 accidents reported to PUC, involving triple-trailer vehicle combinations. The following table shows the number of accidents involving triples, with the total commercial vehicle accidents, by year:

| | 85 | 86 | 87 | 88 | 89 | 90 | TOTAL |
|---|---|---|---|---|---|---|---|
| TRIPLES | 5 | 12 | 10 | 13 | 15 | 10 | 65 |
| ALL VEHICLE COMBINATIONS | 1714 | 1886 | 1631 | 1829 | 1779 | 1637 | 10476 |

Triples account for .6 percent of the total number of accidents reported involving all commercial vehicle combinations during this period.

The following table shows the distribution of accidents by vehicle configuration.

TOTAL ACCIDENTS BY VEH. CONFIGURATION
1985 THROUGH 1990

| | TOTAL NO. ACCIDENTS | % OF TOTAL ACCIDENTS |
|---|---|---|
| TRUCK | 1509 | 14.4 |
| TRUCK & TRAILER | 974 | 9.3 |
| TRACTOR/SEMI TL. | 6588 | 62.9 |
| TRAC/DOUBLE TL. | 1144 | 10.9 |
| TRAC/TRIPLE TL. | 65 | .6 |
| BOBTAIL | 165 | 1.6 |
| OTHER | 31 | .3 |
| | 10476 | 100.0 |

Figures from the ODOT Permit and Weighmaster Section, indicate that from 1985 through 1989, an average of 2.2 percent of the commercial vehicles registered in Oregon by PUC were permitted for triples. However, we do not know how often the permitted vehicles were operated as triples.

Of the 65 total truck accidents involving triples, 31, or 47.7 percent, were classified as "Truck-at-fault", indicating that the accidents resulted from the actions of the triples driver, or were due to a mechanical defect or load securement problem on the triple combination.

TRUCK-AT-FAULT ACCIDENTS

| | 85 | 86 | 87 | 88 | 89 | 90 | TOTAL |
|---|---|---|---|---|---|---|---|
| TRIPLES | 2 | 5 | 5 | 7 | 8 | 4 | 31 |
| ALL VEHICLE COMBINATIONS | 867 | 941 | 849 | 1030 | 937 | 829 | 5453 |

Triples account for .6 percent of the truck-at-fault accidents during this period.

The following table shows a distribution of truck-at-fault accidents by cause for triples compared to all other vehicle configurations.

CAUSE DISTRIBUTION

TRUCK-AT-FAULT ACCIDENTS
1985 THROUGH 1990

| | TRIPLES | % | OTHER VEH. | % |
|---|---|---|---|---|
| DRIVER ACTIONS | 20 | 64.5 | 3928 | 72.4 |
| DRIVER CONDITION | 5 | 16.1 | 526 | 9.7 |
| MECHANICAL DEFECT | 5 | 16.1 | 607 | 11.2 |
| LOAD CONDITION & SECUREMENT | - | | 261 | 4.8 |
| OTHER | 1 | 3.2 | 101 | 1.9 |
| | 31 | | 5422 | |

The most common truck-at-fault accidents involving triples were sideswipe and rearend collisions, and four types of crashes; running off roadway, unit-separation, jackknife, and overturn. These are also the most common types of collisions and crashes involving all vehicle combinations.

The table at the top of the next page shows a breakdown of the truck-at-fault accidents, by accident type, for triples versus all other vehicle configurations. For instance, of the truck-at-fault accidents involving triples, 22.6 percent were sideswipe collisions. For all vehicle combinations, sideswipes accounted for 26.6 percent of the truck-at-fault accidents.

BREAKDOWN OF TRUCK-AT-FAULT ACCIDENTS BY TYPE
FOR TRIPLES AND OTHER VEHICLE CONFIGURATIONS
1985 THROUGH 1990

| TYPE | ALL VEHICLE CONFIGURATIONS | % | TRIPLE TRAILERS | % |
|---|---|---|---|---|
| REAREND | 842 | 15.4 | 4 | 12.9 |
| HEADON | 148 | 2.7 | 1 | 3.2 |
| SIDESWIPE | 1448 | 26.6 | 7 | 22.6 |
| BROADSIDE | 310 | 5.7 | 0 | - |
| ROLLAWAY | 41 | .8 | 0 | - |
| BACKING | 167 | 3.1 | 1 | 3.2 |
| RAN OFF ROAD | 966 | 17.7 | 6 | 19.4 |
| UNIT SEPARATION | 97 | 1.8 | 2 | 6.4 |
| JACKKNIFE | 290 | 5.3 | 5 | 19.4 |
| OVERTURN | 669 | 12.3 | 4 | 12.9 |
| FIRE | 6 | .1 | 0 | - |
| LOADSHIFT | 52 | .9 | 0 | - |
| LOADSPILL | 160 | 2.9 | 0 | - |
| HIT & RUN | 155 | 2.8 | 1 | 3.2 |
| OTHER | 102 | 1.9 | 0 | - |
| | 5453 | | 31 | |

As you can see there are some marked differences in accident type distribution depending upon vehicle configuration. In order to illustrate these differences, an appendix has been included, with a series of graphs showing the proportion of truck-at-fault accidents by vehicle configuration for each accident type.

Graph A-1, for instance, compares the proportion of truck-at-fault accidents involving the truck striking the rear of another vehicle, for all combinations. For instance, this shows that for straight trucks, 22.6 percent of the accidents involve rearend collision; while for triples the proportion is 12.9 percent.

Also included are breakdowns for sideswipe collisions (A-2), and for the four most frequent types of crashes, ran off road (A-3), unit-separations (A-4), jackknifes (A-5), and overturns (A-6).

Graph A-4 shows that unit-separations occur most frequently in vehicle combinations using a "pintle hook" type coupling device (ie between trailers on doubles and triples, and on truck and trailer combinations). Comparatively, the proportion

of unit separations is lower in accidents involving tractor-semi trailers which use a "fifthwheel".

There were two unit-separations involving triples reported to PUC during the 1985 - 1990 period. Cause analysis show these unit-separations were caused by speed in one case, and by a failure of a pintle-hook in the second occurrence.

Graph A-5 shows the distribution of jackknife accidents for each vehicle combination. Of the truck-at-fault accidents involving triples, 16.1 percent were jackknifes. Referring to the next table, triples accounted for 1.72 percent of the jackknifes during the six year period.

PROPORTION OF TOTAL TRUCK-AT-FAULT ACCIDENTS
INVOLVING TRIPLES
1985 - 1990

| TYPE | TOTAL | TRIPLES | PERCENT |
|---|---|---|---|
| REAREND | 842 | 4 | .48 |
| HEADON | 148 | 1 | .68 |
| SIDESWIPE | 1448 | 7 | .48 |
| BACKING | 167 | 1 | .60 |
| RAN OFF ROAD | 966 | 6 | .62 |
| UNIT SEPARATION | 97 | 2 | 2.10 |
| JACKKNIFE | 290 | 5 | 1.72 |
| OVERTURN | 669 | 4 | .60 |

Graph A-6 displays the distribution of overturn accidents for each vehicle configuration. As you can see, 12.9 percent of the truck-at-fault accidents involving triples, were overturns.

This is not the complete picture about overturns, however. In the process of accident analysis and coding, the accident type is determined by what is referred to as the "first harmful event." If a truck runs off of the roadway, strikes an object and overturns; the accident will be coded as "ran off road" since that was the first harmful event.

From 1985 through 1990, there were a total of 13 accidents, involving triples, that resulted in an overturn. The breakdown follows:

TRIPLES ACCIDENTS RESULTING IN OVERTURN

| TYPE | NO. ACCIDENTS |
|---|---|
| JACKKNIFE | 2 |
| RAN OFF ROAD | 5 |
| OVERTURN | 4 |
| UNIT SEPARATION | 2 |

Of the accidents resulting in overturn, the following shows the number by vehicle unit within the triple combination:

| VEHICLE | NO. OVERTURNS |
|---|---|
| ENTIRE COMB. | 2 |
| TR + 1ST TL | 1 |
| 2ND & 3RD TL | 2 |
| 3RD TL ONLY | 6 |
| NOT SPECIFIED | 2 |

One other bit of information is illustrated by graph A-7. This graph deals again with rear-end collisions. The solid bars represent the proportion of truck-at-fault accidents accounted for by rearends for each vehicle configuration. The lined bars represent the proportion of accidents that were the fault of other vehicle drivers (ie. not truck drivers).

Over one fourth of the "other driver-at-fault" accidents that involved triples, were rearend collisions (10). Of the 10 rearends, all occurred on an interstate route, 9 of them in darkness.

INJURIES/FATALITIES

During the period from 1985 through 1990, triples accidents have resulted in 42 injuries and 2 fatalities. This amounts to .6 percent and .4 percent of the total, respectively.

The following table shows the number of injuries and fatalities by year.

| | 85 | 86 | 87 | 88 | 89 | 90 | TOTAL |
|---|---|---|---|---|---|---|---|
| INJURIES | | | | | | | |
| TRIPLES | 5 | 2 | 4 | 8 | 9 | 14 | 42 |
| ALL VEH COMBINATIONS | 1102 | 1132 | 979 | 1398 | 1061 | 869 | 6541 |
| FATALITIES | | | | | | | |
| TRIPLES | 0 | 1 | 0 | 0 | 0 | 1 | 2 |
| ALL VEH COMBINATIONS | 73 | 91 | 58 | 132 | 94 | 70 | 518 |

44 injuries or fatalities

The next table shows the number of injuries and fatalities that were determined to be 'truck-at-fault' versus those that were the fault of the other vehicle driver.

CASUALTIES - ALL VEHICLE COMBINATIONS

| | TRUCK AT FAULT | | OTHER AT FAULT | | TOTAL |
|---|---|---|---|---|---|
| | NO. | % | NO. | % | |
| INJURIES | 2748 | 41.7 | 3835 | 58.3 | 6583 |
| FATALITIES | 110 | 21.2 | 410 | 78.8 | 520 |

The following information shows specific Oregon highways where triples accidents have occurred. As you can see these accidents have occurred most frequently on Interstates 84 and 5; with the rest scattered on various roadways.

PROPORTION OF ACCIDENT FREQUENCY FOR TRIPLES
ON SPECIFIC HIGHWAYS

1985 THROUGH 1990

| HIGHWAY | TOTAL ACCIDENTS | TRIPLES ACCIDENTS | PERCENTAGE |
|---|---|---|---|
| INTERSTATE 84 | 901 | 25 | 2.8 |
| INTERSTATE 5 | 1517 | 20 | 1.3 |
| INTERSTATE 205 | 158 | 1 | .6 |
| INTERSTATE 405 | 79 | 1 | 1.3 |
| US 26 | 215 | 1 | .5 |
| US 30 | 158 | 1 | .6 |
| US 101 | 335 | 1 | .3 |
| SR 99 | 303 | 1 | .3 |
| SR 140 | 120 | 1 | .8 |
| SR 224 | 45 | 2 | 4.4 |

In addition to the on-highway accidents, there have been 11 triples accidents on city streets. The cities where triples accidents have occurred are listed below:

| | | | |
|---|---|---|---|
| PORTLAND | 2 | CRESWELL | 1 |
| TIGARD | 1 | ROSEBURG | 1 |
| BEND | 1 | GRANTS PASS | 1 |
| BOARDMAN | 1 | MEDFORD | 1 |
| CENTRAL POINT | 1 | COTTAGE GROVE | 1 |

total 65 triples accidents
9 on non interstate highways
11 on city streets

The remaining five tables display the results of safety inspections conducted upon triple combinations in Oregon.

INSPECTION RESULTS FOR TRIPLES
1986 THROUGH 1990

| | 1986 | 1987 | 1988 | 1989 | 1990 |
|---|---|---|---|---|---|
| NO. INSP | 52 | 27 | 42 | 38 | 70 |
| OS VEH % | 12.8 | 7.4 | 6.8 | 7.5 | 6.2 |

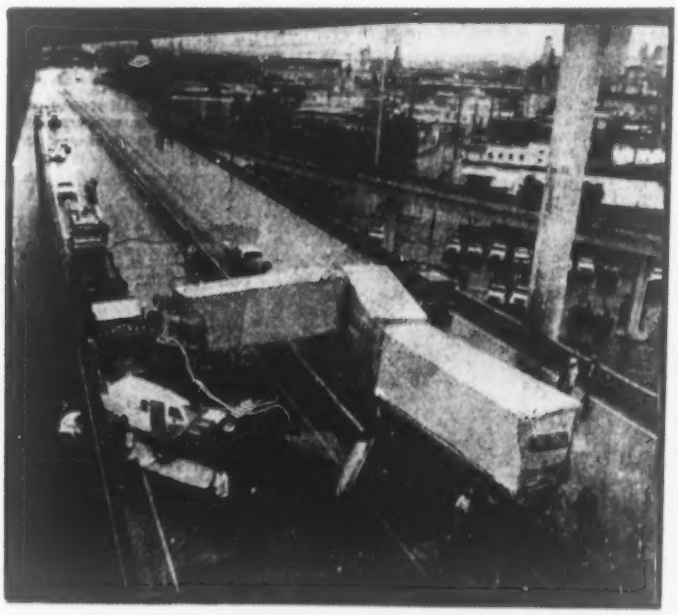
CRASH CITIZENS FOR RELIABLE AND SAFE HIGHWAYS

# THE SAFETY DEBATE ON LCVs:

# CRASH VS. THE AMERICAN TRUCKING ASSOCIATIONS



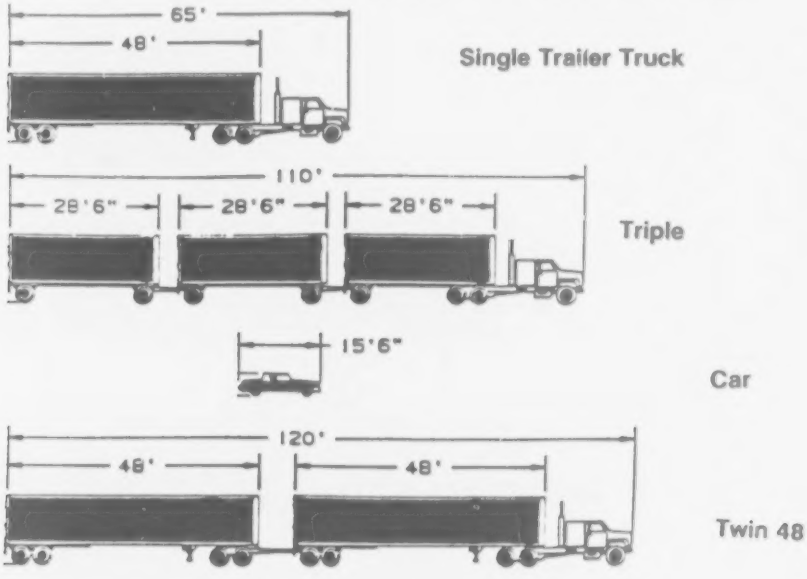
CITIZENS FOR RELIABLE AND SAFE HIGHWAYS
81 Lansing Street, Suite 106, San Francisco, CA 94105-1611; (415) 777-3942

## THE DEBATE BETWEEN CRASH AND THE ATA

Citizens for Reliable and Safe Highways (CRASH) is a nationwide truck safety organization led by Joan Claybrook, President of Public Citizen, and Dr. Gerald Donaldson of Advocates for Highway and Auto Safety. CRASH's 16-member Board of Directors also includes a former U. S. Department of Transportation Secretary, John Volpe, former California Governor Pat Brown, highway safety experts, health professionals, law enforcement officials and the President of the American Insurance Association.

CRASH opposes for safety reasons a trucking industry proposal that, if adopted by Congress, would lead the way to nationwide use of "Twin 48s," Rocky Mountain Doubles and Triple trailer trucks (Longer Combination Vehicles or "LCVs").

A "Twin 48" is two 48 foot trailers on the back of one tractor — it weights as much as fifty cars. A Triple trailer truck is just what it sounds like — a tractor pulling three trailers. A Rocky Mountain Double is a tractor hauling one 48-foot trailer and one 28-foot trailer.



CRASH's other goals are to prevent truck crashes caused by:

1. fatigued truck drivers
2. poorly maintained trucks, and
3. drug or alcohol impaired truck drivers

Although CRASH has been warmly embraced by the highway safety community, CRASH has been attacked by the American Trucking Associations ("ATA"). The ATA denies that fatigue, drugs and poor maintenance are serious problems for the trucking industry and argues that "Triples" and Twin 48s are safe.

The issue will come to a head soon, as both CRASH and the ATA will try to add amendments to the Highway Bill that Congress will pass this year. The ATA amendment would raise the federal maximum truck weight limit from 80,000 pounds to about 135,000 pounds (or eliminate the weight limit entirely), and would open the door for Triples, Rocky Mountain Doubles and Twin 48s to run everywhere in the United States.

The CRASH amendment would prevent the further spread of LCVs and would end their use in those states where they are currently allowed. The amendment would result in the compilation of accurate accident and related data so that reliable accident rate studies could be undertaken. Finally, it would enable law enforcement officers to enforce truck maintenance laws that are frequently ignored today.

The debate between CRASH and the ATA is robust. Here it is.

# EXECUTIVE SUMMARY

## EXECUTIVE SUMMARY

An analysis of the scientific literature leads to the following conclusions:

1. **The Engineering Of LCVs Makes Them Unsafe**

   a. **Inherent Instability**

   A Triple trailer truck consists of six pieces of equipment: a tractor, two converter dollies and three trailers. A converter dolly looks like this:

   Points where one piece is linked to another are called "articulation joints." A Triple has **five** articulation joints:

   The articulation joints permit swivelling, and are necessary if these truck trains are to maneuver around corners and on highway ramps. However, they also make them dangerously unstable.

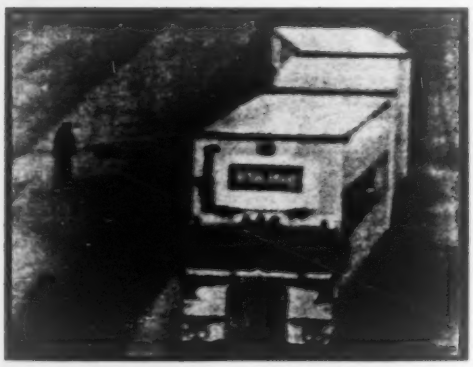
3

A Triple trailer truck's instability can be easily detected on the highway in what is called "sway." Even on a windless day, the three trailers continually move back and forth in serpentine fashion as the Triple moves down the highway.

These five articulation joints also dramatically increase the severity of the "Crack-the-Whip Effect" (explained below) which can cause trailer separation or overturn.

b. **Braking**

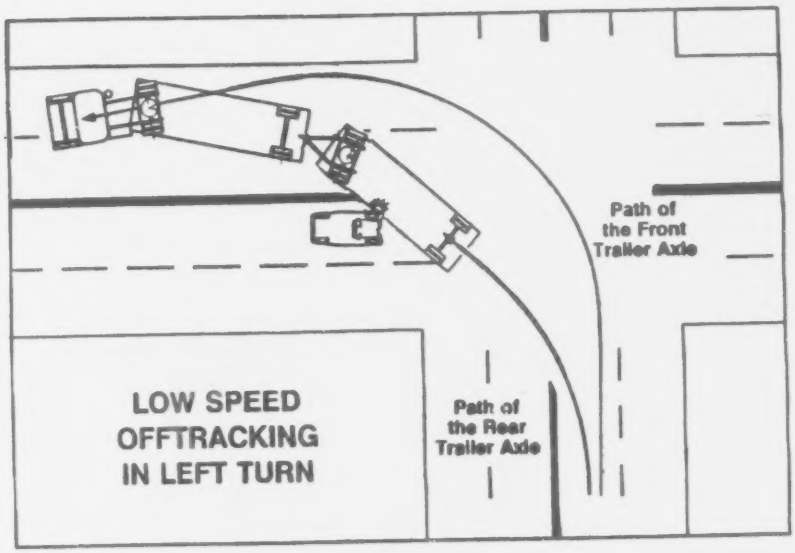
The real world braking problems of Triples and Twin 48s are far worse than those of single trailer trucks due to the LCVs' heavier weights, more trailers, longer lengths and LCVs' greater likelihood of hauling a mix of both loaded and empty trailers.



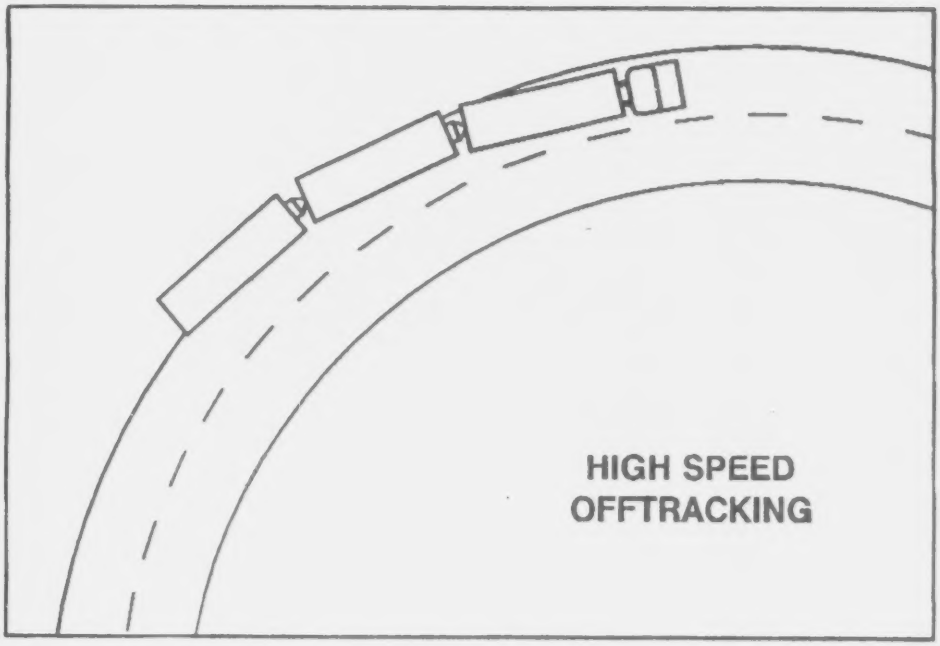
*3rd Trailer hurled to side during braking test by California Department of Transportation ("Caltrans")*

c. **Offtracking**

"Offtracking" occurs when the trailers's rear wheels do not follow the path of the tractor's front wheels.



5



The high speed offtracking of LCVs is much worse than that of single trailer trucks. High speed offtracking can cause LCVs to swing into oncoming lanes of traffic, to hit objects alongside the roads, to cross over curbs and gutters and to overturn.

6

Low speed offtracking of Twin 48s is much worse than that of Single trailer trucks.

*2nd Trailer of Twin 48 making left turn during Caltrans test would have hit automobile had auto driver not backed up.*

AASHTO, the association of state highway officials, concluded that LCV offtracking makes it impossible for 57% of the Interstate interchanges to safely accommodate Triples and for 75% of the Interstate interchanges to safely accommodate Twin 48s.

7

The U. S. Department of Transportation concluded in a Congressionally mandated study that:

> Most interchanges on the Interstate system cannot safely accommodate LCVs — even the most maneuverable Triples.

**d. Jackknifing**

Studies in northwestern states indicate that Triples and Double 28s are much more prone to jackknife than are single trailer trucks.

**e. No Driver Control Over Last Trailer**

A TRB truck driver survey found that drivers of Double 28s have difficulty seeing the rear of the truck and have difficulty detecting quickly when the second trailer of a Double 28 starts an unusual motion.

Since Twin 48s and Triples are much longer than Double 28s and Triples are much more unstable than Double 28s, an AAA Foundation Study of drivers indicates that more than 80% of drivers appear to agree with the final conclusion of Roy Roper, an experienced Triples driver:

> As far as I'm concerned, Double [28s] aren't really that safe, but you can control them a little bit. But Triples and their third trailer — you really just have no control of it back there.

2. **LCV Engineering Problems Cause Crashes**

Studies show that LCV instability caused by multiple articulation joints, the "Crack-the-Whip Effect," LCV braking problems and LCV offtracking cause crashes, crashes that would not have occurred with a Single trailer truck.

3. **LCVs Are Incompatible With Cars In Traffic**

LCVs move more slowly than other trucks on upgrades. These slower speeds have proven unsafe. Trucks which travel 15 mph below the prevailing speed of other vehicles have accident involvement rates **nine times** higher than those that travel at the same speed as other traffic.

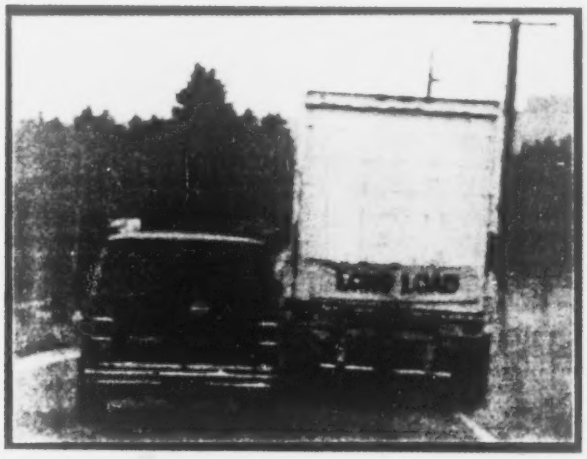
*Twin 48 moves so slowly on upgrade during Caltrans test that it is passed by two Single trailer trucks. All 3 lanes of freeway are filled by trucks.*

9

LCVs also accelerate more slowly than other trucks when maneuvering on crowded freeways and roads. Lane changes and freeway merging by LCVs disrupt traffic. Furthermore, LCVs' slower acceleration speeds when traveling from an onramp onto the acceleration lane (merge lane) of the freeway are unsafe. The traffic acceleration lanes designed for cars and Single trailer trucks are too short for the longer and heavier LCVs to accelerate to prevailing highway speeds.

Motorists who pass or are passed by LCVs in wet weather will be blinded by splash and spray on their windshields for much longer periods than motorists who pass or are passed by Single trailer trucks. This can cause an increased risk of accidents.

Passing LCVs takes more time and distance — up to 20% more — increasing safety risks particularly on two-lane, undivided highways.



*It took 12 seconds for the van driver to pass this Triple.*

4. **Multi-Trailer Truck Accidents Are More Severe**

Since LCVs have more trailers, are longer and are less stable than Single trailer trucks, there is a greater risk when an LCV is involved in an accident that the multiple units will be thrown into adjacent or oncoming lanes of traffic. This can lead to more severe accidents.

5. **Multi-Trailer Trucks Are Disproportionately Involved (Over-Involved) In Accidents**

Contrary to the conclusions of the ATA Foundation Study, the Transportation Research Board reported the general consensus that Multi-trailer trucks have a higher accident rate than Single trailer trucks.

The more recent and more detailed studies which scientifically control for type of highway traveled have found a significant over-involvement by Multi-trailer trucks in fatal and non-fatal accidents. The University of Michigan Transportation Research Institute found Multi-trailer trucks to be 32% over-involved in fatal accidents. The Insurance Institute for Highway Safety found Multi-trailer trucks to be 200% over-involved in interstate highway accidents.

In sum, there are five reasons why Longer Combination Vehicles are unsafe:

1. The engineering of LCVs make them dangerous.

2. The LCV engineering problems cause crashes that would not have occurred with Single trailer trucks.

3. LCVs are incompatible with cars in traffic.

11

4. Due to their greater length and instability and their greater number of trailers, Multi-trailer truck accidents are more severe than Single trailer truck accidents. When a Multi-trailer truck has an accident, people are more likely to be killed or injured.

5. Multi-trailer trucks are disproportionately involved (over-involved) in accidents compared to Single trailer trucks.

The risk to motorists, pedestrians and cyclists who must share the road with Triples and Twin 48s is unacceptably high. Truck drivers should not be forced to drive them.

12

# LCV ENGINEERING PROBLEMS

13

## THE INHERENT INSTABILITY OF LCVs

Triples are inherently dangerous for many reasons. Three of the many reasons are:

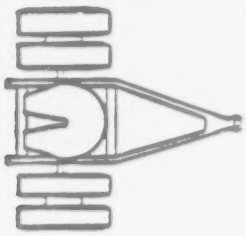
1. **Five Articulation Joints**

A tractor-semitrailer has only one articulation joint. A Double trailer truck has three articulation joints. A Triple trailer truck has five articulation joints. For all practical purposes, the more articulation joints, the more dangerous the vehicle.

An articulation joint is the point where a trailer connects to a tractor or to a converter dolly and upon which swivelling is possible. Without these articulation joints, these super-long trucks could never go around curves or turn at intersections.

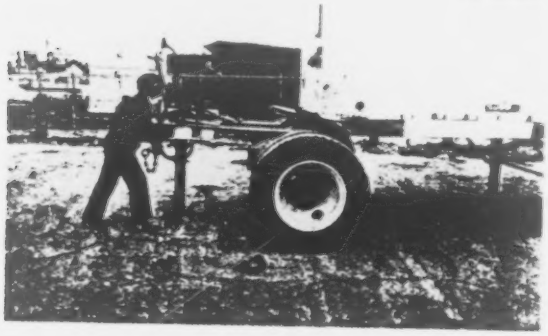
It is also the feature which allows trucks to jackknife. A Single unit truck (as shown below) has no articulation joint and cannot jackknife.

A Triple trailer truck is made up of six separate pieces of equipment — a tractor, two converter dollies and three trailers — and five articulation joints. A converter dolly, when viewed from the top, looks like this:

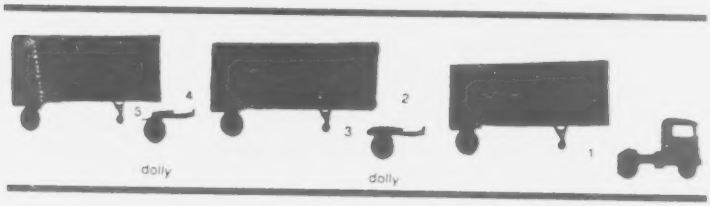


14

The dolly is connected to a trailer as shown below:



The five articulation joints of a Triple can be best understood by diagraming the six pieces of equipment before they are connected:



Those five articulation joints greatly increase the risks of jackknife, dangerous sway, overturn and trailer separation. The five articulation joints also dramatically increase the severity of the "Crack-the-Whip Effect," which amplifies forces throughout the rig. (See below.)

2. **Sway**

A Triple trailer truck travelling on a straight freeway, even on a windless day, can look like a snake slithering down the road. Due to the five articulation joints, the three trailers continually sway back and forth as the truck moves forward.

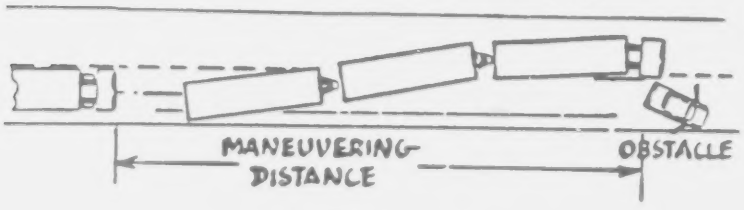
A road test by the California Department of Transportation found that the third trailer sometimes sways as much as three feet.[1]

3. **The "Crack-the-Whip Effect"**

When the driver of any articulated vehicle makes a rapid steering maneuver by moving the steering wheel in one direction and then back in the opposite direction — for example to avoid a road hazard — the sideways motion is amplified as it passes through the connecting dollies and trailers.[2]

The end trailer is swung a great distance laterally one way and then the other, creating a violent cracking movement known as the "Crack-the-Whip Effect."

The "Crack-the-Whip Effect" occurs when an articulated vehicle makes an abrupt evasive steering maneuver such as that shown below:

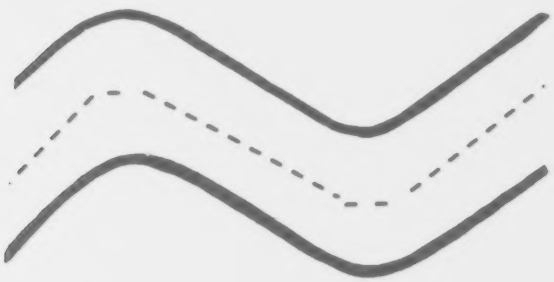


[1] California Department of Transportation, *Longer Combination Vehicle Operational Test*, March 1984, pp. iii and 24.

[2] R. D. Ervin, R. L. Nisonger, C. C. McAdam and P. S. Fancher, "Influence of Size and Weight Variables and the Stability and Control Properties of Heavy Trucks," Vol. I, University of Michigan Transportation Research Institute, 1983, pp. 22, 29.

16

The "Crack-the-Whip Effect" also occurs when the driver of an articulated vehicle makes a lane change at moderate or high speed or when the driver negotiates a sharp curve or an S curve:



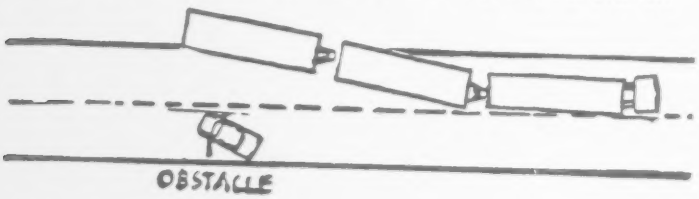
The "Crack-the-Whip Effect" can be understood by visualizing six school children playing the child's game of "crack-the-whip" on ice skates. The six join hands, creating five articulation joints. The first child (who is the equivalent of a tractor in a Triple trailer truck) starts the group skating through some gentle S curves. The distance skated by the first child is not very great. The force begun by the first child, however, is amplified as it moves through the five articulation joints (i.e., the five sets of clasped hands of the children). The sixth child is therefore whirled in a wide arc. Even on the gentle S curves, the last child must skate as skillfully as she can to keep her balance and resist the forces which threaten to topple her.

The first child then tightens the S curves. Each time the first child changes direction, a new force is created, which is also amplified as it moves through the six children's clasped hands. The sixth skater is hurled one way and then the other.

If the sixth skater is able to hold on at all, she will do so only after resisting violent cracking forces akin to those exerted on the tip of a cracked whip. Usually, the force is so strong that the sixth child loses her grasp of the fifth child's hand and is sent flying away from the group or is sent tumbling on the ice.

The mechanics are the same when a Triple trailer truck driver makes an abrupt evasive maneuver, changes lanes or negotiates a sharp curve or an S curve. The tractor moves quickly, but not a great distance, in one direction and then another.

Because of the articulation joints, however, that motion is greatly amplified as it moves through the trailers and connection units (dollies). The distance moved by the third trailer will be much greater than the distance moved by the tractor. The third trailer will be swung into adjacent lanes of traffic or the shoulder. When the driver turns the tractor steering wheel back to straighten the path of the tractor, the third trailer will be yanked back by a violent, cracking force which can result in trailer separation or overturn.



The Office of Motor Carriers in the U. S. Department of Transportation in March 1991 sent out a special alert to all truckers and trucking companies warning that

> small tractor steering movements or braking applications, particularly in a lane change, are magnified by a second trailer and can reach uncontrollable levels, producing considerable yawing and subsequent rollover.[3]

---

[3] Office of Motor Carriers, United States Department of Transportation, "On Guard: The Hazards of Operating Multiple Trailers," Vol. 20, No. 1, March 1991, p.1.

18

According to the University of Michigan's Transportation Research Institute, the "Crack-the-Whip Effect" on the third trailer on a Triple trailer truck is **3½ times** greater than it is on the trailer of a Single trailer truck.[4] Therefore, many evasive steering maneuvers, lane changes, sharp curve or S curve movements that can be performed safely by an 18-wheeler can cause a Triple to overturn, separate or hit adjacent objects.

The danger of the "Crack-the-Whip Effect" is illustrated by a Triples accident in the Autumn of 1989. An automobile driver hit a deer, pulled off the freeway onto the shoulder and got out to examine the damage to his car. Shortly thereafter, a Triples driver came upon the deer lying on the roadway where it had been struck and swerved to the right to avoid it. The tractor and the first two trailers passed safely between the deer and the auto driver. However, because of the "Crack-the-Whip Effect," the third trailer tipped up to a 20 degree angle on its right wheels and swung into the motorist, killing him instantly. Had the third trailer tipped another one or two degrees, it would have rolled over onto the automobile in which the motorist's wife and two grandchildren were waiting.

**ATA REBUTTAL:**

The ATA challenges the University of Michigan finding that the "Crack-the-Whip Effect" for a Triple is **3½ times** as great as that of a Single trailer truck by arguing in a White Paper that "the findings of the study were derived from computer modeling based on evasive maneuvers in worst-case conditions rather than actual accident experience."[5]

---

[4] R. D. Ervin, supra note 2, p. 161.

[5] ATA White Paper delivered to House and Senate staffs of Public Works subcommittees responsible for surface transportation in August 1990 (hereinafter "ATA White Paper").

The ATA White Paper also argues that the "Crack-the-Whip Effect" is not dangerous since "drivers of twin-trailers and 'triples' are required to obtain a special license endorsement based on a written examination which addresses the stability issue, the importance of smooth steering and the importance of avoiding the need for evasive maneuvers. Pertinent information is incorporated in the Commercial Driver License Manual."[6]

Finally, the ATA argues that "the rollover threshold is not affected by truck configuration. Existing tractor-semitrailers and five axle Doubles have similar rollover threshold values. We know of no statistics regarding separation when a rear trailer overturns."[7]

## CRASH RESPONSE:

a. **Truck Drivers License Manual**

CRASH doubts that an admonition in an exam or in a drivers license manual to avoid the need for evasive maneuvers will eliminate them. Even the best drivers encounter emergency situations. Occasionally, the best drivers will need to make evasive maneuvers. Every driver encounters sharp curves and S curves. Every driver makes lane changes.

CRASH notes that the truck drivers license manual referred to in the ATA White Paper states that the "Crack-the-Whip Effect" for Triples is **3½ times** that of Single trailer trucks and cites the University of Michigan study as the source for that statistic.

---

[6] ATA White Paper.

[7] ATA White Paper.

20

b. **Methodology Of University Of Michigan Study**

The University of Michigan Transportation Research Institute engineers are highly respected. No one other than the ATA has challenged the methodology used for the study. The computer models in the study were based on actual truck vehicle road tests and the models' results were tested against actual vehicle tests.

c. **"Crack-The-Whip Effect" And Rollover**

The assertion that the number of trailers is unimportant and that the rollover threshold for Double trailer trucks is similar to that for Single trailer trucks is simply wrong. The U. S. Department of Transportation's March 1991 special alert to all truckers and trucking companies warned:

> The chances of the rear trailer unit rolling over during a sharp turn vary with the combination trailer unit configuration. The last trailer of a triple with 27-foot trailers is 3½ times more apt to roll over in a sharp turn than a 5-axle tractor semi-trailer with a 45-foot trailer.[8]

According to the University of Michigan study, the "Crack-the-Whip Effect" for Double 28 foot trailer trucks is **2 times** that for Single trailer trucks. The "Crack-the-Whip Effect" for Triples is **3½ times** as great.[9]

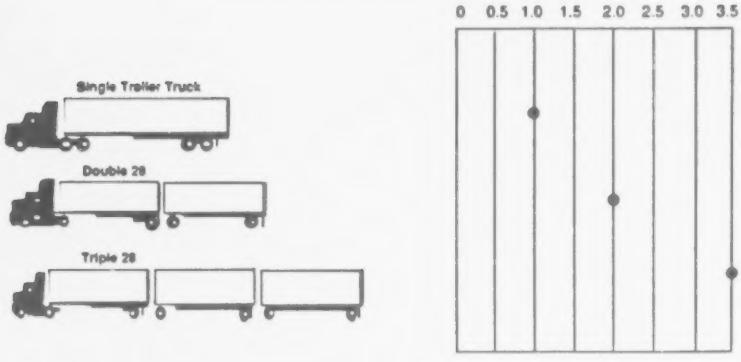
---

[8] Office of Motor Carriers, U. S. Department of Transportation, supra note 3, p.1.

[9] R. D. Ervin, supra note 2, p. 161. Note the following discussion of rollover in articulated vehicles in the University of Michigan study: "Another case in point concerns a dynamic response characteristic which is known to be particularly manifested by the multiply-articulated [sic] truck combinations—truck/full trailers, doubles, and triples. This phenomenon will be defined later as the 'rearward amplification' ['crack-the-whip'] characteristic by which a snaking action is set up in multiple-element trains during rapid steering maneuvers such as may be

*footnote continued next page*

## "Crack the Whip Effect" or Rearward Amplification



**d. Trailer Separation**

Although the ATA may not be aware of the statistics regarding separation when a rear trailer overturns, the scientific literature is full of such statistics:

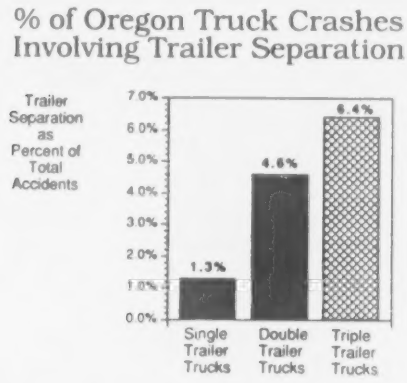
---

*footnote continued from previous page*
undertaken to suddenly avoid an obstacle. This phenomenon is such that the rearmost trailer element experiences an amplified tendency to be rolled over in the maneuver. The accident record is known to contain various examples of multiple-trailer configurations which have suffered an extraordinarily high incidence of accidents in which only their rearmost trailer has overturned [citations]. Thus, in the examination of the various types of multiple-trailer combinations and the sensitivity of these combinations to loading and length variations, the 'rearward amplification' characteristic has been quantified as a key indicator of stability and control behavior . . .

The left-then-right sequence tends to set up a 'crack-the-whip' motion in vehicle combinations having multiple articulation points. This type of motion response is of safety interest, as suggested earlier, because of the increased likelihood that the rearmost trailer in such combination vehicles will experience a rollover." R. D. Ervin, supra note 2, pp. 22, 29.

22

- A study of truck accidents in Oregon from 1985 through 1990 found that only 1.3% of the Single trailer truck accidents resulted in trailer separation, but that 4.6% of the Double trailer truck accidents involved trailer separation and 6.4% of the Triples accidents involved trailer separation.[10]



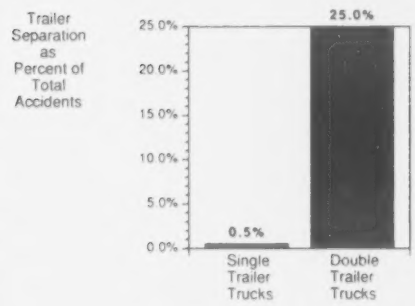
- A two-year study of Single trailer truck and Double trailer truck accidents in Washington State found that trailer separation occurred in 25% of the crashes involving a Double trailer truck, but that less than 1% of the Single trailer truck crashes involved trailer separation.[11]

---

[10] Oregon Public Utilities Commission, "Triple Trailer Combinations Accidents and Inspections in Oregon 1985 through 1990," March 1991, p. A-4.

[11] H. S. Stein and I. S. Jones, "Crash Involvement of Large Trucks by Configuration A Case Control Study," *American Journal of Public Health*, May 1988, Vol. 78, No 5, pp 497-498.

## % of Washington State Truck Crashes Involving Trailer Separation



- A study at the University of North Carolina on North Carolina truck accidents found that Twin trailer trucks are over-represented in accidents where trailer separation occurs prior to a collision or rollover. None of the Single trailer truck accidents involved trailer separation, but more than 10% of the Twin trailer truck accidents involved trailer separation. More than half of those accidents involved trailer separation before any collision or rollover.[12]

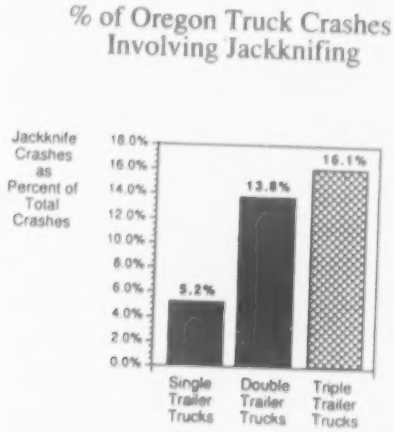
[14] Id.

## JACKKNIFING

Triple trailer trucks are much more likely to jackknife than are Single trailer trucks. Double trailer trucks are also more apt to jackknife than Single trailer trucks.

In a study of Triple, Double and Single trailer truck crashes in Oregon from 1985 to 1990, the Oregon Public Utility Commission found that 5% of Single trailer truck accidents involved jackknifing, but that 14% of the Double trailer truck accidents and 16% of the Triple trailer truck accidents involved jackknifing.[15]



[15] Oregon Public Utility Commission, supra note 10, p. A-5

**26**

A study of truck accidents in Washington State found that the percentage of Double trailer truck accidents involving jackknifings was more than twice as high as the percentage of Single trailer truck accidents involving jackknifing.[16]

**ATA REBUTTAL:**

None known to CRASH.

## BRAKING BIGGER AND HEAVIER TRUCKS

### LARGE TRUCKING COMPANY:

One of the largest Interstate trucking companies has said: "Triples have more tires (26) than a standard Single 48 foot trailer truck (18 tires). More tires mean more brakes. Braking performance is related to the weight carried by each axle on a truck, not the total gross weight of the vehicle. With reduced weight at each axle compared to a Single trailer truck, Triples have less work to do at each brake."[17]

### CRASH RESPONSE:

Recent braking tests of Triples indicate they are capable of stopping in the same distance as Single trailer trucks. These tests, however, are performed under ideal conditions. The equipment is relatively new, is well maintained and is evenly loaded. The brakes are fully adjusted. The roadways are good. The test drivers are expert and fully alert.

Like all trucks, Triples and Twin 48s are not driven on the highway under such ideal conditions. Consequently, their handling in over-the-road real world situations frequently varies dramatically from test track handling.[18]

---

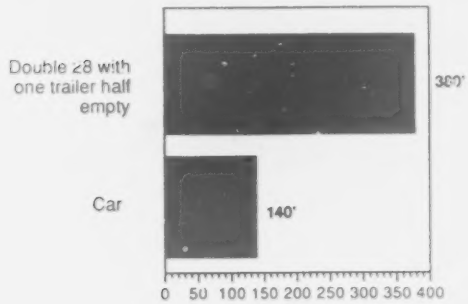
[17] These statements are made in an 8½ minute video on Triples made by Yellow Freight, one of the largest trucking companies in the United States (hereinafter "Yellow Freight Video").

[18] R. W. Radlinski, "NHTSA's Heavy Vehicle Brake Research Program — An Overview," Eleventh International Technical Conference on Experimental Safety Vehicles, Washington, D. C., May 12-15, 1987, pp. 762-766.

28

Brake systems for all kinds of trucks are antiquated.[19] Unlike hydraulic brakes of passenger cars that immediately respond when drivers apply their brakes, truck air brakes take as long as a one-half to three quarters of a second after the driver hits the brake pedal before the air brakes are fully activated.[20] This is one of the reasons why passenger cars have shorter stopping distances than trucks, particularly Multi-trailer trucks with one or more trailers empty or partially empty.[21]

Stopping Distances of Cars and Double Trailer Trucks on Dry Roads.



---

[19] In 1972 the National Transportation Safety Board detailed the many problems with tractor-trailer brakes based on antiquated 1950s' technology, but few of those problems have been solved. National Transportation Safety Board, "Commercial Motor Vehicle Braking," NTSB Report HSS-72-5, 1972.

[20] R. W. Radlinski, "NHTSA's Heavy Vehicle Brake Research Program — An Overview," Eleventh International Technical Conference on Experimental Safety Vehicles, Washington, D. C., May 12-15, 1987, p. 764.

[21] Insurance Institute for Highway Safety, "Big Trucks and Highway Safety," 1985, p. 12; R. D. Ervin, supra note 2, page 119.

In addition, air brakes are very susceptible to environmental contaminants such as dirt, can lose power because of leaks in air lines and connections, and become significantly worn and lose capacity by overheating on grades in mountainous areas. Truck stopping distances are dramatically increased when their brakes are out of adjustment.

Although all truck brakes have these problems, the real world braking problems of Triples and Twin 48s are far worse than those of Single trailer trucks.

1. **Poorly Maintained Brakes**

   Brakes which are defective create worse problems for Longer Combination Vehicles than for Single trailer trucks with brake defects because LCVs have more weight and more trailers.

   (a) **More Weight**

   Fully loaded Single trailer trucks generally weigh 80,000 pounds. Fully loaded Triples generally weigh 110,000 pounds, **37%** more than a Single trailer truck. Fully loaded Twin 48s weigh as much as 135,000 pounds, almost **70%** more than a Single trailer truck.

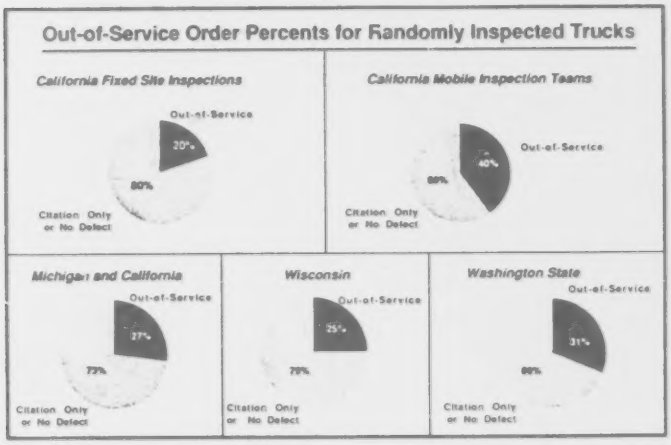
   If truck brakes are not correctly adjusted, the truck's minimum stopping distance will increase in direct proportion to the increase in the vehicle's gross weight.[22]

---

[22] Ervin et al., supra note 2, pp. 55-56.

30

A frightening percentage of big-rigs on the road have brakes that are out of adjustment. More than **25%** of the trucks on the road today have mechanical defects so severe that they should immediately be ordered out-of-service — that is, ordered not to move until the dangerous mechanical defects are corrected.[23] The vast majority of those mechanical defects are defective brakes.[24]



---

[23] Semi-random inspections of trucks throughout the country during a three-day period in May of each year (Roadcheck '89, Roadcheck '90, etc.) have found more than 30% of trucks to have out-of-service violations. During Roadcheck '89, 31,000 trucks were inspected at 160 locations in 47 states. Inspectors ordered **32%** of the trucks out of service (memorandum from Stephen Crane, Regional Director, Office of Motor Carrier Safety, Federal Highway Administration, Albany, New York to John Hibbs, Director, Office of Motor Carrier Safety, Field Operation, Washington, D. C., May 26, 1989). During Roadcheck '90, **30%** of inspected vehicles were ordered out of service. (Interview with Milt Schmidt, Inspection Coordinator, Regional Office, Director of Office of Motor Carrier safety, Albany, New York, August 1990.)

*Footnote continued on next page.*

[24] Congress of the United States, Office of Technology Assessment, "Gearing Up for Safety" Summary, 100th Congress, p. 14.

*Footnote continued from preceding page.*
Not all Roadcheck inspections are completely random. Indeed, some states' inspections are selective. In some states those trucks in apparently poor condition or with obvious safety defects are inspected first.

However, the U. S. Congress' Office of Technology Assessment found that "even in states where efforts are made to perform completely random inspections, **30%** of inspected vehicles are being put out-of-service. (Congress of the United States, Office of Technology Assessment, "Gearing Up for Safety," Summary, 100th Congress, p. 5.)_ California, for example makes only completely random truck inspections. The percentage of out-of-service violations found ranges from a low of 20% at the fixed site inspection locations (which drivers of poorly maintained vehicles can avoid by careful route planning) to a high of 40% at the surprise inspections conducted by mobile inspection teams. (Interview on January 3, 1991 with Captain Larry Rollin, Chief, Commercial and Technical Services Section, California Highway Patrol.)Carefully controlled random inspection of trucks in four states confirms the findings of the Office of Technology Assessment. All found that at least **25%** of the randomly selected trucks had out-of-service violations.

1. **California and Michigan**
   In 1987, Michigan and California Highway Patrol inspectors randomly selected a total of 604 trucks for inspection. **Twenty-seven percent** (166 trucks) had out-of-service violations. (Rae Tyson, "What Four State Truck Inspections Found." *USA Today*, March 24, 1987.)

2. **Wisconsin**
   Random truck inspections at Kegonsa and Utica near Madison found that **25%** of the inspected trucks had out-of-service violations. (B. Davis, "Preliminary Results of MCSAP Random Sample Inspections at Kegonsa and Utica Scales Southeast of Madison on Interstate 90, Wisconsin State Patrol, 1986.)

3. **Washington State**
   The Washington State Patrol randomly selected trucks on Washington Interstates for inspection over a two-year period from 1984 to 1986 as part of a study designed by the Insurance Institute for Highway Safety. **Thirty-one percent** of the randomly selected trucks were ordered out-of-service. (I. S. Jones and H. S. Stein, "Defective Equipment and Tractor-Trailer Crash Involvement," *Accident Analysis and Prevention*, Vol. 21, No. 5, 1989, pp. 469-81.)

32

If Triples and Twin 48s come into widespread use, it is likely that they will have similar ratios of serious braking problems. Indeed, 73% of the maintenance violations found in Triples in Oregon between 1985 and 1990 concerned braking systems.[25]

Although the additional axles of Triples and Twin 48s will compensate to a certain degree for their added weight, Longer Combination Vehicles (which when fully loaded, are generally significantly heavier than 80,000 pounds) with brakes out of adjustment will have substantially longer stopping distances than 80,000 pound trucks with brakes out of adjustment.

(b) **More Trailers**

Federal regulations require drivers to check their brake adjustment before embarking on a trip, a task which usually takes about 30 minutes. Out-of-service order statistics (discussed above) indicate this regulation is frequently ignored at the beginning of a trip. However, even those drivers who spend 30 minutes checking brakes at the start of a trip rarely take the time to check brake adjustment on trailers they pick up during the trip.

Yet, Longer Combination Vehicle drivers frequently stop several times during the course of a trip to drop off a trailer or pick up a new one. Rather than delay the trip by doing a new brake inspection, they usually hook up and get on the road. The brakes on the new trailer are thus more likely to be out of adjustment than the trailer brakes with which the driver started the trip.

---

[25] Oregon Public Utilities commission, supra note 10, page 11.

2. **Truck Length**

The additional length of these Triples as well as the physical connection of another trailer to the air brake system of a tractor trailer truck significantly increases the brake application time before all brakes are activated.[26] This extra delay could be 0.2 seconds or more, which at highway speeds means that the longer truck would travel about an additional 16 feet, approximately one car length, before its brakes were fully applied.

3. **Tractors Hauling Both Loaded and Empty Trailers**

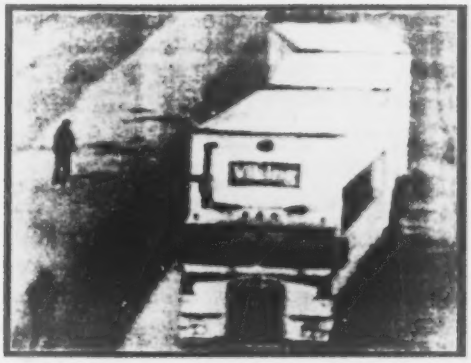
It is a common practice for Double and Triple trailer truck drivers to haul one or two fully loaded trailers and one or two empty trailers as a back haul or transfer. These uneven trailer loads can be dangerous in emergency braking situations.

The reason: big-rig brakes are designed for the fully loaded condition. The air brakes (which have fixed braking forces) apply sufficient pressure to the wheels of the tractor and the wheels of each of its trailers to stop each when fully laden. If, however, one of the trailers is empty, it will be severely overbraked and will prematurely lock up. In emergency situations involving sudden braking, the empty trailer(s) will immediately lock up and tend to swing out of control into adjacent lanes of traffic.

---

[26] Richard W. Radlinski & Mark A. Flick, "Tractor and Trailer Brake System Compatibility," Society of Automotive Engineers (SAE) Paper 861942, 1986, p. 8

34



*Had the 3rd trailer been empty and the 1st and 2nd trailers full, 3rd trailer swing during this Caltrans braking test would have been much worse.*

The overbraking on the empty trailers will cause vehicle instability even at relatively low deceleration levels.[27]

Controlled braking studies with Double 28s demonstrate the dramatic difference in stopping distance resulting from uneven trailer loads.[28] Full Double 28s loaded to 80,000 pounds travelling at 55 mph can stop within 200 feet on a dry road.[29] Double 28s with one trailer full and the other half-empty take 380 feet to stop on a dry road.[30] If, however, the road is slippery, the same fully loaded Double 28 takes 400 feet to stop.[31] A Double 28 with one loaded and one half-empty trailer on a slippery road takes 900 feet to stop.[32]

---

[27] Radlinski, supra note 20, page 761.

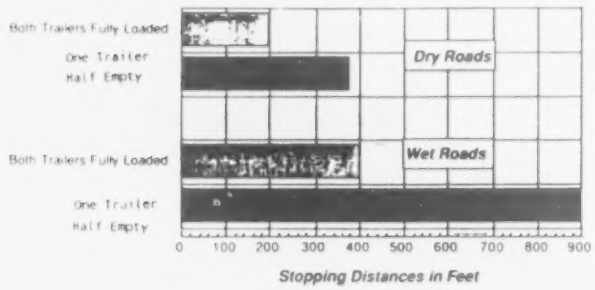
[28] R. D. Ervin, supra note 2, page 119.

[29] Id.

[30] Id.

[31] Id.

[32] Id.



Braking Triples with uneven loads appear to present even more problems than does braking Double 28s with uneven loads for three reasons. First, Triples are longer than Double 28s. Second, Triples have more articulation joints than Double 28s, and therefore more instability. Finally, since Triples have more trailers than do Double 28s, triples present more opportunities to have uneven loads.

4. **Brake System Incompatibility of Coupled Trailers**

It is crucial that the brake systems on each of the six pieces of equipment of a Triple work together and that all components are compatible. With widespread use of Triples, it will be very difficult for the average truck fleet to accomplish this. It is difficult to ensure compatibility when one is picking up and dropping off trailers all over the country.

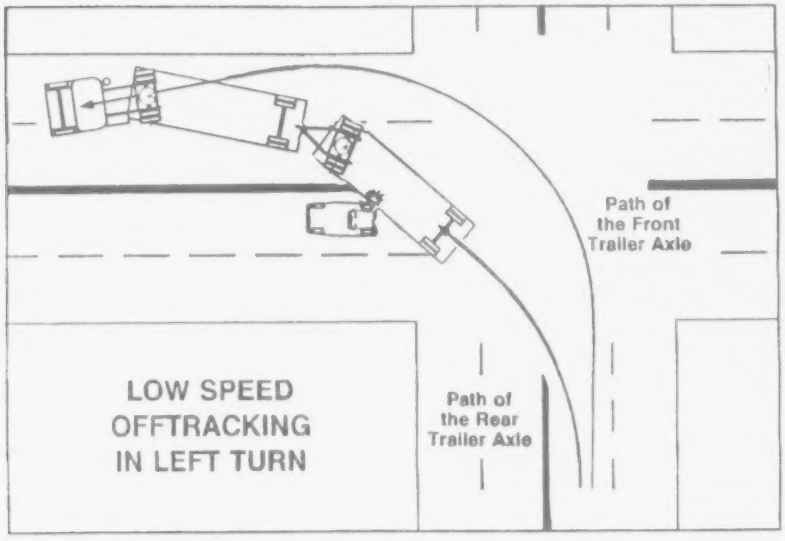
Testing of truck combinations with poor timing and brake actuation compatibility show such incompatibility increases stopping distances by as much as **25%** on a wet roadway.[33]

[33] Richard W. Radlinski and Mark A. Flick, "Tractor and Trailer Brake System Compatibility," SAE Paper 861942, 1986.

36

## OFFTRACKING

Offtracking means that the rear wheels of a trailer do not follow the front wheels of the tractor. Offtracking (diagrammed below) is dangerous because it can cause trailers to swing into adjacent lanes of traffic or force the tractor to go over the center line into oncoming traffic. As a result, trailers often hit curbs, guardrails or roadway signs.



37

**LARGE TRUCKING COMPANY:**

The Yellow Freight Video shows a Single trailer truck and a Triple making a 180 degree turn in large, empty, paved lot. The narrator says:

> "Watch. In a turn, the offtracking of a standard semi (which operates almost unrestricted on all city streets and highways) would force a semi to cross the center line to make the turn. Triples can make the same turn and not cross the center line. Or, as in this demonstration, Triples can turn entirely within the turn made by a standard semi. The offtracking for Triples (which operate only on highways where they don't create a traffic problem) is actually less. What this means is that next to Doubles, Triples have the best turning radius of any combination."[34]

**CRASH RESPONSE:**

The Yellow Freight statement is not totally wrong. A Triple making a 180 degree turn at **low speed** will offtrack less than a Single 48 foot trailer truck making the same 180 degree turn at **low speed**. The Yellow Freight statement, however, tells only one small part of the story. Here is the rest:

1. **Low Speed Offtracking for Triples**

   Although low speed offtracking for Triples making a 180 degree turn is modestly less severe (i.e., better) for Triples than it is for Single 48-foot trailer trucks, the road tests performed by the California Department of Transportation ("Caltrans") showed that low speed offtracking for Triples is more severe (i.e., worse) than it is for Single 48-foot trailer trucks making 30, 60, 90, 120 and 150 degree turns.[35]

---

[34] Yellow Freight Video.

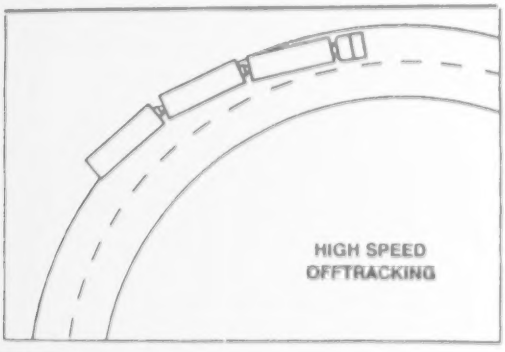
[35] California Department of Transportation, supra note 1, pp. 30, 38-39. Note that a University of Michigan study found that Triples had slightly less severe (i.e., slightly better) offtracking than single 48 foot trailer trucks on 90 degree turns. However, that study also found that "singles with 48-foot semitrailers can only negotiate right-hand turns at normal urban intersections of four-lane streets if the tractor begins in the left-hand lane of the entry road and actually crosses over the centerline of the exit roadway to assure clearance between the trailer tires and the curb." R. D. Ervin, et al., "An Overview of the Dynamic Performance Properties of Long Truck Combinations," University of Michigan Transportation Research Institute, 1984, p. 41.

Caltrans found that Triples encroached two feet into adjacent lanes of traffic when making low speed left and right turns in urban intersections.[36] The U. S. Secretary of Transportation, in a special report requested by the Congress in the Surface Transportation Assistance Act of 1982, concluded that "even Triples must follow extreme paths to make a 90 degree right turn at typical intersections. These paths often must carry the combination into opposing lanes of traffic on both legs of the intersection."[37]

2. **High Speed Offtracking**

Low speed offtracking is important. However, high speed offtracking is even more critical from a safety standpoin.. The Triple and the Twin 48 both offtrack dangerously when those vehicles go around curves at highway speeds or travel loop ramps at typical posted speeds.[38]

High speed offtracking does not produce inward movement (as it does at low speeds) but, because of centrifugal force, the movement is now outward, as diagrammed below.



[36] Id., p. 30

[37] Report of Secretary of Transportation to the United States Congress, "The Feasibility of a Nationwide Network for Longer Combination Vehicles," Federal Highway Administration, Washington, D. C., June 1985, p. III-11.

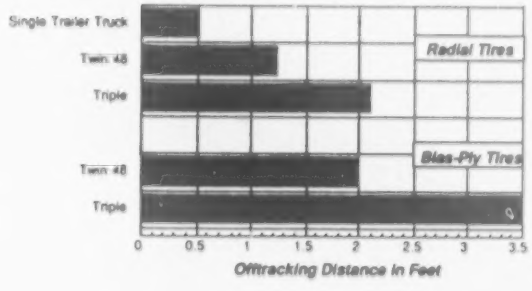
[38] Most of the posted speeds at on-ramps and off-ramps are intended for automobiles, but promote instability and substantial offtracking for LCVs.

39

The outward offtracking is much more severe for a Triple trailer truck than for a Single 48-foot trailer truck. At 55 mph, a Single trailer truck will outwardly offtrack by six inches on the moderate curve utilized in the 1983 University of Michigan Transportation Research Institute analysis. A Twin 48 at 55 mph on the identical curve will outwardly offtrack on that same curve by about 1¼ feet.[39] A Triple will offtrack on the same curve by more than two feet at 55 mph.[40]

If the Triple uses bias-ply tires instead of radials, the outward offtracking on the same curve at 55 mph will be almost 3½ feet; a Twin 48 with bias-ply tires will outward offtrack more than 2 feet.[41]

## Outward Offtracking at 55 MPH



This degree of outward offtracking is dangerous. High speed offtracking of LCVs means that a curb, a guardrail or an automobile in an adjacent lane could be struck by the rearmost trailer. It is particularly dangerous on loop ramps where the trailer might overturn when it strikes the curb or a railing

---

[39] Ervin, et al., supra note 2, pp. 154-156.

[40] Id.

[41] Id.

or parapet on an elevated ramp.

3. **Offtracking for Twin 48s**

Low speed offtracking for Twin 48s is extraordinarily severe and dangerous, more severe and dangerous than for any other truck configuration.

The road test by the California Department of Transportation ("Caltrans") found that Twin 48s, even when moving at slow speeds, encountered significant problems on most freeway onramps and offramps.[42]

The right rear tires on the last trailer always swept onto the shoulder, and sometimes actually crossed over the asphalt berm delineating the outside of the shoulder on loop ramps. The Twin 48s were already using as much room as the loop ramps allowed.[43]

*Rear tires of Twin 48 crossed over berm onto unpaved land during Caltrans test.*

[42] California Department of Transportation, supra note 1, p. 19.

[43] California Department of Transportation, supra note 1, p. 19.

41

These problems were observed on the most modern freeways, but were more severe on the older design freeway interchanges which have a concrete gutter and a rolled curb delineating the ramp from its shoulder. During the Caltrans road test, the Twin 48s consistently crossed over and climbed this rolled curb. It was not unusual during the Caltrans test for only one tire of each rear dual tire set to be riding on top of the curb, with the other dual tire being suspended in the air. This creates a significant pressure (¼ of the full trailer weight over a few square inches) on the tires and creates a grave risk of tire blowout.[44]

Twin 48s making left and right turns at urban intersections used up not only all the space in their lane of traffic, but all the space in the adjacent lane of traffic as well.[45] When a Twin 48 tried to make a right turn exit from a trucking company yard onto a four-lane road (Crows Landing Road in Modesto, California), the Twin 48 crossed over both of the two southbound lanes and actually crossed four feet into the northbound lanes used by oncoming traffic before completing the right turn.[46] This move required the Highway Patrol to stop traffic in both directions so that the truck could make the turn.

4. **Conclusion of AASHTO And The U. S. Department of Transportation**

AASHTO,[47] the association of state highway officials, concluded that LCV offtracking makes it impossible for 57% of America's Interstate interchanges to safely accommodate Triples and for 75% of the Interstate interchanges

---

[44] California Department of Transportation, supra note 1, p. 20.

[45] California Department of Transportation, supra note 1, p. 30.

[47] AASHTO stands for American Association of State Highway and Transportation Officials.

to safely accommodate Twin 48s.[48]

After reviewing all available evidence from field tests, simulation models, and the experience of state highway agency design engineers, the Secretary of the U. S. Department of Transportation concluded in the congressionally mandated study:

> Most interchanges on the Interstate system cannot safely accommodate LCVs — even the most maneuverable Triples. In addition, if the longer combinations were to travel on the arterial highway system in most parts of the country, they would have significant problems making turns without hitting objects beside the road and severely disrupting traffic flow.[49]

## NO DRIVER CONTROL OF LAST TRAILER

Drivers of Double 28s often cannot sense the impending instability of the second trailers because of the greater number of articulation joints.[50]

A Transportation Research Board survey of truck drivers found that substantial majorities of truck drivers have difficulty seeing the rear of the truck and have difficulty detecting quickly when the second trailer of a Double 28 starts an unusual motion.[51]

Twin 48s and Triples are much longer than Double 28s. Triples are much more unstable than Double 28s. Due to that extra length and added instability, it appears that the overwhelming majority of truckers agree with Roy Roper, an experienced Triples driver from Kansas:

> As far as I'm concerned, Double [28s] aren't really that safe, but you can control them a little bit. But Triples and their third trailer — you really just have no control of it back there.[52]

In a driver survey of truck drivers done for the AAA Foundation, 84% believed that Triples are less safe than Single trailer trucks and 82% thought Twin 48s were less safe. More than two-thirds thought Triples were much less safe and 63% believed Twin 48s to be much less safe.[53]

# LCV ENGINEERING PROBLEMS CAUSE CRASHES

45

## LCV ENGINEERING PROBLEMS CAUSE CRASHES

Studies show that the engineering problems of LCVs cause crashes, crashes that would not have occurred with a Single trailer truck.

Studies of Double 28s — two 28-foot trailers on the back of a tractor — demonstrate that the basic instabilities caused by the articulation joints lead to Double 28 accidents. Since the engineering problems of LCVs are more severe than those of Double 28s (e.g., a Double 28 has 3 articulation joints and a Triple has 5), one can conclude by extrapolation that those same instabilities lead to LCV accidents.

### 1. National Transportation Safety Board ("NTSB") Study

The NTSB studied 189 heavy truck accidents and reported its conclusions in 1988. Forty-one of those crashes involved Double 28s with three articulation joints. One of the causes or contributing factors in 18 of those 41 Double 28 crashes (41%) was instability problems associated with the rear trailer.[54]

### 2. University of North Carolina Study

The University of North Carolina Highway Safety Research Center study of heavy truck accidents from 1981 through 1987 found that the overturn rate for Double 28s in North Carolina was **4.3 times** the average truck overturn rate.[55] The researchers found that Double 28s were more likely to be involved in loss of control accidents, often apparently resulting from second trailer sway.[56] The researchers also found that Double 28s were

[56] Id. at 101 and 107.

46

over-represented in accidents on North Carolina ramps.[57]

A number of North Carolina Double 28 accidents were caused by the second trailer separating from the rest of the rig as it was rolling down the highway, often after some hard-steering maneuver.[58] None of those accidents involved a collision. None would have occurred had the tractor been hauling only one trailer. The researchers found no Single trailer accident involving trailer separation.

### 3. California Highway Patrol Study

A 1981 study of California tank truck accidents by the California Highway Patrol found that Single trailer tank trucks overturned in 50% of their crashes. Double 28 foot tank trucks, however, overturned in 70% of their crashes, demonstrating the greater instability of Double 28 foot tank trucks.[59]

Tank truck rollover accidents have proven particularly dangerous. Ninety-five percent of the persons killed in California tank truck accidents lost their lives in rollover accidents.[60]

### 4. University of Michigan Transportation Research Institute ("UMTRI") and Insurance Institute for Highway Safety ("IIHS") Studies

The UMTRI and IIHS studies demonstrate that Double 28s are disproportionately involved (over-involved) in accidents. Both studies indicate trailer overturn plays a substantial role in Double 28 crashes. Those studies are discussed and cited in a later section of this paper.

---

[58] Id. at 101.

[59] W. M. Heath, Chief Engineer, "California Tank Truck Accident Survey," California Highway Patrol, 1981. Tank trucks with their liquid cargoes are dangerous because of the cargo shift and surge as the vehicle maneuvers. Combining the surge problem with the multiple articulation joints of LCVs makes tank LCVs extraordinarily dangerous.

[60] Id.

**ATA REBUTTAL:**

None known to CRASH.

# LCVs ARE INCOMPATIBLE WITH CARS

## SPLASH AND SPRAY

### LARGE TRUCKING COMPANY:

Yellow Freight says that "Splash and spray from Triples is 20% less than from tractor-semitrailers. The front wheels act as a squeegee on wet pavements, allowing the rear wheels to travel on a dry path."[61]

### CRASH RESPONSE:

Even if Single trailer trucks cause more splash and spray than Triples, Triples still cause enough splash and spray to blind motorists in wet weather. Moreover, motorists passed by or passing Triples will be blinded by splash and spray on their windshields for far longer periods, since Triples are much longer than Single trailer trucks. This can cause an increased risk of accidents.

Double 48s cause as much splash and spray as Single trailer trucks Motorists who pass or are passed by Double 48s will be exposed to splash and spray for longer time frames than motorists adjacent to Single trailer trucks.

---

[61] Yellow Freight Video.

## SLOW SPEEDS

Triples and Twin 48s move more slowly than other trucks on upgrades. They also take longer to accelerate when entering freeways from onramps and when maneuvering on crowded urban freeways and other crowded roads. These slow speeds are unsafe.

The slower speeds on upgrades and slower acceleration on level terrain is due to heavier weight (80,000 pounds for Single trailers, up to 110,000 pounds for Triples, and up to 135,000 pounds for Twin 48s) and the greater air resistance because of more gaps between trailers and the increased overall length.[62] Air resistance is especially strong in a crosswind.[63]

Although the effect of air resistance on level terrain and weight on upgrades can be countered by more horsepower, trucking companies have to date generally not increased horsepower for their Triples or for their Twin 48s. However, several companies have suggested that they would do so in the future.[64]

Anyone who has been forced to wait behind a big rig while it slowly creeps past an even heavier one on an upgrade (blocking both lanes in one direction of a four-lane freeway), or who has suddenly had to slow as a big truck changed lanes during rush hour, recognizes first hand how Triples and Twin 48s will disrupt traffic.[65]

---

[62] Twin Trailer Trucks, Transportation Research Board Special Report 211, National Research Council, Washington, D. C., 1986, pp. 286-287.

[63] Id.

[64] Interviews with major trucking companies by Transmode Consultants, Inc. in December, 1990.

[65] Unfortunately, the 1985 Transportation Research Board Highway Capacity Manual does not account for the increased congestion effects of LCVs.

51

*Slow Twin 48 was passed by 2 Single trailer trucks on upgrade during Caltrans test.*

Their slower speeds are also unsafe. One study concluded that trucks which travel 15 mph below the prevailing speed of other vehicles have accident involvement rates **nine times** higher than those that travel at the same speed as other traffic. The University of Texas study concluded that the accident involvement rate is **15½ times** higher if the speed differential is 20 mph.[66]

In field tests conducted by the California Department of Transportation in 1983, the Triples and Twin 48s on 3%-4% grades achieved speeds that were 15 mph to 22 mph slower than the mean speed for Single trailer trucks.[67]

The Oregon experience with slow Triples trying to climb upgrades illustrates what the Oregon Public Utilities Commission calls the "speed problem."[68] Fourteen

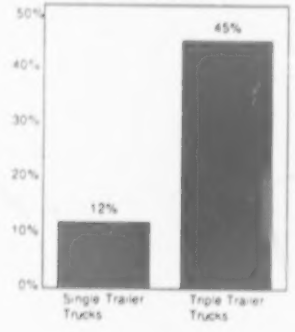
[69] Id.

## FREEWAY MERGING AND LANE CHANGES

Because of their length and slow acceleration, Triples and Twin 48s take longer to merge into freeway traffic from an onramp. Acceleration lanes (merge lanes which allow vehicles coming from onramps to build up enough speed so as to be able to easily merge with other vehicles already on the freeway) are designed primarily for cars and are too short for the longer and heavier LCVs to accelerate up to highway speeds before being forced to merge with existing traffic. Consequently, they frequently have to slow or stop to find a gap in traffic which is large enough to allow them to merge. This results in traffic backup and disruption at the interchange. It also creates the potential for following motorists to hit the rear end of LCVs which suddenly slow or stop.

Longer Combination Vehicles have the same problem changing lanes. In one study, Single trailer trucks were found to have caused the sudden slowing of following cars in only **12%** of their observed lane-change maneuvers. Triples, however, caused the following cars to slow down suddenly in **45%** of their observed lane changes.[70]

Percentage of Lane Changes Causing Sudden Slowing of Following Cars



[70] E. L. Seguin, et al., "The Effects of Truck Size on Driver Behavior." Federal Highway Administration Report RD-81/170. The Institute for Research, State College, PA, March 1982, pp. 11, 131.

54

Lane changes by Triples are also potential safety hazards. As previously discussed, the "Crack-the-Whip Effect" that comes with steering direction reversal may be strong enough in some circumstances to cause the third trailer to swing into adjacent lanes, separate and/or overturn.

**ATA RESPONSE:**

None known to CRASH.

## PASSING

Longer trucks increase the distance and the time needed for autos to pass them. A Utah study compared the risks of passing 110 feet long Triples with the risks of passing 65 feet Single trailer trucks on two-way, two-lane highways. Both kinds of trucks travelled 40 mph and were passed by cars moving at 55 mph. Cars passing Triples had to travel 165 feet farther and two seconds longer in the oncoming traffic lane than did cars passing Single trailer trucks.[71]

The greater the delay imposed on cars following Triples or Twin 48s on two-lane, two-way highways, the greater the likelihood that a car will attempt to pass when it is unsafe. Once committed to passing an LCV, drivers have less chance to avoid a collision by pulling back behind the LCV than if it were only 65 feet long.[72]

**MAJOR TRUCKING COMPANY:**

"A six lane divided Interstate highway is the typical road for Triples. Out on the Interstate passing Triples is not a problem."[73]

**CRASH RESPONSE:**

There is much more LCV travel on non-Interstate highways and local streets and roads than one would be led to believe by the ATA and major trucking companies.

---

[71] Report of Secretary of Transportation to the United States Congress, "The Feasibility of a Nationwide Network for Longer Combination Vehicles, Federal Highway Administration, Washington, D. C., 1985, pp. IV - 8-9.

[72] Id.

[73] Yellow Freight Video.

56

*A Triple travels through a small Idaho town*

A great many Triples accidents already occur on **non-**Interstate highways and on city streets. In Oregon, 30% of the Triples accidents which occurred from 1985 through 1990 took place off the Interstates. Twenty percent of all Oregon Triples crashes occurred on city streets.

If the ATA succeeds in getting authority to run LCVs on a state's Interstate highways, it will soon clamor to expand LCV use to state highways, as admitted by the Executive Director of the ATA's research arm:

> The extent to which LCVs can operate on a state's highway system will also vary and **increase with time** and experience.[74]

The Oregon experience with Triples illustrates what is likely to happen elsewhere.

When the State of Oregon first permitted Triples, it limited them to the Interstate system, and even prohibited Triples on certain portions of Interstate. Soon, however, Triples were authorized on some two-lane, two-way state highways, but only in fair weather. The state highway mileage open to Triples in Oregon gradually grew until today about two-thirds of Oregon state highway mileage is open to Triples. Most of that state highway mileage is made up of two-lane, two-way roads. In 1989, the restriction against running Triples in the rain on two-lane, two-way state highways was lifted. Now, Triples are even allowed on certain county roads and city streets in Oregon.

---

[74] Clyde E. Woodle, "Longer Combination Vehicles," Transportation Executive Update. March-April 1990, attached to ATA White Paper.

# MULTI-TRAILER TRUCK ACCIDENTS ARE MORE SEVERE

# SEVERITY OF ACCIDENTS

Due to their longer length, their greater number of trailers and articulation joints and due to their generally greater instability, accidents involving Triples and Twin 48 accidents are expected to be more severe than Single trailer truck accidents.

## ATA RESPONSE:

"The very laws of physics tell us that when two objects collide the lighter object is going to sustain greater damage."[75]

"Severity of truck accidents is not sensitive to truck configuration and, given that a truck accident occurs, the probabilities of fatalities or injuries are not sensitive to changes in truck weight."[76]

## CRASH REBUTTAL:

### 1. Truck Configuration

Longer Combination Vehicles are not only heavier than Single trailer trucks, they also have more units and are less stable. When involved in accidents, there is a greater risk that their multiple units will be thrown into adjacent lanes of traffic and even into oncoming lanes of traffic.

Studies comparing the **fatal** accidents of Double 28s with the **fatal** accidents of Single trailer trucks indicate that severity of accidents is sensitive to truck configuration. Those studies show that Double 28s are over-involved in **fatal** accidents.

Researchers at the University of Michigan Transportation Research Institute ("UMTRI") concluded that, when one controlled for the kinds of highways and

---

[75] ATA White Paper.

[76] Id.

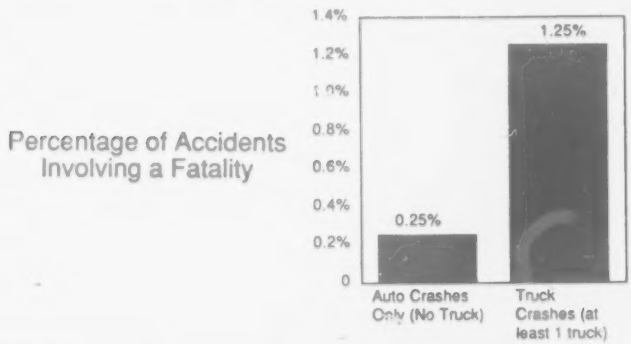
60

roads over which each truck type travels, in 1986 the nationwide **fatal** accident involvement ratio for Double trailer trucks was **27% higher** than the ratio for single trailer trucks and that Double trailer trucks are **32% over-involved** in **fatal** accidents.[77]

Another recent study found the **fatal** accident involvement ratio of Double trailer trucks to be **58% higher** than the ratio for Single trailer trucks.[78]

**2. Severity of Truck Crashes Compared to Auto Crashes**

A six month study of Maryland crashes at Johns Hopkins University found that one out of every 80 truck crashes involved a fatality.[79] For crashes involving only automobiles, only one out of every 400 accidents resulted in a fatality.[80] The main reason for this extraordinary disparity is the greater size and weight of trucks.



[77] K. C. Campbell, "Ten Years of Larger Truck Safety Research," Presented at Motor Vehicle Manufacturers/Department of Transportation, Motor Truck Research Symposium, July 18, 1990, Washington, D. C.

[78] Roger Mingo, Joy Esterlitz and Bret Mingo, "Accident Rates of Multi-Unit Combination Vehicles Derived from Large-Scale Databases, 70th Annual Meeting, Transportation Research Board, Washington, D. C., Session 163, January 16, 1991.

[79] Susan Baker, Co-Director, Injury Prevention Center, Johns Hopkins University, Testimony Before Senate of Maryland Committee on Constitutional and Public Law, Annapolis, Maryland, 1978.

[80] Id.

61

After reviewing nationwide data for 1986, the Transportation Research Board came to the same conclusion about large combination vehicles (i.e., big trucks pulling one or more trailers):

> When large combination vehicles become involved in an accident, the accident is likely to be severe.[81]

The Transportation Research Board also noted that, although trucks pulling at least one trailer were involved in only **2.1%** of all crashes on American Streets and highways, those heavy trucks were involved in **6.7%** of all **fatal** crashes.[82] Thus, heavy trucks' **fatal** accident involvement percentage is **3 times** greater than their overall accident involvement percentage. The Transportation Research Board attributed the greater severity of big rig accidents in part to the size and weight of the big trucks.

**Heavy Trucks % Of all Accidents**
**vs.**
**Heavy Trucks % Of All Fatal Accidents**

# MULTI-TRAILER TRUCK ACCIDENT RATIOS

63

## MULTI-TRAILER TRUCKS ARE OVER-INVOLVED IN ACCIDENTS

There are only two studies without obvious flaws which compare the accident involvement ratios of Double trailer trucks to that of Single trailer trucks and which also control for the following facts:

1. Double trailer trucks are driven primarily on Interstates and Single trailer trucks are driven a much larger percentage of time on the far less safe primary, secondary and local streets and roads.[83]

2. The accident rate on state highways is 5-7 times the rate on Interstates, according to FHWA statistics.[84]

Those two studies found that Double trailer trucks were disproportionately involved (over-involved) in accidents. In reviewing these studies, note that Triples and Twin 48s are far more dangerous than Double 28s. One can reasonably conclude that LCVs would have a greater over-involvement rate than Double 28s.

**1. University of Michigan Transportation Research Institute ("UMTRI") Study**

UMTRI concluded that, when one controlled for the kinds of highways and roads over which each truck type travels, in 1986 the nationwide **fatal** accident involvement ratio for Double trailer trucks was **27% higher** than for Single trailer trucks and that Double trailer trucks were **32% over-involved** in fatal accidents.[85]

---

[83] Truck Weight Limits, supra note 50, p. 125.

[84] U. S. Department of Transportation, Federal Highway Administration, "Highway Safety Performance — 1988, Fatal and Injury Accident Rates on Public Roads in the United States," Report of the Secretary of Transportation to the United States Congress, June 1990; P. P. Jovanis, H. Chang and I. Zabaneh, "A Comparison & Accident Rates for Two Truck Configurations," In Transportation Research Record 1249, TRB, National Research Council, Washington, D. C. 1989.

[85] K. C. Campbell, "Ten Years of Large Truck Safety Research," Presented at Motor Vehicle Manufacturers Association/Department of Transportation Motor Truck Research symposium, July 18, 1990, Washington, D. C.

64

2. **Insurance Institute for Highway Safety Study**

In a study of all truck accidents (not just fatal accidents) on the Interstate highways in the State of Washington from 1984-86, the Insurance Institute for Highway Safety found that Double trailer trucks were **200% over-involved** in accidents.[86]

## ATA REBUTTAL:

The ATA says that the Insurance Institute for Highway Safety study is "based on data from only two Interstate highways in the State of Washington. The study has been extensively questioned because of the practice of extrapolating findings to other areas and conditions."[87]

## CRASH RESPONSE:

The ATA White Paper has questioned the Insurance Institute for Highway Safety study "because of the practice of extrapolating findings to other areas and conditions." A reading of the Insurance Institute study makes it clear that the study purports merely to report findings with respect to accident involvement ratios for various truck types on all Interstates in Washington State. There is no attempt by the authors of that study to extrapolate the Washington State findings to other areas or conditions.

Indeed, one of the authors of that study said in an interview that the accident over-involvement ratio for Double trailer trucks would probably be found to be lower if the identical study were done in a midwestern or eastern state where the use of Doubles is relatively new and rare and where Double trailer trucks are driven primarily by large less-than-truckload ("LTL") trucking companies with relatively good maintenance practices and well-trained and careful drivers.[88]

---

[86] Stein and Jones, "Crash Involvement of Large Trucks by Configuration: A Case-Control Study," American Journal of Public Health, May 1988, Vol. 78 No. 5.

[87] ATA White Paper.

[88] Interview with H. S. Stein on December 18, 1990.

Washington State has allowed Double trailer trucks for 30 years. The usage of Doubles is much broader in Washington State than in most parts of the country. Doubles are commonly driven in Washington State by small trucking companies and farming or natural resource operations with poorer maintenance practices and less qualified and less experienced drivers than the drivers for the large LTL trucking companies. The Washington State experience, however, is probably an omen of things to come in other areas if Doubles are allowed to become as common and as broadly used elsewhere as they now are in Washington State.

66

## ATA FOUNDATION STUDY IS FLAWED

**ATA:**

A study prepared for the Trucking Research Institute and the ATA Foundation purports to show that Triples and Twin 48s have the lowest accident rates of all configurations and that Double 28s have a vastly better accident rate than do Single trailer trucks:[89]

| Type of Truck | Accidents Per Million Miles |
|---|---|
| Triples | 1.1 |
| Twin 48s and Twin 45s | 1.5 |
| Double 28s | 1.7 |
| Single Trailer Trucks | 2.3 |

**CRASH RESPONSE:**

The ATA Foundation study is flawed:

1. **No Control for Type of Highway Travelled**

   Double trailer trucks are driven predominantly on the relatively safe limited access and divided highways of the Interstate system.[90] Single trailer trucks are driven a much greater percentage of time on the far less safe non-Interstate federal-aid systems, on state highways and on local streets and roads. Since the accident rates on state highways is **5-7 times** the accident rate on Interstates,[91] comparing accident rates for Doubles, Triples and Single trailer trucks without controlling for the type of road travelled is like comparing apples to oranges.

---

[89] "Productivity and Consumer Benefits of Longer Combination Vehicles," Sydec, Inc. and Jack Faucett Associates, Alexandria, Virginia, June 1990, Executive Summary, p. 7.

[90] K. L. Campbell, D. F. Blower, R. G. Gattis & A. C. Wolfe, "Analysis of Accident Rates of Heavy-Duty Vehicles," University of Michigan Transportation Research Institute, April, 1988, p. 31.

[91] P. P. Jovanis, supra note 84.

Yet the ATA Foundation study admits this weakness. Footnote 4 to the ATA Foundation study reveals that the calculations have not "taken into account any differences in the types of routes or conditions of operations."[92]

2. **No Accurate Data on Vehicle Miles Traveled**

The National Governors' Association Center for Policy Research[93] and the highway safety research community[94] are unanimous in concluding that, with the possible exceptions of the UMTRI's National Truck Trip Information Service and the Truck Inventory and Use Survey ("TIUS"),[95] no reliable data base exists to determine vehicle miles traveled by truck configuration (i.e., by Triples, Double 28s, Twin 48s and Single trailer trucks).

In a recent study of Triples accidents in Oregon from 1985 through 1990, the Oregon Public Utilities Commission stated categorically:

> . . . we do not know the mileage nor the proportion of miles travelled by these vehicles in a triple combination.[96]

The Oregon PUC denied that it was possible to determine or compare accident rates by trailer configuration.

---

[92] "Productivity and Consumer Benefits of Longer Combination Vehicles," supra note 89, p.7, footnote 4.

[93] Ralph Craft speech at annual meeting of National Association of Governors' Highway Safety Representatives at Baltimore, Maryland, September 8, 1990. Ralph Craft is with the Transportation and Communications Program, Center for Policy Research, National Governors' Association.

[94] See, for example, F. M. Council and W. L. Hall, supra note 12, p.93.

[95] Even the UMTRI National Truck Trip Information Service and TIUS have problems which make one unwilling to rely completely on those data bases. For example, the TIUS survey covers only tractors. Tractors may operate at different times with varying numbers and types of trailers.

[96] Oregon Public Utilities Commission, supra note 10, Executive Summary.

> Triples operate under different conditions and routes than other heavy truck combinations. Mileage information is not available on the various combinations; therefore, it is not possible to compare accident data on a statistically valid basis.[97]

The ATA Foundation study did not use the University of Michigan's National Truck Trip Information Survey or TIUS. Without accurate data on truck miles travelled by truck configuration, it is impossible accurately to determine accident rates by truck configuration. Therefore, the ATA Foundation study's determination of accident rates cannot be reliable.

3. **State Accident Data Inadequate**

The ATA Foundation study claims its accident rate calculations are based on data from various states, turnpike authorities and motor carriers. The states, however, do not collect reliable truck accident data by truck configuration. As the National Governors' Association reported:

> In 1985 less than half of the states collected data on the type of truck involved in the accident, less than a quarter recorded the number of axles on trucks involved, and only three states recorded the name of the trucking company.[98]

Illustrative of the problems with state accident data is a February 28, 1991 letter from the Montana Department of Highway Traffic Safety:

> Prior to 1982, Montana had no distinction between types of semi-trucks. Recently, we have found major problems on reporting of triples, which are coded incorrectly about half the time during the last three years.[99]

---

[99] Letter dated February 28, 1991 to Howard Stein from Jack Williams, State of Montana, Department of Justice, Highway Traffic Safety.

69

4. **Trucking Company Accident Reports are Unreliable**

The ATA Foundation study's accident rate calculations are based in part on accident data provided by motor carriers. Trucking company accident reporting has been proven to be deficient, and dependence on it has proven unreliable.

For example, trucking companies are required by law to report "eligible accidents"[100] to the Office of Motor Carriers ("OMC") of the U. S. Department of Transportation. However, when Messrs. Campbell and Carsten of the University of Michigan's Transportation Research Institute analyzed the eligible accident data provided by trucking companies to OMC, they came to the following conclusion:

> Many fleets, fearing damage to their reputations if data were leaked, were clearly reluctant to report all their accidents. Others found the collection of the data to be too much of a burden on their time. But whatever the reason, the data were clearly too unreliable to perform their intended purpose.[101]

In 1983, the Office of Motor Carriers estimated in testimony before Congress that only **60%** to **70%** of all eligible accidents required by law to be reported to the OMC are actually reported.[102] Subsequent research done for the OMC on the accident reporting practices of motor carriers in Washington State indicates that the 60% to 70% estimate may be high, at least for the State of Washington. The later research showed that only **39%**

---

100 An "eligible accident" is one resulting in an injury where treatment was received away from the site and/or causing property damage of at least $2,000 (before 1986) or $4,400 (1986 and after).

101 K. L. Campbell and O. Carsten, "Fleet Accident Evaluation of FMVSS 121," Report UM-HSR1-81-9, University of Michigan, Highway Safety Research Institutes, Ann Arbor, March, 1981.

5. **Raw Unweighted Averages**

Footnote 4 to the ATA Foundation study on accident rates reveals that:

> The average accident rates shown in Exhibit 4 are approximate estimates because they are raw unweighted averages of accident rates obtained from all sources. Data are not available to estimate weighted accident rates, taking into account differences in the size of the sample from most of the sources.[104]

This means that this study has calculated accident rates from each of its sources and then averaged all of those accident rates together to obtain the total accident rate. In other words, the Triples accident rate for Arizona (which allows Triples only on 26 miles of Interstate highway) was averaged together with and given equal weight to the calculation of a Triples accident rate for Oregon (which allows Triples on 3,000 miles of Interstate highways, state highways and local streets and roads).

The ATA Foundation study is flawed. It deserves to be given no weight.

## CONCLUSION:

The evidence demonstrates that LCVs are unsafe for five reasons:

1. The engineering of LCVs makes them dangerous.

2. The LCV engineering problems cause crashes that would not have occurred with Single trailer trucks.

3. LCVs are incompatible with cars in traffic.

---

104 "Productivity and Consumer Benefits of Longer Combination Vehicles," supra note 89, p. 7.

4. Due to their greater length and instability and additional number of trailers, Multi-trailer truck accidents are more severe than Single trailer truck accidents. When a Multi-trailer truck has an accident, people are more likely to be killed or injured.

5. Multi-trailer trucks are disproportionately involved (over-involved) in accidents compared to Single trailer trucks.

The risk to motorists, pedestrians, and cyclists who must share the road with Triples and Twin 48s is unacceptably high. Truck drivers should not be forced to drive them.

## INTRODUCTION

I am William M. Clifford, President and Chief Executive Officer of St. Johnsbury Trucking Company located in Holliston, Massachusetts. St. Johnsbury is the largest predominately less-than-truckload (LTL) trucking company operating in the Northeast. In 1990, we had revenues in excess of $300 million. I have been employed in the trucking industry for 34 years. Since joining St. Johnsbury in 1968, I have held various corporate positions before becoming President & Chief Executive Officer in 1990.

This statement is submitted on behalf of the Regular Common Carrier Conference (RCCC), of which I am Chairman. The RCCC is a national trade association composed of approximately 250 for-hire motor carriers with a combined annual revenue of $15 billion, representing about 95 percent of the LTL shipment business in the U.S. Our members include the largest, national general freight LTL carriers, with annual revenues in excess of $2 billion, as well as small regional carriers with annual revenues of several million dollars. They transport general commodities in less-than-truckload (LTL) shipments throughout the United States. As common carriers, they form the backbone of the Nation's for-hire transportation network providing service to all shippers and communities on shipment of all sizes.

The RCCC is separate from but affiliated with the American Trucking Associations, Inc. and while we endorse the statement and testimony of ATA before this Subcommittee on the Administration's bill, the Surface Transportation Assistance Act of 1991, we wish to emphasize several issues of particular importance to the LTL general freight trucking industry, by far, the largest segment of the for-hire industry, as well as ATA.

## SUMMARY OF POSITION

The Administration's proposal establishes a sound framework for legislation to rebuild our Nation's highways. It appropriately proposes a five year highway program and recognizes a national highway system comprising about 150,000 miles of Highways of National Significance. It calls for the establishment of comprehensive, long term bridge, pavement, safety, and congestion management programs to enhance our mobility and infrastructure. The RCCC endorses these features. However, we also believe that Congress needs to go further in certain areas.

The federal government must increase the total amount of its highway program funding beyond the $87.7 billion proposed by the Administration. We recommend that the federal government authorize about $104 billion for this five year highway program. Increased federal funding of our highways and bridges is necessary to reverse the decline in our infrastructure and enhance our Nation's productivity. Time is of the essence. Each day that we delay in committing the necessary funds will only increase the costs in future years. A $3 billion a year increase in federal funding above that proposed by the Administration is necessary. It can be achieved and sustained for five years by using the projected $16 billion surplus in the Highway Trust Fund.

Second, the current federal funding ratios should be retained. The Administration is proposing to reduce the federal matching ratio in most highway program categories. The RCCC recommends that the federal government provide 90 percent of the funding for the Interstates, 90 percent of the funding for other Highways of National Significance, 75 percent of the funding for urban and rural roads, and 80 percent funding for bridge replacement and rehabilitation. Currently, the state and local governments contribute over 77 percent of the total funding for transportation, while the federal government provides about 23 percent. The financially strapped states and local governments cannot afford the additional financial burdens proposed by the Administration. Our surface transportation infrastructure is truly a **national** asset linking our Nation's people, goods, and services. There is a direct correlation between its soundness and our Nation's productivity, competitiveness, and standard of living. The federal government must continue to shoulder a significant responsibility for preserving and expanding this national asset.

There is, however, an obligation on the part of the states to use their transportation revenue judiciously and for its intended purpose. Unfortunately, while almost all the states have either a multimodal transportation trust fund or a highway trust fund, many divert some of their transportation user revenue to nontransportation programs. There should be a federal incentive for the states to dedicate state and local transportation revenue for transportation purposes exclusively. This can be accomplished through higher federal funding ratios for states that have trust funds and who dedicate their use to transportation programs.

Congress should not allow the states to use federal funds to construct new toll roads or convert existing roads into tolled facilities. Instead, the states should have the option of either using federal funds for construction or maintenance of particular roads, on the one hand, or foregoing federal funds for particular roads, on the other hand, and using tolls as the means to finance their construction, improvements or maintenance. Highway users are subjected to double taxation when a state is allowed to use both federal funds and assess tolls. Those that travel such roads would pay federal user fees and state toll fees. This is unfair. It results in out-of-state operators disproportionately subsidizing state and local road programs through their federal user fees.

In this legislation, Congress should recognize and promote productivity gains in the transportation industry. For the trucking industry, the use of triples and other higher productivity combination vehicles have reduced transportation costs, energy consumption and highway congestion, without a degradation in safety. The federal government should allow, but not mandate, the states to authorize the use of these higher productivity vehicles.

In response to a truck weight study requested by Congress, the Transportation Research Board, a nonpartisan research board within the National Academy of Sciences, made such a recommendation last year. The actual experience with these vehicles now operating in over 20 states demonstrates their safety and productivity benefits. Greater usage could save the Nation billions of dollars annually in transportation costs. The issue is not whether the federal government should mandate their use in the states. Rather, it is whether the current federal impediments to their use should be relaxed to allow the states to decide whether their economic, demographic, safety, and productivity objectives warrant controlled use. Congress should adopt the TRB recommendations in its highway reauthorization legislation. They are consistent with the concept of federalism and will promote productivity.

At a minimum, Congress should make permanent its authorization to the state of Wyoming to allow vehicles in excess of 80,000 pounds gross weight to operate on its Interstates and Defense highways. The Wyoming Demonstration Project has improved transportation productivity and economic growth without an adverse impact on safety.

Moreover, Congress should authorize other states to establish similar demonstration projects for periods up to three years. As a condition to such authorizations, Congress could establish requirements pertaining to these vehicles including gross weight, drivers and companies to ensure safety. The states would then impose such requirements through a permit process for motor carriers.

The temporary authorization to the states for such demonstration programs would allow the states and the federal government to obtain empirical data on the productivity, economic, and safety impacts of such vehicles based on the actual service record. Congress could then make an objective decision on the impact of the TRB recommendations.

Last, but not least, the federal government should not preempt the right of the states to regulate truck transportation within their borders. Currently, about 42 states regulate intrastate trucking. In varying degrees, they license carriers and regulate rates and other practices to promote safety, service, stability, and fairness. Preemption would undermine the states' policy decisions. It is inconsistent with the principle of federalism. It is also unwar-

ranted and unnecessary because the states are continually reviewing and altering their policies regarding economic regulation to promote the public interest, and they are best suited to make these judgments.

## IMPORTANCE OF A SOUND INFRASTRUCTURE

The federal government's initiative in 1956 to construct and fund a system of Interstate and primary highways throughout the United States has significantly enhanced our Nation's economic growth, productivity, and mobility. The federal government's investment in our highway infrastructure has substantially benefited our Nation. There is a direct correlation between the condition of our infrastructure and national productivity.

Unfortunately, the level of public investment in our core infrastructure has declined substantially over the past two decades. From 1956 through 1970, public investment ranged from 1.8 to 2 percent of GNP. From 1971 until 1987, it declined steadily from 1.4 percent to 1 percent of GNP[1]. This halving, or 50 percent decline in investment mirrors our decline in national productivity, according to Dr. David Alan Aschauer, former Senior Economist with the Federal Reserve Bank of Chicago. He estimates that our Nation's productivity, which was at 2.8 percent from 1953 to 1969, declined to 1.4 percent from 1970 through 1987. He attributes this dramatic decline to the neglect of our infrastructure. Consequently, it is imperative that the federal government increase its level of funding for our highways.

## FEDERAL FUNDING LEVELS

The Administration proposes in the Surface Transportation Assistance Act of 1991 to invest $87.7 billion in our Nation's highways and bridges over the next five years. Federal spending on our highways would increase from $16.2 billion in fiscal year 1992 to $20.3 billion in fiscal year 1996.[2] The Congressional Budget Office estimates the actual outlays for federal-aid highways under the Administration's bill would total $82 billion over the period 1992-1996. This is a $14 billion increase in spending over the preceding five year period, according to CBO. However, in real terms (constant dollars), federal spending would remain almost unchanged. Therefore, while the $14 billion increase in federal funding seems a positive step, it falls short of the level necessary to just maintain the current condition of our highways and bridges.

The RCCC recommends that Congress appropriate about $104 billion for the five year highway program. The Administration's proposed funding should be increased by $3 billion a year. Congress should authorize $19 billion for FY 1992 and progressively increase the amount to $20 billion in FY 1993, $21 billion in FY 1994, $22 billion in FY 1995, and $23 billion in FY 1996. This additional $15 billion in spending could be accomplished from drawing down the Highway Trust Fund. It currently has an $11 billion surplus which CBO projects will rise to $16.3 billion by 1996, primarily due to an infusion of revenue from the 2.5 cents per gallon fuel increase under the Omnibus Reconciliation Act of 1990.

---

1 Bureau of Economic Analysis, U.S. Department of Commerce.

2 CBO Testimony, Statement of James L. Blum, before Senate Committee on Environment and Public Works, March 5, 1991, p. 9.

Recently, the leadership of the House Public Works Committee proposed an alternative reauthorization plan calling for a five year, $119 billion highway program. This legislation proposes a federal funding level of $21 billion in 1992 and $24.5 billion in each of the succeeding four years. It would be funded from the Trust Fund surplus and the receipts from the recent 5 cent federal fuel excise tax increase, including the 2.5 cents that went to deficit reduction. The RCCC endorses greater federal spending.

Time is of the essence, however. The Department of Transportation estimates that about 40 percent of our roads are currently in fair or poor condition, and nearly 28 percent of our bridges are structurally deficient or functionally obsolete.

The sooner the government allocates the necessary funds to rebuild our infrastructure, the less expensive the task will be. For example, the road builders estimate that it costs about $125,000 per mile to resurface a two lane road in "fair" condition. However, that cost increases nearly 500 percent to $600,000 per mile if that road is allowed to deteriorate to a "poor" condition.[3] Clearly, the sooner we start rebuilding our roads, the more we, as a Nation, save in total costs and lost productivity. Therefore, it is imperative that we provide as much additional funding as possible in the beginning of this five year program.

## FEDERAL/STATE FUNDING RATIOS

The Administration proposes to restructure the Federal-Aid Highway Program into three main components: (1) a national highway program; (2) an urban and rural program; and (3) a bridge program.

Importantly, the Administration endorses a National Highway System (NHS) that would encompass about 150,000 miles, including 43,000 miles of Interstate highways, the Defense Highways, and principal arterial routes. Funding for the NHS would increase from $7.7 billion in 1992 to $11.2 billion in 1996.

The federal government would continue to provide 90 percent of the funding for the completion and reconstruction of the interstates. However, it would only provide 75 percent of the funding for these other primary roads that connect cities and centers of economic activity handling approximately 70 percent of all commercial freight activity.

**The RCCC recommends that the federal government provide 90 percent of the funding for projects pertaining to all these vital highways on the proposed National Highway System (NHS).**

The Administration's new urban and rural program will comprise approximately 700,000 miles of non-local roads. Funding for this program would increase from $3.9 billion in 1992 to $5.7 billion in 1996. A state would also be allowed to transfer up to 15 percent of its NHS funds to urban and rural projects if the Secretary of Transportation determines that its interstate roads are adequate.

---

3 The Road Information Program (TRIP), 1990 State Highway Funding Methods, P. 6.

The Administration proposes to provide 60 percent of funding for these urban and rural projects. Again, this is a reduction in the current federal level of 75 percent. **The RCCC recommends that the federal government maintain its current 75 percent funding level.** While a federal matching ratio lower than 90 percent is appropriate for urban and rural roads, many of these secondary roads link agricultural and smaller communities to the primary road system. A 75 percent funding level is appropriate to preserve this link.

Last, but not least, the proposed bridge program would provide $1.8 billion in 1992, increasing to $2.8 billion in 1996 to rehabilitate or replace existing bridges. The federal matching share would be 75 percent, except bridges on Interstates would receive 90 percent federal funding. The current 80 percent federal funding level for noninterstate bridges should be maintained.

The increased federal funding levels recommended by the RCCC can be managed under our proposed federal highway appropriations discussed above. They are warranted and can be managed by the federal government.

The Administration's proposal to shift more of the financial burden to the states is ill-advised and unfair. It is ill-advised since the states, through the National Governors Association, have already testified before Congress that the debt-ridden states and localities cannot shoulder the increased burden.[4] It is unfair because the state and local governments already bear the lion's share of total costs for our highways. In 1988, state and local governments spent $53.53 billion on transportation, or 77.6 percent of the total of $69 billion in governmental expenditures. In contrast, the federal government spent $15.47 billion, or 22.4 percent. Moreover, the state and local share has been increasing. In 1980, they contributed 74 percent and the federal government contributed 26 percent.[5]

Our recommended higher federal matching ratios will restore the historical federal/state contribution ratios on highway projects of national importance and, importantly, facilitate the timely repair and building of needed roads.

## TOLLS

The Administration proposes to allow the states to use up to 35 percent of their federal funds to construct new, noninterstate toll roads or convert existing, noninterstate roads into tolled facilities. We are opposed to using federal funds for either new toll roads or converting and maintaining existing roads through tolls. The states should have the option of **either** using federal funds for construction and maintenance of particular roads, or foregoing the federal funds on particular roads and using tolls as the means to finance construction, improvements, or maintenance.

When a state is allowed to use both federal funds and tolls, motor carriers and other highway users are subject to double taxation. They pay federal highway user fees and also the state toll fees.

---

4 Statement of National Governors' Assn., by Honorable Wallace G. Wilkinson, before the House Public Works and Transportation Committee, February 20, 1991.

5 FHWA, Highway Statistics (1980 and 1988).

As a basic concept, we support a toll free national highway system. We recognize, however, that tolls can play a role in financing new construction, improvements, and maintenance that might not otherwise occur. Tolls generally impact vehicle operators in proportion to their road usage. Thus, local and regional highway users benefitting most from the toll road will appropriately pay a higher proportion of the fees. However, when federal funds and toll fees are both employed, the out-of-state operators are subsidizing state and local road programs through their federal highway user fees. This is unfair.

## STATE TRUST FUNDS

Currently, 34 states have highway trust funds and another 13 states have multimodal transportation trust funds. (See Appendix A.) Only the states of Alaska, New York, Rhode Island, and the District of Columbia lack any type of trust fund. The trust fund mechanism has proven to be a fair and effective mechanism to provide revenues for our highway and transit needs. The federal government should encourage and provide an incentive for all the states to establish trust funds.

In 1988, state highway user taxes provided $44.9 billion or over 83 percent of all state and local highway program revenue. Unfortunately, not all the states' highway user revenue is dedicated to transportation projects. Currently, 30 states constitutionally dedicate highway revenues to highway programs. Six states partially dedicate revenues, and 14 states and the District of Columbia have no dedication provision.[6]

While it is difficult to quantify the exact amount of highway user revenue diverted to nontransportation programs, it is likely to amount to billions annually. Our infrastructure can ill-afford to lose such precious revenue.

The RCCC, therefore, recommends that Congress provide a financial incentive for all states to establish either a highway or transportation trust fund and dedicate all such revenue to transportation programs. This could be accomplished by providing full federal funding under the various highway programs only to those states that comply with such a requirement. Those states that do not comply could be given, for example, 5 percent less federal matching funds. Their right to transfer up to 15 percent of federal interstate funds to urban and rural programs also could be withdrawn.

## EQUIPMENT PRODUCTIVITY

Just as our infrastructure must change with time, so must our transportation equipment. The trucking industry and economy have realized significant productivity gains through the use of longer combination vehicles, including triple 28 foot trailers and twin 48 foot trailers. Currently, 20 states allow so-called longer combination vehicles (LCV) to operate on the highways under a special permit process which typically imposes special requirements on the drivers, equipment, and roads. (See Appendix B.) The Western Highway Institute data clearly indicate that LCVs have an exemplary safety record based on documented travel. (See Appendix C.) Moreover, the productivity benefits to the Nation are significant. A national LCV network, administered by the states, would result in annual savings of over $4

6 TRIP Report, note 3, supra, at p. 47.

billion to the economy, according to a report conducted by Sydec, Inc. for ATA.

These higher productivity vehicles provide additional benefits. They consume less fuel on a per ton-mile basis than other trucks. Consequently, they will help conserve our domestic oil supplies and reduce our growing dependence on foreign oil. They also will assist our Nation's clean air program. These LCVs produce less pollutants since they consume less fuel on a ton-mile basis. Additionally, they will help in reducing highway congestion since fewer trucks will be required to transport the same amount of freight. Importantly, LCVs provide one means for the trucking industry to address the mounting shortage of qualified truck drivers, particularly in the truckload segment.

The federal government currently allows the states to authorize their use, as well as other vehicles – such as buses, construction equipment, and waste haulers – through grandfather provisions to the existing 80,000 pound federal gross vehicle weight limit. Efforts by the railroads and others to turn back the clock and stifle productivity by eliminating these grandfather rights should not be tolerated by Congress. Congress should therefore not adopt H.R. 1226, a bill that would undermine the existing grandfather rights of states.

The railroads provide service to less than 10 percent of the Nation's cities, while trucking provides service to all. For more than 90 percent of the cities we provide the only freight transportation service. It is wrong to withhold from the people of these cities the opportunity for better and more productive services. Railroad interests are wrong in this matter.

TRB calculated in its Truck Weight Limits report to Congress that the elimination of the grandfather provisions would increase truck transportation costs by $7.76 billion annually, result in nearly 29,000 additional truck accidents annually, and increase truck travel by more than 4 billion miles, requiring a great deal more fuel. H.R. 1226 is contrary to the Nation's needs and objectives.

Instead, Congress should adopt the recommendations of the Transportation Research Board in its Truck Weight Limits Report to Congress last year. TRB recommends that all states be allowed to establish special permit programs authorizing certain vehicles in excess of 80,000 pounds to operate. These permit programs would have to include the following key features. A state would have to designate the routes upon which the overweight vehicles may operate and would have to check all bridges. The maximum weight for permit vehicles over 80,000 pounds should be no greater than that given by the current bridge formula for vehicles with up to nine axles. Thus, depending on the axle group length, 7 axle vehicles could handle up to 122,000 pounds and 9 axle vehicles up to 130,000 pounds. Furthermore, TRB recommends that states establish fee structures for permits that cover any increase in highway agency costs from the permit vehicles, as well as the costs of administration and enforcement of the programs. TRB's recommendations are sound and should be adopted by Congress.

If Congress believes that it is not advisable to adopt the TRB recommendations at this time, it should make permanent the authorization to the state of Wyoming to permit vehicles in excess of 80,000 pounds to operate on the Interstates and Defense Highways within

the state. This demonstration project has proven successful in improving transportation productivity and economic growth without a degradation in safety.

Moreover, Congress should authorize other states to establish similar demonstration projects for up to three years. Congress could establish minimum requirements pertaining to the vehicles, including gross weight, drivers and companies to ensure safety. The states would then impose such requirements through a permit process for motor carriers.

A temporary authorization to the states for such demonstration programs would allow the states and federal government to obtain empirical data of the productivity, economic impact and safety impact of such vehicles in actual service. Congress could then make an objective decision on the impact of the TRB recommendations.

## STATE TRUCKING REGULATION

The Administration's bill, in Section 508, proposes to preempt the right of states to economically regulate truck transportation within their borders. This would be accomplished by barring the application of their licensing, rate, tariff, and other provisions to the intrastate operations of interstate trucking companies. Congress should reject this preemption request.

In most cases, state economic regulation of trucking predates federal regulation enacted in 1935. It serves to accomplish on the state level the objectives embodied in the Interstate Commerce Act. State economic regulation seeks to promote safe, productive transportation services at reasonable rates to all shippers and commodities. State regulation is not static; it is constantly reassessed and modified, if necessary, to meet the changing or special needs and demands of a state.

Forty-two (42) states currently regulate trucking in one form or another. Since 1980, five states have deregulated or substantially reduced economic regulation of trucking. Numerous other states have reevaluated and modified truck regulation according to their assessment of the public interest. In 1990 and the beginning of this year alone, the states of California, Indiana, Illinois, Michigan, Minnesota, Utah, and Washington have considered legislative or administrative proposals to alter their regulatory programs. In 1989 California, which is often the bellwether state, substantially relaxed general freight trucking regulation. However, its revised program actually beefs-up the licensing requirement to promote safety; it retains rate filings for contract and common carriers to promote pricing information and deter discrimination, and also establishes a rate floor and rate cap to avoid unreasonable pricing.

Federal preemption would undermine California's revised regulatory program (as well as 41 others) which is the product of nearly two years of hearings that resulted in a carefully crafted program tailored to the needs of that state. This is inappropriate.

The states should have the right to retain the authority to fashion regulations expressly suited to their own needs. A state's right to control activity within its borders is a fundamental right that should not be lightly discarded. Congress has considered such action in the past only upon clear and overwhelming evidence that the states, individually and

collectively, have acted intransigently and burdened commerce. Such conditions are simply not present.

The states are continually reviewing and modernizing their regulations to reflect public interest. One shoe does not fit all. Many states, particularly rural ones, believe that effective trucking regulation promotes the service and rate levels necessary for their business climate. Others value its safety benefits and labor stability. They need to, and should have, the right to choose the system to best fit their needs. The states recognize the need to adapt to changing times and are the best qualified to administer to their own needs. Consumers and the electorate will tell them when change is necessary. Federal preemption is not appropriate in these circumstances.

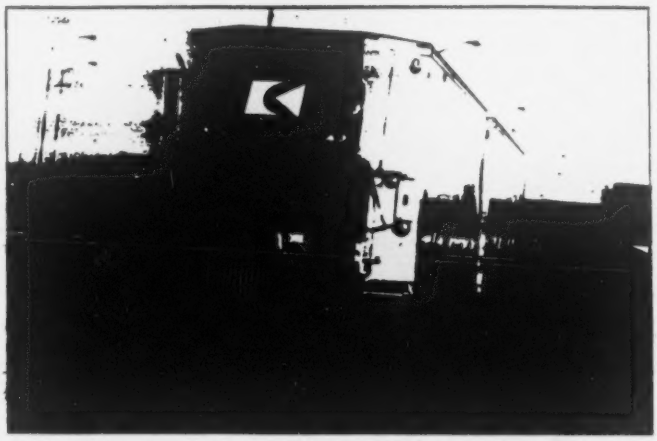
# APPENDIX C

# LCV Operations in the Western USA

By Byron L. Geuy

In many advanced national economies since World War II truck transportation has become the preeminent mode of surface transport in terms of contribution to gross national product if not in ton miles transported. Because of its pervasiveness throughout the economy, truck transport is an obvious focal point to improve efficiency and productivity of freight movement. The pressure to make trucking more efficient is very apparent in those parts of North America where dependence upon truck transport is greatest. The limited rail network and absence of any extensive navigable waterway routes in Western North America underlie the emergence of improved truck transport technology in that region. Long distances between urban centers, low population densities, and natural resource-based economies are major factors encouraging the development of more efficient truck transport.



The purpose of this paper is to present a summary of the Western states' development of more productive trucks, their status in the late 1980s, and discussion of the factors influencing the acceptance and expansion of this transport technology in the United States.

## WHAT ARE MORE PRODUCTIVE TRUCKS?

In the U.S. context more productive trucks are commonly referred to as "longer combination vehicles" (LCVs). The three most common LCV configurations in service in the U.S. are as follows:

The Rocky Mountain double which consists typically of a three axle tractor pulling a 48' semitrailer and a 28' full trailer. Overall lengths can range from 75' to 98'. Gross weights can reach 110,000 lbs with seven axles.

The Turnpike double which consists of a three axle tractor pulling a 45' or 48' semitrailer and another trailer of equal or similar length. Overall lengths may range from 104' to 118' depending on trailer lengths and tractor wheelbase. Practical gross weights, when limited by the federal bridge Formula B, can reach 129,000 lbs with careful loading over nine axles.

The Triple combination which usually consists of a two axle tractor pulling a 28' semitrailer and two 28' trailers. Overall lengths again vary with tractor wheelbase and other minor hardware options from 98' to 110'. A three axle tandem drive tractor is sometimes used, which adds about one meter to overall length. Gross weights under Formula B can reach 115,0000 lbs but typically are well under 100,000 lbs because this combination is favored by less-than-truckload (LTL) carriers whose average freight density frequently causes "cube out" loading limitations.

More detailed typical dimensional and weight specifications for these configurations are shown in Figure 1. Two other less frequently seen LCV types operated in some of the Western states are: a truck pulling two trailers (with dimensions comparable to triples) and the LCV auto carrier consisting of truck with B-type hitch arrangements for the two following semitrailers. This configuration has an overall length in the 100' range. Auto carriers offer the only relatively common example of a B-train hitching linkage operated in the U.S. at this time.

## WHERE DO LCVs OPERATE IN NORTH AMERICA?

Of the 17 states from the Pacific Coast of the U.S. eastward to and including the six states of the Great Plains, 14 permit the operation of some type of LCV. Only Texas, New Mexico, and California along the southern tier of states prohibit their operation in this vast area. This generalization, however, is deceptive upon closer examination. Thirteen states permit Rocky Mountain doubles, 11 allow Turnpike doubles, and 11 permit Triples.

Other discontinuities in LCV operation are apparent upon examination of Table I. The discrepancies in permissible gross weights, access, and other operational restrictions assure much less than optimum transport efficiency. For example, LCVs in Colorado can load no heavier than tractor semitrailers. Triples in Nebraska must operate empty and Rocky Mountain doubles trailers are limited to 68' including connecting device in Oregon and Washington.

In addition to the public highways mentioned, LCVs also operate in 1,560 miles of toll roads (turnpikes) in six middle Western and Eastern states as shown in Table I. All six states permitted LCV operations prior to any public highway operation in Western states. It should be noted

that turnpike administrators are motivated by business principles seeking to pay bond holders, maintain the capital facility, assure user safety, and encourage patronage from the dominant customer group, automobile drivers. After 25 to 30 years of continuous operation of LCVs on these turnpikes, it may be presumed their use of these facilities is economically and environmentally compatible.

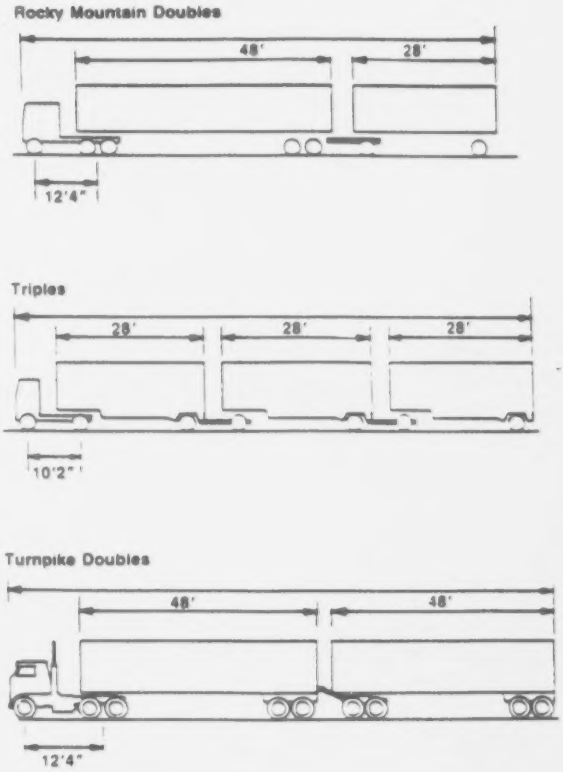
## BRIEF HISTORY OF LCV DEVELOPMENT

A number of factors combined with a cooperative industry/government process have shaped the present status of LCV use. Knowing the past is important in assessing the future of this transport technology.

The federal government's control of axle, tandem, and gross weight limits on the interstate system of highways effectively capped truck productivity at 73,280 lbs in 1956 and in 1974 at 80,000 lbs gross combination weight (GCW) for configurations in regular operation on all highways. One of several "grandfather" provisions in the federal law enabled states with statutory oversize/overweight special permit issuance authority in 1956 to continue to exercise that right.[1] Nearly all states in the Western region had authority in 1956 and it remains the basis for all LCV operations to this day. A few of the gaps on the maps represent states without the requisite grandfather authority. The future lies with corrective federal legislation. In summary, the interstate system is vital to an integrated LCV network. A special permit system is a legal necessity to operate an economically viable LCV network.

Western highway engineers with extensive road systems and comparatively low average daily travel from tax generating vehicles have emphasized low axle loads and stretched out equipment to avoid concentrated bridge loadings. Federal Formula B effectively reduces average axle loads as lengths and gross weight increase. This strategy conserves construction and maintenance funds. It dovetails with the Western truck operator's trailer (long or short) to either of the two common configurations in regular service. This approach provides a very cost effective way of gaining payload without obsoleting a major investment. However, the development of the necessary vehicle refinements and administrative control systems did not happen overnight. They have been the result of a 25-year evolutionary process beginning in the mid 1960s.

Figure 1. Typical dimensions of three common long combination vehicles.



That process can be capsuled into the following steps:

The trucking industry conducted research to develop hardware. Recently, government has sponsored limited research on componentry but not exclusively for LCVs.

Industry and state/province governments jointly conducted tests on performance, evaluated routes, and instituted operational test programs.

Established industry organizations developed regional objectives for LCV sizes and weights and guidelines for special permit rules and regulations.

Industry and government coordinated these same items through public sector organizations, such as legislatures, executive department agencies, and regional bodies of officials.

The development of uniformity in the LCV arena is a voluntary activity to date without federal involvement except for two recent studies of the concept. [2]

There is an extensive technical bibliography documenting the multitude of tests, public and private, which have been conducted during the 25 years of LCV development. The Western Highway Institute (WHI)

**Table 1 Status of Longer Combination Vehicle Operations in the United States and Canada**

| Jurisdiction | Longer Combinations Rocky Mtn Dbls (RMD) | Turnpike Dbls (YD) | Triples (TR) | First Operation in | Maximum Length (Feet) | Maximum Gross Weight (lbs) | Highway Restrictions | Operational Restrictions |
|---|---|---|---|---|---|---|---|---|
| Alaska | x | x | | 1981 | 90 Comb Trailers | 109,000 | Designated state hwys | Units shall not convoy |

*Gross weight is achieved before cubic capacity is fully utilized; lower density freight would result in lower relative fuel consumption.

alone has prepared eight major technical reports on horsepower, traction, offtracking, splash and spray, etc. [6–9] and in 1980 summed it all up in a 500 page report to the Transportation Research Education and Development Foundation.[11] Every contiguous Western state has conducted tests of LCVs, some two and three times. Nine states have produced 13 published reports on their research.[8,12] In addition, an extensive body of literature exists on various components and performance characteristics of LCVs as investigated by equipment suppliers, consultants, universities, etc. The synthesis of this work in each state's rules and regulations and permit enforcement process represents the balancing of positive and negative performance and productivity characteristics which are unique to each configuration and, in some degree, to each jurisdiction's operating environment.

To facilitate the adoption of compatible, if not uniform, guidelines, WHI published a set of LCV model rules and regulations together with a set of 11 model administrative forms in the early 1970s. Most states used them initially, but gradually adjusted them to fit their experience, with the result that considerable nonuniformity now exists. In early 1987 WHI, together with Western state trucking associations and a committee of administrators cooperatively reviewed and revised the set of model rules.[13]

The revised rules continue to be stringent on such points as driver control, equipment specifications, speed, stability, operating procedures, insurance, and accident reporting.

## MEASURES OF LCV PERFORMANCE

In the discussion that follows, the attempt is made to briefly characterize the performance of LCV operations in the Western U.S. according to a number of variables as reported by individual users, officials, and researchers to give some flavor of their contributions to the Western transport system. It is fundamental that each type of LCV performs differently and is selected by the operator for its particular blend of qualities. Similarly the state rules and regulations applicable to each type LCV typically vary to adjust for those critical performance differences as they affect public safety.

### *Productivity*

Table II provides a handy reference chart of key performance variables by three LCV types compared with the two standard truck configurations in ordinary (nonpermit) operations. Columns 4, 11, and 12 particularly illustrate the absolute weight and cubic capacity of these units as well as their comparative performance by index number. The gross weight of 105,500 lbs in the table is the most common gross limit observed by five states. Seven others are more liberal with four allowing full Formula B giving a theoretical addition of 23,500 lbs at nine axles on Turnpike doubles. Formula B would permit 110,000 lbs on Rocky Mountain doubles.

Industrywide LCV productivity data are not available. However, anecdotal information from users' federal testimony is suggestive of the magnitude of savings obtainable. Western experience *if* projected nationally would yield a 25 percent reduction in one of the three largest carriers' fleets — a $43,000,000 saving. Another carrier in the top three projects a national savings of 20 percent of its miles, based on Western experience.[2] Edson Express reportedly uses Rocky Mountain doubles for 90 percent of its LTL operations because the consumption patterns of small towns favor a mix of truckload freight outbound and LTL inbound.[1] The joint industry questionnaire for the 1985 federal LCV network study revealed about 1200 permittee companies in only four Western states, indicating extensive regional use of LCVs.

The Utah Motor Transport Association reports an average departure schedule of over 600 LCVs leaving Salt Lake City daily. The President of Holly Sugar reported that LCVs were responsible for transport savings enabling two to three Western sugar refineries to stay in operation. Wyoming's two year test of increased

weight on the interstate system by over 450 permit operators showed nearly 75 percent used Rocky Mountain double equipment, while comprising less than two percent of the truck traffic on one interstate route and seven percent on another. The study nevertheless resulted in 26,000 fewer trips and a saving of 670,000 gallons of fuel. One bulk cement carrier reduced rates 14 percent as a result of LCV equipment in the test.[4]

The statement is frequently made by LCV advocates that in America's deregulated trucking industry (with average operating ratios in the high 90s), LCV savings are passed on to shippers in large measure and help forestall rate increases.

*Fuel Savings*

Montana tests over four months showed triples saved 27 percent on fuel consumption over twin trailers. Utah found the saving to be 25 percent and Wyoming 23 percent. Turnpike doubles saved 42 percent over tractor semis in a 17 month test by South Dakota. Individual carriers report comparable figures. Salt Creek Freightways (now Edson Express) reported an 8.6 percent fuel saving for RMDs compared to doubles over a 2.5 year period. Fuel is a significant cost factor to truck operators.[5]

*Access*

Access is related to productivity because if the point of freight origin or destination, or points for food, fuel, repair, and rest, cannot be reached without breaking up the LCV into shorter configurations, then additional costs are incurred. A number of considerations mitigate restricted access. Of primary importance is the permit system itself. Individual routes are approved in advance after an engineering evaluation of road geometrics, structure adequacy, and the condition of traffic operations along the requested route.

Offtracking data in Column 7 of Table II illustrates that triples are slightly better than the standard, generally unrestricted, tractor semitrailer in turning characteristics. Triples are heavily used in point to point terminal operations which tend to be located on the periphery of metropolitan areas. It is a fact that the newer cities of the West have experienced their area growth in the automobile age. Truck terminal locations are sought to minimize traffic congestion away from core cities and near major interstate or circumferential freeways. When growth overtakes these outlying locations, as occasionally happens, the appreciation in land values can often offset a terminal move to a more favorable location. Indeed, a number of "takeovers" in the post deregulation trucking industry have appeared to be driven more by the real estate asset value than the transport earning capacity.

The transport industry has not sought LCV access beyond the lower traffic density ring on the outer circumference of urban areas. At break bulk terminals, refueling stops, or marshalling yards, whether publicly or privately owned, the LCVs can easily be broken down for delivery to final destination in conventional configuration. The reverse process is equally easy in the makeup of outbound LCVs.

Rocky Mountain doubles and short Turnpike doubles as well as truck and two trailers are often the configurations of choice for relatively short hauls of mineral, petroleum, and agricultural resources in the West. As the recent Wyoming study[6] illustrated, these hauls frequently are crucial to the economic viability of the plant, mine, or refinery involved. These facilities are relatively remote and with low traffic volumes being the norm on service roads, do not pose major access problems to LCVs.

The 1986 Western states LCV study by the Federal Highway Administration surveyed 14 criteria used by states for selecting LCV routes.[7] The most commonly used criteria were: limited access; four or more lanes; divided highway; 12 foot lanes; minimum curvature; and grade. Lesser factors were: minimum shoulder width; level of service; accident rate; passing lanes; and interchange spacing. Idaho has developed a scoring system for rating all routes and then uses offtracking ability of the LCV as the final classifying factor for permit eligibility to three classes of route system.[8] States that have the longest experience with LCVs have the simplest review process.

## HIGHWAY AND BRIDGE EFFECTS

Permit engineers in evaluating routes for LCV operation consider many factors. The Triples exert 26 percent less axle weight effect measured in equivalent standard axle loads (ESAL) per ton hauled than doubles on flexible and rigid pavements at the 105,500 lb GCW loading. Turnpike doubles impact pavements at the same 105,500 lbs up to 62 percent less than the tractor semitrailer. The Rocky Mountain double has intermediate performance. The indices are shown in Column 8 of Table II. Even when loadings reach full Formula B as permitted in four Western states, the pavement effects rating of LCVs is better than conventional equipment per ton hauled in comparable service. When tandem drive tractors are used with triples and loaded as high as 119,000 lbs GCW the pavement effects rating is still slightly better than the tractor semitrailer per ton hauled on flexible pavements, and 33 percent better on rigid pavements.

A computer analysis of four bridge types representative of many structures on the interstate and primary highways in the West has been undertaken.[9] Each bridge had three different span lengths. Each analysis confirmed the superior performance of the Triples and Turnpike doubles when measured against the tractor semitrailer or the bridge design vehicle. The study concluded that the use of LCVs would extend bridge life and reduce maintenance costs.

***The consensus of opinion asserts that the LCV safety record is better than that of trucks in general for many reasons. These are due to the special permit requirements under which they operate which assure generally higher standard highways, better drivers, better equipment, and above average weather conditions.***

These findings are not inconsistent with preliminary results reported by AASHTO from a comprehensive national bridge study by the University of Maryland. That study evaluated the impact of 11 vehicle configurations including the three common Western LCVs upon a national sample of over 300 bridges using 20 different combinations of standard bridge evaluation criteria. This study will also generate analytical software that will enable permit engineers to readily evaluate bridge capacity on proposed LCV routes as well as indicate cost effective strengthening measures in structures determined to be inadequate.[7]

## MECHANICAL ISSUES

Much of the early research of LCVs had dealt with ways to assure satisfactory mechanical performance by LCVs and their major component subsystems. This work continues to "improve the breed" and many of the findings are reflected in the LCV model rules and regulations. The following cursory visit to these performance measures can give only the briefest glimpse of the experience and research findings in each topic area:

### *Traction*

There are 94 Interstate System highway grades in the Western states with grades of five percent or more and 12 grades over six percent. Packed snow conditions can create traction limiting situations for Formula B loaded triples unless pulled by 4x4 tractors under these conditions. Permit rules in the affected areas guard against this eventuality as does close coordination between highway patrol, maintenance, and dispatch personnel.[8] Eleven states have weather restrictions for LCVs in their rules.

### *Horsepower*

Truck and engine manufacturers offer a range of engine and drive train components that assure acceptable acceleration and gradability on the most demanding Western LCV routes.[9] They also provide sophisticated specification analysis service to match hardware ability with operator requirements. Regulators have settled upon a simple-to-enforce speed on grade requirement to measure road performance.

### *Braking*

The requirement that all axles of an LCV apply braking force almost simultaneously led to the development and subsequent requirement for fast air transmission and release valves. The need for proper brake balance and compatibility of brake linings and valving is shared with conventional trucks. LCVs have several advantages contributing to their superior braking performance. Formula B or lower gross loadings assure individual axle loads well within the brake capacity of each wheel. On wet surfaces the wiping action of multiple trailing tires progressively improves the surface friction coefficient for rearward axles. Multiple unit vehicles exhibit a marked tendency to resist unbalanced override braking forces causing tractor jackknife and/or trailer swing. Triples particularly benefit from the stabilizing effect of the rear units, a phenomenon especially noticeable on ice course testing. LCVs easily meet all federal and state braking distance requirements.

### *Dynamic Stability*

The principles determining the dynamic behavior of various truck configurations are much better understood today than when LCVs were first used. However, the stabilizing effects of lowering the center of gravity, lengthening wheel bases, forward placement of heavier units, wide axle tracks, no slack hitches, stiff tires and suspension, lubricated fifth wheels, and proper forward set of tractor fifth wheels have long been recognized. They are evident in the model rules and regulations for LCVs. Proper equipment assures the ability of trailing vehicles to track within three inches of the line of towing vehicle.

As a result of more research, most of it through computer simulation, a question has been raised as to the yaw instability in rapid lane change of the rear trailer in conventional doubles, and particularly triples, operations. This research has given impetus to regulatory initiatives in Canada to encourage the use of B-train combinations and to the development of a satisfactory double drawbar dolly.[10] Analysis of accident statistics in the U.S. have not as yet provided any conclusive proof of this alleged design deficiency as the cause of an inferior safety record. As will be noted, LCVs in all their forms own the best safety records in the U.S. trucking industry — for whatever reason.

### *Offtracking*

Slow speed offtracking is well understood and the predictive models for this phenomenon are widely used in facility design by engineers and architects. As noted earlier, this characteristic, which varies considerably by configuration type as shown in Figure 1, is the basic determinant for differences in the route system permitted for Turnpike doubles and Rocky Mountain doubles.[4]

### *Backing*

As a general rule, configurations with one or two points of articulation can be backed a reasonable distance. However, tests have shown A-dolly doubles (three pivot points) or triples (five pivot points) can be backed up sufficiently far to pull around an obstacle in the traffic lane.[11]

### *Splash and Spray*

Suppression of vehicle splash and spray has proven to be a very complex problem. A great deal of industry and federal research effort has been applied to finding a solution. In the context of LCVs the studies have consistently shown lowest rankings for single drive axle doubles and triples in van configuration. These types respond well to the application of no-rebound synthetic grass type mudflaps and narrow side skirts. One state known for its high precipitation has required splash and spray "treatment" for LCV equipment.[8]

## HUMAN FACTORS IN LCV OPERATION

Federal legislation in 1987 now being progressively implemented through rulemaking is tightening the standards for all truck driver licensing in every state. Ultimately, it will prevent multiple licenses and create a national accident record center. The model rules place great responsibility upon permit holders to have an aggressive safety program including a documented driver training and certification program conforming to

applicable laws. The driver must have documented special instruction and training in the LCV type he is to operate and be under the control of the permit holder.

It must be admitted, however, as the 1986 FHWA report[9] details, that the states have not been sufficiently forceful in adopting these provisions. Nevertheless, it can be surmised that the permits are quite valuable and that their revocation by the state would be so damaging that carriers have voluntarily done an adequate job thus far in assuring that only senior experienced drivers are assigned to LCV operations.[10] A number of state reports have made this observation and it is a logical causal factor in the current LCV safety record.

## LCV SAFETY RECORD

The LCV highway accident experience is, of course, the ultimate measure of LCV safety capability. Unfortunately, state and national motor vehicle accident data provide very limited reliable accident rates by configuration type and exposure (miles of travel). Individual company data from many large fleets and from turnpike authorities show LCV accident rates well below those of conventional trucks.[11] The state of Nevada reported the 1986 rate for triples as 0.34 per million, that of doubles 0.90, the tractor semitrailers 2.1, and single trucks 2.77 and affirmed that it matches well with data from prior years.

The University of Michigan Transportation Research Institute (UMTRI) with the best national base on medium and heavy truck fatal accidents, reported 18,119 tractors involved in fatal accidents over the five year period (1980-84). Three percent were bobtails, 91 percent were pulling one semitrailer, five percent were pulling doubles, and only four tractors were pulling triples.[12] Suggestive as these numbers are, skeptics insist on accident data controlled for exposure, and comparable operating conditions. A feasibility study for that kind of data acquisition and analysis effort is now underway at UMTRI sponsored by the Motor Vehicle Manufacturers Association (MVMA) and Western Highway Institute (WHI).

It is perhaps fair to say that the consensus of opinion asserts that the LCV safety record is better than that of trucks in general for many reasons. These are due to the special permit requirements under which they operate which assure generally higher standard highways, better drivers, better equipment, and above average weather conditions.

## ENVIRONMENTAL FACTORS

In recent years federal legislation has established a timetable for reduction in truck noise levels. LCV power units will meet these requirements. As noted earlier, their areas of operation lie outside urban areas where the greatest concern for unnecessary noise is manifest. This is a fortuitous circumstance for the complete solution to the tire noise problem at speed has not been found and LCVs have many tires.

The problems of air quality in the nation's metropolitan areas are the subject of accelerated efforts at this time to meet mandated goals on a range of air contaminants. Although quantitatively small contributors to the air pollution burden in some of the more impacted areas like Los Angeles, Phoenix, and Denver, truck operators are being included in drastic strategies to effect improvements. Some of these would limit operating hours and require conversion to presumably cleaner fuels like methanol and liquid petroleum gas.[13] LCVs burn less fuel per ton of freight delivered and they do not penetrate the core areas of the metropolitan zones in question.

## TAXES

Taxes and permit fees applicable to LCVs reflect the same diversity in systems and levels as apply to trucks in regular operation.[14] In general, the trucking industry supports a permit fee system adequate to administer an effective administrative and enforcement program to ensure compliance with individual state LCV regulations. This program should include the capability for reporting meaningful LCV safety statistics and occasional reports, based on sampling techniques, relating to the economic and productivity aspects of LCV operation.

Highway user fees applicable to LCVs should be an integral part of the state's user fee structure and be based upon acceptable cost allocation procedures for the individual LCV types, considering effects upon various cost elements and annual travel by highway system.

In addition, the industry has demonstrated a willingness to contribute to the cost of upgrading certain highway facilities in specific areas to accommodate permit holders, groups of users, or shippers. Many states have procedures to enable these joint funding arrangements for various highway and related facility expenditures.

## JOBS AND LCVs

In general terms, organized labor in the trucking industry has actively opposed the spread of LCV operations although including premium pay in the national contract for LCV drivers. This position has been maintained despite the substantial decline in union truck driver membership since deregulation. The recently negotiated contract calls for approximately six percent annual increases over three years for an industry with composite operating figures barely avoiding red ink. LCVs offer one of the few productivity strategies to keep unionized carriers profitable and competitive. Further erosion in their numbers would seem to ensure a loss of jobs far more abundantly and certainly than the speculative decline that might occur over the short term from expanded LCV use. The problem is very similar to that faced by other industries in the U.S. seeking to install more efficient capital equipment to maintain or recover competitive position in the world market.

## RAILROADS AND LCVs

Railroads, with minor exception, are privately owned in the U.S. but historically have had a sympathetic ear from government. They also have become fewer in number, larger, and more competitively aggressive since deregulation early in this decade. In most areas of the West, trucks provide the only alternative mode of shipment for dry freight. Rail prices in the absence of rail, pipeline, or water competition are based on truck rates adjusted for the value difference in quality of service provided. Clearly in these circumstances, which obtain widely in the West, the more ineffi-

cient trucks are, or the higher their operating taxes become, the higher can be the railroad rate structure for competitive traffic.

A case study in the verification of the above scenario was provided in April 1988 in the publication of Wyoming's report on its two year LCV test. LCV transport provided the economic efficiency needed to break Union Pacific's monopoly on mineral shipments out of southwest Wyoming. LCV hauls of this commodity to central Wyoming and northwest Utah put two more rail-truck competitors into the market resulting in rate reductions for shippers and customers.[4]

Many railroads have recently acquired new trucking subsidiaries but these newcomers' contribution to consolidated corporate earnings are far too small at this stage to generate any expectation of change in the historic rail/government affairs strategy toward its very numerous but much smaller truck competition.

A close look at some aspects of LCV potential gives good reason to question rail fears of substantial traffic diversion modeled by the 1985 federal study. Triples operators are essentially LTL carriers — a market the railroads abandoned decades ago. Turnpike doubles are likely to have a very limited route system for many years and the special leading constraints forced by Formula B inhibit long haul truckload utilization of this configuration as demonstrated in the MHTA four state tests.[5]

Finally, Rocky Mountain doubles and short Turnpike doubles have shown themselves to be best adapted for mixed freight service to Western communities and short resource development hauls which the rail network either cannot service or has effectively abandoned. In reality, the modes are far more complementary than competitive and should be in step with each other and support productive innovation in each industry in the interest of national transport efficiency.

## What The Railroads Say. . .

It was widely publicized recently that the railroad industry is very concerned about the potential productivity gains made by the trucking industry in the states.

Thomas L. Finkbiner, Assistant Vice President of International and Intermodal Marketing for Norfolk Southern Corporation was quoted at the American Railroad Conference in Washington saying, that if the trucking industry is able to successfully lobby the state legislatures to allow twin 48-foot trailers in a majority of the states, then the future of intermodal movements by rail is in serious jeaopardy.

He acknowledged that today, motor carriers using "doubles," a 28-foot trailer combined with either another 28-foot or longer trailer achieves an operating cost of about 93 cents per mile. If twin 48-foot trailers became widely used, Mr. Finkbiner speculated that the operating cost would drop to about 54 cents per mile. He said, "We couldn't get within a Grand Canyon distance of that figure. If twin-48's are made legal, we might as well roll up our rails and go home because it's over."

New York
Building Congress, Inc.

TESTIMONY OF

LOUIS J. COLETTI

PRESIDENT & CEO, NEW YORK BUILDING CONGRESS

BEFORE THE

U.S. HOUSE SUBCOMMITTEE ON SURFACE TRANSPORTATION

WASHINGTON, D.C.

April 18, 1991

I AM LOUIS J. COLETTI PRESIDENT AND CHIEF EXECUTIVE OFFICER OF THE NEW YORK BUILDING CONGRESS, WHICH IS THE ONLY PRIVATE SECTOR ASSOCIATION REPRESENTING EVERY SEGMENT OF THE DESIGN, BUILDING AND CONSTRUCTION INDUSTRIES IN NEW YORK CITY. MR. CHAIRMAN, THANK YOU FOR INVITING ME TO SPEAK BEFORE YOUR SUBCOMMITTEE TO OFFER THE VIEWS OF THE BUILDING CONGRESS ON THE REAUTHORIZATION OF THE SURFACE TRANSPORTATION ASSISTANCE ACT.

I KNOW THAT THERE ARE PROBABLY PEOPLE IN THIS ROOM WHO ARE WONDERING WHY SOMEONE WHOSE MEMBERSHIP COMPRISES NOT A FEW HIGHWAY CONSTRUCTION CONTRACTORS WOULD COME TO WASHINGTON TO ARGUE THE CASE FOR MORE FEDERAL DOLLARS FOR NEW YORK'S SUBWAYS AND COMMUTER RAIL.

I REALLY DIDN'T WANDER OFF TO THE WRONG HEARING. I'M HERE BECAUSE I REPRESEN. A WIDE CONSTITUENCY, ALL THE ELEMENTS OF WHICH AGREE THAT URBAN MASS TRANSIT MUST BE AT THE TOP OF OUR AGENDA. THEY ADVOCATE A CONTINUING, VIGOROUS FEDERAL COMMITMENT THROUGHOUT THE 1990'S FOR THE BENEFIT OF THE PEOPLE OF NEW YORK AND THE FUTURE ECONOMIC HEALTH OF OUR NATION. CONSEQUENTLY, THEY VIEW THE ADMINISTRATION'S NATIONAL TRANSPORTATION STRATEGY AS A DANGEROUS THREAT BOTH IN THE NEAR-AND LONG-TERM.

WE'RE NOT HERE TODAY SHOPPING FOR AN EASY, OVER-THE-COUNTER CURE FOR OUR RECESSION. WE'VE LIVED THROUGH RECESSIONS BEFORE. THE MAJORITY OF OUR ORGANIZATION'S MEMBERS ARE BUSINESSMEN AND WOMEN

WHO KNOW HOW TO ADJUST TO A BUSINESS CYCLE.

NEW YORK ENTERED ITS ECONOMIC TROUGH THREE YEARS BEFORE THE REST OF THE NATION. IT STARTED WITH THE CRASH IN THE FINANCIAL MARKETPLACE IN OCTOBER 1987 AND IT HAS NOW STRUCK HARD AT THE REAL ESTATE INDUSTRY. IT MAY WELL LINGER HERE A COUPLE OF YEARS AFTER EVERYONE ELSE HAS RECOVERED.

EVEN SO, WE RECOGNIZE THAT WE WILL NOT GET OUR MEMBERS OUT OF THIS SLUMP BY BUILDING MORE ROADS AND SKYSCRAPERS. THERE IS SIMPLY NO PLACE TO PUT THEM. NOR COULD MORE ASPHALT AND CONCRETE EXTRICATE THE MOTORING PUBLIC FROM A PERVASIVE CONGESTION THAT BEGINS IN THE SUBURBS AND THE OUTER BOROUGHS AND SPILLS INTO MANHATTAN'S CENTRAL BUSINESS DISTRICT EVERY SINGLE DAY, CLOGGING OUR STREETS AND FOULING OUR AIR.

FOR RESIDENTS OF THE METROPOLITAN NEW YORK REGION SURFACE TRANSPORTATION MEANS RAIL LINES AND BUS LINES. THE "E" TRAIN IS TO US WHAT I-80 IS TO PENNSYLVANIA OR IOWA.

PRESIDENT BUSH, IN HIS ADDRESS TO A JOINT SESSION OF CONGRESS LAST MONTH, URGED QUICK ACTION ON HIS TRANSPORTATION PLAN, SAYING THAT, "IF OUR FORCES COULD WIN THE GROUND WAR IN 100 HOURS, THEN, SURELY THE CONGRESS CAN PASS THIS LEGISLATION IN 100 DAYS".

LIKE ALL AMERICANS, I WANT THE PRESIDENT TO HAVE A SUCCESSFUL

NEXT 100 DAYS AND I WANT THAT FOR NEW YORK CITY, TOO. I DON'T WANT THE KIND OF 100 DAYS NAPOLEON WAS REMEMBERED FOR. YOU'LL RECALL, HE RALLIED THE TROOPS, GRABBED A FEW HEADLINES THEN LOST CRUSHINGLY AT WATERLOO, FINALLY ENDING UP IMPRISONED ON A FORBIDDING, STORM-LASHED ISLAND.

NEW YORK WILL BECOME SUCH A DESOLATE PLACE IF WE LOSE AMERICA'S NEXT GROUND WAR -- THE FIGHT FOR SURFACE TRANSPORTATION, TRANSPORTATION CONSISTENT WITH EACH REGION'S PRESSING NEEDS, APPORTIONED IN AN EQUITABLE MANNER.

THE ADMINISTRATION'S PLAN AT THE MOMENT IS DISTURBINGLY SHORT ON EQUITY. AFTER THE DEVASTATING CUTBACKS BORNE BY ITS PUBLIC TRANSIT THROUGHOUT THE 80'S, NEW YORK NEEDS TO BE MADE WHOLE AGAIN. INSTEAD, WHAT WE FIND HERE IS A PROFOUNDLY UNJUST FUNDING FORMULA THAT WOULD EVISCERATE OUR SYSTEM. IN AWARDING AID BASED ON FUEL CONSUMPTION THE NEW PROPOSAL WOULD PUNISH US FOR BEING AN ENERGY-EFFICIENT CITY.

I OPENED MY NEWSPAPER ONE DAY LAST MONTH AND WAS SHOCKED TO FIND THAT LOS ANGELES, CITY OF ANGELS AND FREEWAYS, AND MIAMI, EACH WITH MORE MILES OF ROAD THAN WE HAVE, ARE SLATED TO RECEIVE MORE AID THAN WE WILL. SENATOR MOYNIHAN HAS NOTED THAT, IN A FEW YEARS, I-95 BETWEEN FT. LAUDERDALE AND MIAMI WILL HAVE TO BE 44 LANES WIDE TO PREVENT THAT STRETCH FROM EXPERIENCING NEAR-CONTINUOUS TRAFFIC DELAYS.

READING THIS PROPOSAL I ASK MYSELF IF THAT ISN'T WHAT D.O.T. HAS IN MIND. MAYBE, AGAINST ALL LOGIC, THE IDEA IS SOMEHOW TO BUILD OUR WAY OUT OF CONGESTION.

THEN TO PILE INJURY UPON INJURY, ALL OF NEW YORK'S FEDERAL OPERATING FUNDS ARE TO BE ELIMINATED AND WE CAN NO LONGER TOUCH THE GENERAL REVENUE FOR OUR CAPITAL EXPENSES. TRUE, WE CAN COMPLETELY DRAW DOWN THE MASS TRANSIT ACCOUNT OF THE HIGHWAY TRUST FUND BUT THAT WILL BE GONE BY FISCAL YEAR 98'.

IN THAT EVENT WE WILL HAVE TO TAP INTO THE GENERAL FUND AGAIN, OR THE NEW YORK SUBWAY AND BUS SYSTEMS, METRO-NORTH SERVICE TO WESTCHESTER AND CONNECTICUT AND LONG ISLAND SERVICE WILL EITHER DISAPPEAR, OR BE PRICED AT A LEVEL ONLY THE WEALTHY COULD AFFORD. AND THE SHAME OF IT IS THAT THE METROPOLITAN TRANSIT AUTHORITY HAS BEEN MAKING GREAT PROGRESS, WHICH IF ALLOWED TO CONTINUE, WOULD MAKE IT AN EXCELLENT FEEDER SYSTEM FOR AN OVERHAULED, REJUVENATED PENN STATION SERVING THE ENTIRE NORTHEAST CORRIDOR.

THE CAUSE OF GREATER REGIONAL COOPERATION WAS SPURRED ON THIS PAST MONDAY WHEN AMTRAK MOVED ALL OF ITS NEW YORK OPERATIONS INTO PENN STATION FROM GRAND CENTRAL STATION. AS THE RESULT OF THIS CONSOLIDATION, AMTRAK WILL BE ABLE TO PROVIDE DIRECT CONNECTIONS FOR RAIL TRAVELERS FROM UPSTATE NEW YORK WITH TRAINS ON THE NORTHEAST CORRIDOR AND THE LONG ISLAND RAILROAD. THE IMPROVED CONNECTIONS AT NEW YORK SHOULD GENERATE NEARLY 120,000 ADDITIONAL

PASSENGERS A YEAR FOR AMTRAK.

NEW YORK WILL CERTAINLY REQUIRE THAT ITS TRANSPORTATION INFRASTRUCTURE BE IN OPTIMUM CONDITION NEXT YEAR. BOTH THE DEMOCRATIC NATIONAL CONVENTION AND A SPECTACULAR OPERATION SAIL CELEBRATING THE 500TH ANNIVERSARY OF COLUMBUS' VOYAGE OF DISCOVERY WILL ATTRACT RECORD NUMBERS OF TOURISTS TO THE NATION'S TOURIST MECCA. IN ORDER TO BE GOOD HOSTS WE MUST HAVE THE ABILITY TO MOVE THEM AROUND MANHATTAN.

NEW YORK MUST HAVE THE ABILITY TO KEEP OUR NATION GLOBALLY COMPETITIVE. BY COMPARISON TO A NUMBER OF OUR FOREIGN TRADING PARTNERS, ALL OF WHOM INVEST FAR MORE HEAVILY IN PUBLIC TRANSPORTATION, AMERICA'S TRANSPORTATION INFRASTRUCTURE IS WOEFULLY INADEQUATE AND WE ARE PAYING THE PRICE. IT IS ESTIMATED THAT $73 BILLION IS WASTED ON TRAFFIC JAMS EACH YEAR -- $73 BILLION IN LOST PRODUCTIVITY, LOST WAGES AND EXCESS FUEL CONSUMED.

THE NEW YORK BUILDING CONGRESS HAS BEEN IN THE FOREFRONT OF THE RECENT SUCCESSFUL EFFORT TO URGE BOTH GOVERNOR CUOMO AND GOVERNOR FLORIO TO ACCEPT THE PORT AUTHORITY OF NEW YORK-NEW JERSEY'S TOLL INCREASE ON ITS HUDSON RIVER CROSSINGS. WE TOOK THIS POSITION, NOT ONLY TO BOOST ECONOMIC GROWTH IN THE TWO STATES, BUT ALSO TO HELP THE AUTHORITY UPGRADE THE PORT OF NEW YORK'S CAPACITY AS A HUB OF INTERNATIONAL TRADE. WHEN YOU CONSIDER THAT UNIFIED

GERMANY POSSESSES NOT ONE, BUT TWO PORT FACILITIES SUPERIOR TO OURS -- HAMBURG AND BREMEN -- YOU BEGIN TO HAVE SOME IDEA OF THE DISTANCE WE MUST TRAVEL TO MEET THE CHALLENGE OF AN ECONOMY INTEGRATED EUROPE.

OR JAPAN. WHILE NEW YORK IN THE LAST QUARTER CENTURY HAS ADDED A GRAND TOTAL OF FIVE MILES OF NEW RAIL SERVICE, TOKYO, ALREADY IN FIRST PLACE IN PUBLIC TRANSPORTATION, WILL ADD 300 MILES OF NEW RAIL AND TROLLEY ROUTES TO ITS TRANSPORTATION NETWORK IN THE NEXT 10 YEARS.

MAKE NO MISTAKE, FOR AMERICA TO REMAIN COMPETITIVE, NEW YORK MUST ALSO. IF NEW YORK LOSES ITS PLACE AS THE CAPITAL OF WORLD BUSINESS, THE BATON WILL PASS ON, NOT TO HOUSTON OR ATLANTA, BUT TO FRANKFURT OR TOKYO.

I HOPE EVERYONE UNDERSTANDS BY NOW THAT, AS A NATION, WE ALL PROSPER OR FAIL TOGETHER. WHEN COUNTLESS AMERICANS IN OTHER PARTS OF OUR COUNTRY SAW THEIR DREAMS DISINTEGRATE THROUGH THE CHICANERY OF VENAL SAVINGS & LOAN OPERATORS THE FEDERAL GOVERNMENT DID NOT SAY, "SORRY EVERYBODY IN TEXAS, YOU THERE IN THE SUNBELT, YOU HAD IT PRETTY GOOD THROUGH THE 80'S. NOW, WE WILL FORGET ABOUT YOU AND LET YOU TAKE YOUR LOSSES, NO MATTER HOW IT AFFECTS YOU AND YOUR CHILDREN".

INSTEAD, CONGRESS AND THE PRESIDENT RECOGNIZED THAT THE VICTIMS

45-155 O—91——48

NEEDED RELIEF AND THEY DIPPED INTO THE TREASURY -- IF "DIPPED" IS THE RIGHT WORK FOR A BAILOUT NOW AT $500 BILLION AND RISING -- AND THE TAXPAYERS OF THE NORTHEAST KICKED IN, TOO.

OUR NATION'S TRANSPORTATION INFRASTRUCTURE IS JUST AS IMPORTANT AS OUR S&L INFRASTRUCTURE OR OUR BANKING INFRASTRUCTURE. IT SHOULD NOT BE SHORTCHANGED.

NEW YORK'S SHARE OF THAT TRANSPORTATION INFRASTRUCTURE IS APPROXIMATELY 40 PERCENT, FOR 40 PERCENT OF THE MASS TRANSIT USED IN THE UNITED STATES IS USED IN THE NEW YORK CITY AREA. ONE OTHER STATISTIC: 85 PERCENT OF ALL CENTRAL BUSINESS DISTRICT COMMUTERS IN NEW YORK USE MASS TRANSIT.

WITH THE SUBURBS HAVING BECOME THE LOCATION FOR MOST OF OUR REGION'S EMPLOYMENT GROWTH ENSURING MOBILITY FOR THE REVERSE-COMMUTER IS INCREASINGLY A PROBLEM. LONG ISLAND'S CONGESTED ROADS ARE CONTRIBUTING TO A LABOR SHORTAGE THERE. MORE TRACK CAPACITY FOR THE LIRR IS LONG OVERDUE.

OVER THE YEARS THE STATE OF NEW YORK HAS MADE A LARGE CONTRIBUTION TO THE CITY'S TRANSIT, CONTRIBUTING ANNUALLY $1.4 BILLION TO BOTH THE CAPITAL AND OPERATING BUDGETS. THAT FIGURE REPRESENTS NEARLY HALF THE ENTIRE FEDERAL MASS TRANSIT PROGRAM, BUT WITH ALBANY NOW IN STRAITENED CIRCUMSTANCES OF ITS OWN, NEW YORK CANNOT RELY ON THAT REVENUE SOURCE AS IT ONCE DID.

WASHINGTON OUGHT TO BE INCREASING ITS SUPPORT. INSTEAD IT SENDS CONTRADICTORY SIGNALS. ON THE ONE HAND, NEW YORK CITY IS REQUIRED TO COMPLY WITH THE 1990 CLEAN AIR ACT, WHICH MANDATES GREATER COSTS FOR POLLUTION CONTROL AND, LEST ONE FORGET, IMPOSES PENALTIES FOR NON-COMPLIANCE WHICH CAN RESULT IN FEDERAL DOLLARS BEING DENIED TO A COMMUNITY. ON THE OTHER, IT WITHDRAWS SUPPORT FOR MAINTAINING THE ONE SYSTEM THAT RELIABLY REDUCES EXHAUST EMISSIONS. SINCE IT TAKES 10 LANES ON ROADS INTO MANHATTAN TO EQUAL THE CARRYING CAPACITY FOR JUST ONE TRACK "LANE" ON THE LONG ISLAND RAILROAD OR METRO NORTH, DOES THE D.O.T.'S HIGHWAY-TILTED FORMULA MAKE SENSE FOR A CITY ON THE MOVE THAT WOULD LIKE TO BREATHE, TOO?

THERE IS PRECIOUS LITTLE BREATHING OCCURRING ON THE BROOKLYN-QUEENS EXPRESSWAY. A RECENT STUDY PLACED THE COST OF CONGESTION TO TRUCKERS THERE AT $34 MILLION ANNUALLY -- FOR JUST ONE 12-MILE LONG HIGHWAY. A MAJOR SHIPPING SERVICE ESTIMATES NEW YORK'S TRUCKING EXPENSES TO BE 30 PERCENT ABOVE THE NATIONAL AVERAGE.

LAST AUGUST, AFTER IRAQ INVADED KUWAIT, THE PRESIDENT CALLED ON AMERICANS TO CONSERVE ENERGY. WHAT BETTER WAY TO DO SO THAN TO EXPAND MASS TRANSIT?

YET THE PRESIDENT AND HIS ADVISORS HAVE PRESENTED TO CONGRESS A PROGRAM THAT, WITH ITS HIGHER MATCHING RATIOS FOR FUNDING HIGHWAYS, WOULD ALMOST CERTAINLY, AS INCOMING MTA CHAIRMAN PETER

STANGL HAS SAID, "TEMPT" STATE AND LOCAL OFFICIALS TO CHOOSE ROADS OVER SUBWAYS. I URGE YOU TO HELP THEM RESIST TEMPTATION BY RESTORING BALANCE TO THE FUNDING FORMULA AND RESTORING OUR OPERATING FUNDS. THE NEW YORK BUILDING CONGRESS WOULD ALSO ASK THAT, WITHIN THE LIMITS OF THE BUDGET ENFORCEMENT ACT, YOU PROVIDE FUNDING LEVELS THAT WOULD GIVE THE METROPOLITAN TRANSIT AUTHORITY, OVER TIME, THE WHEREWITHAL TO CONTINUE MEETING ITS CAPITAL NEEDS.

AS IT WOULD APPEAR LIKELY IN THE WAKE OF THE GULF WAR THAT THE UNITED STATES MAY ENJOY EVEN LOWER PRICES FOR IMPORTED OIL, THIS COULD BE A PROPITIOUS TIME FOR AN INCREASE IN THE FEDERAL GAS TAX, PERHAPS, AS THE MTA HAS SUGGESTED, ON THE ORDER OF ONE CENT FOR EVERY TWO ON AVERAGE THAT THE REAL PRICE FALLS.

THAT KIND OF COMMITMENT TO URBAN MASS TRANSIT WOULD GO A LONG WAY TOWARD GUARANTEEING THAT THE NATION'S LARGEST METROPOLITAN REGION HAS A TRANSPORTATION SYSTEM SECOND TO NONE, ABLE TO SERVE ITS OWN RESIDENTS AND THE NATION AT LARGE.

THANK YOU.

**STATEMENT BY DERRICK A. CRANDALL, CHAIRMAN EMERITUS OF THE AMERICAN LEAGUE OF ANGLERS AND BOATERS, BEFORE THE U.S. HOUSE OF REPRESENTATIVES COMMITTEE ON PUBLIC WORKS REGARDING THE FUTURE OF THE NATION'S HIGHWAY PROGRAM, APRIL 18, 1991**

---

Mr. Chairman and distinguished Members of Congress, I am Derrick Crandall and I am submitting testimony as Chairman Emeritus of the American League of Anglers and Boaters, a non-profit membership organization comprised of more than 30 key national organizations representing boating and fishing interests.

We have a vital interest in the nation's surface transportation legislation because of actions taken by the Congress in 1984 which transferred monies attributable to the tax on fuel consumed in motorboats to the Aquatic Resources Trust Fund, or the Wallop-Breaux Fund as it is more commonly known. The amount transferred is just over 1%, based upon an estimate by the Department of the Treasury.

The rationale for the transferal of these funds is exactly the same which underlies the Highway Trust Fund itself: the excise tax on motorfuel should be a user fee which is used to benefit those paying the tax. That philosophy has made possible an excellent network of highways -- and is at work today improving our nation's fisheries habitats, expanding access to our public waters and enhancing boating safety and aquatic resources education programs. Motorboat fuel taxes are combined with a 10% federal excise tax on fishing tackle and related items, and the funds are then apportioned among the states as matching grants for eligible projects.

We are pleased to submit for the record of this hearing a copy of a 12 minute videotape explaining the operations of the Wallop-Breaux Fund which featured President George Bush, as well as the transcript of the President's introduction to the account's purpose. This colorful and visually appealing videotape documents a "Great American Success Story." We are also including a brochure on the Wallop-Breaux Fund.

In conclusion, we urge the Congress to continue to earmark the federal excise taxes paid on motorboat fuels for boating and fishing purposes, as the Congress did in 1984 and reaffirmed both during the 1987 highway bill reauthorization and during the 1990 legislative session, when federal motorfuel excise taxes were increased and extended. Support for this outstanding program is bi-partisan and enthusiastic in the Congress, within the Administration and among the nation's tens of millions of anglers and boaters.

Thank you.

Derrick A. Crandall, Chairman Emeritus
American League of Anglers and Boaters
1331 Pennsylvania Avenue, NW Suite 726
Washington, D.C. 20004

## PRESIDENT GEORGE BUSH'S GREETING/REMARKS "WALLOP-BREAUX: AN AMERICAN SUCCESS STORY"

What a pleasure to join you, members of the American Recreation Coalition, in celebration of the Wallop-Breaux Trust Fund.

I'm sure most of you know my fondness for grabbing a rod and reel, gathering a few friends together and heading for the relaxation of fishing and boating. Whether its in Maine of Florida, or somewhere else in this wonderful land of ours; there's nothing like a few hours spent on our beautiful lakes, rivers and streams.

Like you, I believe we must restore our nation's fisheries and enhance boating opportunities. Many of you who are here today were involved, and we all were delighted, when legislation was signed in 1984 creating the Aquatic Resources Trust Fund -- known as the Wallop-Breaux Fund.

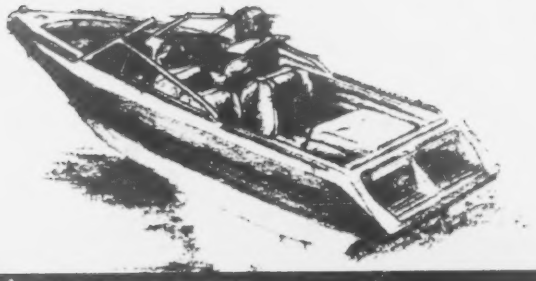
This unique fund is helping improve boating safety, making our sport fisheries more productive and making it easier to gain access to the nation's public waters.

But, the program is special for another reason: it is entirely funded by the nation's anglers and boaters, primarily through federal excise taxes on fishing tackle and fuel used in motorboats. The monies are earmarked and automatically returned as matching grants to state boating and fishing agencies and as appropriations for Coast Guard recreational boating programs.

Our administration is working to insure that Wallop-Breaux funds keep going towards these purposes. As a fan of fishing I know we must maintain this vital program. Each of us who fish or boat is an active partner in Wallop-Breaux. Together we're adding to the wonderful legacy of the American outdoors left to us by previous generations and we in turn are helping to leave our children and grandchildren a more beautiful world where they too can enjoy America's great outdoors.

Thank you, each of you, for your part in the Wallop-Breaux success story.

* * *



# WALLOP / BREAUX
## *AN AMERICAN SUCCESS STORY*

### Setting a Course for the Future

Americans love the outdoors – especially the outdoors where there is water! Whether we are racing across the waves, wetting a line, waterskiing, chasing after that "big one," or simply drifting in a boat on still water on a sunny afternoon, we spend a great deal of our leisure time on and near the water.

Those of us who enjoy the water know that our waterways are a precious resource which must be protected and enhanced for future generations. And that's where the Aquatic Resources (Wallop/Breaux) Trust Fund comes in.

Since 1984, every gallon of fuel we purchase for our boats, and virtually every fishing item imaginable produces revenues for the Wallop/Breaux Fund – one of the greatest conservation programs ever. It's working for all of us – and it's working now.

It's a Great American Success Story – tens of millions of anglers and boaters uniting to make sure America's surface waters will continue to play an important part in the lives of generations to come!

***"It's a success story that's really working"***

***— Senator Malcolm Wallop (R-WY)***

## What is Wallop/Breaux?

Many Americans don't know that there is a 10% federal excise tax on nearly every fishing tackle item, or that we pay a 14 cent-per-gallon federal excise tax on the fuel we use to operate our boats.

But, since 1984, thanks to Senators Malcolm Wallop of Wyoming and John Breaux of Louisiana, these taxes have been deposited in the Wallop/Breaux Trust Fund. These dollars now get spent where they belong: on fisheries research and fish habitat improvements; on improving access to our waterways for boating; and on boating safety and aquatic resource education programs.

The Wallop/Breaux Trust Fund makes each of us a partner with the federal government, state governments and with boating and fishing organizations in protecting and enhancing America's waters.

The result is the return of our taxes to boating and fishing programs administered by state agencies, the U.S. Fish and Wildlife Service, and the U.S. Coast Guard.

The pooling of our tax dollars through Wallop/Breaux (now more than $250 million each year) is beginning to make a difference that anglers and boaters can see and will be able to enjoy for years to come.

***"You can depend on literally millions of dollars in federal funds and taxpayer funds that will be coming back to your state to be used on very worthwhile projects."***

***— Senator John Breaux (D-LA)***

## *How are Wallop/Breaux Funds Spent?*

***For Sport Fish Restoration***

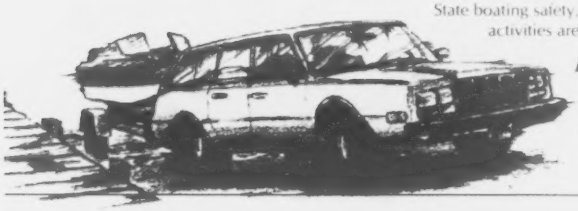
State fisheries research programs and fisheries habitat improvements are funded through Wallop/Breaux.

***For Public Boating Access***

Projects which improve boater access to public waters, such as boat launch ramps, are funded through Wallop/Breaux.

***For Boating Safety***

State boating safety, education, and law enforcement activities are funded through Wallop/Breaux.



***For Aquatic Education***

Local instruction projects on the proper use and conservation of our waterways are funded through Wallop/Breaux.

# Wallop/Breaux:
# An American Success Story

The Wallop/Breaux Fund allows tens of millions of boaters and anglers to help improve America's public waters. Our efforts can and should continue for generations, helping to protect our waterways even as America's population of anglers and boaters swells.

But, the future success of Wallop/Breaux requires a small extra effort on the part of every angler and boater to understand this program. To help create that understanding, the American League of Anglers and Boaters has produced a 12-minute video entitled, "Wallop/Breaux: An American Success Story."

This action-packed video shows the results of boating and fishing dollars at work off the coast of California, in classrooms in Pennsylvania, through the work of the Florida Marine Patrol and in new boat launching ramps across the country. President George Bush is joined in the video by Senators Wallop and Breaux. They explain why this remarkable program is working so well today and why they have pledged their support for its continuation.

The video was first shown in June 1990 at Chartmaker 2000, a national conference sponsored by the American League of Anglers and Boaters. It is both educational and inspiring, and is suitable for viewing by angling and boating groups, public and private conservation organizations, recreation industry groups and the media.

Copies may be obtained from either ALAB or its member organizations for a nominal charge. Additional information about the Wallop/Breaux Trust Fund is available through state fishing and boating agencies - contact them to find our how your dollars are being spent locally!

***I know we must maintain this vital program. Each of us who fish or boat is an active partner in Wallop/ Breaux"***

***— President George Bush***

# Statement of the

# American Traffic Safety Services Association

# to the

# Subcommittee on Surface Transportation Hearing on

# Highway Safety Issues

Presented by: Charles Dawson
President, American Traffic Safety Services Association

Accompanied by: Caroline Carver
Director, Government Relations
American Traffic Safety Services Association

101st Congress
April 18, 1991

Mr. Chairman and members of the Subcommittee, I am Charles Dawson, national president of the American Traffic Safety Services Association (ATSSA). I testified before this committee last April, and I am pleased to be able to be with you again today. I am aware that the committee is preparing major highway legislation which will soon be completed, and today I would like to make suggestions concerning safety programs pertaining to that legislation.

ATSSA is a national trade association in its 21st year representing over 850 companies and individuals in the traffic control industry. Most of the traffic safety equipment and services used on our highways are provided by ATSSA members. Our membership also includes public officials at all levels of government who are concerned with traffic control and the safety of the motoring public.

I would like to make some specific recommendations in areas of:

IMPROVED SAFETY FOR AGING DRIVERS
IMPROVED WORK ZONE SAFETY
UNIFORMITY OF STANDARDS FOR TRAFFIC CONTROL DEVICES
COMPREHESIVE SAFETY MANAGEMENT
REDUCING FATALITIES ON RURAL INTERSTATES
TRAFFIC SAFETY ON PRIVATE PROPERTY
THE DBE/WBE PROGRAM
FUNDING AND THE FEDERAL ROLE

## IMPROVED SAFETY FOR AGING DRIVERS

We would like to commend the committee for mandating an older driver study as part of the 1987 Surface Transportation Act. ATSSA recognizes the existing and growing problem of the aging driver. Currently, 12% of the U.S. population is 65 or over, and in the next 30 years, this number will more than double. It is clear that the traffic control features (primarily signs and pavement markings) on the present highway system were designed for an average driver who is far removed in age and ability from today's driver. With this in mind, ATSSA supports the findings of the National Academy of Sciences, reported through the Transportation Research Board in the Special Report #218.

We commend states such as Florida, New York, and North Carolina for taking the lead and developing programs that will aid the older driver including larger and better maintained signs and upgraded pavement markings which often mean wider, more visible edgelines. These highway safety improvements not only enhance the safety and mobility of older drivers, but of all drivers.

Specifically, we recommend:

- **Upgraded signing and marking standards and better maintained pavement markings and signs. Pavement marking and signs need to be maintained to provide both day and night and year round visibility.**

- **Improved positive guidance through the work zones. Particular emphasis needs to be placed on nighttime appearance and visibility.**

### Upgraded Signing and Marking Standards and Better Maintained Pavement Markings and Signs

In order to upgrade marking and signing standards to levels sufficient for older drivers:

(1) All roadways should be marked with center and edge lines which should be maintained at performance levels sufficient to meet the needs of the older driver. We know from our driving experience that although most roads have centerlines, many do not have edgelines, and a number of roads in the U.S. have no markings at all. Pavement markings on too many highways and roads are

worn out and barely visible to the driver. At night or in rainy weather they are not visible at all. To ensure that pavement markings are maintained to a high level of visibility, the Secretary should be encouraged to develop standards for minimum maintained levels of retroreflectivity for pavement markings on all streets and highways.

(2) Sign legibility should be improved by requiring larger and better maintained signs. (Current design standards are 50 ft. per one inch of letter height; the recommended standard from the National Research Council is 40 ft. per one inch of letter height.)

(3) Sign luminance and contrast standards should be increased where needed.

(4) Minimum required visibility distances should be increased through improved sign placement, multiple signing, and symbol messages where needed.

- **To ensure that signs and marking standards are improved to accommodate the older driver, Congress should direct the Secretary to propose rulemaking that would establish revised visibility and legibility standards on all streets and highways for signs and markings that will accommodate all drivers including the elderly and those with diminished visual capabilities. These standards should include provisions to require minimum maintained levels of retroreflectivity to ensure nighttime visibility and legibility.**

## Improved Positive Guidance Through the Work Zone

For the aging driver the added distractions of a work zone can impair the decision-making ability affecting perception and reaction time. Because aging drivers have more difficulty seeing, responding to, and interpreting changes in roadside conditions, all traffic control devices should be uniform in appearance, brightness, and placement and have consistent meaning from one worksite to another. Our specific recommendations regarding improving work zone safety are discussed below.

# IMPROVED WORK ZONE SAFETY

Each year when we address this committee, we report an increase in work zone fatalities. This year, unfortunately, is no exception. During 1989, 782 traffic accident fatalities and an estimated 28,000 disabling injuries occurred in work zones in one single year. It looks as if fatalities may be down somewhat for 1990, although the figures are not yet complete. Certainly the disturbing fatality and accident rate in work zones shows how badly we need a work zone safety program in the 1991 Highway Act.

The Sept 27, 1990, Work Zone Summary Report from FHWA indicates deficiencies continue to exist in the areas of development, implementation, and management of the work zone traffic control plans. The report states that the quality and maintenance of traffic control devices, particularly through deterioration on long-term projects, remains a problem area. The report also indicates that the limited number of trained personnel is a problem. With this in mind, ATSSA continues to endorse the recommendations from the Advocates for Highway and Auto Safety which calls for a Highway Work Zone Safety Program. This program would provide for improved work zone safety by enhancing the quality and effectiveness of traffic control devices, safety appurtenances, traffic control plans, and bidding practices for traffic control devices and services.

In order to address this critical issue of safety in work zones, ATSSA recommends that the new Highway Act include provisions addressing the following:

Education and training of persons responsible for work zone traffic control are of utmost importance for the members of our association. In 1978, ATSSA initiated a certified Worksite Traffic Supervisor (WTS) Program. Developed as a joint effort with the Institute of Transportation Engineers (ITE) and the Federal Highway Administration (FHWA), the WTS program sets industry standards that have resulted in an upgrading of the quality of work zone traffic control. The 1990 FHWA Annual Work

Zone Report states that the higher rate of turnover of personnel both in government agencies and the private sector results in a constant need to provide training. A number of states now require some degree of certification of worksite traffic supervisors, but all states should require this. Legislation should require that:

- **Each state highway department designate, and require the contractor to designate, for each project, a person trained and certified who will have the responsibility and authority for assuring that the provisions of the Traffic Control Plan (TCP) and other safety aspects of the work zone are effectively administered.**

Legislative history should assert that these standards should be formulated and adopted with due regard to the current training and certification program of ATSSA and should be equivalent or superior to this program.

It has been shown that the use of individual bid items for traffic control devices provides a fairer method of paying for the devices, encourages the contractor to provide better maintenance of devices, and provides a better means of enforcing the provisions of the TCP. The FHWA has recommended the use of individual bid items for a number of years, and yet many states still use lump-sum bidding or a combination of unit price and lump sum for traffic control in work zones. This practice often underfunds adequate traffic control and the contractor has an incentive to reduce to a minimum his cost for temporary traffic control. Legislation should require that:

- **Each state highway department use individual bid items for providing, installing, moving, replacing, and maintaining traffic control devices and safety systems.**

Many states do not collect work zone accident data, or if they do, it is collected inconsistently. Because of the lack of uniformity, the FHWA has discontinued collecting work zone accident data from the states. They rely only on the Fatal Accident Reporting System (FARS) data, and little is known beyond how many fatalities occur in work zones.

- **Each state highway department should be required to collect uniform data on all work zone accidents. Such data should include the type, design, and operational characteristics of work zones in which accidents have occurred; the type of roadway; traffic volume; the nature of the accident; and the extent of the damage, injuries, or fatalities sustained. Each state highway department should also analyze and use this information to correct deficiencies and improve future traffic control plans.**

FHWA should perform effective oversight of work zone safety practices in the states and report on the progress of the states to Congress.

- **The Secretary should be directed to conduct annual reviews of work zone safety practices and policies, both state-by-state and on a national level in order to determine the effectiveness of each state's work zone safety practices. The results of such inspections, reviews, and assessments shall be reported annually to the Congress.**

The Administration's proposal eliminates Section 120(d) which allows for 100% federal funding for certain safety improvements, those having a significant cost/benefit ratio in terms of lives saved for money spent. Section 120(d) should be retained and applied to all roads included in the National Highway System. Last week, at the April 10th hearing on reauthorization, the Committee heard the Congresswoman from Ohio, Marcy Kaptur, ask for federal dollars for replacement of signing. She said funding is inadequate, and yet the administration proposes to cut an existing program that allows for 100% federal funding for signing , pavement marking, and other safety improvements. Unfortunately, even at a 100% federal funding, these projects are often overlooked. Left with a 25% or 40% match requirement, these vital cost-effective safety improvements may be disregarded altogether. In order to encourage states to use superior traffic control devices and procedures and reduce serious losses

now occurring in work zones, 100% federal funds should also be made available for work zone traffic control.

- **The present 23 U.S.C. Section 120(d) should be retained and amended by adding between "... traffic signs" and "highway lights..." the phrase "or for temporary traffic control devices, markings, and safety appurtenances for guiding, warning, and protecting traffic, workers, and pedestrians in highway work zones."**

## UNIFORMITY OF STANDARDS FOR TRAFFIC CONTROL DEVICES

Consistent, uniform standards for traffic control devices should apply to all classifications of roadways regardless of jurisdiction or user agency. Unfortunately, this is not the case. The Manual on Uniform Traffic Control Devices (MUTCD) for streets and highways presents a national standard governing the design and use of all traffic control devices. However, it is not uniformly enforced, particularly off the federal-aid highway system. Indeed, since the Secretary of Transportation is not legislatively required to promulgate the standards, there is a question as to whether the Department of Transportation even has the authority to enforce the provisions of the MUTCD.

To clarify this situation and provide for uniformity and strict enforcement of the provisions of the MUTCD, ATSSA recommends:

- **The Secretary of Transportation be specifically required to promulgate standards and practices for the design and use of traffic control devices.**

- **The location and design of all traffic control devices shall conform to uniform nationally standards and practices as promulgated by the Secretary and revised periodically to accommodate the state-of-the-art.**

## COMPREHENSIVE SAFETY MANAGEMENT

Unfortunately, state and local jurisdictions do not have adequate funding to upgrade signs or pavement markings, even though the Federal Highway Administration's *Report on Highway Safety* shows that in these areas alone we receive the maximum benefits in terms of lives saved and injuries prevented for every dollar spent. The latest annual Report on Highway Safety Improvement Programs, from the Office of Highway Safety, FHWA, states that one of the top two improvements which have most effectively reduced fatal and injury accidents at the lowest costs are traffic signs at a benefit/cost ratio of 4.6 to one.

Safety work should by done as part of 3R work. Because safety has been categorized into narrow and low-funded programs, it is often the last thing to be considered. If safety is truly a top priority item, then it must be funded accordingly. ATSSA recommends that the federal government provide leadership in the way of increased funding and specific legislative guidelines on how that money must be spent.

- **The next Highway Act should mandate that the states engage in safety construction work as part of their project requirements in performing 3R work.**

Each state should be required to have a highway safety management program, approved by the Secretary, which would include the following requirements:

- Standardization of forms and adequate record keeping for investigation of accidents, injuries, and deaths on all federal-aid highways.

- Design and traffic control standards that ensure the highest feasible levels of operating safety.

- Provisions for work zone safety.

- A system for evaluating the safety cost-effectiveness of projects completed with funding under this section, including work zone accidents.

- Other principles and requirements for areas of management, design, and operation as the Secretary shall deem necessary.

## REDUCING FATALITIES ON RURAL INTERSTATES AND OTHER EXPRESSWAYS WHERE SPEED LIMITS HAVE BEEN RAISED TO 65 MPH

Enforcement of speed is a major concern in highway work zones. These work areas are inherently dangerous even under the best of conditions. Increased speeds on our highways have increased the risk not only for the motorist but also for the highway worker. The fatality rate on interstate highways for work zone personnel accounts for 30% of all work zone deaths. By comparison, other interstate fatalities accounted for less that 10% of all highway deaths.

It is imperative that we have diligent law enforcement and assistance in work zones. If speeds remain unchanged, then reasonable countermeasures need to be implemented on highways that have raised their speed limits to 65 mph.

- **ATSSA supports the recommendations of the Advocates for Highway and Auto Safety and recommends that each state raising their speed limits to 65 mph undertake to elevate the highway to the highest state-of-the-art levels for design and traffic control including larger and more frequent signing, improved and more durable pavement markings, and the use of other state-of-the-art traffic control devices.**

## TRAFFIC SAFETY ON PRIVATE PROPERTY

Report language in the 1987 Federal-Aid Highway Act acknowledged the growing concern about traffic safety on private property where the public is invited to travel. The conferees noted that accidents and fatalities on private property have risen in conjunction with the increase in the volume of business-related traffic on such property, and these accidents and fatalities are attributable, in part, to the lack of uniform traffic control devices.

Washington's own Dr. Gridlock refers to malls as the "new downtowns." These new downtowns, as well as industrial parks, resorts, hospitals, colleges, private residential streets, and condominiums, are not governed by established public standards of traffic control. As a result, signing and pavement markings are often confusing or non-existent, and worse than that, these areas are dangerous. The National Safety Council reports that there are between 1,000 and 1,100 fatalities each year on non-public roadways. ATSSA's own investigation into the State of Virginia revealed dramatically that private property traffic accidents accounted for from one-sixth to one-half of all reported accidents.

The American Association of State Highway and Transportation Officials conducted a survey and determined that there is little uniformity nationwide and that a problem exists with the non-use or improper use of traffic control devices on private property. They recommend that states adopt legislation making it mandatory that signs, signals, and pavement markings be in compliance with the Manual on Uniform Traffic Control Devices (MUTCD). Presently, only five states have statutes regulating traffic control devices on private property stipulating that those devices be in conformance with the MUTCD.

Because of the lack of uniformity and lack of regulation at the state level, this committee held hearings and mandated regulations governing the use of handicapped parking spaces on private property. The lack of uniformity governing the use of traffic control devices on private property is an equally serious and sometimes life-threatening problem. ATSSA would recommend:

- **Title 23, Section 109(d) and Section 402(a) be modified to require the standards for traffic control devices that are approved by the Secretary for**

**federal-aid highways and other public roads also be applicable for all roadways on private property open to public travel.**

## DBE/WBE PROGRAM

The 1982 Surface Transportation Assistance Act provided that not less than 10% of the amounts authorized under Title I and Title II of the Act be expended with disadvantaged business enterprises. The 1987 Act expanded the program to include woman-owned businesses. ATSSA supports the inclusion of women in the program. We also support the intent of the bill which aims to provide equal opportunity to all Americans to compete in the Federal-Aid Highway Program. So that implementation of the program does not disproportionately affect any one segment of the industry and so that the program can truly help minority and woman-owned businesses that need assistance, ATSSA recommends the following:

- **Specific limits be placed on specialty subcontracting work.**

Prior to the 1987 Act, we testified that this is critical to specialty subcontractors who have been unfairly and adversely affected by the program. Until limits can be put on the amount of work in each subcontracting area, then specialty items will continue to be used to meet the 10% goal. Small industries, such as ours, are often used to fill a disproportionate percentage of the requirements, sometimes up to 100%. This committee responded to these concerns by including report language in the 1987 STURAA which stated that: *"The conferees believe that the participation of minorities and women should be equitably distributed throughout the highway construction industry and the implementation of the DBE program should not fall disproportionately on any one segment of the industry."*

- **The Secretary should be directed to collect data from the states on DBE/WBE participation.**

To our knowledge, no data has been collected addressing this issue. In spite of the recognition of the problem and in spite of the conferees request to address the problem, the FHWA is still not tracking industry participation within the program, and there is nothing in the Administration's recommendations addressing this issue.

Our own industry requested information from a number of states on participation of traffic control companies in the DBE/WBE program. Only three states were able to provide us with this information, although we had been told by FHWA that this data was available at the state level. In 1987, in Tennessee, 20% of the traffic control dollars went to DBE firms. In the same year, in Florida, 77% of the pavement striping dollars went to DBE firms. In Colorado, from October 1987 through March 1989, 96% of traffic control dollars went to DBE and WBE firms; 102% of the flagging dollars went to DBE or WBE firms. Non DBE/WBE firms were virtually excluded from open competition in these particular areas. A FHWA study assessing the impact of the program noted that "particular non-DBE specialty subcontractors have seen their federal-aid highway construction markets shrink or even virtually disappear" (USDOTFHWA Report, p. xi, March 1986). We ask that Congress correct this oversight by including language in the 1991 Act which would, at a minimum:

- **Require the Secretary to obtain the dollar amounts in each subcontracting area that are being awarded to DBE/WBE firms and compare that amount with the overall dollar amounts being awarded to non-DBE/WBE firms in those same subcontracting areas. We further suggest that the following categories, which correspond closely with the ones now being used by states to report to FHWA, be examined:**
  - Excavation
  - Base and subbase
  - Roadway surface
  - Structures
  - Landscaping
  - Traffic control
  - Incidental construction

- **The U.S. Department of Transportation should work closely with private industry organizations to develop and fund training programs for minority and women-owned business firms to help them compete within the free enterprise system on an equal basis.**

- **ATSSA recommends separate funding categories for training.**

We believe that one of the great deficiencies of this program is the complete lack of funding for training and education of minorities who may be making their first entry into the highway construction business. There have been few privately-funded training programs for DBE/WBE's. In our industry, ATSSA sponsors a very good technical training program and most new companies, both minority, women, and nonminority, have received a great deal of assistance by having their key personnel participate. The ATSSA program is self-funded, and the most widely-used and highly-respected in the country; however, some new minority firms simply cannot afford even the nominal cost for technical training in the traffic control field. There needs to be some federal funding for similar training programs, particularly in the areas of general business management, accounting, bidding procedures.

- **The Administration's definition of "Small Business Concern" should be lowered to a more realistic number.**

"Small Business Concern" should be redefined and lowered from the Administration's proposed "average annual gross receipts over the preceding three fiscal years in excess of $15,370,000." ATSSA members are primarily traffic control specialty subcontractors: 90% of our members have annual gross receipts of less that $3 million and 75% have less than $1 million. To avoid flagrant abuses and to protect those for whom the program was intended--bona fide, developing and emerging minority and woman-owned businesses certified as needing assistance--this number should be reducedsignificantly. A high threshold of over $15 million helps large companies that are already very well established. If the intent is to assist small, emerging companies, then this number is far too high.

## FUNDING AND THE FEDERAL ROLE

More than 45,000 people are killed and 3 million injured in traffic accidents each year. If vehicle miles traveled doubles by the year 2020 as expected, fatalities could double as well. This is unacceptable. Safety considerations must be an integral part of every aspect of the new federal highway program.

If safety is truly the number-one consideration of the Administration and Congress, then we feel that there must be an increase in the authorization levels of all highway safety programs.

Specifically, we would request:

1. **A significant increase in the FHWA-administered portion of 402 funds. This investment would result in the reduction of lost lives, property damage, and liability costs each year.**

2. **Separate federal funding categories for the training of personnel in work zone traffic control.**

3. **That requirements that products and services that enhance safety and improve traffic operations be included criteria for all federal "3-R" and "4-R" programs.**

4. **The Federal Highway Trust Fund be made permanent, removed from the unified budget, and released from obligation limitations. All interest earned (more than $1 billion annually) should be released to the states and local governments, and the balance of the Trust Fund should be drawn down to a reasonable level of $2 to $3 billion.**

STATEMENT OF WILLIAM H. DEMPSEY

PRESIDENT OF THE ASSOCIATION OF AMERICAN RAILROADS

BEFORE THE

SURFACE TRANSPORTATION SUBCOMMITTEE

OF THE

HOUSE COMMITTEE ON PUBLIC WORKS AND TRANSPORTATION

APRIL 18, 1991

## I. INTRODUCTION.

My name is William H. Dempsey. I am the President of the Association of American Railroads. The AAR is the national trade association of the freight railroad industry. It represents Class I railroads that accounted for 91 percent of rail freight revenues in 1989.

I welcome this second opportunity to present the railroad industry's view on the 1991 highway reauthorization legislation.

It is almost one year exactly since I last appeared before you. I explained then that the railroad industry's highest priority in the 1991 highway legislation was to oppose any increase in the Federal 80,000 pound weight limit. Such an increase would lead inexorably to the nationwide operation of longer combination vehicles (LCVs), including twin 48s and triple 28s.

Because these monster combinations could devastate the railroads, increased weight limits are literally a matter of life and death for my industry.

Last year I emphasized the following points in opposing LCVs:

- Higher truck weight would lead to massive diversion of existing rail freight to our already crowded, deteriorating highway system;
- The public overwhelmingly shares the railroad industry's opposition to bigger trucks;
- Research supports the public's concern about the safety of longer and heavier trucks; and
- LCVs are harmful to sound highway finance, safety, the environment, energy use, and other public policy concerns.

As an alternative to LCVs, I urged an increased reliance on safe, environmentally benign, energy efficient, and under-utilized rail as the appropriate response to meet the transportation challenges of the 1990s.

And I concluded by asking you to remember that, as we put it, "highway policy is rail policy" – and vice versa. Modally compartmentalized decision-making can have extremely damaging consequences for our national transportation system. At the least, a comprehensive study of the LCV issue is needed before Congress makes such a major change in the nation's freight transportation system.

## II. A 1991 OVERVIEW AND UPDATE.

### A. An Overview.

Nothing in the last twelve months has caused me to change my mind. Indeed, further study, and the overwhelming opposition of other groups to bigger trucks, has reinforced my opinion that increased truck weights would be a transportation disaster.

Let me, then, review the points I made last year. In doing so, I want to emphasize the views of other groups as well as my own industry. While AAR research may be discounted by some as "self-interested", it is surely harder, I believe, to quarrel with representatives of the public interest like the American Association of State Highway and Transportation Officials (AASHTO), the American Automobile Association, the National Conference of State Legislatures, the National Taxpayers Union, the Consumer Federation of America, the Union of Concerned Scientists, the Center for Auto Safety, the National Association of Governors' Highway Safety Representatives, the Sierra Club, the Friends of the Earth, and the National Wildlife Federation.

### B. Rail Diversion.

AAR's computer model of truck/rail competition predicts "first order" rail losses of 41 percent of the 1988 net operating revenue (pre-tax profits) and 11 percent of annual ton-miles from the nationwide operation of twin 48s. When so-called "secondary" traffic losses are included, the total loss in rail traffic should amount to 19 percent of annual ton-miles, according to a new study conducted for AAR by Temple, Barker and Sloane (TBS). These secondary losses result when rail traffic and revenue figures drop below the level necessary to maintain a rail corridor or line of business in the long run.

While this is, as I noted, a disaster for railroads, their employees, and the shippers and commodities they serve, it is the impact on the highway system that is especially relevant for your committee. This level of rail diversion would mean the addition of up to 167 billion ton-miles of highway traffic to the interstate highway system, a gain of up to 30 percent.

### C. The Heavy Truck Underpayment.

So huge an increase in truck traffic means much more dramatic increases in congestion and higher highway costs.

And who will bear these higher costs? Not the trucking industry. I noted last year that trucks now pay far less than their full highway costs. Subsequent research shows that LCVs are particular offenders. The average twin 48 would, under current tax law, pay only 44 percent of just its "short-run" costs. Moreover, this figure does not include the capital costs of the highway system. Railroads, of course, must fully cover the capital costs of their infrastructure and even earn a return on investment. The inclusion of capital costs would further reduce the share paid by the average twin 48 to 22 percent of its fair share.

The increased cost shortfall resulting from LCV operations can have only two results: higher taxes on automobile drivers or an even greater revenue shortfall. The latter would in turn cause faster highway deterioration and, ultimately, higher total highway repair bills.

It is this threat that has caused the National Taxpayers Union and groups like the AAA to oppose LCVs. And AASHTO, in its recent letter to you, has also cited concerns with accelerated highway repair costs. It said:

> "Since existing roadways cannot be modified as fast as truck size limits, a further round of size increases could result in disproportionate increases in safety issues and roadway deterioration, an issue which should be examined and understood before further changes are mandated or allowed."

D. Public Opposition To LCVs.

Last year I cited results from a national poll conducted for the AAR by a well-known sampling firm. It revealed that about 90 percent of respondents opposed LCVs. Indeed, some 18 percent wanted trucks to be shorter than they are now. A new poll, conducted for the American Automobile Association Foundation for Traffic Safety, shows an almost equal level of opposition to longer trucks from truck drivers themselves. These professional drivers, sampled in four western states with existing LCV operations, opposed the widespread legalization of doubles by 71 percent to 25 percent and triples by 80 percent to 15 percent.

E. LCV Safety.

The explanation for this opposition to LCVs and the opposition of two elements of the trucking industry -- the Owner Operator Independent Drivers Association and the Teamsters -- is clear from the surveys and testimony to the Committee: safety. Both the general public and the truck drivers themselves believe that LCVs are simply less safe than current trucks.

For example:

- 86 percent of those surveyed in the AAR poll believe longer trucks would be less safe than current rigs.

- 83 percent of the truck drivers surveyed by the AAA Foundation thought that LCVs were less safe than single trailer combinations, and strong majorities thought they were much less safe.

- The Owner Operator Independent Drivers Association testified before you last March 15: " The experienced drivers will tell you that these trucks, especially the . . . 48-foot doubles, are simply not easy to control."

- Teamster Joint Council Number 7, at your July 5, 1990 San Jose Field Hearings: "Larger and heavier trucks make braking more critical."

- And the AAA told your committee last year that it "opposes any further increases in existing federal maximum truck size and weight standards because the present legal size and weight limits applying to trucks and combinations of vehicles already tax the limits of safety."

These safety concerns are well grounded.

For one thing, LCVs will degrade transportation system safety simply by diverting traffic from safer railroads onto less safe highways.

The most recent available data (1989) shows that railroads are more than three times safer than combination trucks: 1.31 fatalities per ton-mile for rail versus 4.09 fatalities per ton-mile for truck.

The massive diversion from rail caused by twin 48s will, therefore, by itself cause increased transportation-related fatalities.

But in addition, LCVs are almost certainly less safe than the current trucks they would replace.

New safety research shows that current twin 28 combinations are much more dangerous than conventional tractor-trailers. According to an analysis for AAR by Roger Mingo, formerly of the Federal Highway Administration, current doubles have fatal accident rates per 100 million vehicle miles travelled (VMT) 66 percent greater than tractor-trailers. If current doubles are so unsafe, can any rational person believe that longer doubles and triples in widespread operation would be less dangerous?

But, again, you need not rely on AAR research. Just look at the long list of safety groups opposing LCVs. These include the American Insurance Association, the Alliance of American Insurers, Kemper, Aetna, Hartford and Travelers insurance companies, the American Automobile Association, Citizens for Reliable and Safe Highways (CRASH), the Center for Auto Safety, Advocates for Highway Safety, and the National Association of Governors' Highway Safety Representatives.

F. Highway Finance, Environmental And Other LCV-Related Problems.

I have already noted the likelihood that LCVs will worsen the highway finance problem. Another area of potential concern is the impact of LCVs on the nation's bridges. A new report finds $13-15 billion in bridge costs from nationwide legalization of twin 48s on the rural interstate alone[1]. Twin 48 operations on urban interstate bridges would add significantly to this estimate.

This and other highway finance concerns may explain why an impressive list of state and local government groups are on record opposing LCVs. These include the National Conference of State Legislatures (NCSL), the City of Chicago, 101 other Illinois cities and municipal associations, the California State Legislature and the states that voted for the AASHTO policy of deferring increases pending further study. (A two-thirds vote was necessary to endorse that policy.)

AASHTO, like many of the other groups, is concerned about more than highway finance, however. In its letter to you, AASHTO states:

"AASHTO does not believe mandating these (truck weight) changes, or granting states authority to make these changes, is justified based on what is now known; considerable further study of the ramifications of these changes is needed. For example, there are long-term *safety*, financial and *environmental* implications to changes in truck sizes and weights which warrant thorough examination, beyond any analysis which has occurred to date" (emphasis added).

The AASHTO message on the environment is reinforced by three of the nation's most distinguished environmental groups, all opposed to LCVs: Sierra Club, Friends of the Earth, and the National Wildlife Federation. They are joined by many local and more specialized environmental interests.

---

[1] *Jose Weissmann and Rob Harrison, The Impact of Turnpike Doubles and Triple 28s on the Rural Interstate Bridge Network, University of Texas, Center for Transportation Studies, January 1991.*

G. The Need For Further Study.

I have just returned from Portland, Oregon, where AASHTO gathered representatives from all the interest groups concerned with bigger trucks and the future of the transportation system to discuss a research plan for a full assessment of LCVs. The Transportation Research Board, too, is considering a multi-million dollar project for LCV research.

And the General Accounting Office is doing its own study for this committee of LCV safety. These projects suggest that any move to bigger trucks now would take place without the comprehensive research effort that should be completed before so massive a change in the nation's transportation policy.

**III. LCVS AND THE TRUCKING INDUSTRY.**

I am convinced that the AASHTO position of no LCVs without further extensive study represents as close to a consensus as I have ever seen in the transportation community.

Other than some portions of the trucking industry, I know of no one who is actively working for bigger trucks.

I believe that my friend Tom Donohue was correct when he said in a USA Today interview:

"I don't argue that there is anybody in America who wants larger trucks anywhere on any highway."

What is particularly interesting to me is the lack of enthusiasm even within the trucking industry for LCVs.

I have already mentioned the Teamsters and the Owner-Operators. Better than anyone, these truck driver organizations can speak to the potential safety hazards of longer and heavier trucks. And they know, too, that LCVs threaten trucking industry jobs.

But trucking companies are also at risk from LCV legalization. Rail intermodal draymen, the truckers who pick up and deliver intermodal containers and trailers, have formed an organization known as HALT – Haulers Against Longer Trucks – to oppose LCVs. They recognize that any threat to rail intermodal is a threat to their companies.

LCVs also put at risk the economic health of many small and mid-sized truckload (TL) carriers. These carriers lack the capital resources and scope of operations necessary to compete successfully in a truck market dominated by LCVs. If LCVs are legalized, these smaller companies -- many based in rural parts of our country -- will see much of their business siphoned off by bigger carriers. The result will almost certainly be greater concentration in truckload trucking and the failure of many small firms. Remaining small carriers will be forced to increase rates, in many cases, to shippers off the interstate because LCVs will drive up the costs of business even for those carriers that cannot use them. Efficient trucking operations depend on operating full as high a percentage of the time as possible. If smaller truckers lose loads on major highways to LCVs, they can no longer offer as efficient a service to smaller, more remote shippers.

TL carrier opposition to LCVs is beginning to coalesce. In a recent survey by the Interstate Truckload Carriers Conference, an ATA affiliate, members split down the middle on ATA's preferred state option plan for size and weight increases. And when asked if they backed higher sizes and weights in return for a fuel tax increase, these TL carriers were overwhelmingly opposed.

The railroad industry has been heavily criticized by some for "waging war" on the trucking industry over the LCV issue. I hope I have made clear that in fact our position is not just one that we share with the overwhelming majority of Americans and the groups that represent them, but is also one as to which we are on the same side with many truckers.

I look forward to the time when we can put the LCV issue behind us. The railroads do not enjoy being in conflict even with a minority of the trucking industry. We prefer to work together on the many issues where the entire transportation sector can come together to improve the productivity of the American economy.

But LCVs are an idea whose time -- if there ever was one -- has past. Perhaps thirty years ago, when our highways were uncrowded and newly built, the nation could have afforded a massive shift in freight traffic from the railroads to trucking. Today's highway system, though, is simply not capable of bearing the extra burden of bigger trucks. We are unlikely to build many more interstates, and the ones we have are full. And our national rail system will not survive such a diversion either without a drastic downsizing.

The right approach is to preserve America's balanced freight transportation system. The railroads, with their improved plant and large unused capacity, can handle a much larger role as the economy expands. And by relying on rail, the nation can help meet the safety, energy efficiency, environmental and "quality of life" challenges of the 1990s.

## IV. HIGHWAY-RAIL CROSSING SAFETY.

I would like to conclude my remarks today by addressing an additional issue of significant importance to the railroad industry - highway-rail crossing safety.

In July, 1973, the Subcommittee on Investigations and Review, of the House Committee on Public Works, in reporting the conclusions of a six year investigation of the accomplishments and status of highway safety in America made the following determination:

> "Whose responsibility is it to see that maximum safety is incorporated into our motor vehicle transportation system?
>
> On this, the subcommittee is adamant. It is the responsibility of Government and specifically those agencies that, by law, have been given that mandate. This responsibility begins with the Congress and flows through the Department of Transportation, its Federal Highway Administration, the State Highway Departments and safety agencies, and the street and highway units of counties, townships, cities and towns. There is no retreating from this mandate, either in letter or in spirit."

Within one month the Highway Safety Act of 1973 was enacted into law. That historic law created and funded a national highway safety program specifically dedicated to enhanced safety at highway-railroad crossings by providing for needed crossing engineering and warning device improvements. Beginning in 1988, approximately $250,000 was also annually set aside from federal crossing improvement funds as a contribution to Operation Lifesaver, a nationwide public information, driver education, and traffic law enforcement program focused on reducing crossing accidents. The Federal Highway Administration estimates that the crossing engineering improvement program, combined with Operation Lifesaver efforts, has prevented over 6,000 fatalities and 25,000 injuries since 1974, and has an overall benefit-cost ratio of 1.3. Today, after making available over $2.5 billion in federal highway user fee revenues and succeeding in reducing the annual rate of crossing accidents and fatalities by over 50 percent, I am concerned that the future of the Federal Highway-Rail Crossing Improvement Program (Section 130 Program) is in serious jeopardy.

The Federal Highway Administration has advocated a position which heavily promotes increased flexibility in state and local government decision-making with regard to the use of federal highway funds. FHWA's position takes shape in the form of consolidated highway program categories or a "block grant", in this case called the "Urban and Rural Program."

If federal funding for crossing improvements were to be consolidated into a flexible block grant highway program, rather than remain dedicated or earmarked for crossing improvements, it is probable that crossing needs would rarely successfully compete with more traditional highway needs such as highway capacity improvements and highway maintenance. Historically, highway safety generally, and crossing safety particularly, fares very poorly in the competition for scarce financial resources. In fact, this problem was the core reason the separate crossing improvement program category was established in 1973. During the forty years between 1934 and 1973 less than $95 million in federal funds was spent installing signs and warning systems at public crossings, and crossing accidents and casualties continued to increase. Since 1974, nearly $1.3 billion in federal Section 130 Program funds has been spent on crossing warning systems and, as I mentioned earlier, crossing accidents and casualties have dropped dramatically.

The Federal Crossing Improvement Program has proven to be a highway safety program that works, and it continues to be successful. Proposals to consolidate the Section 130 Program with other highway program categories would very simply constitute a retreat to the same situation which so troubled the Congress, the highway safety community, and the railroad industry prior to 1973. I urge you to continue the separate Crossing Improvement Program and the earmarked support for the National Operation Lifesaver Program.

William H. Dempsey
President

ASSOCIATION
OF AMERICAN
RAILROADS

April 19, 1991

Honorable Norman Y. Mineta
Chairman
Subcommittee on Surface Transportation
United States House of Representatives
B 376 Rayburn House Office Building
Washington, D.C. 20515

Dear Chairman Mineta:

I very much appreciate the opportunity to testify yesterday before the Subcommittee on Surface Transportation regarding two issues of critical importance to the railroad industry--longer combination vehicles (LCV's) and highway-rail crossing safety. During my appearance you asked a question concerning whether a separate categorical Section 130 Program continued to be necessary, given the Program's past success in reducing crossing accidents and fatalities by approximately 50 percent. In addition to my oral response during the subcommittee hearing, I would offer this supplemental response to your question and ask that this correspondence be included as part of the official hearing record.

Much has been accomplished through the Section 130 Program, and other efforts such as Operation Lifesaver, to improve highway-rail crossing safety since the early 1970's. It is apparent much still remains to be done. Section 159 of the Surface Transportation and Uniform Relocation Assistance Act of 1987 (Public Law 100-17) required the Secretary of Transportation to "conduct a study of national highway-railroad crossing improvement and maintenance needs." The "Rail-Highway Crossing Study" has been completed and documents the following findings:

> "For the 1988-2005 time period, approximately $853 million in estimated annual needs are identified...
>
> For warning systems, an estimated annual investment of $185 million in improvements is necessary to maintain current overall safety performance. An additional $105 million is needed to adequately maintain and operate the system. An initiative to cost effectively reduce current accident levels would require another $30 million

50 F Street, N.W., Washington, D.C. 20001 (202) 639-2402

annually, for a total of $320 million annually in potential needs for warning systems.

The estimated annual investment in structure improvements to maintain traffic services and structural conditions, for both highway and railroad structures, is $390 million. Routine maintenance adds another $35 million, for an annual total of $425 million in structure needs. Of the $108 million in other needs identified, 74 percent are for maintaining, replacing, and improving crossing surfaces."

Clearly, substantial additional effort and investment are required to maintain and continue to improve crossing safety. An integral part of this country's commitment to improved highway-rail crossing safety continues to be a separate categorical Federal Highway-Rail Crossing Improvement Program.

Once again, thank you for your interest in issues of concern to the railroad industry, and your commitment to this country's overall transportation needs.

Sincerely,

William H. Dempsey

# Testimony of
# Robert Desjardins
## on Behalf of
# The Associated General Contractors of America
## Presented to the
# House Public Works and Transportation Committee
# Subcommittee on Surface Transportation
## on the Topic of Reauthorization of
# The Nation's Surface Transportation Programs
## April 18, 1991

The Associated General Contractors of America (AGC) is a national trade association of more than 32,500 firms, including 8,000 of America's leading general contracting firms. They are engaged in the construction of the nation's commercial buildings, shopping centers, factories, warehouses, highways, bridges, tunnels, airports, water works facilities, waste treatment facilities, dams, water conservation projects, defense facilities, multi-family housing projects and site preparation/utilities installation for housing development.

The Associated General Contractors of America
1957 E Street N.W., Washington, D.C. 20006-5199 (202) 393-2040 Fax (202) 347-4004

Mr. Chairman and Members of the Subcommittee, I am Robert Desjardins, a contractor from Pittsfield, Maine. I am also this year's Highway Division Chairman of the Associated General Contractors of America (AGC). AGC is a national trade association of more than 32,500 firms, including 8,000 of America's leading general contracting firms. They are engaged in the construction of the nation's commercial buildings, shopping centers, factories, warehouses, highways, bridges, tunnels, airports, water works facilities, dams, water conservation projects, defense facilities, multi-family housing projects and site preparation/utilities installation for housing development.

AGC appreciates the opportunity to express its views on issues facing the nation in surface transportation. AGC believes this nation must increase investment in its surface transportation infrastructure to provide the foundation for continued economic prosperity and international competitiveness.

AGC is also concerned that this country is in a recession and that steps must be taken immediately to stimulate the nation's economy and create jobs.

The harsh realities of the recession in the construction industry are dramatically demonstrated by the United States and state by state Economic Fact Sheets which are included with this testimony. These fact sheets have been developed from the latest information from the Departments of Labor and Commerce on the current status of construction employment and the role of construction in the nation's economy.

Briefly, the fact sheets show that the construction industry lost 498,000 jobs in the ten month period from May 1990 to March 1991, and that construction unemployment rose from 13.0 percent in February 1990 to over 21 percent in February of 1991. This compares with a total U.S. unemployment rate of 5.8 percent in February 1990 and 7.2 percent in February 1991.

Clearly, this is a critical problem that needs to be addressed. AGC believes the reauthorization of the nation's surface transportation programs can play a significant role in bringing the nation out of the recession and provide the long term framework to promote needed investment in our nation's transportation infrastructure.

With the nation in a recession, AGC believes the economic benefits of infrastructure investment are particularly worthy of note. Unlike many government expenditures, infrastructure spending is an investment which has short and long term benefits.

The short term benefits of infrastructure investment are increased construction employment and the ripple effect of induced economic activity in other industries that follows. The U.S. Department of Commerce estimates that:

- Each additional $1 billion spent on new construction creates 46,800 jobs in construction, supply and service industries. A $25 billion highway program sustains nearly 1.2 million jobs.

- Each $1 spent on new construction in the United States generates $3.62 in economic activity across all industries and services. A $25 billion highway program generates $90.5 billion in economic activity throughout the country.

These statistics show that at a time when construction industry unemployment looms at over 21 percent, and unemployed construction workers account for 14 percent of the nation's unemployed, increased spending for the nation's surface transportation programs couldn't be more critical.

The long term benefits of infrastructure investment have also been well documented over the past several years. The research of Dr. David Aschauer has established a critical link between infrastructure investment and productivity by comparing the infrastructure investment levels of the major industrialized nations and their productivity. Based on Dr. Aschauer's research, this nation needs to invest more in infrastructure to maintain productivity and global competitiveness now and in the future.

As the 102nd Congress gets underway, we applaud this Subcommittee for scheduling these hearings and getting on with the important task of reauthorizing the nation's highway and mass transit programs. AGC is also very encouraged that President Bush and Transportation Secretary Skinner have placed transportation as a top priority of the Administration's domestic agenda.

We commend you Mr. Chairman, and the leadership of the House Public Works and Transportation Committee for taking the initiative earlier this year to propose an aggressive, 5-year, $153 billion, budgetary framework for the future funding of our nation's surface transportation programs.

AGC believes the Committee's budget request is on the right track to improve and expand the efficiency of our nation's highway and bridges and make a substantial federal commitment towards addressing documented annual highway capital needs of all levels of government of $58.5 billion. It can also make a critical difference in the state of the U.S. economy, now and in the future.

Therefore, at our recent Convention, AGC unanimously adopted a Convention resolution in support of the House Public Works Committee's budget proposal. Consistent with our policy to increase highway investment, AGC will continue to: urge a draw down in the trust fund balance; support a recapturing of the 2 1/2 cent gas tax lost to the general fund last year; and support an increase in the gas tax to address unmet highway needs. The Committee can count on our continued support and cooperation as you develop the details of the Committee's reauthorization proposal.

In preparation for the reauthorization of the federal surface transportation programs in 1991, AGC undertook a policy development initiative in 1988 which is ongoing. Recognizing that construction of the interstate highway system will be essentially complete in the early 1990s, America is at a crossroads with regard to its future transportation policy. AGC's policy development effort has focused on those surface transportation issues which will continue to be important to the nation into the 21st century.

Following is a discussion of some of the major policy recommendations which

AGC has adopted to guide our efforts in working with the Administration and the Congress to develop new surface transportation legislation.

## TRANSPORTATION'S ROLE IN ECONOMIC DEVELOPMENT

AGC believes that transportation infrastructure is at the very heart of what makes this country thrive and prosper. Over the past 30 years the gross national product of this country has grown over 1,000 percent, nearly double the increase of the previous 30-year period in our history. Several factors account for this growth.

One factor, highway development, stands out above all others. America has grown and prospered from the mobility provided by the nation's highway transportation system, in general, and specifically the Interstate Highway System, which was started in 1956. A look at the role of our highway system in our economy will show the magnitude of its effect on current and future economic development.

- 89.5 percent of all personal travel is on highways;
- 82 percent of all freight revenues are carried on highways; nearly every product manufactured or consumed in this country is, for a portion of its journey from production to market carried by truck; and
- 85 percent of America's workers commute to work by private vehicle.

Clearly, highways play a vital role in our economy. No commercial, industrial, retail, or residential development would have been built in a location that did not provide for an adequate highway system to support it.

As development patterns have changed, highways have played an even more important role in this country. Development over the past 20 years has shifted substantially to suburban growth centers. Suburban employment currently accounts for 60 percent of metropolitan jobs, 47 percent of all job destinations, and 67 percent of all job growth in this country. America is increasingly working in commercial buildings, industrial complexes, and shopping centers in suburban areas. None of these suburban developments would have been possible without an adequate highway transportation system serving them.

Increasingly, communities around this country are recognizing the critical link between highways and economic development. Phoenix has undertaken a multi-billion dollar road development program designed to support the area's rapid economic development. A critical factor in the tremendous growth in the suburban Washington, D.C., area of Fairfax County, Virginia, has been access to highway transportation. This same link between highways and building is being played out in growth areas across the country.

Unfortunately, some tend to take our highway system for granted. Indeed, like other aspects of our nation's infrastructure, some rarely acknowledge the vital role that highways play in their daily lives, until the highway system breaks down.

There are already signs our highway system is wearing out. The tremendous highway investment made over the past 35 years has been a great success. Our highway network has carried traffic far beyond its design life, as Americans have enjoyed the rewards of mobility unknown to most of the rest of the world. This success, however, has taken its toll as we fail to adequately reinvest in our highway system. Many portions of the Interstate system are in need of repair and reconstruction; nearly 50 percent of the nation's bridges are structurally deficient or obsolete; and congestion on urban freeways is increasing at an alarming rate.

A central question facing the Congress is how to ensure adequate investment in the nation's transportation infrastructure to meet current and future demands for economic growth. AGC believes that this nation is seriously underinvesting in its transportation infrastructure, at a great cost to the nation in lost productivity, jobs, and international competitiveness. The nation's transportation system is the arterial system by which the country's economic development is nurtured and supported. If the people of this country, both public officials and private citizens alike, continue to ignore the construction and rehabilitation of this nation's highways and the congestion in the nation's airports and airways, our nation will pay many times over in lost economic opportunity now and in the future.

AGC is joined by a number of others in a concern for the state of the nation's infrastructure. There is clear and convincing evidence that our abysmally deficient investment in infrastructure is having a negative effect on the future of the nation's economy. The National Council on Public Works Improvement (NCPWI) identified the current lack of infrastructure investment as an issue approaching crisis proportions. In its final report entitled "Fragile Foundations" the NCPWI concluded that the quality of America's infrastructure is barely adequate to fulfill current requirements and insufficient to meet the demands of the future. A major recommendation contained in the NCPWI final report is a call for a national commitment, shared by all levels of government and the private sector, to increase capital spending for infrastructure by as much as 100 percent above current levels.

The Rebuild America Coalition, an organization of 64 public and private associations dedicated to infrastructure investment, published a study in March of 1988 entitled "Increasing Infrastructure Investment: Making America's Economy Competitive Again". That study examined the historic role of infrastructure investment in promoting economic growth and the adverse economic effects of the disinvestment in infrastructure which has taken place over the past 20 years.

A strong link between public works investment and America's productivity and international competitiveness has been drawn by economist Dr. David Aschauer, formerly with the Chicago Federal Reserve Bank. In his research, Dr. Aschauer studied the productivity and public investment levels of seven major industrialized nations -- the United States, Japan, West Germany, Canada, France, Italy, and the United Kingdom.

The results of Aschauer's research indicate that nations with the highest savings and investment also have the highest productivity. He concludes that "Public investment, by directly raising productivity as well as by promoting private investment, works doubly hard in enhancing our worldwide competitive position." Last year, 327 economists, including six Nobel Laureates, called upon the Congress and the President to increase public investment noting the crucial link between that investment and the productivity needed for a competitive edge.

In as much as transportation is a major component of the nation's infrastructure, AGC believes that the NCPWI findings and the research work of the Rebuild America Coalition and Dr. Aschauer lend strong support to our advocacy of increased transportation capital investment to keep America's economy strong.

AGC Recommendation

**AGC urges the federal government to assume the necessary leadership role to promote adequate transportation capital investment by all levels of government.**

## SURFACE TRANSPORTATION NEEDS AND FUTURE FUNDING

Statistics show that U.S. spending on public works projects has declined significantly as a percentage of total governmental expenditures. In 1950, 19.1 percent of government expenditures went to public works, by 1984, the figure dropped to 6.8 percent. This comes at a time that U.S. motorists experienced over 700 million hours of delay on highways -- wasting nearly 3 billion gallons of gasoline as a result. The projected congestion of 3.9 billion hours of delay by 2005 is staggering.

The most in-depth analysis of highway needs was performed in 1988 by the American Association of State Highway and Transportation Officials (AASHTO). In their report entitled "The Bottom Line -- A Summary of the Surface Transportation Investment Requirements 1988-2020", AASHTO identified annual highway capital investment needs, by all levels of government, of up to $58.5 billion between now and the year 2020. This compares with highway capital spending in 1987 of only $31 billion.

With respect to mass transit needs, AASHTO's Bottom Line report identified annual capital investment requirements of up to $3.4 billion. Currently, capital investment in transit is just over $2.1 billion annually.

AGC Recommendation

**AGC applauds the work of AASHTO as part of the Transportation 2020 program and encourages the Subcommittee to consider AASHTO's needs assessment in addressing future surface transportation funding.**

## THE CURRENT PROGRAM -- MODEL CONCEPTS FOR THE FUTURE

The challenges facing this country in transportation are immense, but not insurmountable. The federal programs supporting the nation's surface transportation are basically sound, providing a solid framework to address the challenges of the future. As the Subcommittee considers the future surface transportation legislation, AGC believes there are a number of important concepts of the current program which are critical to the success of surface transportation programs in the future. They include:

- **User Fee - Trust Fund Concepts** - The critical element which has led to the success of the Federal-aid highway program is the user-fee financed trust fund mechanism which is used to support them. The trust fund concept has long been recognized as a reliable and stable financing mechanism for infrastructure investment. As early as the 1930s, several states had developed dedicated, user-fee mechanisms to support highway improvement programs in their states.

  By 1956, the year the Interstate Highway Program was initiated, some 25 states had instituted trust funds or similar dedicated funding sources for their highway programs. Using these successes as a model, the Interstate Highway Program was developed around the user-fee trust fund concept. That financing mechanism has served this country well for nearly 35 years, supporting the nation's highway program and the development of the world's greatest public works project -- the Interstate Highway System.

  Several key features of the trust fund are largely responsible for its success. First it is user-fee financed -- the nation's highway transportation system is paid for only by the user. The more you use the system the more you pay. The public support for the highway program has remained strong primarily because the traveling public receives a direct benefit from the money it pays in user fees.

  Another key aspect of the trust fund is that it provides a stable and reliable financing mechanism on which a successful, major capital investment program must depend. A typical highway project may take 7 to 10 years from the planning stage to completion. Proper planning for the transportation needs of the future requires that a dependable source of revenue will be available to finance the needed improvements when they are ready for construction. The multi-year authorization process and contract authority are critical ingredients to permit for this long term planning and assure the highway program's success.

  From the budgetary standpoint, perhaps the most critical feature of the trust fund is the Byrd Amendment which assures its solvency. The amendment provides that on an annual basis, there is a determination of the outstanding obligations and current balance and expected receipts of the trust fund. This information is used to guarantee that future commitments against the trust fund can be honored.

AGC Recommendation

**AGC recommends the Congress continue the concept of a user fee financed trust fund to support the nation's Federal-aid highway program.**

- Maintain the Gas Tax for Transportation Purposes - AGC strongly opposes any diversion of fuel taxes to purposes other than transportation. As discussed previously, the transportation needs of this country are so great, that we cannot afford to divert this revenue source to other government spending. AGC supports an increase in the gas tax if it is dedicated solely to improving the nation's highways and bridges. AGC believes that the 2.5 cents now going to the general fund for deficit reduction should be placed in the Highway Trust Fund and used for needed highway and bridge improvements.

In a related issue, AGC believes the Congress should eliminate the fuel tax exemption for gasohol. Purchasers of gasohol, like other highway users, should pay their fair share of the costs of construction and rehabilitation of the nation's highway system. However, since gasohol users pay only one-third of the normal 14 cent per gallon gas tax, they are being subsidized by other highway users. Last year, the gasohol subsidy cost the Highway Trust Fund nearly $500 million.

AGC believes that energy independence and clean air are worthy goals, but not at the expense of the nation's highway program. If the gasohol industry truly needs a tax incentive to compete in the marketplace, then other subsidies should be considered by the Congress. The entire nation will benefit from cleaner air and energy independence, therefore, AGC believes the general taxpayer, not the nation's highway program, should bear the responsibility to subsidize the gasohol industry.

AGC Recommendation

**AGC strongly urges the Congress to reject any further proposal to increase the gasoline tax for deficit reduction or non-transportation spending. AGC further urges the Congress to place the 2.5 cents now going to the general fund for deficit reduction in the Highway Trust Fund to be used for much needed highway and bridge improvements. AGC supports Congressional efforts to increase funding for the nation's highway program through spending down the trust fund balance, increasing highway user fees, and elimination of the tax exemption for gasohol.**

- The Open Competitive Bidding System - The open competitive bidding system has long been the cornerstone of the effective administration of public funds in construction contracts. The nation's highway system, as exemplified by the Interstate system, is an outstanding example of the success of this bidding system. Across this nation, the traveling public utilizes a highway system that

was built to quality standards and the public has been assured, through open competition with award to lowest responsive and responsible bidder, that they were obtaining this quality product at the lowest cost to the taxpayer.

AGC believes that the open competitive bidding system remains the single most effective means of contracting for highway construction. In instances where concerns about contractor performance arise, there currently exists a number of steps which can be used by State transportation officials to assure a quality project. These steps include: Prequalification; Improved Plans and Specifications; Prebid Conferences; Adequate Inspection; and Preconstruction Conferences. AGC believes these steps, in conjunction with open competitive bidding, assures the taxpaying public of the highest quality project at the lowest possible price and the construction contractor of fairness and integrity in the selection process.

AGC Recommendation

**AGC strongly urges continuation of the time-tested, open competitive bidding system -- with contracts publicly advertised, bids publicly received and read aloud, and contracts awarded to the lowest responsive and responsible bidder -- as the means of contracting for federally-assisted highway construction.**

- Equitable Distribution of Funding - AGC recognizes that one of the most difficult challenges of developing future highway legislation will be devising equitable formulas for the distribution of funding. While the current formulas may not be viewed by all states as equitable, AGC believes that two concepts contained in the current program assure all states a certain level of equity. They are the one-half percent minimum apportionment and the 85 percent minimum allocation provisions.

AGC acknowledges that these provisions may have to take a different form in the future program since certain categories of funding are likely to be revised. However, AGC endorses the overall concept of guaranteeing small and rural states a minimum level of total federal funding to support their highway programs. AGC equally endorses the concept of guaranteeing a minimum level of return of trust fund contributions to states which through the formula process receive significantly less in apportionments than they contribute in user fees.

AGC Recommendation

**AGC recommends a continuation, in future legislation, of the concepts of a guaranteed level of federal funding to small and rural states, as well as a guaranteed minimum return of trust fund revenues to donor states which contribute significantly more in user fees than they receive in apportionments.**

## CURRENT PROBLEMS -- A LOSS OF PROGRAM EFFECTIVENESS

While the current program has generally worked well, there are a number of policies which are having an adverse effect on the overall program effectiveness. The most damaging policies are occurring as part of the budget process which prevents the timely expenditure of highway user revenues for their intended purpose. No less troublesome, however, are several other aspects of the program which compromise the cost effectiveness of the program. The problem areas include:

- **Budgetary Treatment of the Transportation Trust Funds** - While the trust fund mechanism has worked well in funding transportation programs, the current budget process inhibits the expenditure of the trust fund receipts for their intended purpose. AGC views the trust fund and the highway program in the context of an ongoing capital investment program which should be subject to different rules than the current budget allows. AGC believes the manner in which the transportation trust funds are treated in the budget process needs to be modified.

  As mentioned previously, the highway program is founded on the basis of multi-year authorizations for highway investment. The process recognizes that when a highway project is approved and let for contract, it may be 3 or more years before the final reimbursement for the project will be made to a state and the construction contractor paid in full for the work. For this reason, the user fees paid into the Highway Trust Fund are kept in force for 2 years beyond the final authorization in any highway legislation. This provides the necessary financing for the project at the time the bills need to be paid. Without other artificial spending restraints, such as obligation ceilings, the trust fund can support the highway program with a relatively low cash balance of approximately $2 to $3 billion.

  The budget problems which have faced this country since the late 1960s, however, have had a detrimental effect on the ability of the federal government to let the trust fund work in the manner in which it was intended. Since 1969, artificial spending restraints have caused the Highway Trust Fund balance to grow dramatically to a current balance of over $15 billion, including the mass transit account.

  A first step in addressing this issue would be to expend the trust fund balances for their intended purposes. Since the trust fund receipts can be used for no other purpose than transportation, bankrolling these trust funds is not only a breach of faith with the transportation users of this country, but is merely postponing work that should be done now to prevent more costly repairs later. A longer term solution to this issue is to take the trust funds out of the unified budget. These programs have not contributed to the deficit. The large cash balances are the very proof of that. The user-fee financed transportation programs of this country should be funded at the level their trust funds can support. The receipts should not be loaned to other programs while vital transportation needs of this country are neglected.

AGC Recommendation

**AGC continues to endorse the House Public Works and Transportation Committee's initiatives to take the transportation trust funds out of the unified budget process.**

- Special Preference Programs - In conjunction with AGC concerns about preservation of the open competitive bidding system, AGC has an ongoing concern with the continuation of special preference programs within DOT's federally assisted construction programs. Beginning with the Department of Transportation's 1980 Minority Business Enterprise regulations and continuing with the statutory requirements for Disadvantaged Business Enterprise (DBE) participation in the highway, transit, and airport improvement programs which were enacted in 1982 and 1987, AGC is very concerned that the Department's DBE programs are compromising the competitive bidding system.

  Although the notion exists that the apparent lack of minority-owned construction firms proves there has been discrimination in the award of public construction contracts, AGC believes that the open competitive bidding system, by its nature, is race and gender blind. If construction contracts are publicly advertised, bids accepted from all qualified bidders and read aloud publicly, there is no chance that a public agency can discriminate in the award of their contracts.

  AGC therefore questions why general contractors should be subjected to requirements that force them to engage in another kind of discrimination which denies individuals subcontracts because they are not a member of a preferred disadvantaged group.

  AGC Recommendation

  **AGC urges the Congress to sunset the current DBE program which results in the denial of subcontracts to many individuals because of their race, gender, or national origin. Instead, the Congress should explore means of promoting the participation of disadvantaged business enterprises in the Federal-aid highway program that will not be subject to constitutional challenge.**

- Highway program funding sanctions - Over the past several decades, the highway program has been used as leverage to force compliance with other federal mandates. From highway beautification to clean air, there are currently at least 11 different highway program sanctions ranging from withholding project approval to withholding of highway apportionments which may be imposed. Given the pressing need to adequately fund our nation's highway program, it is counterproductive, at best, to impose highway sanctions on states and jeopardize their ability to meet growing highway needs.

AGC Recommendation

**AGC recommends that the Congress remove the current sanctions and penalties affecting the highway program and explore alternate means to achieve appropriate state compliance.**

- Federal/State Roles - As other major changes in the program are considered, it is an opportune time to reassess the current federal/state/local roles in the nation's highway program. AGC believes that the federal/state partnership that has existed in the highway program has generally worked well. AGC believes, however, that a refinement of the federal and state roles should be examined, as follows: There is a legitimate role for the federal government to establish national priorities and conduct oversight of federal expenditures. However, AGC believes there has been too much federal intrusion into state decisionmaking and the administration of the highway program.

AGC Recommendation

**AGC recommends the Congress consider a reduced federal role in highway program administration, particularly with respect to project by project decisionmaking, and endorse increased flexibility in program administration by the states.**

- Funding Flexibility between Highway and Transit Programs - In a related issue AGC is concerned by the provisions in the Administration's bill which would provide state and local governments the flexibility to transfer funding between the highway and transit programs.

  AGC continues to believe that revenues placed in the Highway Account of the trust fund must be expended solely for highway improvements. Current revenues are insufficient to meet documented highway needs; allowing the transfer of funds to mass transit projects further exacerbates an already critical funding problem.

AGC Recommendation

**AGC recommends that the Congress reject proposals to provide funding transferability between highway and transit programs to state and local governments.**

In closing, AGC acknowledges that the Congress faces a tremendous challenge in balancing interests in the future legislation and stands ready to work with the Congress as it develops solutions to the nation's transportation infrastructure crisis.

# UNITED STATES ECONOMIC FACT SHEET

This economic fact sheet contains the latest economic data available as of March, 1991.

## CONSTRUCTION EMPLOYMENT

- In 1990, **5,204,000** people were employed in the construction industry. While this exceeded the 1989 average by 4,000 jobs, construction industry employment declined from 4.8 percent of U.S. employment in 1989 to **4.7 percent of U.S. employment** in 1990.

- In the ten months between May, 1990 and March, 1991, **498,000** jobs have been lost in the construction industry, almost **10 percent** of the industry's total employment. In the first three months of 1991, between December, 1990 and March, 1991, construction employment dropped by **195,000 jobs.**

U.S. EMPLOYMENT

| *Year* | *Construction* | *Total* | *Constr Pct of Total* |
|---|---|---|---|
| 1985 | 4,673,000 | 97,519,000 | 4.8 |
| 1986 | 4,816,000 | 99,525,000 | 4.8 |
| 1987 | 4,967,000 | 102,200,000 | 4.9 |
| 1988 | 5,110,000 | 105,536,000 | 4.8 |
| 1989 | 5,200,000 | 108,413,000 | 4.8 |
| 1990 | 5,204,000 | 110,323,000 | 4.7 |
| January, 1991 | 4,841,000 | 109,813,000 | 4.4 |
| February, 1991 | 4,860,000 | 109,522,000 | 4.4 |
| March, 1991 | 4,788,000 | 109,316,000 | 4.4 |

Bureau of Labor Statistics, U.S. Department of Labor

## CONSTRUCTION UNEMPLOYMENT RATE

- The **national** average construction unemployment rate increased to **11.1% in 1990** from 10.0% in 1989. For the U.S. as a whole, the civilian worker unemployment rate averaged **5.5%** in 1990, up from 5.3% in 1989.

- In February, 1991, the construction industry unemployment rate reached **21.4%**. In February, 1990, the construction industry unemployment rate was 13.1%. These construction unemployment rates compare with the total U.S. unemployment rate of **7.2%** in February, 1991 and 5.8% one year earlier in February, 1990. These unemployment rates are not adjusted for seasonality.

- In February, 1991, unemployed construction workers accounted for **14.6%** of the total 8.9 million unemployed Americans even though the construction industry only accounted for **4.4%** of employment. In February, 1991, **1,306,000** construction workers in the U.S. were unemployed. In February, 1990, 838,000 construction workers were unemployed.

## IMPACT OF CONSTRUCTION ON THE U.S. ECONOMY

- Each $1 spent on new construction in the United States generates a total of **$3.6182** in economic activity across all industries and services. This multiplier can be used to estimate the impact of a new construction project on the economy. For example, a $20 million project would result in a $72,364,000 increase in economic transactions ($20 million X the 3.6182 multiplier). This total includes the original $20 million project.

- Each additional $1 billion spent on new construction in the United States creates **46,800 jobs** in construction, supplier, and service industries.

- For each $1 of new construction, the earnings of households in the state is increased by **$1.0929**. For example, a $20 million construction project would increase the total household earnings (primarily payroll) by $21,858,000 ($20 million X $1.0929). Both construction workers and employees of other industries benefit from this increased standard of living, and this figure also shows that the tax base of the state is increased.

Note: Figures from 1988 Regional Input-Output Modeling System (RIMS II), Bureau of Economic Analysis, U.S. Department of Commerce.

## CONSTRUCTION'S SHARE OF THE U.S. ECONOMY

- The total construction industry payroll in the United States in 1989 was $128,713,052,000, 6.4 percent of the nation's total private industry payroll.

- The construction industry employs **one-third more** people than food stores, more than **twice** as many workers as auto dealers and service stations combined, and also **twice** as many workers as the insurance industry. Most manufacturing industries are also far below construction industry in employment.

**SELECTED INDUSTRY EMPLOYMENT, JANUARY 1991**

| | |
|---|---|
| Construction (seasonally adjusted) | 4,832,000 |
| Food Stores | 3,317,100 |
| Auto Dealers and Service Stations | 2,081,400 |
| Insurance | 2,155,000 |
| Transportation Equipment | 1,871,600 |
| Textile Manufacturing | 679,300 |
| Tobacco Industry | 50,000 |

Bureau of Labor Statistics, U.S. Department of Labor

- Over the last five years for which data is available, U.S. construction increased from 4.5% of gross domestic product in 1982 to 4.7% in 1986. Unfortunately, this very useful data, the first of its kind computed for the nation and all fifty states, is not available for more recent years due to federal budget cuts.

**CONSTRUCTION'S SHARE OF GROSS DOMESTIC PRODUCT**

| | *1982* | *1983* | *1984* | *1985* | *1986* |
|---|---|---|---|---|---|
| UNITED STATES | 4.5% | 4.5% | 4.6% | 4.7% | 4.7% |

Bureau of Economic Analysis, U.S. Department of Commerce

Note: These numbers do not include the value of supplies and equipment used in construction; for example, steel used in construction is counted as part of the steel industry rather than in the construction total. When the total value of construction is taken into account, AGC has estimated that construction approaches 10% of the gross national product.

## U.S. CONSTRUCTION MARKETS

- In 1990, the volume of new construction in the U.S. was **$434.3 billion**, an increase of 0.5 percent over the 1989 volume of $432.1 billion.
- The public construction market -- **infrastructure investment** -- continued its recent growth, reaching **$109.7 billion** in 1990, with most of the growth occurring in state and local construction.
- Nonresidential construction stayed essentially steady at **$137.5 billion** in 1990, with industrial construction offsetting declines in other markets, particularly office construction.
- Residential construction declined to **$187.1 billion** in 1990 from $196.6 billion in 1989.

VALUE OF NEW CONSTRUCTION PUT IN PLACE (IN BILLIONS OF DOLLARS)

| *Construction Category* | *1986* | *1987* | *1988* | *1989* | *1990* |
|---|---|---|---|---|---|
| Residential Buildings | $187.1 | $194.7 | $198.1 | $196.6 | $187.1 |
| Nonresidential Construction | 126.5 | 125.0 | 129.0 | 137.0 | 137.5 |
| **Total Private Construction** | **313.6** | **319.6** | **327.1** | **333.5** | **324.6** |
| State and Local Construction | 72.2 | 76.5 | 82.7 | 86.3 | 95.7 |

# ALABAMA ECONOMIC FACT SHEET

This economic fact sheet contains the latest economic data available as of February, 1991.

## CONSTRUCTION EMPLOYMENT

- Construction employment in Alabama increased from 64,800 in 1984 to 78,000 in 1988, then dropped to 75,900 in 1989.
- In December, 1990, the construction industry in Alabama employed 200 more workers than in December of 1989 (monthly data not seasonally adjusted).
- Construction employment was 4.8% of total state employment of 1.6 million in 1989.

ALABAMA EMPLOYMENT

| *Year* | *Construction* | *Total* | *Constr Pct of Total* |
|---|---|---|---|
| 1984 | 64,800 | 1,387,700 | 4.7 |
| 1985 | 71,400 | 1,427,100 | 5.0 |
| 1986 | 74,900 | 1,463,300 | 5.1 |
| 1987 | 75,100 | 1,507,700 | 5.0 |
| 1988 | 78,000 | 1,558,700 | 5.0 |
| 1989 | 75,900 | 1,588,300 | 4.8 |
| December, 1989 | 76,700 | 1,603,100 | 4.8 |
| December, 1990 | 76,900 | 1,620,200 | 4.7 |

Bureau of Labor Statistics, U.S. Department of Labor

CONSTRUCTION EMPLOYMENT IN MAJOR CITIES

| *City* | *1988* | *1989* | *December,1990* |
|---|---|---|---|
| Birmingham | 24,400 | 22,700 | 22,400 |
| Huntsville | 5,500 | 4,900 | 5,400 |
| Mobile | 10,800 | 10,200 | 10,500 |
| Montgomery | 8,200 | 7,200 | 6,800 |
| Tuscaloosa | 3,100 | 3,500 | 4,300 |

Bureau of Labor Statistics, U.S. Department of Labor

## ALABAMA UNEMPLOYMENT RATE

- In 1990, the unemployment rate in Alabama was 6.8% (7.0% in 1989, 7.4% in 1988), as compared to the national average rate of 5.5% (5.3% in 1989, 5.5% in 1988).
- In 1990, 128,000 people were unemployed in the state. 102,000 people were unemployed in the state in 1989, including 12,000 construction workers.
- The **construction** unemployment rate in Alabama was 11.5% in 1989 (16.4% in 1988). The **national** average construction unemployment rate increased to 11.1% in **1990** from 10.0% in 1989 (10.6% in 1988).

## ECONOMIC IMPACT OF CONSTRUCTION ON ALABAMA

- Each $1 spent on new construction in Alabama generates a total of $2.4374 in economic activity in both industries and services in the state. This ratio is used to estimate the impact of new construction on the state's economy. For example, a $20 million project would result in a $48,748,000 increase in the state's economy ($20 million X the 2.4374 multiplier). This total includes the original $20 million project.
- Each additional $1 million spent on new construction in Alabama creates 40.8 jobs. For example, a $20 million new construction project would create 816 jobs in the state in construction, supplier, and service industries (20 X 40.8 jobs per million).

- For each $1 of new construction, the earnings of households in the state is increased by $.7897. For example, a $20 million construction project would increase the total household earnings in the state by $15,794,000 ($20 million X $.7897). Both construction workers and employees of other industries benefit from this increased standard of living, and this figure also shows that the tax base of the state is increased.

Note: Figures from 1988 Regional Input-Output Modeling System (RIMS II), Bureau of Economic Analysis, U.S. Department of Commerce.

## CONSTRUCTION'S SHARE OF ALABAMA'S ECONOMY

- The total construction industry payroll in Alabama in 1989 was $1,525,289,000, 6.3 percent of the state's total private industry payroll.

- In Alabama, construction (including homebuilding, nonresidential building and nonbuilding work) comprised 3.2% of the state's gross product in 1986. On average in the Southeast states (AL,AR,FL,GA,KY, LA,MS,NC,SC,TN,VA,WV), construction grew from 5.1% in 1982 to 5.3% in 1986. This very useful data, the first of its kind computed on a state-by-state basis, is not available for more recent years due to federal budget cuts.

CONSTRUCTION'S SHARE OF GROSS PRODUCT

| | *1982* | *1983* | *1984* | *1985* | *1986* |
|---|---|---|---|---|---|
| ALABAMA | 3.1% | 3.0% | 3.0% | 3.2% | 3.2% |
| SOUTHEAST | 5.1 | 4.9 | 5.1 | 5.2 | 5.3 |
| UNITED STATES | 4.5 | 4.5 | 4.6 | 4.7 | 4.7 |

Bureau of Economic Analysis, U.S. Department of Commerce

Note: These numbers do not include the value of supplies and equipment used in construction; for example, steel used in construction is counted as part of the steel industry rather than in the construction total. When the total value of construction is taken into account, AGC has estimated that construction accounts for 10% of the gross national product.

## NONRESIDENTIAL BUILDING PERMITS IN ALABAMA

- In 1990, the value of nonresidential building permits issued for new construction increased 3.3 percent from 1989, to $490.7 million. Nonresidential remodeling and reconstruction work dropped 8.3 percent, to $350.3 million in 1990. Residential construction authorized by building permits increased 6.3 percent in 1990.

VALUE OF NONRESIDENTIAL BUILDING PERMITS ISSUED IN ALABAMA (IN THOUSANDS)

| *Construction Category* | *1989* | *Preliminary 1990* | *Percent Change* |
|---|---|---|---|
| Single Family Houses | $505,875 | $519,189 | 2.6% |
| Two-Family Buildings | 3,638 | 5,239 | 44.0 |
| Three- and Four-Family Buildings | 12,006 | 5,563 | -53.7 |
| Five-or-more Family Buildings | 73,706 | 102,478 | 39.0 |

# ALASKA ECONOMIC FACT SHEET

This economic fact sheet contains the latest economic data available as of February, 1991.

## CONSTRUCTION EMPLOYMENT

- Construction employment in Alaska has decreased rapidly from 20,400 in 1984 to 9,000 in 1988, rebounding slightly to 9,800 in 1989.

- As of December, 1990 construction employment had risen to 9,100 (not seasonally adjusted), an increase over December's employment level one year earlier.

- Construction employment was 9.0% of total state employment in 1984. In 1989, construction accounted for 4.3% of the 227,300 people employed in Alaska.

ALASKA EMPLOYMENT

| *Year* | *Construction* | *Total* | *Constr Pct of Total* |
|---|---|---|---|
| 1984 | 20,400 | 225,700 | 9.0 |
| 1985 | 18,600 | 230,700 | 8.1 |
| 1986 | 13,400 | 220,700 | 6.1 |
| 1987 | 10,100 | 210,100 | 4.8 |
| 1988 | 9,000 | 213,700 | 4.2 |
| 1989 | 9,800 | 227,300 | 4.3 |
| December, 1989 | 8,100 | 221,200 | 3.7 |
| December, 1990 | 9,100 | 227,100 | 4.0 |

Bureau of Labor Statistics, U.S. Department of Labor

## ALASKA UNEMPLOYMENT RATE

- In 1990, the unemployment rate for all private nonagricultural wage and salary workers in Alaska was 6.9% (6.7% in 1989), as compared to the national average rate of 5.5% in 1990 (5.3% in 1989).

- In 1990, 18,000 people were unemployed in the state. 12,000 people were unemployed in the state in 1989, including 2,000 construction workers.

- The **construction** unemployment rate in Alaska was 19.1% in 1989 (29.7% in 1988). The **national** average construction unemployment rate increased to 11.1% in **1990** from 10.0% in 1989 (10.6% in 1988).

## ECONOMIC IMPACT OF CONSTRUCTION ON ALASKA

- Each $1 spent on new construction in Alaska generates a total of $1.6564 in economic activity in both industries and services in the state. This ratio is used to estimate the impact of new construction on the state's economy. For example, a $20 million project would result in a $33,128,000 increase in the state's economy ($20 million X the 1.6564 multiplier). This total includes the original $20 million project.

- Each additional $1 million spent on new construction in Alaska creates 15.4 jobs. For example, a $20 million new construction project would create 308 jobs in the state in both construction, supplier, and service industries ($20 X 15.4 jobs/million).

- For each $1 of new construction, the earnings of households in the state is increased by $.5317. For example, a $20 million construction project would increase the total household earnings in the state by $10,634,000 ($20 million X $.5317). Both construction workers and employees of other industries benefit from this increased standard of living, and this figure also shows that the tax base of the state is increased.

Note: Figures from 1988 Regional Input-Output Modeling System (RIMS II), Bureau of Economic Analysis, U.S. Department of Commerce

## CONSTRUCTION'S SHARE OF ALASKA'S ECONOMY

- The total construction industry payroll in Alaska in 1989 was $411,988,000, 9.3 percent of the state's total private industry payroll.

- In Alaska, construction (including homebuilding, nonresidential building and nonbuilding work) comprised 10.1% of the state's gross product in 1986. For the entire Far West region (CA,NV,OR,WA,AK,HI), construction made up 4.6% of the region's economy. This very useful data, the first of its kind computed on a state-by-state basis, is not available for more recent years due to federal budget cuts.

CONSTRUCTION'S SHARE OF GROSS PRODUCT

| | *1982* | *1983* | *1984* | *1985* | *1986* |
|---|---|---|---|---|---|
| ALASKA | 12.0% | 14.6% | 14.0% | 11.8% | 10.1% |
| FAR WEST | 4.5 | 4.3 | 4.5 | 4.5 | 4.6 |
| UNITED STATES | 4.5 | 4.5 | 4.6 | 4.7 | 4.7 |

Bureau of Economic Analysis, U.S. Department of Commerce

Note: These numbers do not include the value of supplies and equipment used in construction; for example, steel used in construction is counted as part of the steel industry rather than in the construction total. When the total value of construction is taken into account, AGC has estimated that construction accounts for 10% of the gross national product.

## NONRESIDENTIAL BUILDING PERMITS IN ALASKA

- In 1990, the value of nonresidential building permits issued for new construction increased 59.1 percent from 1989, to $62.9 million. Nonresidential remodeling and reconstruction work increased by 19.7 percent, to $48.6 million in 1990.

- Residential construction authorized by building permits increased 56.6 percent in 1990.

VALUE OF NONRESIDENTIAL BUILDING PERMITS ISSUED IN ALASKA (IN THOUSANDS)

| *Construction Category* | *1989* | *Preliminary 1990* | *Percent Change* |
|---|---|---|---|
| Single Family Houses | $49,520 | $84,382 | 70.0% |
| Two-Family Buildings | 4,642 | 7,045 | 51.8 |

# ARIZONA ECONOMIC FACT SHEET

This economic fact sheet contains the latest economic data available as of February, 1991.

## CONSTRUCTION EMPLOYMENT

- Construction employment in Arizona increased from 97,000 in 1984 to 113,100 in 1986, then declined to 85,900 in 1989.
- In December, 1990, the construction industry in Arizona employed 2,300 fewer workers than one year earlier (monthly data not seasonally adjusted).
- Construction employment was 8.2% of total state employment in 1984. In 1989, construction accounted for 5.9% of the 1.5 million people employed in Arizona.

ARIZONA EMPLOYMENT

| *Year* | *Construction* | *Total* | *Constr Pct of Total* |
|---|---|---|---|
| 1984 | 97,000 | 1,181,900 | 8.2% |
| 1985 | 112,100 | 1,278,600 | 8.8 |
| 1986 | 113,100 | 1,337,800 | 8.5 |

## ARIZONA UNEMPLOYMENT RATE

- In 1990, the unemployment rate in Arizona was 5.3% (5.2% in 1989, 6.1% in 1988), as compared to the national average rate of 5.5% (5.3% in 1989, 5.5% in 1988).
- In 1990, 92,000 people were unemployed in the state. 89,000 people were unemployed in the state in 1989, including 12,000 construction workers.
- The **construction** unemployment rate in Arizona was 11.9% in 1989 (10.6% in 1988). The **national** average construction unemployment rate increased to 11.1% in **1990** from 10.0% in 1989 (10.6% in 1988).

## ECONOMIC IMPACT OF CONSTRUCTION ON ARIZONA

- Each $1 spent on new construction in Arizona generates a total of $2.0866 in economic activity in both industries and services in the state. This ratio is used to estimate the impact of new construction on the state's economy. For example, a $20 million project would result in a $41,732,000 increase in the state's economy ($20 million X the 2.0866 multiplier). This total includes the original $20 million project.
- Each additional $1 million spent on new construction in Arizona creates 32.9 jobs. For example, a $20 million new construction project would create 658 jobs in the state in construction, supplier, and service industries ($20 X 32.9 jobs/million).

- For each $1 of new construction, the earnings of households in the state is increased by $.6987. For example, a $20 million construction project would increase the total household earnings in the state by $13,974,000 ($20 million X $.6987). Both construction workers and employees of other industries benefit from this increased standard of living, and this figure also shows that the tax base of the state is increased.

Note: Figures from 1988 Regional Input-Output Modeling System (RIMS II), Bureau of Economic Analysis, U.S. Department of Commerce.

## CONSTRUCTION'S SHARE OF ARIZONA'S ECONOMY

- The total construction industry payroll in Arizona in 1989 was $1,863,958,000, 7.5 percent of the state's total private industry payroll.

- In Arizona, construction (including homebuilding, nonresidential building and nonbuilding work) comprised 10.0% of the state's gross product in 1986. On average in the Southwest states (AZ,NM,OK,TX), construction grew from 5.9% in 1982 to 6.1% in 1984, then dropped back to 5.9% by 1986. This very useful data, the first of its kind computed on a state-by-state basis, is not available for more recent years due to federal budget cuts.

CONSTRUCTION'S SHARE OF GROSS PRODUCT

| | *1982* | *1983* | *1984* | *1985* | *1986* |
|---|---|---|---|---|---|
| ARIZONA | 8.6% | 9.2% | 10.0% | 10.4% | 10.0% |
| SOUTHWEST | 5.9 | 6.0 | 6.1 | 6.0 | 5.9 |
| UNITED STATES | 4.5 | 4.5 | 4.6 | 4.7 | 4.7 |

Bureau of Economic Analysis, U.S. Department of Commerce

Note: These numbers do not include the value of supplies and equipment used in construction; for example, steel used in construction is counted as part of the steel industry rather than in the construction total. When the total value of construction is taken into account, AGC has estimated that construction accounts for 10% of the gross national product.

## NONRESIDENTIAL BUILDING PERMITS IN ARIZONA

- In 1990, the value of nonresidential building permits issued for new construction dropped 23.2 percent from 1989, to $725 million. Nonresidential remodeling and reconstruction work increased 18.4 percent, to $409.6 million in 1990. Residential construction authorized by building permits increased 0.7 percent in 1990.

VALUE OF NONRESIDENTIAL BUILDING PERMITS ISSUED IN ARIZONA (IN THOUSANDS)

| *Construction Category* | *1989* | *Preliminary 1990* | *Percent Change* |
|---|---|---|---|
| Single Family Houses | $1,790,603 | $1,767,068 | -1.3% |

## ARKANSAS UNEMPLOYMENT RATE

- In 1990, the unemployment rate in Arkansas was 6.9% (7.2% in 1989, 7.9% in 1988), as compared to the national average rate of 5.5% (5.3% in 1989, 5.5% in 1988).
- In 1990, 78,000 people were unemployed in the state. 82,000 people were unemployed in the state in 1989, including 7,000 construction workers.
- The **construction** unemployment rate in Arkansas was 14.3% in 1989 (10.6% in 1988). The **national** average construction unemployment rate increased to 11.1% in **1990** from 10.0% in 1989 (10.6% in 1988).

## ECONOMIC IMPACT OF CONSTRUCTION ON ARKANSAS

- Each $1 spent on new construction in Arkansas generates a total of $2.3166 in economic activity in both industries and services in the state. This ratio is used to estimate the impact of new construction on the state's economy. For example, a $20 million project would result in a $46,332,000 increase in the state's economy ($20 million X the 2.3166 multiplier). This total includes the original $20 million project.
- Each additional $1 million spent on new construction in Arkansas creates 40.6 jobs. For example, a $20 million new construction project would create 812 jobs in the state in construction, supplier, and service industries ($20 X 40.6 jobs/million).

- For each $1 of new construction, the earnings of households in the state is increased by $.7287. For example, a $20 million construction project would increase the total household earnings in the state by $14,574,000 ($20 million X $.7287). Both construction workers and employees of other industries benefit from this increased standard of living, and this figure also shows that the tax base of the state is increased.

Note: Figures from 1988 Regional Input-Output Modeling System (RIMS II), Bureau of Economic Analysis, U.S. Department of Commerce.

## CONSTRUCTION'S SHARE OF THE ARKANSAS ECONOMY

- The total construction payroll in Arkansas in 1989 was $603,915,000, 4.8 percent of the state's total private industry payroll.

- In Arkansas, construction (including homebuilding, nonresidential building and nonbuilding work) comprised 4.9% of the state's gross product in 1986. On average in the Southeast states (AL,AR,FL,GA,KY, LA,MS,NC,SC,TN,VA,WV), construction grew from 5.1% in 1982 to 5.3% in 1986. This very useful data, the first of its kind computed on a state-by-state basis, is not available for more recent years due to federal budget cuts.

CONSTRUCTION'S SHARE OF GROSS PRODUCT

| | *1982* | *1983* | *1984* | *1985* | *1986* |
|---|---|---|---|---|---|
| ARKANSAS | 4.7% | 4.5% | 4.6% | 4.8% | 4.9% |
| SOUTHEAST | 5.1 | 4.9 | 5.1 | 5.2 | 5.3 |
| UNITED STATES | 4.5 | 4.5 | 4.6 | 4.7 | 4.7 |

Bureau of Economic Analysis, U.S. Department of Commerce

Note: These numbers do not include the value of supplies and equipment used in construction; for example, steel used in construction is counted as part of the steel industry rather than in the construction total. When the total value of construction is taken into account, AGC has estimated that construction accounts for 10% of the gross national product.

## NONRESIDENTIAL BUILDING PERMITS IN ARKANSAS

- In 1990, the value of nonresidential building permits issued for new construction increased 30.6 percent from 1989, to $328.5 million. Nonresidential remodeling and reconstruction work increased 31.2 percent, to $149.9 million in 1990. Residential construction authorized by building permits increased 5.7 percent in 1990.

VALUE OF NONRESIDENTIAL BUILDING PERMITS ISSUED IN ARKANSAS (IN THOUSANDS)

| *Construction Category* | *1989* | *Preliminary 1990* | *Percent Change* |
|---|---|---|---|
| Single Family Houses | $273,883 | $307,242 | 12.2% |

## CALIFORNIA UNEMPLOYMENT RATE

- In 1990, the unemployment rate in California was 5.6% (5.1% in 1989, 5.2% in 1988), as compared to the national average rate of 5.5% (5.3% in 1989, 5.5% in 1988).
- In 1990, 823,000 people were unemployed in the state. 737,000 people were unemployed in the state in 1989, including 56,000 construction workers.
- The **construction** unemployment rate in California was 7.2% in 1989 (8.5% in 1988). The **national** average construction unemployment rate increased to 11.1% in **1990** from 10.0% in 1989 (10.6% in 1988).

## ECONOMIC IMPACT OF CONSTRUCTION ON CALIFORNIA

- Each $1 spent on new construction in California generates a total of $2.4516 in economic activity in both industries and services in the state. This ratio is used to estimate the impact of new construction on the state's economy. For example, a $20 million project would result in a $49,032,000 increase in the state's economy ($20 million X the 2.4516 multiplier). This total includes the original $20 million project.

- Each additional $1 million spent on new construction in California creates 29.2 jobs. For example, a $20 million new construction project would create 584 jobs in the state in construction, supplier, and service industries ($20 X 29.2 jobs/million).

- For each $1 of new construction, the earnings of households in the state is increased by $.7954. For example, a $20 million construction project would increase the total household earnings in the state by $15,908,000 ($20 million X $.7954). Both construction workers and employees of other industries benefit from this increased standard of living, and this figure also shows that the tax base of the state is increased. Note: Figures from 1988 Regional Input-Output Modeling System (RIMS II), Bureau of Economic Analysis, U.S. Department of Commerce.

## CONSTRUCTION'S SHARE OF CALIFORNIA'S ECONOMY

- The total construction industry payroll in California in 1989 was $18,472,992,000, 6.8 percent of the state's total private industry payroll.

- In California, construction (including homebuilding, nonresidential building and nonbuilding work) increased from 4.1% of the state's gross product in 1982 to 4.5% in 1986. California's economy was 12.6 percent of the U.S. GNP in 1986. This very useful data, the first of its kind computed on a state-by-state basis, is not available for more recent years due to federal budget cuts.

CONSTRUCTION'S SHARE OF GROSS PRODUCT

| | *1982* | *1983* | *1984* | *1985* | *1986* |
|---|---|---|---|---|---|
| CALIFORNIA | 4.1% | 4.0% | 4.3% | 4.3% | 4.5% |

| Denver | 32,800 | 30,900 | 33,500 |

Bureau of Labor Statistics, U.S. Department of Labor

## COLORADO UNEMPLOYMENT RATE

- In 1990, the unemployment rate in Colorado was 4.9% (5.9% in 1989, 6.5% in 1988), as compared to the national average rate of 5.5% (5.3% in 1989, 5.5% in 1988).
- In 1990, 87,000 people were unemployed in the state. 98,000 people were unemployed in the state in 1989, including 9,000 construction workers.
- The construction unemployment rate in Colorado was 12.2% in 1989 (19.1% in 1988). The national average construction unemployment rate increased to 11.1% in 1990 from 10.0% in 1989 (10.6% in 1988).

## ECONOMIC IMPACT OF CONSTRUCTION ON COLORADO

- Each $1 spent on new construction in Colorado generates a total of $2.1933 in economic activity in both industries and services in the state. This ratio is used to estimate the impact of new construction on the state's economy. For example, a $20 million project would result in a $43,866,000 increase in the state's economy ($20 million X the 2.1933 multiplier). This total includes the original $20 million project.
- Each additional $1 million spent on new construction in Colorado creates 33.9 jobs. For example, a $20 million new construction project would create 678 jobs in the state in construction, supplier, and service industries ($20 X 33.9 jobs/million).
- For each $1 of new construction, the earnings of households in the state is increased by $.7259. For example, a $20 million construction project would increase the total household earnings in the state by $14,518,000.

($20 million X $.7259). Both construction workers and employees of other industries benefit from this increased standard of living, and this figure also shows that the tax base of the state is increased.

Note: Figures from 1988 Regional Input-Output Modeling System (RIMS II), Bureau of Economic Analysis, U.S. Department of Commerce.

## CONSTRUCTION'S SHARE OF COLORADO'S ECONOMY

- The total construction industry payroll in Colorado in 1989 was $1,420,746,000, 5.5 percent of the state's total private industry payroll.

- In Colorado, construction (including homebuilding, nonresidential building and nonbuilding work) dropped from 6.9% of the state's gross product in 1982 to 5.9% in 1986. Construction in the Rocky Mountain Region (CO,ID,MT,UT,WY) has declined from 7.3% of the region's economy to 6.3% in 1986. This very useful data, the first of its kind computed on a state-by-state basis, is not available for more recent years due to federal budget cuts.

CONSTRUCTION'S SHARE OF GROSS PRODUCT

| | *1982* | *1983* | *1984* | *1985* | *1986* |
|---|---|---|---|---|---|
| COLORADO | 6.9% | 6.8% | 6.7% | 6.3% | 5.9% |
| ROCKY MOUNTAIN REGION | 7.3 | 6.7 | 6.7 | 6.7 | 6.3 |
| UNITED STATES | 4.5 | 4.5 | 4.6 | 4.7 | 4.7 |

Bureau of Economic Analysis, U.S. Department of Commerce

Note: These numbers do not include the value of supplies and equipment used in construction; for example, steel used in construction is counted as part of the steel industry rather than in the construction total. When the total value of construction is taken into account, AGC has estimated that construction accounts for 10% of the gross national product.

## NONRESIDENTIAL BUILDING PERMITS IN COLORADO

- In 1990, the value of nonresidential building permits issued for new construction dropped 48.1 percent from 1989, to $277 million. Nonresidential remodeling and reconstruction work increased 0.5 percent, to $371 million in 1990. Residential construction authorized by building permits increased 19.5 percent in 1990 to $1.26 billion.

VALUE OF NONRESIDENTIAL BUILDING PERMITS ISSUED IN COLORADO (IN THOUSANDS)

| *Construction Category* | *1989* | *Preliminary 1990* | *Percent Change* |
|---|---|---|---|
| Single Family Houses | $949,238 | $1,169,745 | 23.2% |

# CONNECTICUT ECONOMIC FACT SHEET

This economic fact sheet contains the latest economic data available as of February, 1991.

## CONSTRUCTION EMPLOYMENT

- Construction employment in Connecticut steadily increased from 60,800 in 1984 to 81,300 in 1988, then declined to 76,300 in 1989.
- As of December, 1990, the construction industry in Connecticut employed 8,200 fewer workers than one year earlier (monthly data not seasonally adjusted).
- Construction employment was 4.0% of total state employment in 1984. In 1989, construction accounted for 4.5% of the almost 1.7 million people employed in Connecticut.

CONNECTICUT EMPLOYMENT

| *Year* | *Construction* | *Total* | *Constr Pct of Total* |
|---|---|---|---|
| 1984 | 60,800 | 1,520,500 | 4.0 |
| 1985 | 65,600 | 1,562,300 | 4.2 |
| 1986 | 71,300 | 1,604,200 | 4.4 |
| 1987 | 78,000 | 1,644,700 | 4.7 |
| 1988 | 81,300 | 1,674,900 | 4.9 |
| 1989 | 76,300 | 1,679,900 | 4.5 |
| December, 1989 | 71,900 | 1,701,600 | 4.2 |
| December, 1990 | 63,700 | 1,681,800 | 3.8 |

Bureau of Labor Statistics, U.S. Department of Labor

CONSTRUCTION EMPLOYMENT IN MAJOR CITIES

Bureau of Labor Statistics, U.S. Department of Labor

## CONNECTICUT UNEMPLOYMENT RATE

- In 1990, the unemployment rate in Connecticut was 5.1% (3.7% in 1989, 2.9% in 1988), as compared to the national average rate of 5.5% (5.3% in 1989, 5.5% in 1988).
- In 1990, 91,000 people were unemployed in the state. 64,000 people were unemployed in the state in 1989, including 8,000 construction workers.
- The **construction** unemployment rate in Connecticut was 8.0% in 1989 (6.8% in 1988). The **national** average construction unemployment rate increased to 11.1% in **1990** from 10.0% in 1989 (10.6% in 1988).

## ECONOMIC IMPACT OF CONSTRUCTION ON CONNECTICUT

- Each $1 spent on new construction in Connecticut generates a total of $2.1710 in economic activity in both industries and services in the state. This ratio is used to estimate the impact of new construction on the state's economy. For example, a $20 million project would result in a $43,420,000 increase in the state's economy ($20 million X the 2.1710 multiplier). This total includes the original $20 million project.
- Each additional $1 million spent on new construction in Connecticut creates 25.7 jobs. For example, a $20 million new construction project would create 514 jobs in the state in construction, supplier, and service industries ($20 X 25.7 jobs/million).

- For each $1 of new construction, the earnings of households in the state is increased by $.7280. For example, a $20 million construction project would increase the total household earnings in the state by $14,560,000 ($20 million X $.7280). Both construction workers and employees of other industries benefit from this increased standard of living, and this figure also shows that the tax base of the state is increased.

Note: Figures from 1988 Regional Input-Output Modeling System (RIMS II), Bureau of Economic Analysis, U.S. Department of Commerce.

## CONSTRUCTION'S SHARE OF CONNECTICUT'S ECONOMY

- The total construction industry payroll in Connecticut in 1989 was $2,470,312,000, 6.2 percent of the state's total private industry payroll.

- In Connecticut, construction (including homebuilding, nonresidential building and nonbuilding work) increased from 3.5% of the state's gross product in 1982 to 4.2% in 1986. On average in the New England states (CT,ME,MA,NH,RI,VT), construction grew from 3.9% in 1982 to 4.8% in 1986. This very useful data, the first of its kind computed on a state-by-state basis, is not available for more recent years due to federal budget cuts.

CONSTRUCTION'S SHARE OF GROSS PRODUCT

| | *1982* | *1983* | *1984* | *1985* | *1986* |
|---|---|---|---|---|---|
| CONNECTICUT | 3.5% | 3.9% | 4.1% | 4.1% | 4.2% |
| NEW ENGLAND | 3.9 | 4.1 | 4.3 | 4.5 | 4.8 |
| UNITED STATES | 4.5 | 4.5 | 4.6 | 4.7 | 4.7 |

Bureau of Economic Analysis, U.S. Department of Commerce

Note: These numbers do not include the value of supplies and equipment used in construction; for example, steel used in construction is counted as part of the steel industry rather than in the construction total. When the total value of construction is taken into account, AGC has estimated that construction accounts for 10% of the gross national product.

## NONRESIDENTIAL BUILDING PERMITS IN CONNECTICUT

- In 1990, the value of nonresidential building permits issued for new construction dropped 53.0 percent from 1989, to $338.7 million. Nonresidential remodeling and reconstruction work decreased slightly, 1.6 percent, to $482.6 million in 1990. Residential construction authorized by building permits dropped 26.6 percent in 1990.

VALUE OF NONRESIDENTIAL BUILDING PERMITS ISSUED IN CONNECTICUT (IN THOUSANDS)

| *Construction Category* | *1989* | *Preliminary 1990* | *Percent Change* |
|---|---|---|---|

# DELAWARE ECONOMIC FACT SHEET

This economic fact sheet contains the latest economic data available as of February, 1991.

## CONSTRUCTION EMPLOYMENT

- Construction employment in Delaware increased from 16,900 in 1984 to 21,700 in 1988, then declined to 20,400 in 1989.
- Construction employment was 5.9% of total state employment of 343,400 in 1989.
- In December, 1990, the construction industry in Delaware employed 300 fewer workers than one year earlier.

DELAWARE EMPLOYMENT

| *Year* | *Construction* | *Total* | *Constr Pct of Total* |
|---|---|---|---|
| 1984 | 16,900 | 280,000 | 6.0 |
| 1985 | 17,600 | 293,400 | 6.0 |
| 1986 | 18,900 | 303,200 | 6.2 |
| 1987 | 20,200 | 320,700 | 6.3 |
| 1988 | 21,700 | 334,200 | 6.5 |
| 1989 | 20,400 | 343,400 | 5.9 |
| December, 1989 | 19,300 | 346,900 | 5.6 |
| December, 1990 | 19,000 | 346,600 | 5.5 |

Bureau of Labor Statistics, U.S. Department of Labor

CONSTRUCTION EMPLOYMENT IN MAJOR CITIES

| *City* | *1988* | *1989* | *December,1990* |
|---|---|---|---|
| Wilmington, DE-MD-NJ | 19,300 | 18,400 | 17,100 |

Bureau of Labor Statistics, U.S. Department of Labor

## DELAWARE UNEMPLOYMENT RATE

- In 1990, the unemployment rate in Delaware was 5.1% (3.5% in 1989, 3.4% in 1988), as compared to the national average rate of 5.5% (5.3% in 1989, 5.5% in 1988).
- In 1990, 19,000 people were unemployed in the state. 13,000 people were unemployed in the state in 1989, including 2,000 construction workers.
- The construction unemployment rate in Delaware was 7.1% in 1989 (5.4% in 1988). The national average construction unemployment rate increased to 11.1% in 1990 from 10.0% in 1989 (10.6% in 1988).

## ECONOMIC IMPACT OF CONSTRUCTION ON DELAWARE

- Each $1 spent on new construction in Delaware generates a total of $1.9032 in economic activity in both industries and services in the state. This ratio is used to estimate the impact of new construction on the state's economy. For example, a $20 million project would result in a $38,064,000 increase in the state's economy ($20 million X the 1.9032 multiplier). This total includes the original $20 million project.
- Each additional $1 million spent on new construction in Delaware creates 25.5 jobs. For example, a $20 million new construction project would create 510 jobs in the state in construction, supplier, and service industries ($20 X 25.5 jobs/million).

- For each $1 of new construction, the earnings of households in the state is increased by $.6100. For example, a $20 million construction project would increase the total household earnings in the state by $12,200,000 ($20 million X $.6100). Both construction workers and employees of other industries benefit from this increased standard of living, and this figure also shows that the tax base of the state is increased.

Note: Figures from 1988 Regional Input-Output Modeling System (RIMS II), Bureau of Economic Analysis, U.S. Department of Commerce.

## CONSTRUCTION'S SHARE OF DELAWARE'S ECONOMY

- The total construction industry payroll in Delaware in 1989 was $478,777,000, 7.0 percent of the state's total private industry payroll.

- In Delaware, construction (including homebuilding, nonresidential building and nonbuilding work) comprised 4.8% of the state's gross product in 1986. On average in the Mideast states (DE,DC,MD,NJ,NY,PA), construction grew from 3.9% in 1982 to 4.5% in 1986. This very useful data, the first of its kind computed on a state-by-state basis, is not available for more recent years due to federal budget cuts.

CONSTRUCTION'S SHARE OF GROSS PRODUCT

| | *1982* | *1983* | *1984* | *1985* | *1986* |
|---|---|---|---|---|---|
| DELAWARE | 5.2% | 4.8% | 4.7% | 4.7% | 4.8% |
| MIDEAST | 3.9 | 3.9 | 4.1 | 4.3 | 4.5 |
| UNITED STATES | 4.5 | 4.5 | 4.6 | 4.7 | 4.7 |

Bureau of Economic Analysis, U.S. Department of Commerce

Note: These numbers do not include the value of supplies and equipment used in construction; for example, steel used in construction is counted as part of the steel industry rather than in the construction total. When the total value of construction is taken into account, AGC has estimated that construction accounts for 10% of the gross national product.

## NONRESIDENTIAL BUILDING PERMITS IN DELAWARE

- In 1990, the value of nonresidential building permits issued for new construction dropped 4.6 percent from 1989, to $199.9 million. Nonresidential remodeling and reconstruction work increased 10.8 percent, to $128.4 million in 1990. Residential construction authorized by building permits dropped 16.5 percent in '990.

VALUE OF NONRESIDENTIAL BUILDING PERMITS ISSUED IN DELAWARE (IN THOUSANDS)

| *Construction Category* | *1989* | *Preliminary 1990* | *Percent Change* |
|---|---|---|---|
| Single Family Houses | $296,554 | $247,352 | -16.6% |
| Two-Family Buildings | 1,383 | 2,592 | 87.4 |
| Three- and Four-Family Buildings | 4,364 | 246 | -94.4 |

# DISTRICT OF COLUMBIA ECONOMIC FACT SHEET

This economic fact sheet contains the latest economic data available as of February, 1991.

## CONSTRUCTION EMPLOYMENT

- Construction employment in the District of Columbia increased from 11,500 in 1984 to 14,700 in 1987, then declined to 14,300 in 1989.
- Construction employment was 2.1% of total District employment in 1989.
- In December, 1990, the construction industry in the District of Columbia employed 13,900, 300 fewer workers than in the same month one year earlier.

**DISTRICT OF COLUMBIA EMPLOYMENT**

| *Year* | *Construction* | *Total* | *Constr Pct of Total* |
|---|---|---|---|
| 1984 | 11,500 | 613,800 | 1.9 |
| 1985 | 13,600 | 629,000 | 2.2 |
| 1986 | 14,100 | 640,100 | 2.2 |
| 1987 | 14,700 | 655,600 | 2.2 |
| 1988 | 14,000 | 673,600 | 2.1 |
| 1989 | 14,300 | 682,500 | 2.1 |
| December, 1989 | 14,200 | 693,100 | 2.0 |
| December, 1990 | 13,900 | 687,800 | 2.0 |

Bureau of Labor Statistics, U.S. Department of Labor

**CONSTRUCTION EMPLOYMENT IN MAJOR CITIES**

| *City* | *1988* | *1989* | *December, 1990* |
|---|---|---|---|
| District of Columbia | 14,000 | 14,300 | 13,900 |
| Washington, MSA, DC-MD-VA | 141,400 | 148,500 | 129,400 |

Bureau of Labor Statistics, U.S. Department of Labor

## DISTRICT OF COLUMBIA UNEMPLOYMENT RATE

- In 1990, the unemployment rate in the District was 6.6% (5.0% in 1989, 5.8% in 1988), as compared to the national average rate of 5.5% (5.3% in 1989, 5.5% in 1988).
- In 1990, 20,000 people were unemployed in the state. 16,000 people were unemployed in the District in 1989, including 1,000 construction workers.
- The **construction** unemployment rate in the District was 10.0% in 1989 (13.4% in 1988). The **national** average construction unemployment rate increased to 11.1% in **1990** from 10.0% in 1989 (10.6% in 1988).

## ECONOMIC IMPACT OF CONSTRUCTION ON THE DISTRICT

- Each $1 spent on new construction in the District of Columbia generates a total of $1.2059 in economic activity in both industries and services in the state. This ratio is used to estimate the impact of new construction on the District's economy. For example, a $20 million project would result in a $24,118,000 increase in the District's economy ($20 million X the 1.2059 multiplier). This total includes the original $20 million project.
- Each additional $1 million spent on new construction in the District creates 5.4 jobs. For example, a $20 million new construction project would create 108 jobs in the District in construction, supplier, and service industries ($20 X 5.4 jobs/million).

- For each $1 of new construction, the earnings of households in the District is increased by $.1627. For example, a $20 million construction project would increase the total household earnings in the District by $3,254,000 ($20 million X $.1627). Both construction workers and employees of other industries benefit from this increased standard of living, and this figure also shows that the tax base of the District is increased.

Note: Figures from 1988 Regional Input-Output Modeling System (RIMS II), Bureau of Economic Analysis, U.S. Department of Commerce.

## CONSTRUCTION'S SHARE OF THE DISTRICT OF COLUMBIA'S ECONOMY

- The total construction industry payroll in the District of Columbia in 1989 was $408,820,000, 3.5 percent of the District's total private industry payroll.

- In the District of Columbia, construction (including homebuilding, nonresidential building and nonbuilding work) comprised 6.9% of the District's gross product in 1986. On average in the Mideast states (DE,DC,MD,NJ,NY,PA), construction grew from 3.9% in 1982 to 4.5% in 1986. This very useful data, the first of its kind computed on a state-by-state basis, is not available for more recent years due to federal budget cuts.

CONSTRUCTION'S SHARE OF GROSS PRODUCT

| | *1982* | *1983* | *1984* | *1985* | *1986* |
|---|---|---|---|---|---|
| DISTRICT OF COLUMBIA | 6.4% | 5.9% | 6.2% | 6.4% | 6.9% |
| MIDEAST | 3.9 | 3.9 | 4.1 | 4.3 | 4.5 |
| UNITED STATES | 4.5 | 4.5 | 4.6 | 4.7 | 4.7 |

Bureau of Economic Analysis, U.S. Department of Commerce

Note: These numbers do not include the value of supplies and equipment used in construction; for example, steel used in construction is counted as part of the steel industry rather than in the construction total. When the total value of construction is taken into account, AGC has estimated that construction accounts for 10% of the gross national product.

## NONRESIDENTIAL BUILDING PERMITS IN THE DISTRICT OF COLUMBIA

- In 1990, the value of nonresidential building permits issued for new construction dropped 51 percent from 1989. Nonresidential remodeling and reconstruction work increased 67.6 percent in 1990, while residential construction authorized by building permits increased 22.5 percent in 1990.

VALUE OF NONRESIDENTIAL BUILDING PERMITS ISSUED IN THE DISTRICT OF COLUMBIA (IN THOUSANDS)

| *Construction Category* | *1989* | *Preliminary 1990* | *Percent Change* |
|---|---|---|---|
| Single Family Houses | $6,745 | $14,212 | 110.7% |
| Two-Family Buildings | 721 | 1,092 | 51.5 |

# FLORIDA ECONOMIC FACT SHEET

This economic fact sheet contains the latest economic data available as of February, 1991.

## CONSTRUCTION EMPLOYMENT

- Construction employment in Florida increased from 318,400 in 1984 to 346,300 in 1988, then declined to 341,100 in 1989. In December, 1990, the construction industry in Florida employed 42,600 fewer workers than one year earlier (monthly data not seasonally adjusted).

- Construction employment was 6.5% of total state employment of 5.3 million in 1989.

FLORIDA EMPLOYMENT

| *Year* | *Construction* | *Total* | *Constr Pct of Total* |
|---|---|---|---|
| 1984 | 318,400 | 4,208,700 | 7.6 |
| 1985 | 334,300 | 4,410,000 | 7.6 |
| 1986 | 339,500 | 4,599,400 | 7.4 |
| 1987 | 341,500 | 4,848,100 | 7.0 |
| 1988 | 346,300 | 5,066,600 | 6.8 |
| 1989 | 341,100 | 5,276,000 | 6.5 |
| December, 1989 | 343,000 | 5,441,600 | 6.3 |
| December, 1990 | 300,400 | 5,541,600 | 5.4 |

## FLORIDA UNEMPLOYMENT RATE

- In 1990, the unemployment rate in Florida was 5.9% (5.6% in 1989, 4.9% in 1988), as compared to the national average rate of 5.5% (5.3% in 1989, 5.5% in 1988).

- In 1990, 378,000 people were unemployed in the state. 348,000 people were unemployed in the state in 1989, including 34,000 construction workers.

- The **construction** unemployment rate in Florida was 7.9% in 1989 (5.5% in 1988). The **national** average construction unemployment rate increased to 11.1% in **1990** from 10.0% in 1989 (10.6% in 1988).

## ECONOMIC IMPACT OF CONSTRUCTION ON FLORIDA

- Each $1 spent on new construction in Florida generates a total of $2.1061 in economic activity in both industries and services in the state. This ratio is used to estimate the impact of new construction on the state's economy. For example, a $20 million project would result in a $42,122,000 increase in the state's economy ($20 million X the 2.1061 multiplier). This total includes the original $20 million project.

- Each additional $1 million spent on new construction in Florida creates 35.3 jobs. For example, a $20 million new construction project would create 706 jobs in the state in construction, supplier, and service industries ($20 X 35.3 jobs million).

- For each $1 of new construction, the earnings of households in the state is increased by $.7120. For example, a $20 million construction project would increase the total household earnings in the state by $14,240,000 ($20 million X $.7120). Both construction workers and employees of other industries benefit from this increased standard of living, and this figure also shows that the tax base of the state is increased. Note: Figures from 1988 Regional Input-Output Modeling System (RIMS II), Bureau of Economic Analysis, U.S. Department of Commerce.

## CONSTRUCTION'S SHARE OF FLORIDA'S ECONOMY

- The total construction industry payroll in Florida in 1989 was $7,120,789,000, 8.1 percent of the state's total private industry payroll.

- In Florida, construction (including homebuilding, nonresidential building and nonbuilding work) comprised 7.3% of the state's gross product in 1986. On average in the Southeast states (AL,AR,FL,GA,KY, LA,MS,NC,SC,TN,VA,WV), construction grew from 5.1% in 1982 to 5.3% in 1986. This very useful data, the first of its kind computed on a state-by-state basis, is not available for more recent years due to federal budget cuts.

CONSTRUCTION'S SHARE OF GROSS PRODUCT

| | *1982* | *1983* | *1984* | *1985* | *1986* |
|---|---|---|---|---|---|
| FLORIDA | 7.3% | 7.0% | 7.5% | 7.4% | 7.3% |
| SOUTHEAST | 5.1 | 4.9 | 5.1 | 5.2 | 5.3 |
| UNITED STATES | 4.5 | 4.5 | 4.6 | 4.7 | 4.7 |

Bureau of Economic Analysis, U.S. Department of Commerce

Note: These numbers do not include the value of supplies and equipment used in construction; for example, steel used in construction is counted as part of the steel industry rather than in the construction total. When the total value of construction is taken into account, AGC has estimated that construction accounts for 10% of the gross national product.

## NONRESIDENTIAL BUILDING PERMITS IN FLORIDA

- In 1990, the value of nonresidential building permits issued for new construction dropped 24.4 percent from 1989, to $3.0 billion. Nonresidential remodeling and reconstruction work increased 4.4 percent, to $1.7 billion in 1990. Residential construction authorized by building permits dropped 19.5 percent in 1990.

VALUE OF NONRESIDENTIAL BUILDING PERMITS ISSUED IN FLORIDA (IN THOUSANDS)

| *Construction Category* | *1989* | *Preliminary 1990* | *Percent Change* |
|---|---|---|---|
| Single Family Houses | $7,965,635 | $6,536,717 | -17.9% |
| Two-Family Buildings | 155,690 | 104,935 | -32.6 |

# GEORGIA ECONOMIC FACT SHEET

This economic fact sheet contains the latest economic data available as of February, 1991.

## CONSTRUCTION EMPLOYMENT

- Annual average construction employment in Georgia declined to 146,500 in 1989.
- As of December, 1990, the construction industry in Georgia employed 10,900 fewer workers than one year earlier (monthly data not seasonally adjusted).
- Construction employment was 5.4% of total state employment in 1984. In 1989, construction accounted for 5.0% of the over 2.9 million people employed in Georgia.

GEORGIA EMPLOYMENT

| *Year* | *Construction* | *Total* | *Constr Pct of Total* |
|---|---|---|---|
| 1984 | 131,500 | 2,448,700 | 5.4 |
| 1985 | 143,800 | 2,569,800 | 5.6 |
| 1986 | 151,900 | 2,672,400 | 5.7 |
| 1987 | 151,500 | 2,763,300 | 5.5 |
| 1988 | 149,800 | 2,879,100 | 5.2 |
| 1989 | 146,500 | 2,945,400 | 5.0 |
| December, 1989 | 148,700 | 3,014,100 | 4.9 |
| December, 1990 | 137,800 | 3,013,700 | 4.6 |

Bureau of Labor Statistics, U.S. Department of Labor

## GEORGIA UNEMPLOYMENT RATE

- In 1990, the unemployment rate in Georgia was 5.4% (5.5% in 1989) as compared to the national average rate of 5.5% (5.3% in 1989).
- In 1990, 175,000 people were unemployed in the state. 177,000 people were unemployed in the state in 1989, including 9,000 construction workers.
- The **construction** unemployment rate in Georgia was 5.5% in 1989. The **national** average construction unemployment rate increased to 11.1% in **1990** from 10.0% in 1989 (10.6% in 1988).

## ECONOMIC IMPACT OF CONSTRUCTION ON GEORGIA

- Each $1 spent on new construction in Georgia generates a total of $2.4854 in economic activity in both industries and services in the state. This ratio is used to estimate the impact of new construction on the state's economy. For example, a $20 million project would result in a $49,708,000 increase in the state's economy ($20 million X the 2.4686 multiplier). This total includes the original $20 million project.
- Each additional $1 million spent on new construction in Georgia creates 37.2 jobs. For example, a $20 million new construction project would create 744 jobs in the state in construction, supplier, and service industries ($20 X 37.2 jobs/million).

- For each $1 of new construction, the earnings of households in the state is increased by $.7947. For example, a $20 million construction project would increase the total household earnings in the state by $15,894,000 ($20 million X $.7947). Both construction workers and employees of other industries benefit from this increased standard of living, and this figure also shows that the tax base of the state is increased. Note: Figures from 1988 Regional Input-Output Modeling System (RIMS II), Bureau of Economic Analysis, U.S. Department of Commerce.

## CONSTRUCTION'S SHARE OF GEORGIA'S ECONOMY

- The total construction industry payroll in Georgia in 1989 was $3,094,774,000, 6.1 percent of the state's total private industry payroll.

- In Georgia, construction (including homebuilding, nonresidential building and nonbuilding work) comprised 5.4% of the state's gross product in 1986. Over the same five years, U.S. construction increased from 4.5% of gross product in 1982 to 4.7% in 1986. This very useful data, the first of its kind computed on a state-by-state basis, is not available for more recent years due to federal budget cuts.

CONSTRUCTION'S SHARE OF GROSS PRODUCT

| | *1982* | *1983* | *1984* | *1985* | *1986* |
|---|---|---|---|---|---|
| **GEORGIA** | **4.6%** | **4.5%** | **5.0%** | **5.2%** | **5.4%** |
| SOUTHEAST | 5.1 | 4.9 | 5.1 | 5.2 | 5.3 |
| UNITED STATES | 4.5 | 4.5 | 4.6 | 4.7 | 4.7 |

Bureau of Economic Analysis, U.S. Department of Commerce

Note: These numbers do not include the value of supplies and equipment used in construction; for example, steel used in construction is counted as part of the steel industry rather than in the construction total. When the total value of construction is taken into account, AGC has estimated that construction accounts for 10% of the gross national product.

## NONRESIDENTIAL BUILDING PERMITS IN GEORGIA

- In 1990, the value of nonresidential building permits issued for new construction dropped 18.2 percent from 1989, to $1.5 billion. Nonresidential remodeling and reconstruction work dropped only slightly, .9 percent, to $772.7 million in 1990. Residential construction authorized by building permits dropped 13.5 percent in 1990.

- The largest percentage drop was in hotel and motel construction, a 72.7 percent decline from $185 million in 1989 to $50.6 million in 1990.

VALUE OF NONRESIDENTIAL BUILDING PERMITS ISSUED IN GEORGIA (IN THOUSANDS)

| *Construction Category* | *1989* | *Preliminary 1990* | *Percent Change* |
|---|---|---|---|
| Single Family Houses | $2,640,386 | $2,429,513 | -8.0% |

# HAWAII ECONOMIC FACT SHEET

This economic fact sheet contains the latest economic data available as of February, 1991.

## CONSTRUCTION EMPLOYMENT

- Construction employment in Hawaii has increased from 15,800 in 1984 to 29,200 in 1989.
- In December, 1990, the construction industry in Hawaii employed 700 fewer workers than in December, 1989 (monthly data not seasonally adjusted).
- Construction employment was 3.8% of total state employment in 1984. In 1989, construction accounted for 5.8% of the 504,800 people employed in Hawaii.

HAWAII EMPLOYMENT

| *Year* | *Construction* | *Total* | *Constr Pct of Total* |
|---|---|---|---|
| 1984 | 15,800 | 412,700 | 3.8 |
| 1985 | 17,200 | 425,700 | 4.0 |
| 1986 | 18,600 | 438,600 | 4.2 |
| 1987 | 21,200 | 460,000 | 4.6 |
| 1988 | 23,400 | 478,100 | 4.9 |
| 1989 | 29,200 | 504,800 | 5.8 |
| December, 1989 | 30,800 | 518,000 | 5.9 |
| December, 1990 | 30,100 | 530,000 | 5.7 |

Bureau of Labor Statistics, U.S. Department of Labor

CONSTRUCTION EMPLOYMENT IN MAJOR CITIES

| *City* | *1988* | *1989* | *December, 1990* |
|---|---|---|---|
| Honolulu | 18,400 | 22,500 | 22,400 |

Bureau of Labor Statistics, U.S. Department of Labor

## HAWAII UNEMPLOYMENT RATE

- In 1990, the unemployment rate in Hawaii was 2.8% (2.6% in 1989, 3.6% in 1988), as compared to the national average rate of 5.5% (5.3% in 1989, 5.5% in 1988).
- In 1990, 15,000 people were unemployed in the state. 13,000 people were unemployed in the state in 1989, including 2,000 construction workers.
- The **construction** unemployment rate in Hawaii was 4.7% in 1989 (9.5% in 1988). The **national** average construction unemployment rate increased to 11.1% in **1990** from 10.0% in 1989 (10.6% in 1988).

## ECONOMIC IMPACT OF CONSTRUCTION ON HAWAII

- Each $1 spent on new construction in Hawaii generates a total of $1.8201 in economic activity in both industries and services in the state. This ratio is used to estimate the impact of new construction on the state's economy. For example, a $20 million project would result in a $36,402,000 increase in the state's economy ($20 million X the 1.8201 multiplier). This total includes the original $20 million project.
- Each additional $1 million spent on new construction in Hawaii creates 22.6 jobs. For example, a $20 million new construction project would create 452 jobs in the state in construction, supplier, and service industries ($20 X 22.6 jobs/million).
- For each $1 of new construction, the earnings of households in the state is increased by $.6218. For example, a $20 million construction project would increase the total household earnings in the state by $12,436,000

($20 million X $.6218). Both construction workers and employees of other industries benefit from this increased standard of living, and this figure also shows that the tax base of the state is increased.

Note: Figures from 1988 Regional Input-Output Modeling System (RIMS II), Bureau of Economic Analysis, U.S. Department of Commerce.

## CONSTRUCTION'S SHARE OF HAWAII'S ECONOMY

- The total construction industry payroll in Hawaii in 1989 was $976,340,000, 11.4 percent of the state's total private industry payroll.

- In Hawaii, construction (including homebuilding, nonresidential building and nonbuilding work) comprised 6.1% of the state's gross product in 1986. For the entire Far West region (CA,NV,OR,WA,AK,HI), construction comprises 4.6% of the economy. This very useful data, the first of its kind computed on a state-by-state basis, is not available for more recent years due to federal budget cuts.

**CONSTRUCTION'S SHARE OF GROSS PRODUCT**

| | *1982* | *1983* | *1984* | *1985* | *1986* |
|---|---|---|---|---|---|
| HAWAII | 6.3% | 6.4% | 5.7% | 5.8% | 6.1% |
| FAR WEST | 4.5 | 4.3 | 4.5 | 4.5 | 4.6 |
| UNITED STATES | 4.5 | 4.5 | 4.6 | 4.7 | 4.7 |

Bureau of Economic Analysis, U.S. Department of Commerce

Note: These numbers do not include the value of supplies and equipment used in construction; for example, steel used in construction is counted as part of the steel industry rather than in the construction total. When the total value of construction is taken into account, AGC has estimated that construction accounts for 10% of the gross national product.

## NONRESIDENTIAL BUILDING PERMITS IN HAWAII

- In 1990, the value of nonresidential building permits issued for new construction increased 15.8 percent from 1989, to $573 million. Nonresidential remodeling and reconstruction work dropped 10.1 percent, to $224 million in 1990. Residential construction authorized by building permits increased 5.1 percent in 1990.

**VALUE OF NONRESIDENTIAL BUILDING PERMITS ISSUED IN HAWAII (IN THOUSANDS)**

| *Construction Category* | *1989* | *Preliminary 1990* | *Percent Change* |
|---|---|---|---|
| Single Family Houses | $574,872 | $633,269 | 10.2% |
| Two-Family Buildings | 24,945 | 34,926 | 40.2 |

# IDAHO ECONOMIC FACT SHEET

This economic fact sheet contains the latest economic data available as of February, 1991.

## CONSTRUCTION EMPLOYMENT

- Construction employment in Idaho reached 16,000 in 1989.
- In December, 1990, the construction industry in Idaho employed 2,200 more workers than one year earlier (monthly data not seasonally adjusted).
- Construction employment was 4.4% of total state employment in 1984, dropped to 4.1% of employment in 1987 and 1988, then recovered to 4.4 percent of total state employment in 1989.

IDAHO EMPLOYMENT

| *Year* | *Construction* | *Total* | *Constr Pct of Total* |
|---|---|---|---|
| 1984 | 14,600 | 330,500 | 4.4 |
| 1985 | 15,100 | 336,000 | 4.5 |
| 1986 | 14,600 | 328,200 | 4.4 |
| 1987 | 13,600 | 333,400 | 4.1 |
| 1988 | 14,200 | 348,500 | 4.1 |
| 1989 | 16,000 | 367,400 | 4.4 |
| December, 1989 | 17,000 | 380,100 | 4.5 |
| December, 1990 | 19,200 | 393,600 | 4.9 |

CONSTRUCTION EMPLOYMENT IN MAJOR CITIES

| *City* | *1988* | *1989* | *December, 1990* |
|---|---|---|---|
| *Boise* | *4,800* | *5,600* | *6,300* |

Bureau of Labor Statistics, U.S. Department of Labor

## IDAHO UNEMPLOYMENT RATE

- In 1990, the unemployment rate in Idaho was 5.8% (5.1% in 1989, 6.2% in 1988), as compared to the national average rate of 5.5% (5.3% in 1989, 5.5% in 1988).
- In 1990, 29,000 people were unemployed in the state. 25,000 people were unemployed in the state in 1989, including 3,000 construction workers.
- The **construction** unemployment rate in Idaho was 12.9% in 1989 (13.6% in 1988. The **national** average construction unemployment rate increased to 11.1% in **1990** from 10.0% in 1989 (10.6% in 1988).

## ECONOMIC IMPACT OF CONSTRUCTION ON IDAHO

- Each $1 spent on new construction in Idaho generates a total of $1.9788 in economic activity in both industries and services in the state. This ratio is used to estimate the impact of new construction on the state's economy. For example, a $20 million project would result in a $39,576,000 increase in the state's economy ($20 million X the 1.9788 multiplier). This total includes the original $20 million project.
- Each additional $1 million spent on new construction in Idaho creates 33.0 jobs. For example, a $20 million new construction project would create 660 jobs in the state in construction, supplier, and service industries ($20 X 33.0 jobs/million).
- For each $1 of new construction, the earnings of households in the state is increased by $.6627. For example, a $20 million construction project would increase the total household earnings in the state by $13,254,000.

($20 million X $.6627). Both construction workers and employees of other industries benefit from this increased standard of living, and this figure also shows that the tax base of the state is increased.

Note: Figures from 1988 Regional Input-Output Modeling System (RIMS II), Bureau of Economic Analysis, U.S. Department of Commerce.

## CONSTRUCTION'S SHARE OF IDAHO'S ECONOMY

- The total construction industry payroll in Idaho in 1989 was $357,045,000, 6.8 percent of the state's total private industry payroll.

- In Idaho, construction (including homebuilding, nonresidential building and nonbuilding work) has drifted downward from 3.7% of the state's gross product in 1982 to 3.3% in 1986. Construction in the Rocky Mountain Region (CO,ID,MT,UT,WY) has declined from 7.3% of the region's economy to 6.3% in 1986.This very useful data, the first of its kind computed on a state-by-state basis, is not available for more recent years due to federal budget cuts.

**CONSTRUCTION'S SHARE OF GROSS PRODUCT**

| | *1982* | *1983* | *1984* | *1985* | *1986* |
|---|---|---|---|---|---|
| IDAHO | 3.7% | 3.2% | 3.4% | 3.3% | 3.3% |
| ROCKY MOUNTAIN REGION | 7.3 | 6.7 | 6.7 | 6.7 | 6.3 |
| UNITED STATES | 4.5 | 4.5 | 4.6 | 4.7 | 4.7 |

Bureau of Economic Analysis, U.S. Department of Commerce

Note: These numbers do not include the value of supplies and equipment used in construction; for example, steel used in construction is counted as part of the steel industry rather than in the construction total. When the total value of construction is taken into account, AGC has estimated that construction accounts for 10% of the gross national product.

## NONRESIDENTIAL BUILDING PERMITS IN IDAHO

- In 1990, the value of nonresidential building permits issued for new construction increased 18.3 percent from 1989, to $183 million. Nonresidential remodeling and reconstruction work increased 15.7 percent to $90 million in 1990.

- Residential construction authorized by building permits increased 22.4 percent in 1990.

**VALUE OF NONRESIDENTIAL BUILDING PERMITS ISSUED IN IDAHO (IN THOUSANDS)**

| *Construction Category* | *1989* | *Preliminary 1990* | *Percent Change* |
|---|---|---|---|
| Single Family Houses | $308,143 | $381,888 | 23.9% |
| Two-Family Buildings | 4,030 | 10,274 | 154.9 |
| Three- and Four-Family Buildings | 6,075 | 8,912 | 46.7 |
| Five-or-more Family Buildings | 24,246 | 18,117 | -25.3 |
| **Total Residential Buildings** | 342,494 | 419,191 | 22.4 |
| **Additions, Alterations, Residential** | 39,179 | 41,146 | 5.0 |
| | | | |
| Hotels, Motels | 9,495 | 10,555 | 11.2 |
| Other Nonhousekeeping | 743 | 510 | -31.4 |
| Amusement, Social, Recreational | 6,303 | 5,948 | -5.6 |
| Churches | 3,952 | 7,396 | 87.1 |
| Industrial Buildings | 19,024 | 40,551 | 113.2 |
| Parking Garages | 57 | 27 | -52.6 |
| Service Stations, Repair Garages | 2,013 | 2,357 | 17.1 |
| Hospitals, Institutional Buildings | 1,403 | 1,846 | 31.6 |
| Office, Bank, Professional Buildings | 34,639 | 39,647 | 14.5 |
| Public Works, Utilities Buildings | 455 | 3,094 | 580.0 |

# ILLINOIS ECONOMIC FACT SHEET

This economic fact sheet contains the latest economic data available as of February, 1991.

## CONSTRUCTION EMPLOYMENT

- Construction employment in Illinois increased steadily from 154,700 in 1984 to 209,500 in 1989.
- In December, 1990, the construction industry in Illinois employed 700 more employees than one year earlier (monthly data not seasonally adjusted).
- Construction employment was 3.3% of total state employment in 1984. In 1989, construction accounted for 4.0% of the almost 5.2 million people employed in Illinois.

**ILLINOIS EMPLOYMENT**

| *Year* | *Construction* | *Total* | *Constr Pct of Total* |
|---|---|---|---|
| 1984 | 154,700 | 4,672,300 | 3.3 |
| 1985 | 171,600 | 4,755,300 | 3.6 |
| 1986 | 181,300 | 4,790,700 | 3.8 |
| 1987 | 196,200 | 4,928,300 | 4.0 |

## ILLINOIS UNEMPLOYMENT RATE

- In 1990, the unemployment rate in Illinois was 6.2% (5.7% in 1989, 6.6% in 1988), as compared to the national average rate of 5.5% (5.3% in 1989, 5.5% in 1988).
- In 1990, 371,000 people were unemployed in the state. 359,000 people were unemployed in the state in 1989, including 29,000 construction workers.
- The **construction** unemployment rate in Illinois was 10.5% in 1989 (12.8% in 1988). The **national** average construction unemployment rate increased to 11.1% in **1990** from 10.0% in 1989 (10.6% in 1988).

## ECONOMIC IMPACT OF CONSTRUCTION ON ILLINOIS

- Each $1 spent on new construction in Illinois generates a total of $2.6145 in economic activity in both industries and services in the state. This ratio is used to estimate the impact of new construction on the state's economy. For example, a $20 million project would result in a $52,290,000 increase in the state's economy ($20 million X the 2.6145 multiplier). This total includes the original $20 million project.
- Each additional $1 million spent on new construction in Illinois creates 31.2 jobs. For example, a $20 million new construction project would create 624 jobs in the state in construction, supplier, and service industries ($20 X 31.2 jobs million).

- For each $1 of new construction, the earnings of households in the state is increased by $.8319. For example, a $20 million construction project would increase the total household earnings in the state by $16,638,000 ($20 million X $.8319). Both construction workers and employees of other industries benefit from this increased standard of living, and this figure also shows that the tax base of the state is increased. Note: Figures from 1988 Regional Input-Output Modeling System (RIMS II), Bureau of Economic Analysis, U.S. Department of Commerce.

## CONSTRUCTION'S SHARE OF THE ILLINOIS ECONOMY

- The total construction industry payroll in 1989 was $6,730,864,000, 6.3 percent of the state's total private industry payroll.

- In Illinois, construction (including homebuilding, nonresidential building and nonbuilding work) increased from 3.9% of the state's gross product in 1982 to 4.1% in 1986. In the Great Lakes region (IL,IN,MI,OH,WI), construction has increased from 3.5% of the region's economy in 1982 to 3.6% in 1986. This very useful data, the first of its kind computed on a state-by-state basis, is not available for more recent years due to federal budget cuts.

**CONSTRUCTION'S SHARE OF GROSS PRODUCT**

| | *1982* | *1983* | *1984* | *1985* | *1986* |
|---|---|---|---|---|---|
| ILLINOIS | 3.9% | 3.8% | 4.0% | 4.0% | 4.1% |
| GREAT LAKES | 3.5 | 3.4 | 3.4 | 3.5 | 3.6 |
| UNITED STATES | 4.5 | 4.5 | 4.6 | 4.7 | 4.7 |

Bureau of Economic Analysis, U.S. Department of Commerce

Note: These numbers do not include the value of supplies and equipment used in construction; for example, steel used in construction is counted as part of the steel industry rather than in the construction total. When the total value of construction is taken into account, AGC has estimated that construction accounts for 10% of the gross national product.

## NONRESIDENTIAL BUILDING PERMITS IN ILLINOIS

- In 1990, the value of nonresidential building permits issued for new construction dropped 5.8 percent from 1989, to $2.4 billion. Nonresidential remodeling and reconstruction work increased 9.3 percent, to $1.4 billion in 1990. Residential construction authorized by building permits dropped 8.3 percent in 1990.

**VALUE OF NONRESIDENTIAL BUILDING PERMITS ISSUED IN ILLINOIS (IN THOUSANDS)**

| *Construction Category* | *1989* | *Preliminary 1990* | *Percent Change* |
|---|---|---|---|
| Single Family Houses | $3,212,645 | $2,905,413 | -9.6% |

## INDIANA UNEMPLOYMENT RATE

- In 1990, the unemployment rate in Indiana was 5.3% (4.8% in 1989, 5.5% in 1988), as compared to the national average rate of 5.5% (5.3% in 1989, 5.5% in 1988).
- In 1990, 150,000 people were unemployed in the state. 136,000 people were unemployed in the state in 1989, including 12,000 construction workers.
- The **construction** unemployment rate in Indiana was 9.6% in 1989 (12.9% in 1988). The **national** average construction unemployment rate increased to 11.1% in **1990** from 10.0% in 1989 (10.6% in 1988).

## ECONOMIC IMPACT OF CONSTRUCTION ON INDIANA

- Each $1 spent on new construction in Indiana generates a total of $2.5132 in economic activity in both industries and services in the state. This ratio is used to estimate the impact of new construction on the state's economy. For example, a $20 million project would result in a $50,264,000 increase in the state's economy ($20 million X the 2.5132 multiplier). This total includes the original $20 million project.
- Each additional $1 million spent on new construction in Indiana creates 38.1 jobs. For example, a $20 million new construction project would create 762 jobs in the state in construction, supplier, and service industries ($20 X 38.1 jobs/million).

- For each $1 of new construction, the earnings of households in the state is increased by $.7973. For example, a $20 million construction project would increase the total household earnings in the state by $15,946,000 ($20 million X $.7973). Both construction workers and employees of other industries benefit from this increased standard of living, and this figure also shows that the tax base of the state is increased.

Note: Figures from 1988 Regional Input-Output Modeling System (RIMS II), Bureau of Economic Analysis, U.S. Department of Commerce.

## CONSTRUCTION'S SHARE OF THE INDIANA ECONOMY

- The total construction industry payroll in Indiana in 1989 was $2,705,877,000, 6.3 percent of the state's total private industry payroll.

- In Indiana, construction (including homebuilding, nonresidential building and nonbuilding work) declined from 4.6% of the state's gross product in 1982 to 4.3% in 1984, then rebounded to 4.6% in 1986. In the Great Lakes region (IL,IN,MI,OH,WI), construction has increased from 3.5% of the region's economy in 1982 to 3.6% in 1986. This very useful data, the first of its kind computed on a state-by-state basis, is not available for more recent years due to federal budget cuts.

CONSTRUCTION'S SHARE OF GROSS PRODUCT

| | *1982* | *1983* | *1984* | *1985* | *1986* |
|---|---|---|---|---|---|
| INDIANA | 4.6% | 4.4% | 4.3% | 4.5% | 4.6% |
| GREAT LAKES | 3.5 | 3.4 | 3.4 | 3.5 | 3.6 |
| UNITED STATES | 4.5 | 4.5 | 4.6 | 4.7 | 4.7 |

Bureau of Economic Analysis, U.S. Department of Commerce

Note: These numbers do not include the value of supplies and equipment used in construction; for example, steel used in construction is counted as part of the steel industry rather than in the construction total. When the total value of construction is taken into account, AGC has estimated that construction accounts for 10% of the gross national product.

## NONRESIDENTIAL BUILDING PERMITS IN INDIANA

- In 1990, the value of nonresidential building permits issued for new construction increased 36.6 percent from 1989, to $1.653 billion. Nonresidential remodeling and reconstruction work decreased 6.2 percent, to $303.1 million in 1990. Residential construction authorized by building permits increased 2.5 percent in 1990.

VALUE OF NONRESIDENTIAL BUILDING PERMITS ISSUED IN INDIANA (IN THOUSANDS)

| *Construction Category* | *1989* | *Preliminary 1990* | *Percent Change* |
|---|---|---|---|
| Single Family Houses | $1,723,805 | $1,816,496 | 5.4% |

# IOWA ECONOMIC FACT SHEET

This economic fact sheet contains the latest economic data available as of February, 1991.

## CONSTRUCTION EMPLOYMENT

- Construction employment in Iowa declined from 38,700 in 1984 to 35,200 in 1986, then increased to 40,500 in 1989.
- In December, 1990 the construction industry in Iowa employed 3,400 more workers than one year earlier (monthly data not seasonally adjusted).
- Construction employment was 3.6% of total state employment in 1984. In 1989, construction accounted for 3.4% of the 1.2 million people employed in Iowa.

**IOWA EMPLOYMENT**

| *Year* | *Construction* | *Total* | *Constr Pct of Total* |
|---|---|---|---|
| 1984 | 38,700 | 1,074,700 | 3.6 |
| 1985 | 36,600 | 1,074,200 | 3.4 |
| 1986 | 35,200 | 1,073,800 | 3.2 |
| 1987 | 35,600 | 1,109,100 | 3.2 |
| 1988 | 38,000 | 1,156,200 | 3.3 |
| 1989 | 40,500 | 1,200,200 | 3.4 |
| December, 1989 | 38,900 | 1,223,400 | 3.2 |
| December, 1990 | 42,300 | 1,234,800 | 3.4 |

Bureau of Labor Statistics, U.S. Department of Labor

**CONSTRUCTION EMPLOYMENT IN MAJOR CITIES**

| *City* | *1988* | *1989* | *December, 1990* |
|---|---|---|---|
| Cedar Rapids | 3,700 | 3,800 | 4,200 |
| Des Moines | 7,800 | 8,300 | 8,900 |
| Dubuque | 1,400 | 1,400 | 1,700 |
| Iowa City | 1,400 | 1,700 | 2,000 |
| Sioux City | 2,100 | 2,200 | 2,000 |
| Waterloo-Cedar Falls | 2,100 | 2,300 | 2,400 |

Bureau of Labor Statistics, U.S. Department of Labor

## IOWA UNEMPLOYMENT RATE

- In 1990, the unemployment rate in Iowa was 4.2% (4.7% in 1988, 4.9% in 1988), as compared to the national average rate of 5.5% (5.3% in 1989, 5.5% in 1988).
- In 1990, 63,000 people were unemployed in the state. 65,000 people were unemployed in the state in 1989, including 7,000 construction workers.
- The **construction** unemployment rate in Iowa was 13.8% in 1989 (12.8% in 1988). The **national** average construction unemployment rate increased to 11.1% in **1990** from 10.0% in 1989 (10.6% in 1988).

## ECONOMIC IMPACT OF CONSTRUCTION ON IOWA

- Each $1 spent on new construction in Iowa generates a total of $2.1336 in economic activity in both industries and services in the state. This ratio is used to estimate the impact of new construction on the state's economy. For example, a $20 million project would result in a $42,672,000 increase in the state's economy ($20 million X the 2.1336 multiplier). This total includes the original $20 million project.
- Each additional $1 million spent on new construction in Iowa creates 36.7 jobs. For example, a $20 million new construction project would create 734 jobs in the state in construction, supplier, and service industries ($20 X 36.7 jobs/million).

- For each $1 of new construction, the earnings of households in the state is increased by $.6959. For example, a $20 million construction project would increase the total household earnings in the state by $13,918,000 ($20 million X $.6959). Both construction workers and employees of other industries benefit from this increased standard of living, and this figure also shows that the tax base of the state is increased.

Note: Figures from 1988 Regional Input-Output Modeling System (RIMS II), Bureau of Economic Analysis, U.S. Department of Commerce.

## CONSTRUCTION'S SHARE OF IOWA'S ECONOMY

- The total construction industry payroll in Iowa in 1989 was $874,868,000, 5.1 percent of the state's total private industry payroll.

- In Iowa, construction (including homebuilding, nonresidential building and nonbuilding work) comprised 3.2% of the state's gross product in 1986. On average in the Plains (IA,KS,MN,MO,NE,ND,SD) states, construction grew from 3.7% in 1982 to 3.9% in 1986. This very useful data, the first of its kind computed on a state-by-state basis, is not available for more recent years due to federal budget cuts.

CONSTRUCTION'S SHARE OF GROSS PRODUCT

| | *1982* | *1983* | *1984* | *1985* | *1986* |
|---|---|---|---|---|---|
| IOWA | 3.4% | 3.3% | 3.3% | 3.2% | 3.2% |
| PLAINS | 3.7 | 3.8 | 3.8 | 3.8 | 3.9 |
| UNITED STATES | 4.5 | 4.5 | 4.6 | 4.7 | 4.7 |

Bureau of Economic Analysis, U.S. Department of Commerce

Note: These numbers do not include the value of supplies and equipment used in construction; for example, steel used in construction is counted as part of the steel industry rather than in the construction total. When the total value of construction is taken into account, AGC has estimated that construction accounts for 10% of the gross national product.

## NONRESIDENTIAL BUILDING PERMITS IN IOWA

- In 1990, the value of nonresidential building permits issued for new construction increased 5.5 percent from 1989, to $454 million. Nonresidential remodeling and reconstruction work increased 22.9 percent, to $217 million in 1990. Residential construction authorized by building permits increased 13.3 percent in 1990.

VALUE OF NONRESIDENTIAL BUILDING PERMITS ISSUED IN IOWA (IN THOUSANDS)

| *Construction Category* | *1989* | *Preliminary 1990* | *Percent Change* |
|---|---|---|---|
| Single Family Houses | $387,080 | $453,832 | 17.2% |
| Two-Family Buildings | 12,780 | 8,796 | -31.2 |
| Three- and Four-Family Buildings | 17,216 | 19,483 | 13.2 |
| Five-or-more Family Buildings | 59,786 | 58,218 | -2.6 |
| **Total Residential Buildings** | 476,862 | 540,329 | 13.3 |
| **Additions, Alterations, Residential** | 61,159 | 70,156 | 14.7 |
| | | | |
| Hotels, Motels | 31,266 | 25,284 | -19.1 |

Bureau of Labor Statistics, U.S. Department of Labor

## KANSAS UNEMPLOYMENT RATE

- In 1990, the unemployment rate in Kansas was 4.4% (4.0% in 1989, 4.9% in 1988), as compared to the national average rate of 5.5% (5.3% in 1989, 5.5% in 1988).
- In 1990, 57,000 people were unemployed in the state. 52,000 people were unemployed in the state in 1989, including 5,000 construction workers.
- The **construction** unemployment rate in Kansas was 10.9% in 1989 (14.8% in 1988). The **national** average construction unemployment rate increased to 11.1% in **1990** from 10.0% in 1989 (10.6% in 1988).

## ECONOMIC IMPACT OF CONSTRUCTION ON KANSAS

- Each $1 spent on new construction in Kansas generates a total of $2.2450 in economic activity in both industries and services in the state. This ratio is used to estimate the impact of new construction on the state's economy. For example, a $20 million project would result in a $44,900,000 increase in the state's economy ($20 million X the 2.2450 multiplier). This total includes the original $20 million project.
- Each additional $1 million spent on new construction in Kansas creates 34.7 jobs. For example, a $20 million new construction project would create 694 jobs in the state in construction, supplier, and service industries ($20 X 34.7 jobs/million).

- For each $1 of new construction, the earnings of households in the state is increased by $.7113. For example, a $20 million construction project would increase the total household earnings in the state by $14,226,000 ($20 million X $.7113). Both construction workers and employees of other industries benefit from this increased standard of living, and this figure also shows that the tax base of the state is increased.

Note: Figures from 1988 Regional Input-Output Modeling System (RIMS II), Bureau of Economic Analysis, U.S. Department of Commerce.

## CONSTRUCTION'S SHARE OF THE KANSAS ECONOMY

- The total construction industry payroll in Kansas in 1989 was $888,772,000, 5.5 percent of the state's total private industry payroll.

- In Kansas, construction (including homebuilding, nonresidential building and nonbuilding work) was 4.1% of the state's gross product in 1986. This level is below the state's historical average: 1963 - 4.7%, 1967 - 4.4%; 1972 - 4.6%; 1977 - 5.4%. This very useful data, the first of its kind computed on a state-by-state basis, is not available for more recent years due to federal budget cuts.

CONSTRUCTION'S SHARE OF GROSS PRODUCT

| | *1982* | *1983* | *1984* | *1985* | *1986* |
|---|---|---|---|---|---|
| KANSAS | 4.0% | 4.0% | 4.1% | 3.9% | 4.1% |
| PLAINS | 3.7 | 3.8 | 3.8 | 3.8 | 3.9 |
| UNITED STATES | 4.5 | 4.5 | 4.6 | 4.7 | 4.7 |

Bureau of Economic Analysis, U.S. Department of Commerce

Note: These numbers do not include the value of supplies and equipment used in construction; for example, steel used in construction is counted as part of the steel industry rather than in the construction total. When the total value of construction is taken into account, AGC has estimated that construction accounts for 10% of the gross national product.

## NONRESIDENTIAL BUILDING PERMITS IN KANSAS

- In 1990, the value of nonresidential building permits issued for new construction dropped 12.0 percent from 1989, to $302 million. Nonresidential remodeling and reconstruction work increased 56.1 percent, to $330 million in 1990. Residential construction authorized by building permits dropped 6.8 percent in 1990.

VALUE OF NONRESIDENTIAL BUILDING PERMITS ISSUED IN KANSAS (IN THOUSANDS)

| *Construction Category* | *1989* | *Preliminary 1990* | *Percent Change* |
|---|---|---|---|
| Single Family Houses | $637,849 | $574,202 | -10.0% |

| Owensboro | 2,200 | 2,200 | 2,100 |

Bureau of Labor Statistics, U.S. Department of Labor

## KENTUCKY UNEMPLOYMENT RATE

- In 1990, the unemployment rate in Kentucky was 5.8% (6.2% in 1989, 7.7% in 1988), as compared to the national average rate of 5.5% (5.3% in 1989, 5.5% in 1988).
- In 1990, 103,000 people were unemployed in the state. 108,000 people were unemployed in the state in 1989, including 11,000 construction workers.
- The **construction** unemployment rate in Kentucky was 11.6% in 1989 (16.4% in 1988). The **national** average construction unemployment rate increased to 11.1% in **1990** from 10.0% in 1989 (10.6% in 1988).

## ECONOMIC IMPACT OF CONSTRUCTION ON KENTUCKY

- Each $1 spent on new construction in Kentucky generates a total of $2.4131 in economic activity in both industries and services in the state. This ratio is used to estimate the impact of new construction on the state's economy. For example, a $20 million project would result in a $48,262,000 increase in the state's economy ($20 million X the 2.4131 multiplier). This total includes the original $20 million project.
- Each additional $1 million spent on new construction in Kentucky creates 39.2 jobs. For example, a $20 million new construction project would create 784 jobs in the state in construction, supplier, and service industries ($20 X 39.2 jobs/million).

- For each $1 of new construction, the earnings of households in the state is increased by $.7543. For example, a $20 million construction project would increase the total household earnings in the state by $15,086,000 ($20 million X $.7543). Both construction workers and employees of other industries benefit from this increased standard of living, and this figure also shows that the tax base of the state is increased.

Note: Figures from 1988 Regional Input-Output Modeling System (RIMS II), Bureau of Economic Analysis, U.S. Department of Commerce.

## CONSTRUCTION'S SHARE OF KENTUCKY'S ECONOMY

- The total construction industry payroll in Kentucky in 1989 was $1,325,185,000, 6.2 percent of the state's total private industry payroll.

- In Kentucky, construction (including homebuilding, nonresidential building and nonbuilding work) comprised 4.9% of the state's gross product in 1986. On average in the Southeast states (AL,AR,FL,GA,KY, LA,MS,NC,SC,TN,VA,WV), construction grew from 5.1% in 1982 to 5.3% in 1986. This very useful data, the first of its kind computed on a state-by-state basis, is not available for more recent years due to federal budget cuts.

**CONSTRUCTION'S SHARE OF GROSS PRODUCT**

| | *1982* | *1983* | *1984* | *1985* | *1986* |
|---|---|---|---|---|---|
| KENTUCKY | 5.1% | 4.7% | 4.6% | 4.7% | 4.9% |
| SOUTHEAST | 5.1 | 4.9 | 5.1 | 5.2 | 5.3 |
| UNITED STATES | 4.5 | 4.5 | 4.6 | 4.7 | 4.7 |

Bureau of Economic Analysis, U.S. Department of Commerce

Note: These numbers do not include the value of supplies and equipment used in construction; for example, steel used in construction is counted as part of the steel industry rather than in the construction total. When the total value of construction is taken into account, AGC has estimated that construction accounts for 10% of the gross national product.

## NONRESIDENTIAL BUILDING PERMITS IN KENTUCKY

- In 1990, the value of nonresidential building permits issued for new construction increased 6.2 percent from 1989, to $498 million. Nonresidential remodeling and reconstruction work increased 3.2 percent, to $175 million in 1990. Residential construction authorized by building permits dropped 0.5 percent in 1990.

**VALUE OF NONRESIDENTIAL BUILDING PERMITS ISSUED IN KENTUCKY (IN THOUSANDS)**

| *Construction Category* | *1989* | *Preliminary 1990* | *Percent Change* |
|---|---|---|---|
| Single Family Houses | $684,553 | $687,816 | 0.5% |

## LOUISIANA UNEMPLOYMENT RATE

- In 1990, the unemployment rate in Louisiana was 6.2% (7.9% in 1989, 10.2% in 1988), as compared to the national average rate of 5.5% (5.3% in 1989, 5.5% in 1988).
- In 1990, 117,000 people were unemployed in the state. 151,000 people were unemployed in the state in 1989, including 24,000 construction workers.
- The **construction** unemployment rate in Louisiana was 16.9% in 1989 (21.2% in 1988). The **national** average construction unemployment rate increased to 11.1% in **1990** from 10.0% in 1989 (10.6% in 1988).

## ECONOMIC IMPACT OF CONSTRUCTION ON LOUISIANA

- Each $1 spent on new construction in Louisiana generates a total of $2.1798 in economic activity in both industries and services in the state. This ratio is used to estimate the impact of new construction on the state's economy. For example, a $20 million project would result in a $43,596,000 increase in the state's economy ($20 million X the 2.1798 multiplier). This total includes the original $20 million project.
- Each additional $1 million spent on new construction in Louisiana creates 33.6 jobs. For example, a $20 million new construction project would create 672 jobs in the state in construction, supplier, and service industries ($20 X 33.6 jobs/million).

- For each $1 of new construction, the earnings of households in the state is increased by $.6975. For example, a $20 million construction project would increase the total household earnings in the state by $13,950,000 ($20 million X $.6975). Both construction workers and employees of other industries benefit from this increased standard of living, and this figure also shows that the tax base of the state is increased.

Note: Figures from 1988 Regional Input-Output Modeling System (RIMS II), Bureau of Economic Analysis, U.S. Department of Commerce.

## CONSTRUCTION'S SHARE OF LOUISIANA'S ECONOMY

- The total construction industry payroll in Louisiana in 1989 was $1,806,236,000, 7.5 percent of the state's total private industry payroll.

- In Louisiana, construction (including homebuilding, nonresidential building and nonbuilding work) declined from 6.4% of the state's gross product in 1982 to 5.2% in 1986. On average in the Southeast states (AL,AR,FL,GA,KY, LA,MS,NC,SC,TN,VA,WV), construction grew from 5.1% in 1982 to 5.3% in 1986. This very useful data, the first of its kind computed on a state-by-state basis, is not available for more recent years due to federal budget cuts.

**CONSTRUCTION'S SHARE OF GROSS PRODUCT**

| | *1982* | *1983* | *1984* | *1985* | *1986* |
|---|---|---|---|---|---|
| LOUISIANA | 6.4% | 6.4% | 6.2% | 5.6% | 5.2% |
| SOUTHEAST | 5.1 | 4.9 | 5.1 | 5.2 | 5.3 |
| UNITED STATES | 4.5 | 4.5 | 4.6 | 4.7 | 4.7 |

Bureau of Economic Analysis, U.S. Department of Commerce

Note: These numbers do not include the value of supplies and equipment used in construction; for example, steel used in construction is counted as part of the steel industry rather than in the construction total. When the total value of construction is taken into account, AGC has estimated that construction accounts for 10% of the gross national product.

## NONRESIDENTIAL BUILDING PERMITS IN LOUISIANA

- In 1990, the value of nonresidential building permits issued for new construction dropped 22.3 percent from 1989, to $366 million. Nonresidential remodeling and reconstruction work dropped 8.9 percent, to $266 million, in 1990. Residential construction authorized by building permits increased 4.9 percent in 1990.

**VALUE OF NONRESIDENTIAL BUILDING PERMITS ISSUED IN LOUISIANA (IN THOUSANDS)**

| *Construction Category* | *1989* | *Preliminary 1990* | *Percent Change* |
|---|---|---|---|
| Single Family Houses | $349,099 | $373,010 | 6.8% |
| Two-Family Buildings | 2,814 | 2,113 | -24.9 |

# MAINE ECONOMIC FACT SHEET

This economic fact sheet contains the latest economic data available as of February, 1991.

## CONSTRUCTION EMPLOYMENT

- Construction employment in Maine has steadily increased from 20,400 in 1984 to 34,100 in 1988, then declined to 33,100 in 1989.

- As of December, 1990, construction employment in the state was 25,000, 6,700 fewer workers than one year earlier (monthly data not seasonally adjusted).

- Construction employment was 4.6% of total state employment in 1984. In 1989, construction accounted for 6.1% of the more than half million people employed in Maine.

**MAINE EMPLOYMENT**

| *Year* | *Construction* | *Total* | *Constr Pct of Total* |
|---|---|---|---|
| 1984 | 20,400 | 445,700 | 4.6 |
| 1985 | 23,400 | 458,400 | 5.1 |
| 1986 | 26,900 | 477,400 | 5.6 |
| 1987 | 31,500 | 501,100 | 6.3 |
| 1988 | 33,300 | 527,100 | 6.3 |
| 1989 | 33,100 | 543,700 | 6.1 |
| December, 1989 | 31,700 | 551,600 | 5.7 |
| December, 1990 | 25,000 | 526,800 | 4.7 |

Bureau of Labor Statistics, U.S. Department of Labor

**CONSTRUCTION EMPLOYMENT IN MAJOR CITIES**

| *City* | *1988* | *1989* | *December, 1990* |
|---|---|---|---|
| Lewiston-Auburn | 2,300 | 2,200 | 1,800 |
| Portland | 9,100 | 8,500 | 6,800 |

Bureau of Labor Statistics, U.S. Department of Labor

## MAINE UNEMPLOYMENT RATE

- In 1990, the unemployment rate in Maine was 5.1% (4.1% in 1989, 4.1% in 1988), as compared to the national average rate of 5.5% (5.3% in 1989, 5.5% in 1988).

- In 1990, 33,000 people were unemployed in the state. 25,000 people were unemployed in the state in 1989, including 4,000 construction workers.

- The **construction** unemployment rate in Maine was 11.0% in 1989 (9.3% in 1988). The **national** average construction unemployment rate increased to 11.1% in **1990** from 10.0% in 1989 (10.6% in 1988).

## ECONOMIC IMPACT OF CONSTRUCTION ON MAINE

- Each $1 spent on new construction in Maine generates a total of $2.0323 in economic activity in both industries and services in the state. This ratio is used to estimate the impact of new construction on the state's economy. For example, a $20 million project would result in a $40,646,000 increase in the state's economy ($20 million X the 2.0323 multiplier). This total includes the original $20 million project.

- Each additional $1 million spent on new construction in Maine creates 34.9 jobs. For example, a $20 million new construction project would create 698 jobs in the state in construction, supplier, and service industries ($20 X 34.9 jobs/million).

- For each $1 of new construction, the earnings of households in the state is increased by $.6834. For example, a $20 million construction project would increase the total household earnings in the state by $13,668,000 ($20 million X $.6834). Both construction workers and employees of other industries benefit from this increased standard of living, and this figure also shows that the tax base of the state is increased.

Note: Figures from 1988 Regional Input-Output Modeling System (RIMS II), Bureau of Economic Analysis, U.S. Department of Commerce.

## CONSTRUCTION'S SHARE OF MAINE'S ECONOMY

- The total construction industry payroll in Maine in 1989 was $713,773,000, 8.6 percent of the state's total private industry payroll.

- In Maine, construction (including homebuilding, nonresidential building and nonbuilding work) increased from 4.8% of the state's gross product in 1982 to 6.2% in 1986. On average in the New England states (CT,ME,MA,NH,RI,VT), construction grew from 3.9% in 1982 to 4.8% in 1986. This very useful data, the first of its kind computed on a state-by-state basis, is not available for more recent years due to federal budget cuts.

CONSTRUCTION'S SHARE OF GROSS PRODUCT

| | *1982* | *1983* | *1984* | *1985* | *1986* |
|---|---|---|---|---|---|
| MAINE | 4.8% | 4.7% | 5.4% | 5.6% | 6.2% |
| NEW ENGLAND | 3.9 | 4.1 | 4.3 | 4.5 | 4.8 |
| UNITED STATES | 4.5 | 4.5 | 4.6 | 4.7 | 4.7 |

Bureau of Economic Analysis, U.S. Department of Commerce

Note: These numbers do not include the value of supplies and equipment used in construction; for example, steel used in construction is counted as part of the steel industry rather than in the construction total. When the total value of construction is taken into account, AGC has estimated that construction accounts for 10% of the gross national product.

## NONRESIDENTIAL BUILDING PERMITS IN MAINE

- In 1990, the value of nonresidential building permits issued for new construction dropped 14.8 percent from 1989, to $184.3 million. Nonresidential remodeling and reconstruction work dropped 38.3 percent, to $75 million in 1990. Residential construction authorized by building permits dropped 28.5 percent in 1990.

VALUE OF NONRESIDENTIAL BUILDING PERMITS ISSUED IN MAINE (IN THOUSANDS)

| *Construction Category* | *1989* | *Preliminary 1990* | *Percent Change* |
|---|---|---|---|

# MARYLAND ECONOMIC FACT SHEET

This economic fact sheet contains the latest economic data available as of February, 1991.

## CONSTRUCTION EMPLOYMENT

- Construction employment in Maryland has steadily increased from 116,000 in 1984 to 162,300 in 1989.
- In December, 1990, the construction industry in Maryland employed 1,200 fewer workers than one year earlier (monthly data not seasonally adjusted).
- Construction employment was 6.4% of total state employment in 1984. In 1989, construction accounted for 7.6% of the 2.1 million people employed in Maryland.

MARYLAND EMPLOYMENT

| *Year* | *Construction* | *Total* | *Constr Pct of Total* |
|---|---|---|---|
| 1984 | 116,000 | 1,814,000 | 6.4 |
| 1985 | 128,800 | 1,887,800 | 6.8 |
| 1986 | 139,500 | 1,952,000 | 7.1 |
| 1987 | 152,300 | 2,028,000 | 7.5 |
| 1988 | 161,100 | 2,102,300 | 7.7 |
| 1989 | 162,300 | 2,147,700 | 7.6 |
| December, 1989 | 158,600 | 2,178,000 | 7.3 |
| December, 1990 | 157,400 | 2,175,600 | 7.2 |

Bureau of Labor Statistics, U.S. Department of Labor

CONSTRUCTION EMPLOYMENT IN MAJOR CITIES

| *City* | *1988* | *1989* | *December, 1990* |
|---|---|---|---|
| Baltimore MSA | 75,700 | 77,600 | 73,900 |
| Suburban Maryland-DC | 69,100 | 71,600 | 68,500 |

Bureau of Labor Statistics, U.S. Department of Labor

## MARYLAND UNEMPLOYMENT RATE

- In 1990, the unemployment rate in Maryland was 4.6% (3.7% in 1989, 4.5% in 1988), as compared to the national average rate of 5.5% (5.3% in 1989, 5.5% in 1988).
- In 1990, 118,000 people were unemployed in the state. 93,000 people were unemployed in the state in 1989, including 17,000 construction workers.
- The **construction** unemployment rate in Maryland was 8.4% in 1989 (6.6% in 1988). The **national** average construction unemployment rate increased to 11.1% in **1990** from 10.0% in 1989 (10.6% in 1988).

## ECONOMIC IMPACT OF CONSTRUCTION ON MARYLAND

- Each $1 spent on new construction in Maryland generates a total of $2.1096 in economic activity in both industries and services in the state. This ratio is used to estimate the impact of new construction on the state's economy. For example, a $20 million project would result in a $42,192,000 increase in the state's economy ($20 million X the 2.1096 multiplier). This total includes the original $20 million project.
- Each additional $1 million spent on new construction in Maryland creates 29.5 jobs. For example, a $20 million new construction project would create 590 jobs in the state in construction, supplier, and service industries ($20 X 29.5 jobs/million).
- For each $1 of new construction, the earnings of households in the state is increased by $.7123. For example, a $20 million construction project would increase the total household earnings in the state by $14,246,000

($20 million X $.7123). Both construction workers and employees of other industries benefit from this increased standard of living, and this figure also shows that the tax base of the state is increased.

Note: Figures from 1988 Regional Input-Output Modeling System (RIMS II), Bureau of Economic Analysis, U.S. Department of Commerce.

## CONSTRUCTION'S SHARE OF MARYLAND'S ECONOMY

- The total construction industry payroll in Maryland in 1989 was $4,120,113,000, 10.6 percent of the state's total private industry payroll.

- In Maryland, construction (including homebuilding, nonresidential building and nonbuilding work) comprised 5.2% of the state's gross product in 1986. On average in the Mideast states (DE,DC,MD,NJ,NY,PA), construction has grown from 3.9% in 1982 to 4.5% in 1986. This very useful data, the first of its kind computed on a state-by-state basis, is not available for more recent years due to federal budget cuts.

CONSTRUCTION'S SHARE OF GROSS PRODUCT

| | *1982* | *1983* | *1984* | *1985* | *1986* |
|---|---|---|---|---|---|
| MARYLAND | 4.2% | 4.4% | 4.8% | 5.0% | 5.2% |
| MIDEAST | 3.9 | 3.9 | 4.1 | 4.3 | 4.5 |
| UNITED STATES | 4.5 | 4.5 | 4.6 | 4.7 | 4.7 |

Bureau of Economic Analysis, U.S. Department of Commerce

Note: These numbers do not include the value of supplies and equipment used in construction; for example, steel used in construction is counted as part of the steel industry rather than in the construction total. When the total value of construction is taken into account, AGC has estimated that construction accounts for 10% of the gross national product.

## NONRESIDENTIAL BUILDING PERMITS IN MARYLAND

- In 1990, the value of nonresidential building permits issued for new construction dropped 10.1 percent from 1989, to $911 million. Nonresidential remodeling and reconstruction work decreased 1.6 percent, to $679 million in 1990. Residential construction authorized by building permits dropped 13.5 percent in 1990.

VALUE OF NONRESIDENTIAL BUILDING PERMITS ISSUED IN MARYLAND (IN THOUSANDS)

| *Construction Category* | *1989* | *Preliminary 1990* | *Percent Change* |
|---|---|---|---|

Bureau of Labor Statistics, U.S. Department of Labor

## MASSACHUSETTS UNEMPLOYMENT RATE

- In 1990, the unemployment rate in Massachusetts was 6.0% (4.0 in 1989, 3.2% in 1988), as compared to the national average rate of 5.5% (5.3% in 1989, 5.5% in 1988).

- In 1990, 189,000 people were unemployed in the state. 127,000 people were unemployed in the state in 1989, including 16,000 construction workers.

- The **construction** unemployment rate in Massachusetts was 10.6% in 1989 (6.7% in 1988). The **national** average construction unemployment rate increased to 11.1% in **1990** from 10.0% in 1989 (10.6% in 1988).

## ECONOMIC IMPACT OF CONSTRUCTION ON MASSACHUSETTS

- Each $1 spent on new construction in Massachusetts generates a total of $2.1338 in economic activity in both industries and services in the state. This ratio is used to estimate the impact of new construction on the state's economy. For example, a $20 million project would result in a $42,676,000 increase in the state's economy ($20 million X the 2.1338 multiplier). This total includes the original $20 million project.

- Each additional $1 million spent on new construction in Massachusetts creates 26.9 jobs. For example, a $20 million new construction project would create 538 jobs in the state in construction, supplier, and service industries ($20 X 26.9 jobs/million).

- For each $1 of new construction, the earnings of households in the state is increased by $.7075. For example, a $20 million construction project would increase the total household earnings in the state by $14,150,000 ($20 million X $.7075). Both construction workers and employees of other industries benefit from this increased standard of living, and this figure also shows that the tax base of the state is increased.

Note: Figures from 1988 Regional Input-Output Modeling System (RIMS II), Bureau of Economic Analysis, U.S. Department of Commerce.

## CONSTRUCTION'S SHARE OF MASSACHUSETTS ECONOMY

- The total construction industry payroll in Massachusetts in 1989 was $3,723,065,000, 5.6 percent of the state's total private industry payroll.

- In Massachusetts, construction (including homebuilding, nonresidential building and nonbuilding work) was 4.7% of the state's gross product in 1986. On average in the New England states (CT,ME,MA,NH,RI,VT), construction grew from 3.9% in 1982 to 4.8% in 1986. This very useful data, the first of its kind computed on a state-by-state basis, is not available for more recent years due to federal budget cuts.

CONSTRUCTION'S SHARE OF GROSS PRODUCT

| | *1982* | *1983* | *1984* | *1985* | *1986* |
|---|---|---|---|---|---|
| MASSACHUSETTS | 3.8% | 3.9% | 4.2% | 4.4% | 4.7% |
| NEW ENGLAND | 3.9 | 4.1 | 4.3 | 4.5 | 4.8 |
| UNITED STATES | 4.5 | 4.5 | 4.6 | 4.7 | 4.7 |

Bureau of Economic Analysis, U.S. Department of Commerce

Note: These numbers do not include the value of supplies and equipment used in construction; for example, steel used in construction is counted as part of the steel industry rather than in the construction total. When the total value of construction is taken into account, AGC has estimated that construction accounts for 10% of the gross national product.

## NONRESIDENTIAL BUILDING PERMITS IN MASSACHUSETTS

- In 1990, the value of nonresidential building permits issued for new construction dropped 33.4 percent from 1989, to $741 million. Nonresidential remodeling and reconstruction work increased 12.3 percent, to $754 million in 1990. Residential construction authorized by building permits dropped 27.2 percent in 1990.

VALUE OF NONRESIDENTIAL BUILDING PERMITS ISSUED IN MASSACHUSETTS (IN THOUSANDS)

| *Construction Category* | *1989* | *Preliminary 1990* | *Percent Change* |
|---|---|---|---|
| Single Family Houses | $1,492,476 | $1,154,760 | -22.6% |
| Two-Family Buildings | 84,460 | 50,626 | -40.1 |
| Three- and Four-Family Buildings | 42,087 | 35,632 | -15.3 |
| Five-or-more Family Buildings | 234,704 | 108,328 | -53.8 |

# MICHIGAN ECONOMIC FACT SHEET

This economic fact sheet contains the latest economic data available as of February, 1991.

## CONSTRUCTION EMPLOYMENT

- Construction employment in Michigan has increased from 92,700 in 1984 to 137,800 in 1989.
- As of December, 1990, the construction industry in Michigan employed 10,900 fewer workers than one year earlier (monthly data not seasonally adjusted).
- Construction employment was 2.7% of total state employment in 1984. In 1989, construction accounted for 3.5% of the 3.9 million people employed in Michigan.

MICHIGAN EMPLOYMENT

| *Year* | *Construction* | *Total* | *Constr Pct of Total* |
|---|---|---|---|
| 1984 | 92,700 | 3,381,000 | 2.7 |
| 1985 | 107,800 | 3,561,500 | 3.0 |
| 1986 | 115,200 | 3,657,300 | 3.1 |
| 1987 | 123,300 | 3,735,800 | 3.3 |
| 1988 | 132,200 | 3,819,200 | 3.5 |
| 1989 | 137,800 | 3,904,500 | 3.5 |
| December, 1989 | 137,800 | 3,957,400 | 3.5 |
| December, 1990 | 126,900 | 3,921,700 | 3.2 |

Bureau of Labor Statistics, U.S. Department of Labor

CONSTRUCTION EMPLOYMENT IN MAJOR CITIES

Bureau of Labor Statistics, U.S. Department of Labor

## MICHIGAN UNEMPLOYMENT RATE

- In 1990, the unemployment rate in Michigan was 7.5% (7.1% in 1989, 7.4% in 1988), as compared to the national average rate of 7.1% (5.3% in 1989, 5.5% in 1988).
- In 1990, 344,000 people were unemployed in the state. 326,000 people were unemployed in the state in 1989, including 29,000 construction workers.
- The **construction** unemployment rate in Michigan was 14.6% in 1989 (15.6% in 1988). The **national** average construction unemployment rate increased to 11.1% in **1990** from 10.0% in 1989 (10.6% in 1988).

## ECONOMIC IMPACT OF CONSTRUCTION ON MICHIGAN

- Each $1 spent on new construction in Michigan generates a total of $2.2647 in economic activity in both industries and services in the state. This ratio is used to estimate the impact of new construction on the state's economy. For example, a $20 million project would result in a $45,294,000 increase in the state's economy ($20 million X the 2.2647 multiplier). This total includes the original $20 million project.
- Each additional $1 million spent on new construction in Michigan creates 30.0 jobs. For example, a $20 million new construction project would create 600 jobs in the state in construction, supplier, and service industries ($20 X 30.0 jobs/million).

- For each $1 of new construction, the earnings of households in the state is increased by $.7474. For example, a $20 million construction project would increase the total household earnings in the state by $14,948,000 ($20 million X $.7474). Both construction workers and employees of other industries benefit from this increased standard of living, and this figure also shows that the tax base of the state is increased.

Note: Figures from 1988 Regional Input-Output Modeling System (RIMS II), Bureau of Economic Analysis, U.S. Department of Commerce.

## CONSTRUCTION'S SHARE OF THE MICHIGAN ECONOMY

- The total construction industry payroll in Michigan in 1989 was $3,920,534,000, 4.8 percent of the state's total private industry payroll.

- In Michigan, construction (including homebuilding, nonresidential building and nonbuilding work) increased from 3.0% of the state's gross product in 1982 to 3.2% in 1986. In the Great Lakes region (IL,IN,MI,OH,WI), construction increased from 3.5% of the region's economy in 1982 to 3.6% in 1986. This very useful data, the first of its kind computed on a state-by-state basis, is not available for more recent years due to federal budget cuts.

**CONSTRUCTION'S SHARE OF GROSS PRODUCT**

| | *1982* | *1983* | *1984* | *1985* | *1986* |
|---|---|---|---|---|---|
| MICHIGAN | 3.0% | 2.8% | 2.8% | 3.0% | 3.2% |
| GREAT LAKES | 3.5 | 3.4 | 3.4 | 3.5 | 3.6 |
| UNITED STATES | 4.5 | 4.5 | 4.6 | 4.7 | 4.7 |

Bureau of Economic Analysis, U.S. Department of Commerce

Note: These numbers do not include the value of supplies and equipment used in construction; for example, steel used in construction is counted as part of the steel industry rather than in the construction total. When the total value of construction is taken into account, AGC has estimated that construction accounts for 10% of the gross national product.

## NONRESIDENTIAL BUILDING PERMITS IN MICHIGAN

- In 1990, the value of nonresidential building permits issued for new construction dropped 25.1 percent from 1989, to $1.3 billion. Nonresidential remodeling and reconstruction work increased 5.0 percent, to $895 million in 1990. Residential construction authorized by building permits dropped 7.6 percent in 1990.

**VALUE OF NONRESIDENTIAL BUILDING PERMITS ISSUED IN MICHIGAN (IN THOUSANDS)**

| *Construction Category* | *1989* | *Preliminary 1990* | *Percent Change* |
|---|---|---|---|
| Single Family Houses | $2,479,658 | $2,376,073 | -4.2% |
| Two-Family Buildings | 35,243 | 27,410 | -22.2 |

| Rochester | 2,100 | 2,200 | 2,100 |
| St. Cloud | 3,600 | 3,900 | 3,600 |

Bureau of Labor Statistics, U.S. Department of Labor

## MINNESOTA UNEMPLOYMENT RATE

- In 1990, the unemployment rate in Minnesota was 4.8% (4.3% in 1989, 4.2% in 1988), as compared to the national average rate of 5.5% (5.3% in 1989, 5.5% in 1988).

- In 1990, 116,000 people were unemployed in the state. 102,000 people were unemployed in the state in 1989, including 12,000 construction workers.

- The **construction** unemployment rate in Minnesota was 11.8% in 1989 (11.3% in 1988). The **national** average construction unemployment rate increased to 11.1% in **1990** from 10.0% in 1989 (10.6% in 1988).

## ECONOMIC IMPACT OF CONSTRUCTION ON MINNESOTA

- Each $1 spent on new construction in Minnesota generates a total of $2.2493 in economic activity in both industries and services in the state. This ratio is used to estimate the impact of new construction on the state's economy. For example, a $20 million project would result in a $44,986,000 increase in the state's economy ($20 million X the 2.2493 multiplier). This total includes the original $20 million project.

- Each additional $1 million spent on new construction in Minnesota creates 31.9 jobs. For example, a $20 million new construction project would create 638 jobs in the state in construction, supplier, and service industries ($20 X 31.9 jobs/million).

- For each $1 of new construction, the earnings of households in the state is increased by $.7311. For example, a $20 million construction project would increase the total household earnings in the state by $14,622,000 ($20 million X $.7311). Both construction workers and employees of other industries benefit from this increased standard of living, and this figure also shows that the tax base of the state is increased.

Note: Figures from 1988 Regional Input-Output Modeling System (RIMS II), Bureau of Economic Analysis, U.S. Department of Commerce.

## CONSTRUCTION'S SHARE OF THE MINNESOTA ECONOMY

- The total construction industry payroll in Minnesota in 1989 was $2,231,136,000, 5.9 percent of the state's total private industry payroll.

- In Minnesota, construction (including homebuilding, nonresidential building and nonbuilding work) increased from 3.3% of the state's gross product in 1982 to 3.7% in 1986. On average in the Plains (IA,KS,MN,MO,NE,ND,SD) states, construction grew from 3.7% in 1982 to 3.9% in 1986. This very useful data, the first of its kind computed on a state-by-state basis, is not available for more recent years due to federal budget cuts.

CONSTRUCTION'S SHARE OF GROSS PRODUCT

| | *1982* | *1983* | *1984* | *1985* | *1986* |
|---|---|---|---|---|---|
| MINNESOTA | 3.3% | 3.3% | 3.5% | 3.5% | 3.7% |

## MISSISSIPPI UNEMPLOYMENT RATE

- In 1990, the unemployment rate in Mississippi was 7.5% (7.8% in 1989, 7.4% in 1988), as compared to the national average rate of 5.5% (5.3% in 1989, 5.5% in 1988).
- In 1990, 88,000 people were unemployed in the state. 91,000 people were unemployed in the state in 1989, including 7,000 construction workers.
- The **construction** unemployment rate in Mississippi was 13.7% in 1989 (11.1% in 1988). The **national** average construction unemployment rate increased to 11.1% in **1990** from 10.0% in 1989 (10.6% in 1988).

## ECONOMIC IMPACT OF CONSTRUCTION ON MISSISSIPPI

- Each $1 spent on new construction in Mississippi generates a total of $2.3577 in economic activity in both industries and services in the state. This ratio is used to estimate the impact of new construction on the state's economy. For example, a $20 million project would result in a $47,154,000 increase in the state's economy ($20 million X the 2.3577 multiplier). This total includes the original $20 million project.
- Each additional $1 million spent on new construction in Mississippi creates 43.2 jobs. For example, a $20 million new construction project would create 864 jobs in the state in construction, supplier, and service industries ($20 X 43.2 jobs/million).
- For each $1 of new construction, the earnings of households in the state is increased by $.7490. For example, a $20 million construction project would increase the total household earnings in the state by $14,980,000

($20 million X $.7490). Both construction workers and employees of other industries benefit from this increased standard of living, and this figure also shows that the tax base of the state is increased.

Note: Figures from 1988 Regional Input-Output Modeling System (RIMS II), Bureau of Economic Analysis, U.S. Department of Commerce.

## CONSTRUCTION'S SHARE OF MISSISSIPPI'S ECONOMY

- The total construction industry payroll in Mississippi in 1989 was $645,190,000, 5.4% of the state's total private industry payroll.

- In Mississippi, construction (including homebuilding, nonresidential building and nonbuilding work) declined from 5.9% of the state's gross product in 1982 to 4.5% in 1986. On average in the Southeast states (AL,AR,FL,GA,KY, LA,MS,NC,SC,TN,VA,WV), construction grew from 5.1% in 1982 to 5.3% in 1986. This very useful data, the first of its kind computed on a state-by-state basis, is not available for more recent years due to federal budget cuts.

CONSTRUCTION'S SHARE OF GROSS PRODUCT

| | *1982* | *1983* | *1984* | *1985* | *1986* |
|---|---|---|---|---|---|
| MISSISSIPPI | 5.9% | 5.2% | 4.7% | 4.5% | 4.5% |
| SOUTHEAST | 5.1 | 4.9 | 5.1 | 5.2 | 5.3 |
| UNITED STATES | 4.5 | 4.5 | 4.6 | 4.7 | 4.7 |

Bureau of Economic Analysis, U.S. Department of Commerce

Note: These numbers do not include the value of supplies and equipment used in construction; for example, steel used in construction is counted as part of the steel industry rather than in the construction total. When the total value of construction is taken into account, AGC has estimated that construction accounts for 10% of the gross national product.

## NONRESIDENTIAL BUILDING PERMITS IN MISSISSIPPI

- In 1990, the value of nonresidential building permits issued for new construction dropped 36.3 percent from 1989, to $188 million. Nonresidential remodeling and reconstruction work increased 7.9 percent, to $146 million in 1990. Residential construction authorized by building permits dropped 12.1 percent in 1990.

VALUE OF NONRESIDENTIAL BUILDING PERMITS ISSUED IN MISSISSIPPI (IN THOUSANDS)

| *Construction Category* | *1989* | *Preliminary 1990* | *Percent Change* |
|---|---|---|---|
| Single Family Houses | $269,475 | $250,613 | -7.0% |
| Two-Family Buildings | 10,188 | 6,124 | -39.9 |
| Three- and Four-Family Buildings | 6,968 | 2,551 | -63.4 |

# MISSOURI ECONOMIC FACT SHEET

This economic fact sheet contains the latest economic data available as of February, 1991.

## CONSTRUCTION EMPLOYMENT

- Construction employment in Missouri increased from 85,700 in 1984 to 97,500 in 1989.
- As of December, 1990, the construction industry in Missouri employed 2,000 fewer workers than during the same month one year earlier (monthly data not seasonally adjusted).
- Construction employment was 4.2% of total state employment in 1984. In 1989, construction accounted for 4.2% of the more than 2.3 million people employed in Missouri.

MISSOURI EMPLOYMENT

| *Year* | *Construction* | *Total* | *Constr Pct of Total* |
|---|---|---|---|
| 1984 | 85,700 | 2,032,700 | 4.2 |
| 1985 | 92,900 | 2,094,700 | 4.4 |
| 1986 | 98,100 | 2,142,600 | 4.6 |
| 1987 | 98,700 | 2,197,800 | 4.5 |
| 1988 | 97,400 | 2,258,900 | 4.3 |
| 1989 | 97,500 | 2,308,000 | 4.2 |
| December, 1989 | 96,700 | 2,333,300 | 4.1 |
| December, 1990 | 94,700 | 2,338,500 | 4.0 |

Bureau of Labor Statistics, U.S. Department of Labor

CONSTRUCTION EMPLOYMENT IN MAJOR CITIES

| *City* | *1988* | *1989* | *December, 1990* |
|---|---|---|---|
| Kansas City, MO-KS | 34,600 | 32,700 | 33,800 |
| St. Louis, MO-IL | 60,100 | 61,600 | 56,200 |
| Springfield | 4,600 | 4,700 | 4,300 |

Bureau of Labor Statistics, U.S. Department of Labor

## MISSOURI UNEMPLOYMENT RATE

- In 1990, the unemployment rate in Missouri was 5.7% (5.5% in 1989, 6.0% in 1988), as compared to the national average rate of 5.5% (5.3% in 1989, 5.5% in 1988).
- In 1990, 151,000 people were unemployed in the state. 143,000 people were unemployed in the state in 1989, including 14,000 construction workers.
- The **construction** unemployment rate in Missouri was 12.1% in 1989 (13.9% in 1988). The **national** average construction unemployment rate increased to 11.1% in **1990** from 10.0% in 1989 (10.6% in 1988).

## ECONOMIC IMPACT OF CONSTRUCTION ON MISSOURI

- Each $1 spent on new construction in Missouri generates a total of $2.4063 in economic activity in both industries and services in the state. This ratio is used to estimate the impact of new construction on the state's economy. For example, a $20 million project would result in a $48,126,000 increase in the state's economy ($20 million X the 2.4063 multiplier). This total includes the original $20 million project.
- Each additional $1 million spent on new construction in Missouri creates 34.7 jobs. For example, a $20 million new construction project would create 694 jobs in the state in construction, supplier, and service industries ($20 X 34.7 jobs/million).
- For each $1 of new construction, the earnings of households in the state is increased by $.7436. For example, a $20 million construction project would increase the total household earnings in the state by $14,872,000

($20 million X $.7436). Both construction workers and employees of other industries benefit from this increased standard of living, and this figure also shows that the tax base of the state is increased.

Note: Figures from 1988 Regional Input-Output Modeling System (RIMS II), Bureau of Economic Analysis, U.S. Department of Commerce.

## CONSTRUCTION'S SHARE OF MISSOURI'S ECONOMY

- The total construction industry payroll in Missouri in 1989 was $2,365,503,000, 5.9 percent of the state's total private industry payroll.

- In Missouri, construction (including homebuilding, nonresidential building and nonbuilding work) increased from 3.7% of the state's gross product in 1982 to 4.1% in 1986. On average in the Plains states (IA,KS,MN,MO,NE,ND,SD), construction grew from 3.7% in 1982 to 3.9% in 1986. This very useful data, the first of its kind computed on a state-by-state basis, is not available for more recent years due to federal budget cuts.

**CONSTRUCTION'S SHARE OF GROSS PRODUCT**

| | *1982* | *1983* | *1984* | *1985* | *1986* |
|---|---|---|---|---|---|
| MISSOURI | 3.7% | 3.7% | 3.9% | 4.0% | 4.1% |
| PLAINS | 3.7 | 3.8 | 3.8 | 3.8 | 3.9 |
| UNITED STATES | 4.5 | 4.5 | 4.6 | 4.7 | 4.7 |

Bureau of Economic Analysis, U.S. Department of Commerce

Note: These numbers do not include the value of supplies and equipment used in construction; for example, steel used in construction is counted as part of the steel industry rather than in the construction total. When the total value of construction is taken into account, AGC has estimated that construction accounts for 10% of the gross national product.

## NONRESIDENTIAL BUILDING PERMITS IN MISSOURI

- In 1990, the value of nonresidential building permits issued for new construction dropped 6.1 percent from 1989, to $792 million. Nonresidential remodeling and reconstruction work dropped 1.6 percent, to $598 million in 1990.

- Residential construction authorized by building permits dropped 6.1 percent in 1990.

**VALUE OF NONRESIDENTIAL BUILDING PERMITS ISSUED IN MISSOURI (IN THOUSANDS)**

| *Construction Category* | *1989* | *Preliminary 1990* | *Percent Change* |
|---|---|---|---|
| Single Family Houses | $1,182,644 | $1,019,946 | -13.8% |
| Two-Family Buildings | 33,503 | 28,346 | -15.4 |
| Three- and Four-Family Buildings | 28,203 | 27,054 | -4.1 |
| Five-or-more Family Buildings | 77,305 | 72,046 | -6.8 |
| **Total Residential Buildings** | **1,221,655** | **1,147,392** | -6.1 |
| **Additions, Alterations, Residential** | **134,811** | **142,656** | 5.8 |
| Hotels, Motels | 35,423 | 44,809 | 26.5 |
| Other Nonhousekeeping | 12,264 | 3,516 | -71.3 |
| Amusement, Social, Recreational | 23,873 | 22,803 | -4.5 |
| Churches | 22,423 | 69,298 | 209.0 |
| Industrial Buildings | 114,175 | 94,675 | -17.1 |
| Parking Garages | 15,750 | 14,900 | -5.4 |
| Service Stations, Repair Garages | 15,966 | 11,072 | -30.7 |
| Hospitals, Institutional Buildings | 61,104 | 44,382 | -27.4 |
| Office, Bank, Professional Buildings | 210,774 | 200,256 | -5.0 |
| Public Works, Utilities Buildings | 5,771 | 6,793 | 17.7 |
| Schools, Educational Buildings | 44,201 | 39,011 | -11.7 |

# MONTANA ECONOMIC FACT SHEET

This economic fact sheet contains the latest economic data available as of February, 1991.

## CONSTRUCTION EMPLOYMENT

- Construction employment in Montana declined from 12,600 in 1984 to 9,700 in 1989.
- As of December, 1990, the construction industry in Montana employed 100 fewer workers than in the same month one year earlier (montly data not seasonally adjusted).
- Construction employment was 4.5% of total state employment in 1984. In 1989, construction accounted for 3.3% of the 290,500 people employed in Montana.

MONTANA EMPLOYMENT

| *Year* | *Construction* | *Total* | *Constr Pct of Total* |
|---|---|---|---|
| 1984 | 12,600 | 281,100 | 4.5 |
| 1985 | 11,500 | 279,100 | 4.1 |
| 1986 | 10,200 | 275,400 | 3.7 |
| 1987 | 8,800 | 274,100 | 3.2 |
| 1988 | 9,000 | 282,900 | 3.2 |
| 1989 | 9,700 | 290,500 | 3.3 |
| December, 1989 | 8,700 | 294,300 | 3.0 |
| December, 1990 | 8,600 | 297,800 | 2.9 |

Bureau of Labor Statistics, U.S. Department of Labor

## MONTANA UNEMPLOYMENT RATE

- In 1990, the unemployment rate in Montana was 5.8% (5.9% in 1989, 7.6% in 1988), as compared to the national average rate of 5.5% (5.3% of 1989, 5.5% in 1988).
- In 1990, 23,000 people were unemployed in the state. 24,000 people were unemployed in the state in 1989, including 3,000 construction workers.
- The **construction** unemployment rate in Montana was 19.1% in 1989 (23.2% in 1988). The **national** average construction unemployment rate increased to 11.1% in **1990** from 10.0% in 1989 (10.6% in 1988).

## ECONOMIC IMPACT OF CONSTRUCTION ON MONTANA

- Each $1 spent on new construction in Montana generates a total of $1.9131 in economic activity in both industries and services in the state. This ratio is used to estimate the impact of new construction on the state's economy. For example, a $20 million project would result in a $38,262,000 increase in the state's economy ($20 million X the 1.9131 multiplier). This total includes the original $20 million project.
- Each additional $1 million spent on new construction in Montana creates 35.4 jobs. For example, a $20 million new construction project would create 708 jobs in the state in construction, supplier, and service industries ($20 X 35.4 jobs/million).
- For each $1 of new construction, the earnings of households in the state is increased by $.6244. For example, a $20 million construction project would increase the total household earnings in the state by $12,488,000 ($20 million X $.6244). Both construction workers and employees of other industries benefit from this increased standard of living, and this figure also shows that the tax base of the state is increased.

Note: Figures from 1988 Regional Input-Output Modeling System (RIMS II), Bureau of Economic Analysis, U.S. Department of Commerce.

## CONSTRUCTION'S SHARE OF MONTANA'S ECONOMY

- The total construction industry payroll in Montana in 1989 was $209,373,000, 5.9 percent of the state's total private industry payroll.

- In Montana, construction (including homebuilding, nonresidential building and nonbuilding work) dropped from 10.1% of the state's gross product in 1982 to 8.4% in 1986. Construction in the Rocky Mountain Region (CO,ID,MT,UT,WY), declined from 7.3% of the region's economy to 6.3% in 1986. This very useful data, the first of its kind computed on a state-by-state basis, is not available for more recent years due to federal budget cuts.

CONSTRUCTION'S SHARE OF GROSS PRODUCT

| | *1982* | *1983* | *1984* | *1985* | *1986* |
|---|---|---|---|---|---|
| MONTANA | 10.1% | 9.9% | 9.3% | 9.2% | 8.4% |
| ROCKY MOUNTAIN REGION | 7.3 | 6.7 | 6.7 | 6.7 | 6.3 |
| UNITED STATES | 4.5 | 4.5 | 4.6 | 4.7 | 4.7 |

Bureau of Economic Analysis, U.S. Department of Commerce

Note: These numbers do not include the value of supplies and equipment used in construction; for example, steel used in construction is counted as part of the steel industry rather than in the construction total. When the total value of construction is taken into account, AGC has estimated that construction accounts for 10% of the gross national product.

## NONRESIDENTIAL BUILDING PERMITS IN MONTANA

- In 1990, the value of nonresidential building permits issued for new construction increased 20.1 percent from 1989, to $41 million. Nonresidential remodeling and reconstruction work increased 34.0 percent, to $59 million in 1990. Residential construction authorized by building permits increased 58.2 percent in 1990.

VALUE OF NONRESIDENTIAL BUILDING PERMITS ISSUED IN MONTANA (IN THOUSANDS)

| *Construction Category* | *1989* | *Preliminary 1990* | *Percent Change* |
|---|---|---|---|
| Single Family Houses | $46,772 | $64,835 | 38.6% |
| Two-Family Buildings | 959 | 2,401 | 150.4 |
| Three- and Four-Family Buildings | 3,089 | 5,209 | 68.6 |
| Five-or-more Family Buildings | 2,685 | 12,660 | 371.5 |
| **Total Residential Buildings** | 53,505 | 84,665 | 58.2 |
| **Additions, Alterations, Residential** | 14,430 | 16,481 | 14.2 |
| | | | |
| Hotels, Motels | 2,536 | 2,232 | -12.0 |
| Other Nonhousekeeping | 0 | 551 | -- |
| Amusement, Social, Recreational | 8 | 1,176 | 14600.0 |
| Churches | 2,474 | 2,238 | -9.5 |
| Industrial Buildings | 3,099 | 1,064 | -65.7 |
| Parking Garages | 576 | 20 | -96.5 |
| Service Stations, Repair Garages | 1,094 | 944 | -13.7 |
| Hospitals, Institutional Buildings | 1,534 | 2,144 | 39.8 |
| Office, Bank, Professional Buildings | 3,935 | 7,883 | 100.3 |
| Public Works, Utilities Buildings | 81 | 550 | 579.0 |
| Schools, Educational Buildings | 320 | 430 | 34.4 |
| Stores, Customer Services | 15,378 | 19,325 | 25.7 |

# NEBRASKA ECONOMIC FACT SHEET

This economic fact sheet contains the latest economic data available as of February, 1991.

## CONSTRUCTION EMPLOYMENT

- Construction employment in Nebraska has generally declined from 25,800 in 1984 to 23,900 in 1989.
- As of December, 1990, the construction industry in Nebraska employed 1,300 more workers than one year earlier (monthly data not seasonally adjusted).
- Construction employment was 4.1% of total state employment in 1984. In 1989, construction accounted for 3.4% of the 705,700 people employed in Nebraska.

NEBRASKA EMPLOYMENT

| *Year* | *Construction* | *Total* | *Constr Pct of Total* |
|---|---|---|---|
| 1984 | 25,800 | 635,400 | 4.1 |
| 1985 | 26,100 | 650,500 | 4.0 |
| 1986 | 24,600 | 652,500 | 3.8 |
| 1987 | 24,500 | 667,200 | 3.7 |
| 1988 | 24,500 | 688,100 | 3.6 |
| 1989 | 23,900 | 705,700 | 3.4 |
| December, 1989 | 22,700 | 716,900 | 3.2 |
| December, 1990 | 24,000 | 735,400 | 3.3 |

Bureau of Labor Statistics, U.S. Department of Labor

CONSTRUCTION EMPLOYMENT IN MAJOR CITIES

| *City* | *1988* | *1989* | *December, 1990* |
|---|---|---|---|
| Lincoln | 4,100 | 3,900 | 4,200 |
| Omaha | 11,900 | 11,600 | 12,100 |

Bureau of Labor Statistics, U.S. Department of Labor

## NEBRASKA UNEMPLOYMENT RATE

- In 1990, the unemployment rate in Nebraska was 2.2% (3.1% in 1989, 3.8% in 1988), as compared to the national average rate of 5.5% (5.3% in 1989, 5.5% in 1988).
- In 1990, 18,000 people were unemployed in the state. 25,000 people were unemployed in the state in 1989, including 1,000 construction workers.
- The **construction** unemployment rate in Nebraska was 3.3% in 1989 (5.8% in 1988). The **national** average construction unemployment rate increased to 11.1% in **1990** from 10.0% in 1989 (10.6% in 1988).

## ECONOMIC IMPACT OF CONSTRUCTION ON NEBRASKA

- Each $1 spent on new construction in Nebraska generates a total of $2.0402 in economic activity in both industries and services in the state. This ratio is used to estimate the impact of new construction on the state's economy. For example, a $20 million project would result in a $40,804,000 increase in the state's economy ($20 million X the 2.0402 multiplier). This total includes the original $20 million project.
- Each additional $1 million spent on new construction in Nebraska creates 35.0 jobs. For example, a $20 million new construction project would create 700 jobs in the state in construction, supplier, and service industries ($20 X 35.0 jobs/million).
- For each $1 of new construction, the earnings of households in the state is increased by $.6694. For example, a $20 million construction project would increase the total household earnings in the state by $13,388,000

($20 million X $.6694). Both construction workers and employees of other industries benefit from this increased standard of living, and this figure also shows that the tax base of the state is increased.

Note: Figures from 1988 Regional Input-Output Modeling System (RIMS II), Bureau of Economic Analysis, U.S. Department of Commerce.

## CONSTRUCTION'S SHARE OF NEBRASKA'S ECONOMY

- The total construction industry payroll in Nebraska in 1989 was $517,199,000, 5.4 percent of the state's total private industry payroll.

- In Nebraska, construction (including homebuilding, nonresidential building and nonbuilding work) increased from 3.6% of the state's gross product in 1982 to 3.7% in 1984, then dropped back to 3.6% in 1986. On average in the Plains states, construction grew from 3.7% in 1982 to 3.9% in 1986. This very useful data, the first of its kind computed on a state-by-state basis, is not available for more recent years due to federal budget cuts.

CONSTRUCTION'S SHARE OF GROSS PRODUCT

| | *1982* | *1983* | *1984* | *1985* | *1986* |
|---|---|---|---|---|---|
| NEBRASKA | 3.6% | 3.6% | 3.7% | 3.7% | 3.6% |
| PLAINS | 3.7 | 3.8 | 3.8 | 3.8 | 3.9 |
| UNITED STATES | 4.5 | 4.5 | 4.6 | 4.7 | 4.7 |

Bureau of Economic Analysis, U.S. Department of Commerce

Note: These numbers do not include the value of supplies and equipment used in construction; for example, steel used in construction is counted as part of the steel industry rather than in the construction total. When the total value of construction is taken into account, AGC has estimated that construction accounts for 10% of the gross national product.

## NONRESIDENTIAL BUILDING PERMITS IN NEBRASKA

- In 1990, the value of nonresidential building permits issued for new construction increased 30.9 percent from 1989, to $222 million. Nonresidential remodeling and reconstruction work increased 5.1 percent, to $131 million in 1990. Residential construction authorized by building permits increased 11.2 percent in 1990.

VALUE OF NONRESIDENTIAL BUILDING PERMITS ISSUED IN NEBRASKA (IN THOUSANDS)

| *Construction Category* | *1989* | *Preliminary 1990* | *Percent Change* |
|---|---|---|---|
| Single Family Houses | $271,291 | $289,283 | 6.6% |
| Two-Family Buildings | 7,246 | 8,910 | 23.0 |
| Three- and Four-Family Buildings | 2,574 | 2,025 | -21.3 |
| Five-or-more Family Buildings | 31,916 | 47,741 | 49.6 |
| **Total Residential Buildings** | 313,027 | 347,959 | 11.2 |
| **Additions, Alterations, Residential** | 35,397 | 35,157 | -0.7 |
| Hotels, Motels | 3,742 | 4,560 | 21.9 |
| Other Nonhousekeeping | 946 | 146 | -84.6 |

# NEVADA ECONOMIC FACT SHEET

This economic fact sheet contains the latest economic data available as of February, 1991.

## CONSTRUCTION EMPLOYMENT

- Construction employment in Nevada has increased from 21,800 in 1984 to 45,600 in 1989.
- As of December, 1990, the construction industry in Nevada employed 2,900 more workers than one year earlier (monthly data not seasonally adjusted).
- Construction employment was 5.1% of total state employment in 1984. In 1989, construction accounted for 7.8% of the 582,300 people employed in Nevada.

NEVADA EMPLOYMENT

| *Year* | *Construction* | *Total* | *Constr Pct of Total* |
|---|---|---|---|
| 1984 | 21,800 | 426,000 | 5.1 |
| 1985 | 23,900 | 446,400 | 5.4 |
| 1986 | 27,700 | 468,100 | 5.9 |
| 1987 | 30,100 | 500,200 | 6.0 |
| 1988 | 36,300 | 537,600 | 6.8 |
| 1989 | 45,600 | 582,300 | 7.8 |
| December, 1989 | 49,100 | 606,300 | 8.1 |
| December, 1990 | 52,000 | 641,800 | 8.1 |

Bureau of Labor Statistics, U.S. Department of Labor

CONSTRUCTION EMPLOYMENT IN MAJOR CITIES

| *City* | *1988* | *1989* | *December, 1990* |
|---|---|---|---|
| Las Vegas | 22,700 | 31,400 | 35,700 |
| Reno | 7,400 | 7,400 | 8,000 |

Bureau of Labor Statistics, U.S. Department of Labor

## NEVADA UNEMPLOYMENT RATE

- In 1990, the unemployment rate in Nevada was 4.9% (5.0% in 1989, 5.5% in 1988), as compared to the national average rate of 5.5% (5.3% in 1989, 5.5% in 1988).
- In 1990, 31,000 people were unemployed in the state. 30,000 people were unemployed in the state in 1989, including 5,000 construction workers.
- The **construction** unemployment rate in Nevada was 10.1% in 1989 (9.7% in 1988). The **national** average construction unemployment rate increased to 11.1% in **1990** from 10.0% in 1989 (10.6% in 1988).

## ECONOMIC IMPACT OF CONSTRUCTION ON NEVADA

- Each $1 spent on new construction in Nevada generates a total of $1.7404 in economic activity in both industries and services in the state. This ratio is used to estimate the impact of new construction on the state's economy. For example, a $20 million project would result in a $34,808,000 increase in the state's economy ($20 million X the 1.7404 multiplier). This total includes the original $20 million project.
- Each additional $1 million spent on new construction in Nevada creates 23.7 jobs. For example, a $20 million new construction project would create 474 jobs in the state in construction, supplier, and service industries ($20 X 23.7 jobs/million).

- For each $1 of new construction, the earnings of households in the state is increased by $.5832. For example, a $20 million construction project would increase the total household earnings in the state by $11,664,000 ($20 million X $.5832). Both construction workers and employees of other industries benefit from this increased standard of living, and this figure also shows that the tax base of the state is increased.

Note: Figures from 1988 Regional Input-Output Modeling System (RIMS II), Bureau of Economic Analysis, U.S. Department of Commerce.

## CONSTRUCTION'S SHARE OF NEVADA'S ECONOMY

- The total construction industry payroll in Nevada in 1989 was $1,217,626,000, 11.5 percent of the state's total private industry payroll.

- In Nevada, construction (including homebuilding, nonresidential building and nonbuilding work) remains very important, ranging from 8.1% of the state's gross product in 1982 to 7.7% in 1986. For the entire Far West region (CA,NV,OR,WA,AK,HI), construction comprised 4.6% of the economy. This very useful data, the first of its kind computed on a state-by-state basis, is not available for more recent years due to federal budget cuts.

CONSTRUCTION'S SHARE OF GROSS PRODUCT

| | *1982* | *1983* | *1984* | *1985* | *1986* |
|---|---|---|---|---|---|
| NEVADA | 8.1% | 7.5% | 7.4% | 7.3% | 7.7% |
| FAR WEST | 4.5 | 4.3 | 4.5 | 4.5 | 4.6 |
| UNITED STATES | 4.5 | 4.5 | 4.6 | 4.7 | 4.7 |

Bureau of Economic Analysis, U.S. Department of Commerce

Note: These numbers do not include the value of supplies and equipment used in construction; for example, steel used in construction is counted as part of the steel industry rather than in the construction total. When the total value of construction is taken into account, AGC has estimated that construction accounts for 10% of the gross national product.

## NONRESIDENTIAL BUILDING PERMITS IN NEVADA

- In 1990, the value of nonresidential building permits issued for new construction dropped 5.6 percent from 1989, to $593 million. Nonresidential remodeling and reconstruction work dropped 35.5 percent, to $349 million in 1990. Residential construction authorized by building permits increased 0.1 percent in 1990.

VALUE OF NONRESIDENTIAL BUILDING PERMITS ISSUED IN NEVADA (IN THOUSANDS)

| *Construction Category* | *1989* | *Preliminary 1990* | *Percent Change* |
|---|---|---|---|
| Single Family Houses | $1,098,353 | $1,156,995 | 5.3% |
| Two-Family Buildings | 9,343 | 10,170 | 8.9 |
| Three- and Four-Family Buildings | 22,425 | 30,956 | 38.0 |
| Five-or-more Family Buildings | 383,400 | 316,030 | -17.6 |
| Total Residential Buildings | 1,513,521 | 1,514,151 | 0.1 |
| Additions, Alterations, Residential | 36,585 | 46,940 | 28.3 |
| | | | |
| Hotels, Motels | 202,843 | 88,293 | -56.5 |

# NEW HAMPSHIRE ECONOMIC FACT SHEET

This economic fact sheet contains the latest economic data available as of February, 1991.

## CONSTRUCTION EMPLOYMENT

- Construction employment in New Hampshire increased from 25,200 in 1984 to 36,800 in 1987, then declined to 31,100 in 1989.
- As of December, 1990, the construction industry in New Hampshire employed 20,000 workers, 6,400 fewer than during the same month one year earlier (monthly data not seasonally adjusted).
- Construction employment was 5.9% of total state employment in 1989.

NEW HAMPSHIRE EMPLOYMENT

| *Year* | *Construction* | *Total* | *Constr Pct of Total* |
|---|---|---|---|
| 1984 | 25,200 | 441,500 | 5.7 |
| 1985 | 30,900 | 466,000 | 6.6 |
| 1986 | 35,200 | 490,100 | 7.2 |
| 1987 | 36,800 | 512,800 | 7.2 |
| 1988 | 35,900 | 529,000 | 6.8 |
| 1989 | 31,100 | 526,500 | 5.9 |
| December, 1989 | 26,400 | 523,200 | 5.0 |
| December, 1990 | 20,000 | 506,800 | 3.9 |

Bureau of Labor Statistics, U.S. Department of Labor

CONSTRUCTION EMPLOYMENT IN MAJOR CITIES

| *City* | *1988* | *1989* | *December, 1990* |
|---|---|---|---|
| Manchester | 5,800 | 5,600 | 3,200 |
| Nashua | 5,000 | 4,000 | 2,100 |
| Portsmouth-Dover-Rochester | 6,000 | 5,200 | 3,600 |

Bureau of Labor Statistics, U.S. Department of Labor

## NEW HAMPSHIRE UNEMPLOYMENT RATE

- In 1990, the unemployment rate in New Hampshire was 5.6% (3.5% in 1989, 2.5% in 1988), as compared to the national average rate of 5.5% (5.3% in 1989, 5.5% in 1988).
- In 1990, 36,000 people were unemployed in the state. 21,000 people were unemployed in the state in 1989, including 3,000 construction workers.
- The **construction** unemployment rate in New Hampshire was 7.8% in 1989 (4.6% in 1988). The **national** average construction unemployment rate increased to 11.1% in **1990** from 10.0% in 1989 (10.6% in 1988).

## ECONOMIC IMPACT OF CONSTRUCTION ON NEW HAMPSHIRE

- Each $1 spent on new construction in New Hampshire generates a total of $2.1747 in economic activity in both industries and services in the state. This ratio is used to estimate the impact of new construction on the state's economy. For example, a $20 million project would result in a $43,494,000 increase in the state's economy ($20 million X the 2.1747 multiplier). This total includes the original $20 million project.
- Each additional $1 million spent on new construction in New Hampshire creates 32.0 jobs. For example, a $20 million new construction project would create 640 jobs in the state in construction, supplier, and service industries ($20 X 32.0 jobs/million).

- For each $1 of new construction, the earnings of households in the state is increased by $.7334. For example, a $20 million construction project would increase the total household earnings in the state by $14,668,000 ($20 million X $.7334). Both construction workers and employees of other industries benefit from this increased standard of living, and this figure also shows that the tax base of the state is increased.

Note: Figures from 1988 Regional Input-Output Modeling System (RIMS II), Bureau of Economic Analysis, U.S. Department of Commerce.

## CONSTRUCTION'S SHARE OF NEW HAMPSHIRE'S ECONOMY

- The total construction industry payroll in New Hampshire in 1989 was $739,205,000, 7.6 percent of the state's total private industry payroll.

- In New Hampshire, construction (including homebuilding, nonresidential building and nonbuilding work) increased from 6.5% of the state's gross product in 1982 to 7.3% in 1986. On average in the New England states (CT,ME,MA,NH,RI,VT), construction grew from 3.9% in 1982 to 4.8% in 1986. This very useful data, the first of its kind computed on a state-by-state basis, is not available for more recent years due to federal budget cuts.

CONSTRUCTION'S SHARE OF GROSS PRODUCT

| | *1982* | *1983* | *1984* | *1985* | *1986* |
|---|---|---|---|---|---|
| NEW HAMPSHIRE | 6.5% | 6.8% | 6.3% | 6.9% | 7.3% |
| NEW ENGLAND | 3.9 | 4.1 | 4.3 | 4.5 | 4.8 |
| UNITED STATES | 4.5 | 4.5 | 4.6 | 4.7 | 4.7 |

Bureau of Economic Analysis, U.S. Department of Commerce

Note: These numbers do not include the value of supplies and equipment used in construction; for example, steel used in construction is counted as part of the steel industry rather than in the construction total. When the total value of construction is taken into account, AGC has estimated that construction accounts for 10% of the gross national product.

## NONRESIDENTIAL BUILDING PERMITS IN NEW HAMPSHIRE

- In 1990, the value of nonresidential building permits issued for new construction dropped 23.8 percent from 1989, to $185.5 million. Nonresidential remodeling and reconstruction work increased 14.7 percent, to $131 million in 1990. Residential construction authorized by building permits dropped 43.0 percent in 1990.

VALUE OF NONRESIDENTIAL BUILDING PERMITS ISSUED IN NEW HAMPSHIRE (IN THOUSANDS)

| *Construction Category* | *1989* | *Preliminary 1990* | *Percent Change* |
|---|---|---|---|
| Single Family Houses | $483,121 | $286,537 | -40.7% |

## NEW JERSEY UNEMPLOYMENT RATE

- In 1990, the unemployment rate in New Jersey was 5.0% (4.1% in 1989, 3.8% in 1988), as compared to the national average rate of 5.5% (5.3% in 1989, 5.5% in 1988).
- In 1990, 202,000 people were unemployed in the state. 163,000 people were unemployed in the state in 1989, including 14,000 construction workers.
- The **construction** unemployment rate in New Jersey was 7.1% in 1989 (7.1% in 1988). The **national** average construction unemployment rate increased to 11.1% in **1990** from 10.0% in 1989 (10.6% in 1988).

## ECONOMIC IMPACT OF CONSTRUCTION ON NEW JERSEY

- Each $1 spent on new construction in New Jersey generates a total of $2.3792 in economic activity in both industries and services in the state. This ratio is used to estimate the impact of new construction on the state's economy. For example, a $20 million project would result in a $47,584,000 increase in the state's economy ($20 million X the 2.3792 multiplier). This total includes the original $20 million project.
- Each additional $1 million spent on new construction in New Jersey creates 27.7 jobs. For example, a $20 million new construction project would create 554 jobs in the state in construction, supplier, and service industries ($20 X 27.7 jobs/million).

- For each $1 of new construction, the earnings of households in the state is increased by $.7764. For example, a $20 million construction project would increase the total household earnings in the state by $15,528,000 ($20 million X $.7764). Both construction workers and employees of other industries benefit from this increased standard of living, and this figure also shows that the tax base of the state is increased.

Note: Figures from 1988 Regional Input-Output Modeling System (RIMS II), Bureau of Economic Analysis, U.S. Department of Commerce.

## CONSTRUCTION'S SHARE OF NEW JERSEY'S ECONOMY

- The total construction industry payroll in New Jersey in 1989 was $5,359,521,000, 6.5 percent of the state's total private industry payroll.

- In New Jersey, construction (including homebuilding, nonresidential building and nonbuilding work) increased from 4.1% of the state's gross product in 1982 to 4.9% in 1986. On average in the Mideast states (DE,DC,MD,NJ,NY,PA), construction grew from 3.9% in 1982 to 4.5% in 1986. This very useful data, the first of its kind computed on a state-by-state basis, is not available for more recent years due to federal budget cuts.

**CONSTRUCTION'S SHARE OF GROSS PRODUCT**

| | *1982* | *1983* | *1984* | *1985* | *1986* |
|---|---|---|---|---|---|
| NEW JERSEY | 4.1% | 4.1% | 4.6% | 4.8% | 4.9% |
| MIDEAST | 3.9 | 3.9 | 4.1 | 4.3 | 4.5 |
| UNITED STATES | 4.5 | 4.5 | 4.6 | 4.7 | 4.7 |

Bureau of Economic Analysis, U.S. Department of Commerce

Note: These numbers do not include the value of supplies and equipment used in construction; for example, steel used in construction is counted as part of the steel industry rather than in the construction total. When the total value of construction is taken into account, AGC has estimated that construction accounts for 10% of the gross national product.

## NONRESIDENTIAL BUILDING PERMITS IN NEW JERSEY

- In 1990, the value of nonresidential building permits issued for new construction dropped 29.6 percent from 1989, to $1.4 billion. Nonresidential remodeling and reconstruction work increased 14.1 percent, to $772.7 million in 1990.

- Residential construction authorized by building permits dropped 38.4 percent in 1990.

**VALUE OF NONRESIDENTIAL BUILDING PERMITS ISSUED IN NEW JERSEY (IN THOUSANDS)**

| *Construction Category* | *1989* | *Preliminary 1990* | *Percent Change* |
|---|---|---|---|
| Single Family Houses | $1,738,355 | $1,192,473 | -31.4% |
| Two-Family Buildings | 72,371 | 36,729 | -49.2 |

# NEW MEXICO ECONOMIC FACT SHEET

This economic fact sheet contains the latest economic data available as of February, 1991.

## CONSTRUCTION EMPLOYMENT

- Construction employment in New Mexico declined from 36,600 in 1984 to 30,600 in 1989.
- In December, 1990, the construction industry in New Mexico employed 1,200 fewer workers than one year earlier (monthly data not seasonally adjusted).
- Construction employment was 7.3% of total state employment in 1984. In 1989, construction accounted for 5.5% of the 560,600 people employed in New Mexico.

**NEW MEXICO EMPLOYMENT**

| *Year* | *Construction* | *Total* | *Constr Pct of Total* |
|---|---|---|---|
| 1984 | 36,600 | 502,800 | 7.3 |
| 1985 | 37,500 | 520,700 | 7.2 |
| 1986 | 35,100 | 528,100 | 6.6 |
| 1987 | 32,100 | 529,300 | 6.1 |
| 1988 | 31,000 | 547,500 | 5.7 |
| 1989 | 30,600 | 560,600 | 5.5 |
| December, 1989 | 29,300 | 570,200 | 5.1 |
| December, 1990 | 28,100 | 574,300 | 4.9 |

## NEW MEXICO UNEMPLOYMENT RATE

- In 1990, the unemployment rate in New Mexico was 6.3% (6.7% in 1989, 8.8% in 1988), as compared to the national average rate of 5.5% (5.3% in 1989, 5.5% in 1988).
- In 1990, 44,000 people were unemployed in the state. 46,000 people were unemployed in the state in 1989, including 5,000 construction workers.
- The **construction** unemployment rate in New Mexico was 15.4% in 1989 (17.2% in 1988). The **national** average construction unemployment rate increased to 11.1% in **1990** from 10.0% in 1989 (10.6% in 1988).

## ECONOMIC IMPACT OF CONSTRUCTION ON NEW MEXICO

- Each $1 spent on new construction in New Mexico generates a total of $2.0005 in economic activity in both industries and services in the state. This ratio is used to estimate the impact of new construction on the state's economy. For example, a $20 million project would result in a $40,010,000 increase in the state's economy ($20 million X the 2.0005 multiplier). This total includes the original $20 million project.
- Each additional $1 million spent on new construction in New Mexico creates 34.1 jobs. For example, a $20 million new construction project would create 682 jobs in the state in construction, supplier, and service industries ($20 X 34.1 jobs/million).
- For each $1 of new construction, the earnings of households in the state is increased by $.6584. For example, a $20 million construction project would increase the total household earnings in the state by $13,168,000.

($20 million X $.6584). Both construction workers and employees of other industries benefit from this increased standard of living, and this figure also shows that the tax base of the state is increased.

Note: Figures from 1988 Regional Input-Output Modeling System (RIMS II), Bureau of Economic Analysis, U.S. Department of Commerce.

## CONSTRUCTION'S SHARE OF NEW MEXICO'S ECONOMY

- The total construction industry payroll in New Mexico in 1989 was $545,259,000, 7.3 percent of the state's total private industry payroll.

- In New Mexico, construction (including homebuilding, nonresidential building and nonbuilding work) increased from 6.6% of the state's gross product in 1982 to 6.7% in 1986. On average in the Southwest states (AZ,NM,OK,TX), construction grew from 5.9% in 1982 to 6.1% in 1984, then dropped back to 5.9% by 1986. This very useful data, the first of its kind computed on a state-by-state basis, is not available for more recent years due to federal budget cuts.

**CONSTRUCTION'S SHARE OF GROSS PRODUCT**

| | *1982* | *1983* | *1984* | *1985* | *1986* |
|---|---|---|---|---|---|
| NEW MEXICO | 6.6% | 6.6% | 6.8% | 6.6% | 6.7% |
| SOUTHWEST | 5.9 | 6.0 | 6.1 | 6.0 | 5.9 |
| UNITED STATES | 4.5 | 4.5 | 4.6 | 4.7 | 4.7 |

Bureau of Economic Analysis, U.S. Department of Commerce

Note: These numbers do not include the value of supplies and equipment used in construction; for example, steel used in construction is counted as part of the steel industry rather than in the construction total. When the total value of construction is taken into account, AGC has estimated that construction accounts for 10% of the gross national product.

## NONRESIDENTIAL BUILDING PERMITS IN NEW MEXICO

- In 1990, the value of nonresidential building permits issued for new construction dropped 34.0 percent from 1989, to $144 million. Nonresidential remodeling and reconstruction work dropped 13.3 percent, to $107 million in 1990. Residential construction authorized by building permits increased 5.0 percent in 1990.

**VALUE OF NONRESIDENTIAL BUILDING PERMITS ISSUED IN NEW MEXICO (IN THOUSANDS)**

| *Construction Category* | *1989* | *Preliminary 1990* | *Percent Change* |
|---|---|---|---|
| Single Family Houses | $408,640 | $423,183 | 3.6% |

## NEW YORK UNEMPLOYMENT RATE

- In 1990, the unemployment rate in New York was 5.2% (5.1% in 1989, 4.3% in 1988), as compared to the national average rate of 5.5% (5.3% in 1989, 5.5% in 1988).

- In 1990, 451,000 people were unemployed in the state. 442,000 people were unemployed in the state in 1989, including 49,000 construction workers.

- The **construction** unemployment rate in New York was 11.1% in 1989 (8.1% in 1988). The **national** average construction unemployment rate increased to 11.1% in **1990** from 10.0% in 1989 (10.6% in 1988).

## ECONOMIC IMPACT OF CONSTRUCTION ON NEW YORK

- Each $1 spent on new construction in New York generates a total of $1.9504 in economic activity in both industries and services in the state. This ratio is used to estimate the impact of new construction on the state's economy. For example, a $20 million project would result in a $39,008,000 increase in the state's economy ($20 million X the 1.9504 multiplier). This total includes the original $20 million project.

- Each additional $1 million spent on new construction in New York creates 21.8 jobs. For example, a $20 million new construction project would create 436 jobs in the state in construction, supplier, and service industries ($20 X 21.8 jobs/million).

- For each $1 of new construction, the earnings of households in the state is increased by $.6018. For example, a $20 million construction project would increase the total household earnings in the state by $12,036,000 ($20 million X $.6018). Both construction workers and employees of other industries benefit from this increased standard of living, and this figure also shows that the tax base of the state is increased. Note: Figures from 1988 Regional Input-Output Modeling System (RIMS II), Bureau of Economic Analysis, U.S. Department of Commerce.

## CONSTRUCTION'S SHARE OF NEW YORK'S ECONOMY

- The total construction industry payroll in New York state in 1989 was $10,279,773,000, 5.6 percent of the state's total private industry payroll.

- In New York, construction (including homebuilding, nonresidential building and nonbuilding work) increased from 3.4% of the state's gross product in 1982 to 4.1% in 1986. On average in the Mideast states (DE,DC,MD,NJ,NY,PA), construction grew from 3.9% in 1982 to 4.5% in 1986. This very useful data, the first of its kind computed on a state-by-state basis, is not available for more recent years due to federal budget cuts.

CONSTRUCTION'S SHARE OF GROSS PRODUCT

| | *1982* | *1983* | *1984* | *1985* | *1986* |
|---|---|---|---|---|---|
| NEW YORK | 3.4% | 3.5% | 3.7% | 3.9% | 4.1% |
| MIDEAST | 3.9 | 3.9 | 4.1 | 4.3 | 4.5 |
| UNITED STATES | 4.5 | 4.5 | 4.6 | 4.7 | 4.7 |

Bureau of Economic Analysis, U.S. Department of Commerce

Note: These numbers do not include the value of supplies and equipment used in construction; for example, steel used in construction is counted as part of the steel industry rather than in the construction total. When the total value of construction is taken into account, AGC has estimated that construction accounts for 10% of the gross national product.

## NONRESIDENTIAL BUILDING PERMITS IN NEW YORK STATE

- In 1990, the value of nonresidential building permits issued for new construction dropped 20.7 percent from 1989, to $2.0 billion. Nonresidential remodeling and reconstruction work dropped 16.0 percent, to $1.1 billion in 1990. Residential construction authorized by building permits dropped 25.4 percent in 1990.

VALUE OF NONRESIDENTIAL BUILDING PERMITS ISSUED IN NEW YORK STATE (IN THOUSANDS)

| *Construction Category* | *1989* | *Preliminary 1990* | *Percent Change* |
|---|---|---|---|
| Single Family Houses | $2,771,426 | $2,179,226 | -21.4% |

## NORTH CAROLINA UNEMPLOYMENT RATE

- In 1990, the unemployment rate in North Carolina was 4.1% (3.5% in 1989, 3.7% in 1988), as compared to the national average rate of 5.5% (5.3% in 1989, 5.5% in 1988).
- In 1990, 139,000 people were unemployed in the state. 119,000 people were unemployed in the state in 1989, including 10,000 construction workers.
- The **construction** unemployment rate in North Carolina was 5.4% in 1989 (5.6% in 1988). The **national** average construction unemployment rate increased to 11.1% in **1990** from 10.0% in 1989 (10.6% in 1988).

## ECONOMIC IMPACT OF CONSTRUCTION ON NORTH CAROLINA

- Each $1 spent on new construction in North Carolina generates a total of $2.3477 in economic activity in both industries and services in the state. This ratio is used to estimate the impact of new construction on the state's economy. For example, a $20 million project would result in a $46,954,000 increase in the state's economy ($20 million X the 2.3477 multiplier). This total includes the original $20 million project.
- Each additional $1 million spent on new construction in North Carolina creates 38.6 jobs. For example, a $20 million new construction project would create 772 jobs in the state in construction, supplier, and service industries ($20 X 38.6 jobs/million).

- For each $1 of new construction, the earnings of households in the state is increased by $.7615. For example, a $20 million construction project would increase the total household earnings in the state by $15,230,000 ($20 million X $.7615). Both construction workers and employees of other industries benefit from this increased standard of living, and this figure also shows that the tax base of the state is increased.

Note: Figures from 1988 Regional Input-Output Modeling System (RIMS II), Bureau of Economic Analysis, U.S. Department of Commerce.

## CONSTRUCTION'S SHARE OF NORTH CAROLINA'S ECONOMY

- The total construction industry payroll in North Carolina in 1989 was $3,091,267,000, 6.3 percent of the state's total private industry payroll.

- In North Carolina, construction (including homebuilding, nonresidential building and nonbuilding work) rose from 3.2% of the state's gross product in 1982 to 4.0% in 1986. On average in the Southeast states (AL,AR,FL,GA,KY, LA,MS,NC,SC,TN,VA,WV), construction grew from 5.1% in 1982 to 5.3% in 1986. This very useful data, the first of its kind computed on a state-by-state basis, is not available for more recent years due to federal budget cuts.

**CONSTRUCTION'S SHARE OF GROSS PRODUCT**

| | *1982* | *1983* | *1984* | *1985* | *1986* |
|---|---|---|---|---|---|
| NORTH CAROLINA | 3.2% | 3.2% | 3.6% | 3.9% | 4.0% |
| SOUTHEAST | 5.1 | 4.9 | 5.1 | 5.2 | 5.3 |
| UNITED STATES | 4.5 | 4.5 | 4.6 | 4.7 | 4.7 |

Bureau of Economic Analysis, U.S. Department of Commerce

Note: These numbers do not include the value of supplies and equipment used in construction; for example, steel used in construction is counted as part of the steel industry rather than in the construction total. When the total value of construction is taken into account, AGC has estimated that construction accounts for 10% of the gross national product.

## NONRESIDENTIAL BUILDING PERMITS IN NORTH CAROLINA

- In 1990, the value of nonresidential building permits issued for new construction decreased 4.4 percent from 1989, to $1.8 billion. Nonresidential remodeling and reconstruction work increased 1.4 percent, to $711 million in 1990. Residential construction authorized by building permits dropped 8.0 percent in 1990.

**VALUE OF NONRESIDENTIAL BUILDING PERMITS ISSUED IN NORTH CAROLINA (IN THOUSANDS)**

| *Construction Category* | *1989* | *Preliminary 1990* | *Percent Change* |
|---|---|---|---|
| Single Family Houses | $2,648,901 | $2,521,258 | -4.8% |

# NORTH DAKOTA ECONOMIC FACT SHEET

This economic fact sheet contains the latest economic data available as of February, 1991.

## CONSTRUCTION EMPLOYMENT

- Construction employment in North Dakota declined from 13,700 in 1984 to 9,800 in 1989.
- As of December, 1990, the construction industry in North Dakota employed 8,600 workers, 100 more than one year earlier (monthly data not seasonally adjusted).
- Construction employment was 5.4% of total state employment in 1984. In 1989, construction accounted for 3.8% of the quarter of a million people employed in North Dakota.

NORTH DAKOTA EMPLOYMENT

| *Year* | *Construction* | *Total* | *Constr Pct of Total* |
|---|---|---|---|
| 1984 | 13,700 | 252,500 | 5.4 |
| 1985 | 11,700 | 252,000 | 4.6 |
| 1986 | 10,800 | 249,900 | 4.3 |

## NORTH DAKOTA UNEMPLOYMENT RATE

- In 1990, the unemployment rate in North Dakota was 3.9% (4.3% in 1989, 5.3% in 1988), as compared to the national average rate of 5.5% (5.3% in 1989, 5.5% in 1988).
- In 1990, 13,000 people were unemployed in the state. 14,000 people were unemployed in the state in 1989, including 2,000 construction workers.
- The **construction** unemployment rate in North Dakota was 16.2% in 1989 (19.3% in 1988). The **national** average construction unemployment rate increased to 11.1% in **1990** from 10.0% in 1989 (10.6% in 1988).

## ECONOMIC IMPACT OF CONSTRUCTION ON NORTH DAKOTA

- Each $1 spent on new construction in North Dakota generates a total of $1.8488 in economic activity in both industries and services in the state. This ratio is used to estimate the impact of new construction on the state's economy. For example, a $20 million project would result in a $36,976,000 increase in the state's economy ($20 million X the 1.8488 multiplier). This total includes the original $20 million project.
- Each additional $1 million spent on new construction in North Dakota creates 34.5 jobs. For example, a $20 million new construction project would create 690 jobs in the state in construction, supplier, and service industries ($20 X 34.5 jobs/million).
- For each $1 of new construction, the earnings of households in the state is increased by $.5929. For example, a $20 million construction project would increase the total household earnings in the state by $11,858,000.

($20 million X $.5929). Both construction workers and employees of other industries benefit from this increased standard of living, and this figure also shows that the tax base of the state is increased.

Note: Figures from 1988 Regional Input-Output Modeling System (RIMS II), Bureau of Economic Analysis, U.S. Department of Commerce.

## CONSTRUCTION'S SHARE OF NORTH DAKOTA'S ECONOMY

- The total construction industry payroll in North Dakota in 1989 was $198,460,000, 6.4 percent of the state's total private industry payroll.

- In North Dakota, construction (including homebuilding, nonresidential building and nonbuilding work) comprised 5.5% of the state's gross product in 1986. On average in the Plains states (IA,KS,MN,MO,NE,ND,SD), construction grew from 3.7% in 1982 to 3.9% in 1986. This very useful data, the first of its kind computed on a state-by-state basis, is not available for more recent years due to federal budget cuts.

CONSTRUCTION'S SHARE OF GROSS PRODUCT

| | *1982* | *1983* | *1984* | *1985* | *1986* |
|---|---|---|---|---|---|
| NORTH DAKOTA | 7.3% | 8.9% | 6.6% | 5.6% | 5.5% |
| PLAINS | 3.7 | 3.8 | 3.8 | 3.8 | 3.9 |
| UNITED STATES | 4.5 | 4.5 | 4.6 | 4.7 | 4.7 |

Bureau of Economic Analysis, U.S. Department of Commerce

Note: These numbers do not include the value of supplies and equipment used in construction; for example, steel used in construction is counted as part of the steel industry rather than in the construction total. When the total value of construction is taken into account, AGC has estimated that construction accounts for 10% of the gross national product.

## NONRESIDENTIAL BUILDING PERMITS IN NORTH DAKOTA

- In 1990, the value of nonresidential building permits issued for new construction decreased 4.4 percent from 1989, to $51 million. Nonresidential remodeling and reconstruction work increased 21.2 percent, to $55 million in 1990.

- Residential construction authorized by building permits dropped 19.5 percent in 1990.

VALUE OF NONRESIDENTIAL BUILDING PERMITS ISSUED IN NORTH DAKOTA (IN THOUSANDS)

| *Construction Category* | *1989* | *Preliminary 1990* | *Percent Change* |
|---|---|---|---|
| Single Family Houses | $67,886 | $65,732 | -3.2% |

# OHIO ECONOMIC FACT SHEET

This economic fact sheet contains the latest economic data available as of February, 1991.

## CONSTRUCTION EMPLOYMENT

- Construction employment in Ohio increased from 144,800 in 1984 to 193,100 in 1989.
- As of December, 1990, the construction industry in Ohio employed 2,300 more workers than one year earlier (monthly data not seasonally adjusted).
- Construction employment was 3.4% of total state employment in 1984. In 1989, construction accounted for 4.0% of the 4,817,200 people employed in Ohio.

OHIO EMPLOYMENT

| *Year* | *Construction* | *Total* | *Constr Pct of Total* |
|---|---|---|---|
| 1984 | 144,800 | 4,260,200 | 3.4 |
| 1985 | 154,000 | 4,372,900 | 3.5 |
| 1986 | 160,700 | 4,471,400 | 3.6 |
| 1987 | 176,400 | 4,582,600 | 3.8 |
| 1988 | 185,600 | 4,700,600 | 3.9 |
| 1989 | 193,100 | 4,817,200 | 4.0 |
| December, 1989 | 195,800 | 4,909,600 | 4.0 |
| December, 1990 | 198,100 | 4,987,200 | 4.0 |

Bureau of Labor Statistics, U.S. Department of Labor

CONSTRUCTION EMPLOYMENT IN MAJOR CITIES

| *City* | *1988* | *1989* | *December, 1990* |
|---|---|---|---|
| Akron | 9,700 | 10,000 | 10,200 |
| Canton | 6,300 | 7,100 | 7,300 |
| Cincinnati | 31,600 | 34,300 | 35,000 |
| Cleveland | 29,400 | 32,900 | 33,700 |
| Columbus | 29,200 | 29,400 | 29,600 |
| Dayton-Springfield | 17,200 | 17,800 | 17,200 |
| Toledo | 11,100 | 11,900 | 12,200 |
| Youngstown-Warren | 7,300 | 7,800 | 7,500 |

Bureau of Labor Statistics, U.S. Department of Labor

## OHIO UNEMPLOYMENT RATE

- In 1990, the unemployment rate in Ohio was 5.7% (5.5% in 1989, 5.9% in 1988), as compared to the national average rate of 5.5% (5.3% in 1989, 5.5% in 1988).
- In 1990, 307,000 people were unemployed in the state. 300,000 people were unemployed in the state in 1989, including 29,000 construction workers.
- The **construction** unemployment rate in Ohio was 12.4% in 1989 (15.4% in 1988). The **national** average construction unemployment rate increased to 11.1% in 1990 from 10.0% in 1989 (10.6% in 1988).

## ECONOMIC IMPACT OF CONSTRUCTION ON OHIO

- Each $1 spent on new construction in Ohio generates a total of $2.5966 in economic activity in both industries and services in the state. This ratio is used to estimate the impact of new construction on the state's economy. For example, a $20 million project would result in a $51,932,000 increase in the state's economy ($20 million X the 2.5966 multiplier). This total includes the original $20 million project.
- Each additional $1 million spent on new construction in Ohio creates 36.4 jobs. For example, a $20 million new construction project would create 728 jobs in the state in construction, supplier, and service industries ($20 X 36.4 jobs /million).

- For each $1 of new construction, the earnings of households in the state is increased by $.8116. For example, a $20 million construction project would increase the total household earnings in the state by $16,232,000 ($20 million X $.8116). Both construction workers and employees of other industries benefit from this increased standard of living, and this figure also shows that the tax base of the state is increased.

Note: Figures from 1988 Regional Input-Output Modeling System (RIMS II), Bureau of Economic Analysis, U.S. Department of Commerce.

## CONSTRUCTION'S SHARE OF OHIO'S ECONOMY

- The total construction industry payroll in Ohio in 1989 was $4,820,657,000, 5.5 percent in the state's total private industry payroll.

- In Ohio, construction (including homebuilding, nonresidential building and nonbuilding work) has remained essentially constant at 3.2% of the state's gross product in 1982 and in 1986. In the Great Lakes region (IL,IN,MI,OH,WI), construction increased from 3.5% of the region's economy in 1982 to 3.6% in 1986. This very useful data, the first of its kind computed on a state-by-state basis, is not available for more recent years due to federal budget cuts.

CONSTRUCTION'S SHARE OF GROSS PRODUCT

| | *1982* | *1983* | *1984* | *1985* | *1986* |
|---|---|---|---|---|---|
| OHIO | 3.2% | 3.1% | 3.2% | 3.2% | 3.2% |
| GREAT LAKES | 3.5 | 3.4 | 3.4 | 3.5 | 3.6 |
| UNITED STATES | 4.5 | 4.5 | 4.6 | 4.7 | 4.7 |

Bureau of Economic Analysis, U.S. Department of Commerce

Note: These numbers do not include the value of supplies and equipment used in construction; for example, steel used in construction is counted as part of the steel industry rather than in the construction total. When the total value of construction is taken into account, AGC has estimated that construction accounts for 10% of the gross national product.

## NONRESIDENTIAL BUILDING PERMITS IN OHIO

- In 1990, the value of nonresidential building permits issued for new construction dropped 14.9 percent from 1989, to $1.6 billion. Nonresidential remodeling and reconstruction work increased 14.0 percent, to $1.3 billion in 1990. Residential construction authorized by building permits increased 2.0 percent in 1990.

VALUE OF NONRESIDENTIAL BUILDING PERMITS ISSUED IN OHIO (IN THOUSANDS)

| *Construction Category* | *1989* | *Preliminary 1990* | *Percent Change* |
|---|---|---|---|
| Single Family Houses | $2,600,937 | $2,798,540 | 7.6% |
| Two-Family Buildings | 70,475 | 38,367 | -45.6 |
| Three- and Four-Family Buildings | 68,607 | 46,901 | -31.6 |
| Five-or-more Family Buildings | 339,944 | 256,856 | -24.4 |
| **Total Residential Buildings** | 3,079,963 | 3,140,664 | 2.0 |
| Additions, Alterations, Residential | 340,829 | 422,741 | 24.0 |

## OKLAHOMA UNEMPLOYMENT RATE

- In 1990, the unemployment rate in Oklahoma was 5.6% (5.6% in 1989, 6.8% in 1988), as compared to the national average rate of 5.5% (5.3% in 1989, 5.5% in 1988).
- In 1990, 86,000 people were unemployed in the state. 85,000 people were unemployed in the state in 1989, including 7,000 construction workers.
- The **construction** unemployment rate in Oklahoma was 14.0% in 1989 (17.6% in 1988). The **national** average construction unemployment rate increased to 11.1% in **1990** from 10.0% in 1989 (10.6% in 1988).

## ECONOMIC IMPACT OF CONSTRUCTION ON OKLAHOMA

- Each $1 spent on new construction in Oklahoma generates a total of $2.2068 in economic activity in both industries and services in the state. This ratio is used to estimate the impact of new construction on the state's economy. For example, a $20 million project would result in a $44,136,000 increase in the state's economy ($20 million X the 2.2068 multiplier). This total includes the original $20 million project.
- Each additional $1 million spent on new construction in Oklahoma creates 35.1 jobs. For example, a $20 million new construction project would create 702 jobs in the state in construction, supplier, and service industries ($20 X 35.1 jobs/million).

- For each $1 of new construction, the earnings of households in the state is increased by $.7005. For example, a $20 million construction project would increase the total household earnings in the state by $14,010,000 ($20 million X $.7005). Both construction workers and employees of other industries benefit from this increased standard of living, and this figure also shows that the tax base of the state is increased.

Note: Figures from 1988 Regional Input-Output Modeling System (RIMS II), Bureau of Economic Analysis, U.S. Department of Commerce.

## CONSTRUCTION'S SHARE OF THE OKLAHOMA ECONOMY

- The total construction industry payroll in Oklahoma in 1989 was $739,296,000, 4.3 percent of the state's total private industry payroll.

- In Oklahoma, construction (including homebuilding, nonresidential building and nonbuilding work) declined from 4.7% of the state's gross product in 1982 to 4.3% in 1986. On average in the Southwest states (AZ,NM,OK,TX), construction grew from 5.9% in 1982 to 6.1% in 1984, and then dropped back to 5.9% in 1986. This very useful data, the first of its kind computed on a state-by-state basis, is not available for more recent years due to federal budget cuts.

CONSTRUCTION'S SHARE OF GROSS PRODUCT

| | *1982* | *1983* | *1984* | *1985* | *1986* |
|---|---|---|---|---|---|
| OKLAHOMA | 4.7% | 4.7% | 4.8% | 4.4% | 4.3% |
| SOUTHWEST | 5.9 | 6.0 | 6.1 | 6.0 | 5.9 |
| UNITED STATES | 4.5 | 4.5 | 4.6 | 4.7 | 4.7 |

Bureau of Economic Analysis, U.S. Department of Commerce

Note: These numbers do not include the value of supplies and equipment used in construction; for example, steel used in construction is counted as part of the steel industry rather than in the construction total. When the total value of construction is taken into account, AGC has estimated that construction accounts for 10% of the gross national product.

## NONRESIDENTIAL BUILDING PERMITS IN OKLAHOMA

- In 1990, the value of nonresidential building permits issued for new construction increased 24.4 percent from 1989, to $267 million. Nonresidential remodeling and reconstruction work dropped only slightly, 1.0 percent, to $153 million in 1990. Residential construction authorized by building permits dropped 6.7 percent in 1990.

VALUE OF NONRESIDENTIAL BUILDING PERMITS ISSUED IN OKLAHOMA (IN THOUSANDS)

| *Construction Category* | *1989* | *Preliminary 1990* | *Percent Change* |
|---|---|---|---|
| Single Family Houses | $371,755 | $363,667 | -2.2% |

## OREGON UNEMPLOYMENT RATE

- In 1990, the unemployment rate in Oregon was 5.5% (5.7% in 1989, 6.8% in 1988), as compared to the national average rate of 5.5% (5.3% in 1989, 5.5% in 1988).
- In 1990, 82,000 people were unemployed in the state. 84,000 people were unemployed in the state in 1989, including 6,000 construction workers.
- The **construction** unemployment rate in Oregon was 11.5% in 1989 (10.6% in 1988). The **national** average construction unemployment rate increased to 11.1% in **1990** from 10.0% in 1989 (10.6% in 1988).

## ECONOMIC IMPACT OF CONSTRUCTION ON OREGON

- Each $1 spent on new construction in Oregon generates a total of $2.2797 in economic activity in both industries and services in the state. This ratio is used to estimate the impact of new construction on the state's economy. For example, a $20 million project would result in a $45,594,000 increase in the state's economy ($20 million X the 2.2797 multiplier). This total includes the original $20 million project.
- Each additional $1 million spent on new construction in Oregon creates 35.9 jobs. For example, a $20 million new construction project would create 718 jobs in the state in construction, supplier, and service industries ($20 X 35.9 jobs/million).

- For each $1 of new construction, the earnings of households in the state is increased by $.7394. For example, a $20 million construction project would increase the total household earnings in the state by $14,788,000 ($20 million X $.7394). Both construction workers and employees of other industries benefit from this increased standard of living, and this figure also shows that the tax base of the state is increased.

Note: Figures from 1988 Regional Input-Output Modeling System (RIMS II), Bureau of Economic Analysis, U.S. Department of Commerce.

## CONSTRUCTION'S SHARE OF OREGON'S ECONOMY

- The total construction industry payroll in Oregon in 1989 was $1,098,013,000, 5.6 percent of the state's total private industry payroll.

- In Oregon, construction (including homebuilding, nonresidential building and nonbuilding work) comprised 3.3% of the state's gross product in 1986. For the entire Far West region (CA,NV,OR,WA,AK,HI), construction comprises 4.6% of the economy. This very useful data, the first of its kind computed on a state-by-state basis, is not available for more recent years due to federal budget cuts.

**CONSTRUCTION'S SHARE OF GROSS PRODUCT**

| | *1982* | *1983* | *1984* | *1985* | *1986* |
|---|---|---|---|---|---|
| OREGON | 3.4% | 3.0% | 3.1% | 3.2% | 3.3% |
| FAR WEST | 4.5 | 4.3 | 4.5 | 4.5 | 4.6 |
| UNITED STATES | 4.5 | 4.5 | 4.6 | 4.7 | 4.7 |

Bureau of Economic Analysis, U.S. Department of Commerce

Note: These numbers do not include the value of supplies and equipment used in construction; for example, steel used in construction is counted as part of the steel industry rather than in the construction total. When the total value of construction is taken into account, AGC has estimated that construction accounts for 10% of the gross national product.

## NONRESIDENTIAL BUILDING PERMITS IN OREGON

- In 1990, the value of nonresidential building permits issued for new construction dropped 13.1 percent from 1989, to $513 million. Nonresidential remodeling and reconstruction work increased 30.6 percent, to $363 million in 1990. Residential construction authorized by building permits increased 18.2 percent in 1990.

**VALUE OF NONRESIDENTIAL BUILDING PERMITS ISSUED IN OREGON (IN THOUSANDS)**

| *Construction Category* | *1989* | *Preliminary 1990* | *Percent Change* |
|---|---|---|---|
| Single Family Houses | $1,028,292 | $1,312,162 | 27.6% |
| Two-Family Buildings | 25,451 | 15,847 | -37.7 |
| Three- and Four-Family Buildings | 24,122 | 43,260 | 79.3 |
| Five-or-more Family Buildings | 322,991 | 284,036 | -12.1 |
| **Total Residential Buildings** | 1,400,856 | 1,655,305 | 18.2 |
| **Additions, Alterations, Residential** | 95,448 | 116,954 | 22.5 |
| | | | |
| Hotels, Motels | 39,792 | 16,914 | -57.5 |
| Other Nonhousekeeping | 567 | 2,176 | 283.8 |
| Amusement, Social, Recreational | 14,263 | 26,426 | 85.3 |
| Churches | 8,389 | 10,792 | 28.6 |
| Industrial Buildings | 122,279 | 148,722 | 21.6 |
| Parking Garages | 2,189 | 8,634 | 294.4 |
| Service Stations, Repair Garages | 5,705 | 4,213 | -26.2 |
| Hospitals, Institutional Buildings | 15,196 | 12,451 | -18.1 |
| Office, Bank, Professional Buildings | 166,616 | 95,902 | -42.4 |

# PENNSYLVANIA ECONOMIC FACT SHEET

This economic fact sheet contains the latest economic data available as of February, 1991.

## CONSTRUCTION EMPLOYMENT

- Construction employment in Pennsylvania has steadily increased from 175,800 in 1984 to 235,300 in 1989. As of December, 1990, the construction industry in Pennsylvania employed 2,200 fewer workers than one year earlier (monthly data not seasonally adjusted).

- Construction employment was 3.8% of total state employment in 1984. In 1989, construction accounted for 4.6% of the more than 5 million people employed in Pennsylvania.

**PENNSYLVANIA EMPLOYMENT**

| *Year* | *Construction* | *Total* | *Constr Pct of Total* |
|---|---|---|---|
| 1984 | 175,800 | 4,654,800 | 3.8 |
| 1985 | 187,100 | 4,730,300 | 4.0 |
| 1986 | 201,800 | 4,790,900 | 4.2 |
| 1987 | 218,300 | 4,915,100 | 4.4 |
| 1988 | 229,600 | 5,041,700 | 4.6 |
| 1989 | 235,300 | 5,115,000 | 4.6 |
| December, 1989 | 233,900 | 5,169,500 | 4.5 |
| December, 1990 | 231,700 | 5,169,300 | 4.5 |

## PENNSYLVANIA UNEMPLOYMENT RATE

- In 1990, the unemployment rate in Pennsylvania was 5.4% (4.5% in 1989, 5.1% in 1988), as compared to the national average rate of 5.5% (5.3% in 1989, 5.5% in 1988).

- In 1990, 318,000 people were unemployed in the state. 264,000 people were unemployed in the state in 1989, including 33,000 construction workers.

- The **construction** unemployment rate in Pennsylvania was 10.5% in 1989 (10.0% in 1988). The **national** average construction unemployment rate increased to 11.1% in **1990** from 10.0% in 1989 (10.6% in 1988).

## ECONOMIC IMPACT OF CONSTRUCTION ON PENNSYLVANIA

- Each $1 spent on new construction in Pennsylvania generates a total of $2.6240 in economic activity in both industries and services in the state. This ratio is used to estimate the impact of new construction on the state's economy. For example, a $20 million project would result in a $52,480,000 increase in the state's economy ($20 million X the 2.6240 multiplier). This total includes the original $20 million project.

- Each additional $1 million spent on new construction in Pennsylvania creates 34.6 jobs. For example, a $20 million new construction project would create 692 jobs in the state in construction, supplier, and service industries ($20 X 34.6 jobs/million).

- For each $1 of new construction, the earnings of households in the state is increased by $.8369. For example, a $20 million construction project would increase the total household earnings in the state by $16,738,000 ($20 million X $.8369). Both construction workers and employees of other industries benefit from this increased standard of living, and this figure also shows that the tax base of the state is increased. Note: Figures from 1988 Regional Input-Output Modeling System (RIMS II), Bureau of Economic Analysis, U.S. Department of Commerce.

## CONSTRUCTION'S SHARE OF PENNSYLVANIA'S ECONOMY

- The total construction industry payroll in Pennsylvania in 1989 was $6,148,441,000, 6.4 percent of the state's total private industry payroll.

- In Pennsylvania, construction (including homebuilding, nonresidential building and nonbuilding work) increased from 3.8% of the state's gross product in 1982 to 4.1% in 1986. On average in the Mideast states (DE,DC,MD,NJ,NY,PA), construction grew from 3.9% in 1982 to 4.5% in 1986. This very useful data, the first of its kind computed on a state-by-state basis, is not available for more recent years due to federal budget cuts.

CONSTRUCTION'S SHARE OF GROSS PRODUCT

| | *1982* | *1983* | *1984* | *1985* | *1986* |
|---|---|---|---|---|---|
| PENNSYLVANIA | 3.8% | 3.8% | 3.8% | 3.8% | 4.1% |
| MIDEAST | 3.9 | 3.9 | 4.1 | 4.3 | 4.5 |
| UNITED STATES | 4.5 | 4.5 | 4.6 | 4.7 | 4.7 |

Bureau of Economic Analysis, U.S. Department of Commerce

Note: These numbers do not include the value of supplies and equipment used in construction; for example, steel used in construction is counted as part of the steel industry rather than in the construction total. When the total value of construction is taken into account, AGC has estimated that construction accounts for 10% of the gross national product.

## NONRESIDENTIAL BUILDING PERMITS IN PENNSYLVANIA

- In 1990, the value of nonresidential building permits issued for new construction decreased 4.7 percent from 1989, to $2.1 billion. Nonresidential remodeling and reconstruction work dropped 20.0 percent, to $843 million in 1990. Residential construction authorized by building permits dropped 16.8 percent in 1990.

VALUE OF NONRESIDENTIAL BUILDING PERMITS ISSUED IN PENNSYLVANIA (IN THOUSANDS)

| *Construction Category* | *1989* | *Preliminary 1990* | *Percent Change* |
|---|---|---|---|
| Single Family Houses | $3,097,316 | $2,632,374 | -15.0% |
| Two-Family Buildings | 24,974 | 18,459 | -26.1 |
| Three- and Four-Family Buildings | 46,847 | 27,158 | -42.0 |
| Five-or-more Family Buildings | 255,305 | 171,498 | -32.8 |
| **Total Residential Buildings** | 3,424,442 | 2,849,489 | -16.8 |
| **Additions, Alterations, Residential** | 536,136 | 579,362 | 8.1 |
| Hotels, Motels | 99,634 | 77,841 | -21.9 |
| Other Nonhousekeeping | 22,338 | 13,418 | -39.9 |
| Amusement, Social, Recreational | 37,116 | 43,657 | 17.6 |

# RHODE ISLAND ECONOMIC FACT SHEET

This economic fact sheet contains the latest economic data available as of February, 1991.

## CONSTRUCTION EMPLOYMENT

- Construction employment in Rhode Island increased from 13,300 in 1984 to 21,200 in 1988, then declined to 20,100 in 1989.
- As of December, 1990, the construction industry in Rhode Island employed 3,200 fewer employees than one year earlier (monthly data not seasonally adjusted).
- Construction employment was 3.2% of total state employment in 1984. In 1989, construction accounted for 4.4% of the 461,000 people employed in Rhode Island.

RHODE ISLAND EMPLOYMENT

| *Year* | *Construction* | *Total* | *Constr Pct of Total* |
|---|---|---|---|
| 1984 | 13,300 | 416,400 | 3.2 |
| 1985 | 15,200 | 429,200 | 3.5 |
| 1986 | 17,400 | 442,500 | 3.9 |
| 1987 | 19,600 | 451,900 | 4.3 |
| 1988 | 21,200 | 459,400 | 4.6 |
| 1989 | 20,100 | 461,000 | 4.4 |
| December, 1989 | 19,400 | 463,400 | 4.2 |
| December, 1990 | 16,200 | 451,400 | 3.6 |

Bureau of Labor Statistics, U.S. Department of Labor

CONSTRUCTION EMPLOYMENT IN MAJOR CITIES

| *City* | *1988* | *1989* | *December, 1990* |
|---|---|---|---|
| Pawtucket-Woonsocket-Attleboro | 6,000 | 5,300 | 4,200 |
| Providence | 15,400 | 15,100 | 13,500 |

## RHODE ISLAND UNEMPLOYMENT RATE

- In 1990, the unemployment rate in Rhode Island was 6.7% (4.1% in 1989, 3.0% in 1988), as compared to the national average rate of 5.5% (5.3% in 1989, 5.5% in 1988).
- In 1990, 35,000 people were unemployed in the state. 21,000 people were unemployed in the state in 1989, including 2,000 construction workers.
- The **construction** unemployment rate in Rhode Island was 10.0% in 1989 (6.8% in 1988). The **national** average construction unemployment rate increased to 11.1% in **1990** from 10.0% in 1989 (10.6% in 1988).

## ECONOMIC IMPACT OF CONSTRUCTION ON RHODE ISLAND

- Each $1 spent on new construction in Rhode Island generates a total of $2.0281 in economic activity in both industries and services in the state. This ratio is used to estimate the impact of new construction on the state's economy. For example, a $20 million project would result in a $40,562,000 increase in the state's economy ($20 million X the 2.0281 multiplier). This total includes the original $20 million project.
- Each additional $1 million spent on new construction in Rhode Island creates 30.5 jobs. For example, a $20 million new construction project would create 610 jobs in the state in construction, supplier, and service industries ($20 X 30.5 jobs/million).

- For each $1 of new construction, the earnings of households in the state is increased by $.6912. For example, a $20 million construction project would increase the total household earnings in the state by $13,824,000 ($20 million X $.6912). Both construction workers and employees of other industries benefit from this increased standard of living, and this figure also shows that the tax base of the state is increased.

Note: Figures from 1988 Regional Input-Output Modeling System (RIMS II), Bureau of Economic Analysis, U.S. Department of Commerce.

## CONSTRUCTION'S SHARE OF RHODE ISLAND'S ECONOMY

- The total construction industry payroll in Rhode Island in 1989 was $539,280,000, 6.6 percent of the state's total private industry payroll.

- In Rhode Island, construction (including homebuilding, nonresidential building and nonbuilding work) increased from 2.1% of the state's gross product in 1982 to 2.7% in 1986. On average in the New England states (CT,ME,MA,NH,RI,VT), construction grew from 3.9% in 1982 to 4.8% in 1986. This very useful data, the first of its kind computed on a state-by-state basis, is not available for more recent years due to federal budget cuts.

CONSTRUCTION'S SHARE OF GROSS PRODUCT

| | *1982* | *1983* | *1984* | *1985* | *1986* |
|---|---|---|---|---|---|
| RHODE ISLAND | 2.1% | 2.2% | 2.3% | 2.5% | 2.7% |
| NEW ENGLAND | 3.9 | 4.1 | 4.3 | 4.5 | 4.8 |
| UNITED STATES | 4.5 | 4.5 | 4.6 | 4.7 | 4.7 |

Bureau of Economic Analysis, U.S. Department of Commerce

Note: These numbers do not include the value of supplies and equipment used in construction; for example, steel used in construction is counted as part of the steel industry rather than in the construction total. When the total value of construction is taken into account, AGC has estimated that construction accounts for 10% of the gross national product.

## NONRESIDENTIAL BUILDING PERMITS IN RHODE ISLAND

- In 1990, the value of nonresidential building permits issued for new construction dropped 58.1 percent from 1989, to $60 million. Nonresidential remodeling and reconstruction work increased 1.2% to $71 million in 1990. Residential construction authorized by building permits dropped 19.2 percent in 1990.

VALUE OF NONRESIDENTIAL BUILDING PERMITS ISSUED IN RHODE ISLAND (IN THOUSANDS)

| *Construction Category* | *1989* | *Preliminary 1990* | *Percent Change* |
|---|---|---|---|
| Single Family Houses | $251,587 | $210,283 | -16.4% |

# SOUTH CAROLINA ECONOMIC FACT SHEET

This economic fact sheet contains the latest economic data available as of February, 1991.

## CONSTRUCTION EMPLOYMENT

- Construction employment in South Carolina steadily increased from 80,800 in 1984 to 93,000 in 1989.
- As of December, 1990, the construction industry in South Carolina employed 6,100 more people than one year earlier (monthly data not seasonally adjusted).
- Construction employment was 6.4% of total state employment in 1984. In 1989, construction accounted for 6.2% of the 1,502,400 people employed in South Carolina.

SOUTH CAROLINA EMPLOYMENT

| *Year* | *Construction* | *Total* | *Constr Pct of Total* |
|---|---|---|---|
| 1984 | 80,800 | 1,262,500 | 6.4 |
| 1985 | 83,800 | 1,296,200 | 6.5 |
| 1986 | 87,800 | 1,338,000 | 6.6 |
| 1987 | 86,700 | 1,392,200 | 6.2 |
| 1988 | 90,700 | 1,448,500 | 6.3 |
| 1989 | 93,000 | 1,502,400 | 6.2 |
| December, 1989 | 97,400 | 1,534,400 | 6.3 |
| December, 1990 | 103,500 | 1,570,400 | 6.6 |

Bureau of Labor Statistics, U.S. Department of Labor

CONSTRUCTION EMPLOYMENT IN MAJOR CITIES

| *City* | *1988* | *1989* | *December, 1990* |
|---|---|---|---|
| Charleston | 13,400 | 13,400 | 14,600 |
| Columbia | 14,400 | 14,200 | 17,200 |
| Greenville-Spartanburg | 22,900 | 23,200 | 23,700 |

Bureau of Labor Statistics, U.S. Department of Labor

## SOUTH CAROLINA UNEMPLOYMENT RATE

- In 1990, the unemployment rate in South Carolina was 4.7% (4.7% in 1989, 4.3% in 1988), as compared to the national average rate of 5.5% (5.3% in 1989, 5.5% in 1988).
- In 1990, 81,000 people were unemployed in the state. 80,000 people were unemployed in the state in 1989, including 10,000 construction workers.
- The **construction** unemployment rate in South Carolina was 9.5% in 1989 (8.2% in 1988). The **national** average construction unemployment rate increased to 11.1% in **1990** from 10.0% in 1989 (10.6% in 1988).

## ECONOMIC IMPACT OF CONSTRUCTION ON SOUTH CAROLINA

- Each $1 spent on new construction in South Carolina generates a total of $2.2872 in economic activity in both industries and services in the state. This ratio is used to estimate the impact of new construction on the state's economy. For example, a $20 million project would result in a $45,744,000 increase in the state's economy ($20 million X the 2.2872 multiplier). This total includes the original $20 million project.
- Each additional $1 million spent on new construction in South Carolina creates 40.5 jobs. For example, a $20 million new construction project would create 810 jobs in the state in construction, supplier, and service industries ($20 X 40.5 jobs/million).

- For each $1 of new construction, the earnings of households in the state is increased by $.7439. For example, a $20 million construction project would increase the total household earnings in the state by $14,878,000 ($20 million X $.7439). Both construction workers and employees of other industries benefit from this increased standard of living, and this figure also shows that the tax base of the state is increased.

Note: Figures from 1988 Regional Input-Output Modeling System (RIMS II), Bureau of Economic Analysis, U.S. Department of Commerce.

## CONSTRUCTION'S SHARE OF SOUTH CAROLINA'S ECONOMY

- The total construction industry payroll in South Carolina in 1989 was $1,831,273,000, 8.3 percent of the state's total private industry payroll.

- In South Carolina, construction (including homebuilding, nonresidential building and nonbuilding work) rose from 3.6% of the state's gross product in 1982 to 4.0% in 1986. On average in the Southeast states (AL,AR,FL,GA,KY, LA,MS,NC,SC,TN,VA,WV), construction grew from 5.1% in 1982 to 5.3% in 1986. This very useful data, the first of its kind computed on a state-by-state basis, is not available for more recent years due to federal budget cuts.

CONSTRUCTION'S SHARE OF GROSS PRODUCT

| | *1982* | *1983* | *1984* | *1985* | *1986* |
|---|---|---|---|---|---|
| SOUTH CAROLINA | 3.6% | 3.7% | 3.9% | 3.9% | 4.0% |
| SOUTHEAST | 5.1 | 4.9 | 5.1 | 5.2 | 5.3 |
| UNITED STATES | 4.5 | 4.5 | 4.6 | 4.7 | 4.7 |

Bureau of Economic Analysis, U.S. Department of Commerce

Note: These numbers do not include the value of supplies and equipment used in construction; for example, steel used in construction is counted as part of the steel industry rather than in the construction total. When the total value of construction is taken into account, AGC has estimated that construction accounts for 10% of the gross national product.

## NONRESIDENTIAL BUILDING PERMITS IN SOUTH CAROLINA

- In 1990, the value of nonresidential building permits issued for new construction increased 11.3 percent from 1989, to $855 million. Nonresidential remodeling and reconstruction work dropped 9.3 percent, to $308 million in 1990. Residential construction authorized by building permits decreased 2.8 percent in 1990.

VALUE OF NONRESIDENTIAL BUILDING PERMITS ISSUED IN SOUTH CAROLINA (IN THOUSANDS)

| *Construction Category* | *1989* | *Preliminary 1990* | *Percent Change* |
|---|---|---|---|
| Single Family Houses | $1,194,443 | $1,190,166 | -0.4% |
| Two-Family Buildings | 15,668 | 13,131 | -16.2 |
| Three- and Four-Family Buildings | 15,577 | 8,850 | -43.2 |

# SOUTH DAKOTA ECONOMIC FACT SHEET

This economic fact sheet contains the latest economic data available as of February, 1991.

## CONSTRUCTION EMPLOYMENT

- Construction employment in South Dakota increased from 9,300 in 1984 to 10,100 in 1989.
- In December, 1990, the construction industry in South Dakota employed 300 more workers than one year earlier (monthly data not seasonally adjusted).
- Construction employment was 3.8% of total state employment in 1984. In 1989, construction accounted for 3.7% of the 274,900 people employed in South Dakota.

SOUTH DAKOTA EMPLOYMENT

| *Year* | *Construction* | *Total* | *Constr Pct of Total* |
|---|---|---|---|
| 1984 | 9,300 | 247,000 | 3.8 |
| 1985 | 9,500 | 249,400 | 3.8 |
| 1986 | 9,600 | 251,900 | 3.8 |
| 1987 | 9,600 | 256,900 | 3.7 |
| 1988 | 9,500 | 266,100 | 3.6 |
| 1989 | 10,100 | 274,900 | 3.7 |
| December, 1989 | 9,400 | 277,700 | 3.4 |
| December, 1990 | 9,700 | 285,100 | 3.4 |

Bureau of Labor Statistics, U.S. Department of Labor

CONSTRUCTION EMPLOYMENT IN MAJOR CITIES

| *City* | *1988* | *1989* | *December, 1990* |
|---|---|---|---|
| Rapid City | 1,700 | 1,800 | 1,900 |
| Sioux Falls | 2,900 | 3,100 | 3,200 |

Bureau of Labor Statistics, U.S. Department of Labor

## SOUTH DAKOTA UNEMPLOYMENT RATE

- In 1990, the unemployment rate in South Dakota was 3.7% (4.2% in 1989, 4.3% in 1988), as compared to the national average rate of 5.5% (5.3% in 1989, 5.5% in 1988).
- In 1990, 13,000 people were unemployed in the state. 15,000 people were unemployed in the state in 1989, including 2,000 construction workers.
- The construction unemployment rate in South Dakota was 15.4% in 1989 (13.9% in 1988). The national average construction unemployment rate increased to 11.1% in 1990 from 10.0% in 1989 (10.6% in 1988).

## ECONOMIC IMPACT OF CONSTRUCTION ON SOUTH DAKOTA

- Each $1 spent on new construction in South Dakota generates a total of $1.9451 in economic activity in both industries and services in the state. This ratio is used to estimate the impact of new construction on the state's economy. For example, a $20 million project would result in a $38,902,000 increase in the state's economy ($20 million X the 1.9451 multiplier). This total includes the original $20 million project.
- Each additional $1 million spent on new construction in South Dakota creates 37.9 jobs. For example, a $20 million new construction project would create 758 jobs in the state in construction, supplier, and service industries ($20 X 37.9 jobs/million).

- For each $1 of new construction, the earnings of households in the state is increased by $.6503. For example, a $20 million construction project would increase the total household earnings in the state by $13,006,000 ($20 million X $.6503). Both construction workers and employees of other industries benefit from this increased standard of living, and this figure also shows that the tax base of the state is increased.

Note: Figures from 1988 Regional Input-Output Modeling System (RIMS II), Bureau of Economic Analysis, U.S. Department of Commerce.

## CONSTRUCTION'S SHARE OF SOUTH DAKOTA'S ECONOMY

- The total construction industry payroll in South Dakota in 1989 was $188,936,000, 6.0 percent of the state's total private industry payroll.

- In South Dakota, construction (including homebuilding, nonresidential building and nonbuilding work) comprised 3.8% of the state's gross product in 1986. On average in the Plains states (IA,KS,MN,MO,NE,ND,SD), construction grew from 3.7% in 1982 to 3.9% in 1986. This very useful data, the first of its kind computed on a state-by-state basis, is not available for more recent years due to federal budget cuts.

CONSTRUCTION'S SHARE OF GROSS PRODUCT

| | *1982* | *1983* | *1984* | *1985* | *1986* |
|---|---|---|---|---|---|
| SOUTH DAKOTA | 3.6% | 3.7% | 3.7% | 3.8% | 3.8% |
| PLAINS | 3.7 | 3.8 | 3.8 | 3.8 | 3.9 |
| UNITED STATES | 4.5 | 4.5 | 4.6 | 4.7 | 4.7 |

Bureau of Economic Analysis, U.S. Department of Commerce

Note: These numbers do not include the value of supplies and equipment used in construction; for example, steel used in construction is counted as part of the steel industry rather than in the construction total. When the total value of construction is taken into account, AGC has estimated that construction accounts for 10% of the gross national product.

## NONRESIDENTIAL BUILDING PERMITS IN SOUTH DAKOTA

- In 1990, the value of nonresidential building permits issued for new construction increased 27.5 percent from 1989, to $116 million. Nonresidential remodeling and reconstruction work dropped 20.9 percent, to $58 million in 1990. Residential construction authorized by building permits increased 39.3 percent in 1990.

VALUE OF NONRESIDENTIAL BUILDING PERMITS ISSUED IN SOUTH DAKOTA (IN THOUSANDS)

| *Construction Category* | *1989* | *Preliminary 1990* | *Percent Change* |
|---|---|---|---|
| Single Family Houses | $77,773 | $92,206 | 18.6% |
| Two-Family Buildings | 1,562 | 4,843 | 210.1 |

# TENNESSEE ECONOMIC FACT SHEET

This economic fact sheet contains the latest economic data available as of February, 1991.

## CONSTRUCTION EMPLOYMENT

- Construction employment in Tennessee increased from 78,300 in 1984 to 97,400 in 1989.
- As of December, 1990, the construction industry in Tennessee employed 4,300 fewer workers than one year earlier (monthly data not seasonally adjusted).
- Construction employment was 4.3% of total state employment in 1984. In 1989, construction accounted for 4.5% of the 2,153,400 people employed in Tennessee.

TENNESSEE EMPLOYMENT

| *Year* | *Construction* | *Total* | *Constr Pct of Total* |
|---|---|---|---|
| *1984* | *78,300* | *1,812,000* | *4.3* |
| 1985 | 85,600 | 1,867,800 | 4.6 |
| 1986 | 90,000 | 1,929,800 | 4.7 |
| 1987 | 95,200 | 2,011,600 | 4.7 |
| 1988 | 96,700 | 2,092,100 | 4.6 |
| 1989 | 97,400 | 2,153,400 | 4.5 |
| December, 1989 | 98,400 | 2,181,200 | 4.5 |
| December, 1990 | 94,100 | 2,173,900 | 4.3 |

Bureau of Labor Statistics, U.S. Department of Labor

CONSTRUCTION EMPLOYMENT IN MAJOR CITIES

| *City* | *1988* | *1989* | *December, 1990* |
|---|---|---|---|
| Chattanooga | 8,000 | 7,800 | 8,400 |
| Johnson City-Kingsport-Bristol | 7,400 | 7,600 | 7,900 |
| Knoxville | 13,600 | 15,000 | 14,100 |
| Memphis, TN-AR-MS | 19,600 | 19,100 | 19,400 |
| Nashville | 27,500 | 24,900 | 24,100 |

Bureau of Labor Statistics, U.S. Department of Labor

## TENNESSEE UNEMPLOYMENT RATE

- In 1990, the unemployment rate in Tennessee was 5.2% (5.1% in 1989, 5.8% in 1988), as compared to the national average rate of 5.5% (5.3% in 1989, 5.5% in 1988).
- In 1990, 125,000 people were unemployed in the state. 121,000 people were unemployed in the state in 1989, including 11,000 construction workers.
- The **construction** unemployment rate in Tennessee was 8.3% in 1989 (10.8% in 1988). The **national** average construction unemployment rate increased to 11.1% in **1990** from 10.0% in 1989 (10.6% in 1988).

## ECONOMIC IMPACT OF CONSTRUCTION ON TENNESSEE

- Each $1 spent on new construction in Tennessee generates a total of $2.4883 in economic activity in both industries and services in the state. This ratio is used to estimate the impact of new construction on the state's economy. For example, a $20 million project would result in a $49,766,000 increase in the state's economy ($20 million X the 2.4883 multiplier). This total includes the original $20 million project.
- Each additional $1 million spent on new construction in Tennessee creates 39.1 jobs. For example, a $20 million new construction project would create 782 jobs in the state in construction, supplier, and service industries ($20 X 39.1 jobs million).

- For each $1 of new construction, the earnings of households in the state is increased by $.8040. For example, a $20 million construction project would increase the total household earnings in the state by $16,080,000 ($20 million X $.8040). Both construction workers and employees of other industries benefit from this increased standard of living, and this figure also shows that the tax base of the state is increased.

Note: Figures from 1988 Regional Input-Output Modeling System (RIMS II), Bureau of Economic Analysis, U.S. Department of Commerce.

## CONSTRUCTION'S SHARE OF TENNESSEE'S ECONOMY

- The total construction industry payroll in Tennessee in 1989 was $2,055,734,000, 5.9 percent of the state's total private industry payroll.

- In Tennessee, construction (including homebuilding, nonresidential building and nonbuilding work) increased from 4.1% of the state's gross product in 1982 to 4.4% in 1986. On average in the Southeast states (AL,AR,FL,GA,KY, LA,MS,NC,SC,TN,VA,WV), construction grew from 5.1% in 1982 to 5.3% in 1986. This very useful data, the first of its kind computed on a state-by-state basis, is not available for more recent years due to federal budget cuts.

CONSTRUCTION'S SHARE OF GROSS PRODUCT

| | *1982* | *1983* | *1984* | *1985* | *1986* |
|---|---|---|---|---|---|
| TENNESSEE | 4.1% | 3.9% | 4.1% | 4.2% | 4.4% |
| SOUTHEAST | 5.1 | 4.9 | 5.1 | 5.2 | 5.3 |
| UNITED STATES | 4.5 | 4.5 | 4.6 | 4.7 | 4.7 |

Bureau of Economic Analysis, U.S. Department of Commerce

Note: These numbers do not include the value of supplies and equipment used in construction; for example, steel used in construction is counted as part of the steel industry rather than in the construction total. When the total value of construction is taken into account, AGC has estimated that construction accounts for 10% of the gross national product.

## NONRESIDENTIAL BUILDING PERMITS IN TENNESSEE

- In 1990, the value of nonresidential building permits issued for new construction decreased 6.9 percent from 1989, to $930 million. Nonresidential remodeling and reconstruction work increased 5.3 percent, to $539 million in 1990. Residential construction authorized by building permits dropped 2.5 percent in 1990.

VALUE OF NONRESIDENTIAL BUILDING PERMITS ISSUED IN TENNESSEE (IN THOUSANDS)

| *Construction Category* | *1989* | *Preliminary 1990* | *Percent Change* |
|---|---|---|---|
| Single Family Houses | $1,284,175 | $1,318,085 | 2.6% |

Bureau of Labor Statistics, U.S. Department of Labor

## TEXAS UNEMPLOYMENT RATE

- In 1990, the unemployment rate in Texas was 6.2% (6.7% in 1989, 7.2% in 1988), as compared to the national average rate of 5.5% (5.3% in 1989, 5.5% in 1988).

- In 1990, 521,000 people were unemployed in the state. 567,000 people were unemployed in the state in 1989, including 52,000 construction workers.

- The **construction** unemployment rate in Texas was 6.7% in 1989 (15.1% in 1988). The **national** average construction unemployment rate increased to 11.1% in **1990** from 10.0% in 1989 (10.6% in 1988).

## ECONOMIC IMPACT OF CONSTRUCTION ON TEXAS

- Each $1 spent on new construction in Texas generates a total of $2.5837 in economic activity in both industries and services in the state. This ratio is used to estimate the impact of new construction on the state's economy. For example, a $20 million project would result in a $51,674,000 increase in the state's economy ($20 million X the 2.5837 multiplier). This total includes the original $20 million project.

- Each additional $1 million spent on new construction in Texas creates 35.5 jobs. For example, a $20 million new construction project would create 710 jobs in the state in construction, supplier, and service industries ($20 X 35.5 jobs/million).

- For each $1 of new construction, the earnings of households in the state is increased by $.8083. For example, a $20 million construction project would increase the total household earnings in the state by $16,166,000 ($20 million X $.8083). Both construction workers and employees of other industries benefit from this increased standard of living, and this figure also shows that the tax base of the state is increased.

Note: Figures from 1988 Regional Input-Output Modeling System (RIMS II), Bureau of Economic Analysis, U.S. Department of Commerce.

## CONSTRUCTION'S SHARE OF THE TEXAS ECONOMY

- The total construction industry payroll in Texas in 1989 was $7,337,039,000, 6.1 percent of the state's total private industry payroll.

- In Texas, construction (including homebuilding, nonresidential building and nonbuilding work) declined from 5.7% of the state's gross product in 1982 to 5.3% in 1986. On average in the Southwest states (AZ,NM,OK,TX), construction has grown from 5.9% in 1982 to 6.1% in 1984, and then dropped back to 5.9% in 1986. This very useful data, the first of its kind computed on a state-by-state basis, is not available for more recent years due to federal budget cuts.

CONSTRUCTION'S SHARE OF GROSS PRODUCT

| | *1982* | *1983* | *1984* | *1985* | *1986* |
|---|---|---|---|---|---|
| TEXAS | 5.7% | 5.8% | 5.7% | 5.5% | 5.3% |
| SOUTHWEST | 5.9 | 6.0 | 6.1 | 6.0 | 5.9 |
| UNITED STATES | 4.5 | 4.5 | 4.6 | 4.7 | 4.7 |

Bureau of Economic Analysis, U.S. Department of Commerce

Note: These numbers do not include the value of supplies and equipment used in construction; for example, steel used in construction is counted as part of the steel industry rather than in the construction total. When the total value of construction is taken into account, AGC has estimated that construction accounts for 10% of the gross national product.

## NONRESIDENTIAL BUILDINC PERMITS IN TEXAS

- In 1990, the value of nonresidential building permits issued for new construction decreased 19.3 percent from 1989, to $2.3 billion. Nonresidential remodeling and reconstruction work increased 3.0 percent, to $1.5 billion in 1990. Residential construction authorized by building permits increased 10.8 percent in 1990.

**VALUE OF NONRESIDENTIAL BUILDING PERMITS ISSUED IN TEXAS (IN THOUSANDS)**

| *Construction Category* | *1989* | *Preliminary 1990* | *Percent Change* |
|---|---|---|---|
| Single Family Houses | $3,313,607 | $3,578,331 | 8.0% |
| Two-Family Buildings | 7,150 | 9,763 | 36.5 |
| Three- and Four-Family Buildings | 11,486 | 12,381 | 7.8 |
| Five-or-more Family Buildings | 105,470 | 208,685 | 97.9 |
| **Total Residential Buildings** | 3,437,713 | 3,809,163 | 10.8 |
| Additions, Alterations, Residential | 399,633 | 408,646 | 2.3 |
| | | | |
| Hotels, Motels | 61,272 | 14,141 | -76.9 |

# UTAH ECONOMIC FACT SHEET

This economic fact sheet contains the latest economic data available as of February, 1991.

## CONSTRUCTION EMPLOYMENT IN UTAH

- In the state of Utah, 26,200 people were employed in the construction industry in 1989, down from 34,800 in 1984.
- In December, 1990, the construction industry in Utah employed 1,300 more workers than one year earlier (monthly data not seasonally adjusted).
- Construction employment was 3.8 percent of total state employment of 690,800 in 1989.

UTAH EMPLOYMENT

| *Year* | *Construction* | *Total* | *Constr Pct of Total* |
|---|---|---|---|
| 1984 | 34,800 | 601,200 | 5.8 |
| 1985 | 35,500 | 624,300 | 5.7 |
| 1986 | 32,200 | 634,100 | 5.1 |
| 1987 | 26,700 | 640,000 | 4.2 |
| 1988 | 24,900 | 660,000 | 3.8 |
| 1989 | 26,200 | 690,800 | 3.8 |
| December, 1989 | 26,800 | 713,700 | 3.8 |
| December, 1990 | 28,100 | 747,500 | 3.8 |

Bureau of Labor Statistics, U.S. Department of Labor

CONSTRUCTION EMPLOYMENT IN MAJOR CITIES

| *City* | *1988* | *1989* | *December, 1990* |
|---|---|---|---|
| Provo-Orem | 2,700 | 2,700 | 2,900 |
| Salt Lake City-Ogden | 17,500 | 18,100 | 19,300 |

Bureau of Labor Statistics, U.S. Department of Labor

## UTAH UNEMPLOYMENT RATE

- In 1990, the unemployment rate in Utah was 4.3% (4.6% in 1989, 5.1% in 1988), as compared to the national average rate of 5.5% (5.3% in 1989, 5.5% in 1988).
- In 1990, 34,000 people were unemployed in the state. 37,000 people were unemployed in the state in 1989, including 3,000 construction workers.
- The **construction** unemployment rate in Utah was 9.9% in 1989 (16.7% in 1988). The **national** average construction unemployment rate increased to 11.1% in **1990** from 10.0% in 1989 (10.6% in 1988).

## ECONOMIC IMPACT OF CONSTRUCTION ON UTAH

- Each $1 spent on new construction in Utah generates a total of $2.2615 in economic activity in both industries and services in the state. This ratio is used to estimate the impact of new construction on the state's economy. For example, a $20 million project would result in a $45,230,000 increase in the state's economy ($20 million X the 2.2615 multiplier). This total includes the original $20 million project.
- Each additional $1 million spent on new construction in Utah creates 37.2 jobs. For example, a $20 million new construction project would create 744 jobs in the state in construction, supplier, and service industries ($20 X 37.2 jobs/million).
- For each $1 of new construction, the earnings of households in the state is increased by $.7319. For example, a $20 million construction project would increase the total household earnings in the state by $14,638,000

($20 million X $.7319). Both construction workers and employees of other industries benefit from this increased standard of living, and this figure also shows that the tax base of the state is increased.

Note: Figures from 1988 Regional Input-Output Modeling System (RIMS II), Bureau of Economic Analysis, U.S. Department of Commerce.

## CONSTRUCTION'S SHARE OF UTAH'S ECONOMY

- The total construction industry payroll in Utah in 1989 was $558,557,000, 5.6 percent of the state's total private industry payroll.

- The construction industry made up 5.1% of the state gross product of Utah in 1986. Construction in the Rocky Mountain Region (CO,ID,MT,UT,WY) declined from 7.3% of the region's economy to 6.3% in 1986. This very useful data, the first of its kind computed on a state-by-state basis, is not available for more recent years due to federal budget cuts.

CONSTRUCTION'S SHARE OF GROSS PRODUCT

| | *1982* | *1983* | *1984* | *1985* | *1986* |
|---|---|---|---|---|---|
| UTAH | 5.3% | 5.3% | 5.8% | 5.6% | 5.1% |
| ROCKY MOUNTAIN REGION | 7.3 | 6.7 | 6.7 | 6.7 | 6.3 |
| UNITED STATES | 4.5 | 4.5 | 4.6 | 4.7 | 4.7 |

Bureau of Economic Analysis, U.S. Department of Commerce

Note: These numbers do not include the value of supplies and equipment used in construction; for example, steel used in construction is counted as part of the steel industry rather than in the construction total. When the total value of construction is taken into account, AGC has estimated that construction accounts for 10% of the gross national product.

## NONRESIDENTIAL BUILDING PERMITS IN UTAH

- In 1990, the value of nonresidential building permits issued for new construction increased 6.1 percent from 1989, to $362 million. Nonresidential remodeling and reconstruction work dropped 16.8 percent, to $112 million in 1990. Residential construction authorized by building permits increased 22.9 percent in 1990.

VALUE OF NONRESIDENTIAL BUILDING PERMITS ISSUED IN UTAH (IN THOUSANDS)

| *Construction Category* | *1989* | *Preliminary 1990* | *Percent Change* |
|---|---|---|---|
| Single Family Houses | $456,595 | $545,439 | 19.5% |
| Two-Family Buildings | 5,346 | 7,028 | 31.5 |
| Three- and Four-Family Buildings | 4,675 | 9,932 | 112.4 |
| Five-or-more Family Buildings | 7,714 | 20,547 | 166.4 |
| **Total Residential Buildings** | **474,330** | **582,946** | **22.9** |
| **Additions, Alterations, Residential** | **50,087** | **36,815** | **-26.5** |
| | | | |
| Hotels, Motels | 8,918 | 7,796 | -12.6 |

# VERMONT ECONOMIC FACT SHEET

This economic fact sheet contains the latest economic data available as of February, 1991.

## CONSTRUCTION EMPLOYMENT

- Construction employment in Vermont has increased from 12,200 in 1984 to 18,200 in 1989.
- As of December, 1990, the construction industry in Vermont employed 3,600 fewer workers than one year earlier (monthly data not seasonally adjusted).
- Construction employment was 5.7% of total state employment in 1984. In 1989, construction accounted for 7.0% of the 261,300 people employed in Vermont.

VERMONT EMPLOYMENT

| *Year* | *Construction* | *Total* | *Constr Pct of Total* |
|---|---|---|---|
| 1984 | 12,200 | 214,900 | 5.7 |
| 1985 | 13,800 | 224,700 | 6.1 |
| 1986 | 15,300 | 234,400 | 6.5 |
| 1987 | 16,500 | 245,600 | 6.7 |
| 1988 | 17,500 | 256,100 | 6.8 |
| 1989 | 18,200 | 261,300 | 7.0 |
| December, 1989 | 18,000 | 266,900 | 6.7 |
| December, 1990 | 14,400 | 257,300 | 5.6 |

Bureau of Labor Statistics, U.S. Department of Labor

CONSTRUCTION EMPLOYMENT IN MAJOR CITIES

| *City* | *1988* | *1989* | *December, 1990* |
|---|---|---|---|
| Barre-Montpelier | 2,400 | 2,500 | 2,500 |
| Burlington | 5,000 | 5,400 | 4,000 |

Bureau of Labor Statistics, U.S. Department of Labor

## VERMONT UNEMPLOYMENT RATE

- In 1990, the unemployment rate in Vermont was 5.0% (3.7% in 1989, 3.1% in 1988), as compared to the national average rate of 5.5% (5.3% in 1989, 5.5% in 1988).
- In 1990, 15,000 people were unemployed in the state. 11,000 people were unemployed in the state in 1989, including 2,000 construction workers.
- The **construction** unemployment rate in Vermont was 7.3% in 1989 (6.2% in 1988). The **national** average construction unemployment rate increased to 11.1% in **1990** from 10.0% in 1989 (10.6% in 1988).

## ECONOMIC IMPACT OF CONSTRUCTION ON VERMONT

- Each $1 spent on new construction in Vermont generates a total of $1.9505 in economic activity in both industries and services in the state. This ratio is used to estimate the impact of new construction on the state's economy. For example, a $20 million project would result in a $39,010,000 increase in the state's economy ($20 million X the 1.9505 multiplier). This total includes the original $20 million project.
- Each additional $1 million spent on new construction in Vermont creates 35.1 jobs. For example, a $20 million new construction project would create 702 jobs in the state in construction, supplier, and service industries ($20 X 35.1 jobs/million).
- For each $1 of new construction, the earnings of households in the state is increased by $.6617. For example, a $20 million construction project would increase the total household earnings in the state by $13,234,000

($20 million X $.6617). Both construction workers and employees of other industries benefit from this increased standard of living, and this figure also shows that the tax base of the state is increased.

Note: Figures from 1988 Regional Input-Output Modeling System (RIMS II), Bureau of Economic Analysis, U.S. Department of Commerce.

## CONSTRUCTION'S SHARE OF VERMONT'S ECONOMY

- The total construction industry payroll in Vermont in 1989 was $374,388,000, 9.0 percent of the state's total private industry payroll.

- In Vermont, construction (including homebuilding, nonresidential building and nonbuilding work) increased from 4.9% of the state's gross product in 1982 to 6.2% in 1986. On average in the New England states (CT,ME,MA,NH,RI,VT), construction grew from 3.9% in 1982 to 4.8% in 1986. This very useful data, the first of its kind computed on a state-by-state basis, is not available for more recent years due to federal budget cuts.

CONSTRUCTION'S SHARE OF GROSS PRODUCT

| | *1982* | *1983* | *1984* | *1985* | *1986* |
|---|---|---|---|---|---|
| VERMONT | 4.9% | 5.3% | 5.5% | 5.9% | 6.2% |
| NEW ENGLAND | 3.9 | 4.1 | 4.3 | 4.5 | 4.8 |
| UNITED STATES | 4.5 | 4.5 | 4.6 | 4.7 | 4.7 |

Bureau of Economic Analysis, U.S. Department of Commerce

Note: These numbers do not include the value of supplies and equipment used in construction; for example, steel used in construction is counted as part of the steel industry rather than in the construction total. When the total value of construction is taken into account, AGC has estimated that construction accounts for 10% of the gross national product.

## NONRESIDENTIAL BUILDING PERMITS IN VERMONT

- In 1990, the value of nonresidential building permits issued for new construction dropped 19.7 percent from 1989, to $89 million. Nonresidential remodeling and reconstruction work dropped 39.7 percent, to $35 million in 1990. Residential construction authorized by building permits dropped 34.2 percent in 1990.

VALUE OF NONRESIDENTIAL BUILDING PERMITS ISSUED IN VERMONT (IN THOUSANDS)

| *Construction Category* | *1989* | *Preliminary 1990* | *Percent Change* |
|---|---|---|---|
| Single Family Houses | $246,388 | $166,368 | -32.5% |
| Two-Family Buildings | 4,848 | 3,941 | -18.7 |
| Three- and Four-Family Buildings | 10,487 | 2,395 | -77.2 |
| Five-or-more Family Buildings | 12,144 | 7,450 | -38.7 |
| **Total Residential Buildings** | 273,867 | 180,154 | -34.2 |
| **Additions, Alterations, Residential** | 40,580 | 38,701 | -4.6 |
| | | | |
| Hotels, Motels | 11,957 | 12,772 | 6.8 |

CONSTRUCTION EMPLOYMENT IN MAJOR CITIES

| *City* | *1988* | *1989* | *December, 1990* |
|---|---|---|---|
| Bristol | 1,000 | 1,100 | 1,100 |
| Charlottesville | 4,100 | 4,400 | 3,900 |
| Danville | 2,000 | 2,200 | 2,000 |
| Lynchburg | 3,700 | 3,700 | 3,800 |
| Norfolk-Virginia Beach-Newport News | 38,100 | 37,400 | 34,600 |
| Northern Virginia | 58,900 | 63,100 | 47,500 |
| Richmond-Petersburg | 30,200 | 30,600 | 29,800 |
| Roanoke | 7,600 | 7,800 | 7,400 |

Bureau of Labor Statistics, U.S. Department of Labor

## VIRGINIA UNEMPLOYMENT RATE

- In 1990, the unemployment rate in Virginia was 4.3% (3.9% in 1989, 3.9% in 1988), as compared to the national average rate of 5.5% (5.3% in 1989, 5.5% in 1988).
- In 1990, 137,000 people were unemployed in the state. 123,000 people were unemployed in the state in 1989, including 10,000 construction workers.
- The construction unemployment rate in Virginia was 5.9% in 1989 (7.3% in 1988. The national average construction unemployment rate increased to 11.1% in 1990 from 10.0% in 1989 (10.6% in 1988).

## ECONOMIC IMPACT OF CONSTRUCTION ON VIRGINIA

- Each $1 spent on new construction in Virginia generates a total of $2.2956 in economic activity in both industries and services in the state. This ratio is used to estimate the impact of new construction on the state's economy. For example, a $20 million project would result in a $45,912,000 increase in the state's economy ($20 million X the 2.2956 multiplier). This total includes the original $20 million project.
- Each additional $1 million spent on new construction in Virginia creates 34.4 jobs. For example, a $20 million new construction project would create 688 jobs in the state in construction, supplier, and service industries ($20 X 34.4 jobs/million).

- For each $1 of new construction, the earnings of households in the state is increased by $.7538. For example, a $20 million construction project would increase the total household earnings in the state by $15,076,000 ($20 million X $.7538). Both construction workers and employees of other industries benefit from this increased standard of living, and this figure also shows that the tax base of the state is increased.

Note: Figures from 1988 Regional Input-Output Modeling System (RIMS II), Bureau of Economic Analysis, U.S. Department of Commerce.

## CONSTRUCTION'S SHARE OF VIRGINIA'S ECONOMY

- The total construction industry payroll in Virginia in 1989 was $4,404,273,000, 9.2 percent of the state's total private industry payroll.

- In Virginia, construction (including homebuilding, nonresidential building, and nonbuilding work) rose from 4.4% of the state's gross product in 1982 to 5.8% in 1986. On average in the Southeast states (AL,AR,FL,GA,KY, LA,MS,NC,SC,TN,VA,WV), construction grew from 5.1% in 1982 to 5.3% in 1986. This very useful data, the first of its kind computed on a state-by-state basis, is not available for more recent years due to federal budget cuts.

CONSTRUCTION'S SHARE OF GROSS PRODUCT

| | *1982* | *1983* | *1984* | *1985* | *1986* |
|---|---|---|---|---|---|
| VIRGINIA | 4.4% | 4.6% | 5.0% | 5.4% | 5.8% |
| SOUTHEAST | 5.1 | 4.9 | 5.1 | 5.2 | 5.3 |
| UNITED STATES | 4.5 | 4.5 | 4.6 | 4.7 | 4.7 |

Bureau of Economic Analysis, U.S. Department of Commerce

Note: These numbers do not include the value of supplies and equipment used in construction; for example, steel used in construction is counted as part of the steel industry rather than in the construction total. When the total value of construction is taken into account, AGC has estimated that construction accounts for 10% of the gross national product.

## NONRESIDENTIAL BUILDING PERMITS IN VIRGINIA

- In 1990, the value of nonresidential building permits issued for new construction dropped 27.3 percent from 1989, to $1.6 billion. Nonresidential remodeling and reconstruction work increased 1.9 percent, to $776 million in 1990. Residential construction authorized by building permits dropped 31.2 percent in 1990.

VALUE OF NONRESIDENTIAL BUILDING PERMITS ISSUED IN VIRGINIA (IN THOUSANDS)

| *Construction Category* | *1989* | *Preliminary 1990* | *Percent Change* |
|---|---|---|---|
| Single Family Houses | $3,199,410 | $2,338,252 | -26.9% |
| Two-Family Buildings | 27,121 | 25,615 | -5.6 |
| Three- and Four-Family Buildings | 34,818 | 20,576 | -40.9 |

# WASHINGTON ECONOMIC FACT SHEET

This economic fact sheet contains the latest economic data available as of February, 1991.

## CONSTRUCTION EMPLOYMENT

- Construction employment in Washington has increased from 79,600 in 1984 to 106,600 in 1989.
- As of December, 1990, the construction industry in Washington employed 10,700 more workers than one year earlier (monthly data not seasonally adjusted).
- Construction employment was 4.8% of total state employment in 1984. In 1989, construction accounted for 5.2% of the 2,045,300 people employed in Washington.

WASHINGTON EMPLOYMENT

| *Year* | *Construction* | *Total* | *Constr Pct of Total* |
|---|---|---|---|
| 1984 | 79,600 | 1,659,600 | 4.8 |
| 1985 | 80,600 | 1,710,400 | 4.7 |
| 1986 | 84,500 | 1,769,900 | 4.8 |
| 1987 | 88,900 | 1,851,800 | 4.8 |
| 1988 | 96,600 | 1,943,200 | 5.0 |
| 1989 | 106,600 | 2,045,300 | 5.2 |
| December, 1989 | 109,100 | 2,104,900 | 5.2 |
| December, 1990 | 119,800 | 2,173,500 | 5.5 |

Bureau of Labor Statistics, U.S. Department of Labor

CONSTRUCTION EMPLOYMENT IN MAJOR CITIES

| *City* | *1988* | *1989* | *December, 1990* |
|---|---|---|---|
| Seattle | 52,300 | 57,000 | 58,000 |

Bureau of Labor Statistics, U.S. Department of Labor

## WASHINGTON UNEMPLOYMENT RATE

- In 1990, the unemployment rate in Washington was 4.9% (6.2% in 1989, 6.5% in 1988), as compared to the national average rate of 5.5% (5.3% in 1989, 5.5% in 1988).
- In 1990, 122,000 people were unemployed in the state. 151,000 people were unemployed in the state in 1989, including 11,000 construction workers.
- The construction unemployment rate in Washington was 9.9% in 1989 (8.9% in 1988). The national average construction unemployment rate increased to 11.1% in 1990 from 10.0% in 1989 (10.6% in 1988).

## ECONOMIC IMPACT OF CONSTRUCTION ON WASHINGTON

- Each $1 spent on new construction in Washington generates a total of $2.3111 in economic activity in both industries and services in the state. This ratio is used to estimate the impact of new construction on the state's economy. For example, a $20 million project would result in a $46,222,000 increase in the state's economy ($20 million X the 2.3111 multiplier). This total includes the original $20 million project.
- Each additional $1 million spent on new construction in Washington creates 34.2 jobs. For example, a $20 million new construction project would create 684 jobs in the state in construction, supplier, and service industries ($20 X 34.2 jobs/million).
- For each $1 of new construction, the earnings of households in the state is increased by $.7538. For example, a $20 million construction project would increase the total household earnings in the state by $15,076,000

($20 million X $.7538). Both construction workers and employees of other industries benefit from this increased standard of living, and this figure also shows that the tax base of the state is increased.

Note: Figures from 1988 Regional Input-Output Modeling System (RIMS II), Bureau of Economic Analysis, U.S. Department of Commerce.

## CONSTRUCTION'S SHARE OF WASHINGTON'S ECONOMY

- The total construction industry payroll in Washington in 1989 was $2,407,297,000, 6.9 percent of the state's total private industry payroll.

- In Washington, construction (including homebuilding, nonresidential building and nonbuilding work) decreased from 6.7% of the state's gross product in 1982 to 5.8% in 1986. For the entire Far West region (CA,NV,OR,WA,AK,HI), construction comprised 4.6% of the economy. This very useful data, the first of its kind computed on a state-by-state basis, is not available for more recent years due to federal budget cuts.

CONSTRUCTION'S SHARE OF GROSS PRODUCT

| | *1982* | *1983* | *1984* | *1985* | *1986* |
|---|---|---|---|---|---|
| WASHINGTON | 6.7% | 6.2% | 6.1% | 5.7% | 5.8% |
| FAR WEST | 4.5 | 4.3 | 4.5 | 4.5 | 4.6 |
| UNITED STATES | 4.5 | 4.5 | 4.6 | 4.7 | 4.7 |

Bureau of Economic Analysis, U.S. Department of Commerce

Note: These numbers do not include the value of supplies and equipment used in construction; for example, steel used in construction is counted as part of the steel industry rather than in the construction total. When the total value of construction is taken into account, AGC has estimated that construction accounts for 10% of the gross national product.

## NONRESIDENTIAL BUILDING PERMITS IN WASHINGTON

- In 1990, the value of nonresidential building permits issued for new construction increased 3.1 percent from 1989, to $1.2 billion. Nonresidential remodeling and reconstruction work decreased 3.4 percent, to $514 million in 1990. Residential construction authorized by building permits increased 7.2 percent in 1990.

VALUE OF NONRESIDENTIAL BUILDING PERMITS ISSUED IN WASHINGTON (IN THOUSANDS)

| *Construction Category* | *1989* | *Preliminary 1990* | *Percent Change* |
|---|---|---|---|
| Single Family Houses | $2,319,075 | $2,646,543 | 14.1% |
| Two-Family Buildings | 53,281 | 52,741 | -1.0 |
| Three- and Four-Family Buildings | 46,673 | 75,163 | 61.0 |
| Five-or-more Family Buildings | 827,817 | 705,081 | -14.8 |
| **Total Residential Buildings** | **3,246,846** | **3,479,528** | 7.2 |
| **Additions, Alterations, Residential** | **178,990** | **225,630** | 26.1 |
| | | | |
| Hotels, Motels | 57,748 | 50,198 | -13.1 |

# WEST VIRGINIA ECONOMIC FACT SHEET

This economic fact sheet contains the latest economic data available as of February, 1991.

## CONSTRUCTION EMPLOYMENT

- Construction employment in West Virginia increased from 22,000 in 1984 to 24,300 in 1988, then dropped to 23,400 in 1989.
- As of December, 1990, the construction industry in West Virginia employed 1,400 more workers than one year earlier (monthly data not seasonally adjusted).
- Construction employment was 3.7% of total state employment in 1984. In 1989, construction accounted for 3.8% of the 612,800 people employed in West Virginia.

WEST VIRGINIA EMPLOYMENT

| *Year* | *Construction* | *Total* | *Constr Pct of Total* |
|---|---|---|---|
| 1984 | 22,000 | 596,600 | 3.7 |
| 1985 | 22,800 | 597,200 | 3.8 |
| 1986 | 22,800 | 597,500 | 3.8 |
| 1987 | 24,000 | 599,000 | 4.0 |
| 1988 | 24,300 | 609,800 | 4.0 |
| 1989 | 23,400 | 612,800 | 3.8 |
| December, 1989 | 22,800 | 621,000 | 3.7 |
| December, 1990 | 24,200 | 627,500 | 3.9 |

Bureau of Labor Statistics, U.S. Department of Labor

CONSTRUCTION EMPLOYMENT IN MAJOR CITIES

| *City* | *1988* | *1989* | *December, 1990* |
|---|---|---|---|
| Charleston | 4,200 | 4,100 | 4,800 |
| Huntington-Ashland, WV-KY-OH | 4,600 | 5,000 | 4,700 |
| Parkersburg-Marietta, WV-OH | 3,100 | 3,100 | 2,900 |
| Wheeling, WV-OH | 2,100 | 2,100 | 2,100 |

Bureau of Labor Statistics, U.S. Department of Labor

## WEST VIRGINIA UNEMPLOYMENT RATE

- In 1990, the unemployment rate in West Virginia was 8.3% (8.6% in 1989, 10.9% in 1988), as compared to the national average rate of 5.5% (5.3% in 1989, 5.5% in 1988).
- In 1990, 64,000 people were unemployed in the state. 66,000 people were unemployed in the state in 1989, including 9,000 construction workers.
- The construction unemployment rate in West Virginia was 18.8% in 1989 (22.0% in 1988). The national average construction unemployment rate increased to 11.1% in 1990 from 10.0% in 1989 (10.6% in 1988).

## ECONOMIC IMPACT OF CONSTRUCTION ON WEST VIRGINIA

- Each $1 spent on new construction in West Virginia generates a total of $1.9167 in economic activity in both industries and services in the state. This ratio is used to estimate the impact of new construction on the state's economy. For example, a $20 million project would result in a $38,334,000 increase in the state's economy ($20 million X the 1.9167 multiplier). This total includes the original $20 million project.
- Each additional $1 million spent on new construction in West Virginia creates 33.1 jobs. For example, a $20 million new construction project would create 662 jobs in the state in construction, supplier, and service industries ($20 X 33.1 jobs/million).

- For each $1 of new construction, the earnings of households in the state is increased by $.6183. For example, a $20 million construction project would increase the total household earnings in the state by $12,366,000 ($20 million X $.6183). Both construction workers and employees of other industries benefit from this increased standard of living, and this figure also shows that the tax base of the state is increased.

Note: Figures from 1988 Regional Input-Output Modeling System (RIMS II), Bureau of Economic Analysis, U.S. Department of Commerce.

## CONSTRUCTION'S SHARE OF WEST VIRGINIA'S ECONOMY

- The total construction industry payroll in West Virginia in 1989 was $527,239,000, 5.6 percent of the state's total private industry payroll.

- In West Virginia, construction (including homebuilding, nonresidential building and nonbuilding work) decreased from 5.1% of the state's gross product in 1982 to 4.8% in 1986. On average in the Southeast states (AL,AR,FL,GA,KY, LA,MS,NC,SC,TN,VA,WV), construction grew from 5.1% in 1982 to 5.3% in 1986. This very useful data, the first of its kind computed on a state-by-state basis, is not available for more recent years due to federal budget cuts.

CONSTRUCTION'S SHARE OF GROSS PRODUCT

| | *1982* | *1983* | *1984* | *1985* | *1986* |
|---|---|---|---|---|---|
| WEST VIRGINIA | 5.1% | 4.7% | 4.7% | 4.8% | 4.8% |
| SOUTHEAST | 5.1 | 4.9 | 5.1 | 5.2 | 5.3 |
| UNITED STATES | 4.5 | 4.5 | 4.6 | 4.7 | 4.7 |

Bureau of Economic Analysis, U.S. Department of Commerce

Note: These numbers do not include the value of supplies and equipment used in construction; for example, steel used in construction is counted as part of the steel industry rather than in the construction total. When the total value of construction is taken into account, AGC has estimated that construction accounts for 10% of the gross national product.

## NONRESIDENTIAL BUILDING PERMITS IN WEST VIRGINIA

- In 1990, the value of nonresidential building permits issued for new construction increased 30.4 percent from 1989, to $134 million. Nonresidential remodeling and reconstruction work dropped 6.2 percent, to $51 million in 1990. Residential construction authorized by building permits increased 18.7 percent in 1990.

VALUE OF NONRESIDENTIAL BUILDING PERMITS ISSUED IN WEST VIRGINIA (IN THOUSANDS)

| *Construction Category* | *1989* | *Preliminary 1990* | *Percent Change* |
|---|---|---|---|
| Single Family Houses | $91,726 | $102,848 | 12.1% |
| Two-Family Buildings | 787 | 1,535 | 95.0 |
| Three- and Four-Family Buildings | 1,682 | 1,218 | -27.6 |
| Five-or-more Family Buildings | 5,175 | 12,307 | 137.8 |

| Wausau | 2,000 | 2,100 | 2,400 |

Bureau of Labor Statistics, U.S. Department of Labor

## WISCONSIN UNEMPLOYMENT RATE

- In 1990, the unemployment rate in Wisconsin was 4.4% (4.4% in 1989, 4.7% in 1988), as compared to the national average rate of 5.5% (5.3% in 1989, 5.5% in 1988).
- In 1990, 113,000 people were unemployed in the state. 114,000 people were unemployed in the state in 1989, including 11,000 construction workers.
- The **construction** unemployment rate in Wisconsin was 8.9% in 1989 (10.9% in 1988). The **national** average construction unemployment rate increased to 11.1% in **1990** from 10.0% in 1989 (10.6% in 1988).

## ECONOMIC IMPACT OF CONSTRUCTION ON WISCONSIN

- Each $1 spent on new construction in Wisconsin generates a total of $2.2712 in economic activity in both industries and services in the state. This ratio is used to estimate the impact of new construction on the state's economy. For example, a $20 million project would result in a $45,424,000 increase in the state's economy ($20 million X the 2.2712 multiplier). This total includes the original $20 million project.
- Each additional $1 million spent on new construction in Wisconsin creates 34.4 jobs. For example, a $20 million new construction project would create 688 jobs in the state in construction, supplier, and service industries ($20 X 34.4 jobs/million).

- For each $1 of new construction, the earnings of households in the state is increased by $.7319. For example, a $20 million construction project would increase the total household earnings in the state by $14,638,000 ($20 million X $.7319). Both construction workers and employees of other industries benefit from this increased standard of living, and this figure also shows that the tax base of the state is increased.

Note: Figures from 1988 Regional Input-Output Modeling System (RIMS II), Bureau of Economic Analysis, U.S. Department of Commerce.

## CONSTRUCTION'S SHARE OF THE WISCONSIN ECONOMY

- The total construction industry payroll in Wisconsin in 1989 was $2,049,183,000, 5.6 percent of the state's total private industry payroll.

- In Wisconsin, construction (including homebuilding, nonresidential building and nonbuilding work) increased from 2.8% of the state's gross product in 1982 to 3.0% in 1986. In the Great Lakes region (IL,IN,MI,OH,WI), construction increased from 3.5% of the region's economy in 1982 to 3.6% in 1986. This very useful data, the first of its kind compiled on a state-by-state basis, is not available for more recent years due to federal budget cuts.

CONSTRUCTION'S SHARE OF GROSS PRODUCT

| | *1982* | *1983* | *1984* | *1985* | *1986* |
|---|---|---|---|---|---|
| WISCONSIN | 2.8% | 2.8% | 2.9% | 2.9% | 3.0% |
| GREAT LAKES | 3.5 | 3.4 | 3.4 | 3.5 | 3.6 |
| UNITED STATES | 4.5 | 4.5 | 4.6 | 4.7 | 4.7 |

Bureau of Economic Analysis, U.S. Department of Commerce

Note: These numbers do not include the value of supplies and equipment used in construction; for example, steel used in construction is counted as part of the steel industry rather than in the construction total. When the total value of construction is taken into account, AGC has estimated that construction accounts for 10% of the gross national product.

## NONRESIDENTIAL BUILDING PERMITS IN WISCONSIN

- In 1990, the value of nonresidential building permits issued for new construction increased 16.1 percent from 1989, to $1.1 billion. Nonresidential remodeling and reconstruction work dropped 2.6 percent, to $539 million in 1990. Residential construction authorized by building permits increased 1.1 percent in 1990.

VALUE OF NONRESIDENTIAL BUILDING PERMITS ISSUED IN WISCONSIN (IN THOUSANDS)

| *Construction Category* | *1989* | *Preliminary 1990* | *Percent Change* |
|---|---|---|---|
| Single Family Houses | $1,257,193 | $1,339,046 | 6.5% |

# WYOMING ECONOMIC FACT SHEET

This economic fact sheet contains the latest economic data available as of February, 1991.

## CONSTRUCTION EMPLOYMENT

- Construction employment in Wyoming has declined from 14,100 in 1984 to 10,100 in 1989.
- As of December, 1990, the construction industry in Wyoming employed 300 more workers than one year earlier (monthly data not seasonally adjusted).
- Construction employment was 6.9% of total state employment in 1984. In 1989, construction accounted for 5.2% of the 193,500 people employed in Wyoming.

**WYOMING EMPLOYMENT**

| *Year* | *Construction* | *Total* | *Constr Pct of Total* |
|---|---|---|---|
| 1984 | 14,100 | 204,300 | 6.9 |
| 1985 | 18,200 | 206,900 | 8.8 |
| 1986 | 16,200 | 196,300 | 8.3 |
| 1987 | 10,800 | 182,600 | 5.9 |
| 1988 | 10,400 | 189,000 | 5.5 |
| 1989 | 10,100 | 193,500 | 5.2 |
| December, 1989 | 9,200 | 193,800 | 4.7 |
| December, 1990 | 9,500 | 195,500 | 4.9 |

Bureau of Labor Statistics, U.S. Department of Labor

**CONSTRUCTION EMPLOYMENT IN MAJOR CITIES**

| *City* | *1988* | *1989* | *December, 1990* |
|---|---|---|---|
| Casper | 1,700 | 1,500 | 1,400 |

Bureau of Labor Statistics, U.S. Department of Labor

## WYOMING UNEMPLOYMENT RATE

- In 1990, the unemployment rate in Wyoming was 5.4% (6.3% in 1989, 7.8% in 1988), as compared to the national average rate of 5.5% (5.3% in 1989, 5.5% in 1988).
- In 1990, 13,000 people were unemployed in the state. 15,000 people were unemployed in the state in 1989, including 2,000 construction workers.
- The **construction** unemployment rate in Wyoming was 16.1% in 1989 (18.9% in 1988). The **national** average construction unemployment rate increased to 11.1% in **1990** from 10.0% in 1989 (10.6% in 1988).

## ECONOMIC IMPACT OF CONSTRUCTION ON WYOMING

- Each $1 spent on new construction in Wyoming generates a total of $1.7297 in economic activity in both industries and services in the state. This ratio is used to estimate the impact of new construction on the state's economy. For example, a $20 million project would result in a $34,594,000 increase in the state's economy ($20 million X the 1.7297 multiplier). This total includes the original $20 million project.
- Each additional $1 million spent on new construction in Wyoming creates 30.6 jobs. For example, a $20 million new construction project would create 612 jobs in the state in construction, supplier, and service industries ($20 X 30.6 jobs/million).

- For each $1 of new construction, the earnings of households in the state is increased by $.5619. For example, a $20 million construction project would increase the total household earnings in the state by $11,238,000 ($20 million X $.5619). Both construction workers and employees of other industries benefit from this increased standard of living, and this figure also shows that the tax base of the state is increased.

Note: Figures from 1988 Regional Input-Output Modeling System (RIMS II), Bureau of Economic Analysis, U.S. Department of Commerce.

## CONSTRUCTION'S SHARE OF WYOMING'S ECONOMY

- The total construction industry payroll in Wyoming in 1989 was $218,903,000, 8.6 percent of the state's total private industry payroll.

- In Wyoming, construction (including homebuilding, nonresidential building and nonbuilding work) declined from 11.8% of the state's gross product in 1982, but rose again to reach 11.8% in 1986. Construction in the Rocky Mountain Region (CO,ID,MT,UT,WY) has declined from 7.3% of the region's economy to 6.3% in 1986. This very useful data, the first of its kind computed on a state-by-state basis, is not available for more recent years due to federal budget cuts.

CONSTRUCTION'S SHARE OF GROSS PRODUCT

| | *1982* | *1983* | *1984* | *1985* | *1986* |
|---|---|---|---|---|---|
| WYOMING | 11.8% | 8.8% | 8.9% | 11.4% | 11.8% |
| ROCKY MOUNTAIN REGION | 7.3 | 6.7 | 6.7 | 6.7 | 6.3 |
| UNITED STATES | 4.5 | 4.5 | 4.6 | 4.7 | 4.7 |

Bureau of Economic Analysis, U.S. Department of Commerce

Note: These numbers do not include the value of supplies and equipment used in construction; for example, steel used in construction is counted as part of the steel industry rather than in the construction total. When the total value of construction is taken into account, AGC has estimated that construction accounts for 10% of the gross national product.

## NONRESIDENTIAL BUILDING PERMITS IN WYOMING

- In 1990, the value of nonresidential building permits issued for new construction increased rapidly from 1989's level, to $311 million. Nonresidential remodeling and reconstruction work increased 8 percent, to $21 million in 1990. Residential construction authorized by building permits increased 7.8 percent in 1990.

VALUE OF NONRESIDENTIAL BUILDING PERMITS ISSUED IN WYOMING (IN THOUSANDS)

| *Construction Category* | *1989* | *Preliminary 1990* | *Percent Change* |
|---|---|---|---|
| Single Family Houses | $50,344 | $53,206 | 5.7% |
| Two-Family Buildings | 712 | 282 | -60.4 |
| Three- and Four-Family Buildings | 706 | 65 | -90.8 |
| Five-or-more Family Buildings | 39 | 2,286 | 5761.5 |
| **Total Residential Buildings** | 51,801 | 55,839 | 7.8 |
| **Additions, Alterations, Residential** | 10,641 | 10,249 | -3.7 |
| | | | |
| Hotels, Motels | 2,939 | 1,907 | -35.1 |
| Other Nonhousekeeping | 362 | 657 | 81.5 |
| Amusement, Social, Recreational | 840 | 10 | -98.8 |
| Churches | 1,360 | 1,800 | 32.4 |
| Industrial Buildings | 2,745 | 84,408 | 2975.0 |
| Parking Garages | 486 | 0 | -- |
| Service Stations, Repair Garages | 387 | 1,048 | 170.8 |
| Hospitals, Institutional Buildings | 320 | 0 | -- |
| Office, Bank, Professional Buildings | 1,680 | 1,985 | 18.2 |
| Public Works, Utilities Buildings | 674 | 724 | 7.4 |
| Schools, Educational Buildings | 162 | 984 | 507.4 |
| Stores, Customer Services | 14,509 | 11,631 | -19.8 |
| Other Nonresidential Buildings | 1,978 | 2,029 | 2.6 |
| Structures other than Buildings | 919 | 1,467 | 59.6 |
| **Total New Nonresidential** | 29,361 | 108,650 | 270.0 |
| **Nonresidential Additions, Alterations** | 19,236 | 20,750 | 7.9 |

**STATEMENT BY:**

**THE NATIONAL CONGRESS OF AMERICAN INDIANS,**
**PRESIDENT WAYNE DUCHENEAUX**

To:

**HOUSE SUBCOMMITTEE ON SURFACE TRANSPORTATION**
**H.R.1351, TO AUTHORIZE FUNDS FOR CONSTRUCTION OF HIGHWAYS, FOR HIGHWAY SAFETY PROGRAMS, FOR MASS TRANSPORTATION PROGRAMS,**
**AND FOR OTHER PURPOSES**

Good afternoon, Mr. Chairman. My name is Wayne Ducheneaux, and I am President of the National Congress of American Indians (NCAI). The NCAI is the oldest and largest organization representative of Indian people nationwide. Our constituency comprises nearly three-fourths of the nations Indian people, including individual members and tribal governments.

I am here today to urge Congress to act upon the needs of tribal governments in the reauthorization of the Federal-Aid Highway Act. The NCAI requests of Congress the following:

1) Authorization of funding for Indian Reservation Roads out of the Highway Trust Fund at $227,000,000 for each of the fiscal years 1992-1996.

2) Amend the Surface Transportation Act to mandate that, in designation by states of Federal-aid primary, secondary and urban systems, states shall cooperate with the appropriate Indian tribal government officials in selecting and designating such systems.

3) Amend the Act to designate bridges on the Indian Reservation Roads System as being eligible for funding.

4) Amend the Act to clarify that tribal officials are eligible for training provided through the National Highway Institute.

5) Amend the Act to mandate Indian preference within the hiring procedures of any contractor awarded a project on or near reservation lands.

Authorization of Funding

Mr. Chairman, tribal governments today are striving to move out from under the dark cloud which has hung over our tribal economies now for nearly one hundred years. We cannot do that without adequate road systems in Indian country, which is one of the lifelines for any sound economic development. Almost one half of the 19,800 miles of reservation roads are within the BIA's road system. Over one-half of the 24,500 miles of public roads on Indian reservations are under the jurisdiction of state and local governments. The remaining 2,700 miles of roads on Indian reservations are under the jurisdiction of tribes and different federal agencies.

Indian Reservation Roads (IRR) today are accurately described as pathetic, on the average. In a recent needs study, the Bureau of Indian Affairs determined that health problems exist due to improper drainage, traffic service is substandard and at times streets are impassable. The BIA also found that some of the roads are in such horrible condition as to be considered a "national disgrace", contributing to the failure to provide adequate education to Indian children (the roads are impassable for school buses), and requiring emergency feeding by helicopter of isolated and stranded livestock and people. In addition, the Department of Energy will soon be engaging in negotiations with tribes to develop an Emergency Response Plan in the event of a hazardous waste accident. The DOE transports hazardous waste through several reservations by main roads and railways. In a life-threatening situation, Mr. Chairman, many tribal governments would not be able to evacuate their communities.

These facts make a compelling case for federal support of reservation roads. H.R.1351 would authorize funding for reservation roads according to the administration's request at $95 million for F.Y.92, with a gradual increase to $121 million by F.Y.96. The BIA's needs study stated point blank that $95 million per year is needed just to maintain the current broken system, but that "approximately $227 million per year is needed to bring the BIA system to an acceptable level of completion in 25 years". That request was summarily rejected by OMB, however, and we now have before us the revised request. It is important to note that between the years of 1979 and 1982, funding for Indian roads decreased by over 40%. The enactment of the Surface Transportation and Uniform Assistance Act of 1987, however, reduced the funding even further to $80 million annually for F.Y.1987-91. Inflation was not factored in.

Mr. Chairman, this administration must realize that it cannot claim to be an advocate of self-sufficiency for tribes without allowing us the tools to do the job. The administration's request for reservation roads is grossly inadequate and far removed from any realistic effort to construct, rebuild and repair reservation roads.

The federal government is directly responsible for providing a safe and adequate roads system in Indian country, and it's not close to doing that as yet. Therefore, the NCAI recommends that this Committee increase the authorized funding proposed in H.R.1351 to $227 million per year throughout F.Y.96. I realize that our request is, over a period of five years, $613 million above H.R.1351 and its companion bill in the Senate, S.610. While we realize that this is quite a disparity, if the BIA recommended $227, then you can be certain that the it's a reflection of the minimum need.

Other Bill Provisions

The bill proposes to enact and amend the Federal-Aid Highway Act. Several bill provisions are of particular concern to Indian tribes in so far as they fail to address tribes at all. In the Federal Lands Highway Program, it was intended by Congress that when states receive federal funds for roads programs, they would treat tribes fairly. It states that before the Secretary can approve a project as an Indian reservation road project on the national highway system, "the Secretary must determine that the obligation of funds for that project is supplementary and not in lieu of the obligation" for projects on Indian reservation roads, "of a fair and equitable share of funds apportioned to the State for the National Highway System". It was never intended that the IRR would be the only source of reservation roads funding. States were to treat tribes fairly and designate federal dollars for reservation roads in keeping with the Civil Rights Act.

For the most part, this is not happening. The BIA pointed out that the states and counties do not always fund needed improvements on or near Indian lands in the same ratio as non-Indian lands. States regularly meet with county officials to plan federal roads projects, but rarely take tribes into consideration when determining priorities for funding out of the Highway Trust Fund. In other words, some states have been using federal dollars meant for Indian reservation roads to enhance state systems IRR funds are to supplement, not replace, the state's responsibility to provide construction on reservations.

In essence, the bill mandates that states consult with local officials, but makes no mention of tribes. NCAI recommends that the Committee include language to mandate that states cooperate and consult with tribal officials under the Federal-aid primary, secondary and urban systems.

Another provision (Section 106) funds bridge replacement and rehabilitation, but the language does not state that bridges on the IRR are eligible for funding. The BIA focused upon what we already knew to be true in its needs study, and that is that tribes are in desperate need of new bridges. Many tribes today are literally isolated, or long detours are required to permit access. This is obviously a life-threatening situation, as emergency vehicles may be delayed or not have access at all. Because deficient BIA bridges have not been corrected since the early 1980's, most bridge washouts since then have not been rebuilt. Mr. Chairman, NCAI requests that this Committee incorporate language within Section 106 making bridges on the IRR System eligible for funding.

Mr. Chairman, this bill also provides for the establishment of a National Highway Institute and provides funding for education and training of Federal, State, and local highway employees. It does not specify whether or not tribal officials are eligible for training. We recommend that the Committee clarify this section by including tribal officials in the language as being eligible.

Finally, while the bill provides that Indian contractors certified by states shall receive preference in contracting awards, it does not permit an Indian employment preference, making it inconsistent with the Civil Rights Act. Indians qualified for employment with any contractor who is awarded a project on or near a reservation should have the opportunity to work. States should work with Tribal Employment Rights Offices (TERO) to implement this provision. The NCAI requests that the Committee incorporate such language within the bill.

Mr. Chairman, Indian Reservation Roads are in deplorable condition, and this Committee has the jurisdiction to authorize funds to fix the problem. Most people don't have to think about the condition of their roads on a daily basis. In Indian country, however, roads are a problem which we deal with every time we get into our automobiles. Our roads are hazardous to our economic livelihood as well as to our personal safety.

Because of the importance of this bill to Indian country, the National Congress of American Indians would like to submit supplemental information and possible amendments before the record is closed. Thank you for the opportunity to testify, Mr. Chairman, and I would be pleased to answer any questions which you may have.

**ADVOCATES**
FOR HIGHWAY
AND AUTO SAFETY

TESTIMONY OF

JACQUELINE GILLAN
DEPUTY EXECUTIVE DIRECTOR

ADVOCATES FOR HIGHWAY AND AUTO SAFETY

COMMITTEE ON PUBLIC WORKS & TRANSPORTATION
SURFACE TRANSPORTATION SUBCOMMITTEE

APRIL 18, 1991

Thank you, Chairman Mineta. I am Jacqueline Gillan, Deputy Director of Advocates for Highway and Auto Safety, a coalition of consumer, safety and insurance organizations dedicated to promoting passage of highway and auto safety laws and policies to reduce death and injury on America's highways, and economic losses due to motor vehicle crashes. I am accompanied by Gerald Donaldson, Assistant Director of Highway Safety for Advocates.

I am very grateful for the opportunity to testify on safety issues in the Surface Transportation Assistance bill, and I thank you for your leadership in highlighting the importance of safety through this hearing. I will summarize my remarks and ask that the entire statement be inserted in the record.

I am here today because Advocates believes the reauthorization of federal highway programs offers an unparalleled opportunity to increase the safety of our roads and bridges. Motor vehicle crashes constitute a major public health dilemma, and cost society more than $85 billion annually. Motor vehicle crashes are the number one cause of death of Americans under the age of 44.

A great proportion of these costs end up being paid not by those involved in crashes, but by taxpayers, insurance carriers and other policy-holders. Addressing motor vehicle and highway safety through prevention and public policy changes not only saves lives and suffering, it saves money. The fewer the crashes, the lighter the burden on taxpayers, insurers, and policy holders.

Every single day, as many Americans die on our highways as were killed during the 45 days of Operation Desert Storm -- 120 per day, nearly 45,000 people per year. Additionally, nearly 4.8 million Americans are injured and 500,000 more are hospitalized each year in automobile crashes.

777 North Capitol Street, NE Suite 410 Washington, DC 20002 Tel: 202/408-1711 Fax: 202/408-1699

This toll is especially bitter because many of these deaths and injuries disable our youth and could have been prevented with effective highway safety countermeasures.

Although much progress has been made, more remains to be done through effective federal, state and local programs. Several significant challenges to improve highway safety lie ahead. The reauthorization of the nation's highway and highway safety programs now before this Committee provides a major opportunity for determining our nation's commitment to meeting these challenges.

**MOTORCYCLE HELMET AND SAFETY BELT USE LAWS**

The Surface Transportation Assistance bill can lessen one burden now being shouldered by all federal taxpayers: the health care costs associated with deaths and injuries which could have been avoided if every state had safety belt and all-rider motorcycle helmet use laws. For example, one study of 105 injured motorcyclists found that 63 percent of their costs were paid by public funds, with Medicaid covering slightly more than half.

Thirty-eight states and the District of Columbia now require safety belt use; 23 states and D.C. have all-rider helmet use laws. We believe California is about to adopt a helmet law; indeed, Advocates has worked hard there to achieve passage, which will result in millions of dollars and hundreds of lives saved every year. Other states passing helmet laws in recent years include Texas, Oregon and Nebraska.

The American public overwhelmingly supports motorcycle helmet laws. In a recent Roper survey, 90 percent of the respondents said they supported such laws; fully 76 percent defined their support for these laws as "strong."

We believe that all states should have these use laws, and the Administration agrees. The goal of the National Highway Traffic Safety Administration (NHTSA) is to have safety belt use laws and all-rider motorcycle helmet use laws in **all 50 states by 1992** (as cited in "Moving America Safely. The National Highway Traffic Safety Administration's Priority Plan," August 1990).

Yet the Administration's proposed surface transportation bill is silent on how this goal would be reached. Advocates urges that this legislation include provisions, such as those in the National Highway Fatality and Injury Reduction Act, sponsored by Representative Jim Cooper (D-TN) and Senator John Chafee (R-RI), which will provide motivation to states to pass these necessary laws.

We know that state safety belt use laws and all-rider motorcycle helmet use laws work. Such helmet use laws have compliance rates of close to 100 percent. We believe all states should show such vision and political will as California. The highway bill can encourage them to find that will.

SPEEDING

It will take further federal initiative to address the growing speed epidemic on our highways. Recent studies have shown a yearly increase of as many as 700 deaths as a result of states raising the speed limit to 65 MPH on rural Interstates. It is clear that increasing the speed limit to 65 MPH results in even more speeding. In one state in which traffic was carefully tracked when its rural Interstates were posted at 65 MPH, the proportion of cars exceeding 70 MPH increased nearly fivefold. A recent Roper Poll shows that although the public recognizes speed as an important factor in highway crashes, an increasing number find it acceptable to drive over the speed limit.

Yet, under the current federal highway program, safety-minded states that wish to remain at 55 MPH are penalized for attempting to stem this speed epidemic and face constant pressure to increase their speed limits to 65 MPH. If a state has kept its roads posted at 55 MPH, it is subject to the loss of federal highway dollars if its drivers don't comply with that speed limit; but if a state has raised the speed limit to 65 MPH, it is not covered by the speed limit compliance rules on those roads and thus can sidestep sanctions.

This anomaly must be addressed in the reauthorization bill. The approach suggested in the Administration's proposal -- which simply eliminates enforcement provisions such as sanctions -- gives the federal government's blessing to speed scofflaws. States are not encouraged to remain at or return to 55 MPH, nor are they strongly encouraged to enforce their speed limits. Instead, the Administration would have each state simply certify that its drivers are obeying the speed limit, and would take them at their word.

We believe a better approach is to create effective mechanisms encouraging the states to take speed limit enforcement seriously, whether at 55 MPH or 65 MPH.

Under Advocates' proposal, if a state posts roads at 65 MPH, the state must prove that it is complying with the 65 MPH speed limit and that the fatality rates of its highways posted at 65 MPH do not exceed those of highways at 55 MPH. One penalty of non-compliance should be the return to 55 MPH on those roads.

In addition, if a state wishes to post or to continue to post a rural Interstate at 65 MPH, drivers of those roads should feel confident that the highway is as safe as it should be at that speed. The state should be required to upgrade the standards of their Interstate highways posted at 65 MPH. We have specific recommendations on how to achieve systematic safety improvements on our existing Interstate highways that will benefit all drivers on these roads.

To encourage compliance on roads posted at 55 MPH, a variety of mechanisms can be used, such as a reduction in the apportionment of federal funds in all major highway categories, ineligibility for any discretionary highway funds, and/or an increase in the state match for major highway programs excluding safety.

This is not a popular position to take, but without strong federal oversight of states' enforcement programs, we will see an increasing disregard for posted speed limits, resulting in more fatalities and injuries. We strongly urge that the reauthorization bill prohibit any expansion of the 65 MPH speed limit and encourage states to remain at or return to 55 MPH.

TRUCK SAFETY

The Surface Transportation Assistance bill must also address the vital issue of commercial vehicle safety, an issue which affects all highway users. When tractor-trailers crash, passenger vehicle occupants are the likely victims. In fatal crashes involving passenger cars and tractor-trailers, the car occupants are killed 49 times as often as the truck occupants. Combination trucks pulling two or more trailers are disproportionately represented in fatal accidents and are also more likely than single trailer trucks to jackknife in a crash. Thus, this bill must contain clear direction if we are to halt any

increase in allowable truck size and weight limits, especially in longer combination vehicles (LCVs), at either the federal or state level.

Use of these enormous trucks will rob some Americans of their lives and will needlessly divert highway taxes. Money that could be applied to enhance safety and mobility are used instead to restore the broken pavement and crumbling bridges that have been pounded to pieces by these giant rigs.

Since changes in federal law in 1982, the Federal Highway Administration (FHWA) has repeatedly indicated its inability to control state size and weight practices and we have seen a steady upward trend in truck lengths and weights. About 35 states currently allow loads greater than the federal limit of 80,000 pounds and 20 of these states permit such loads to be carried in LCVs.

These examples illustrate how the federal stance sharply influences safety in every state. The federal government has responsibility to disburse its monies as effectively as possible, a responsibility sharpened in this era of decreasing resources and increasing needs. **To meet this responsibility, safety must be a major consideration in all transportation investments. Safety considerations should be an integral part of every aspect of the planning, construction and rehabilitation of projects under the federal-aid highway program.**

If Congress adopts major program changes increasing flexibility for the states, it should not be at the expense of decreasing safety for the travelling public.

The federal government can decrease the toll on our highways by providing leadership through three methods: increasing the role of safety in the traditional highway construction programs, reauthorizing and strengthening existing highway safety programs and using federal highway dollars to encourage state action on safety issues. Let me briefly describe how this can be achieved.

**1. Increase the role of safety in the traditional highway construction and maintenance programs**

Most of the monies in the surface transportation assistance program apportioned to state and local governments are used for construction, reconstruction and rehabilitation of federal-aid highways.

Rarely has safety been a paramount consideration early in the planning process or throughout preliminary engineering and construction of roadways. **Effective federal oversight of highway fund expenditures must be guaranteed to ensure the thorough integration of safety into highway projects.**

Since the early seventies when the resurfacing, restoration, and rehabilitation process became the dominant approach in renovating older highways, safety has taken a back seat to the business of renewing pavement on highways whose outdated designs have mostly been left unchanged. The dangerous curves, narrow lanes and shoulders, and roadsides littered with fixed-object hazards have persisted despite the use of record amounts of federal assistance to resurface these primary and secondary highways.

Congress should ensure that safety is a paramount consideration in the use of federal assistance by requiring that states adopt plans for highway safety, highway work zone safety, the Interstate system, bridge, and pavement management. For example, as part of a comprehensive **Highway Safety Management Program**, the basic safety needs of all projects must be reviewed before federal approval is given.

These comprehensive management programs are necessary to restrengthen the federal stewardship of the highway program and guarantee that Congressional objectives of safety, mobility, and cost-effectiveness are met throughout the federal-aid highway systems. Overarching, national performance goals for the design and management of our highways and bridges must be clearly established by Congress and put into practice by the states.

The crucial link in this process is the Federal Highway Administration. Congress should direct the agency to create the appropriate management models. A balance must be struck between the genuine need for flexibility by the states to achieve the performance goals of the highway system that Congress desires and the need for a vigorous federal steward of the system to provide the unifying, directive function that must exist to achieve this. We cannot produce a 21st century highway system to meet all of our mobility requirements through a laissez-faire approach to the use of federal money and through the application of inferior highway and bridge design standards that are a return to the 1950s. Congress must have a clear vision of the highway system it wants this nation to have at the

millennium and it must put into operation now the mechanisms that are necessary to secure this system.

We are also convinced that special attention must be paid to highway work zone safety. More than 785 people were killed in work zones last year and we believe an intensive effort is necessary to reduce work zone fatalities and injuries. In addition, we recommend that Congress adopt a provision for an **Interstate Safety Emphasis Program** which requires states that adopt a 65 MPH speed limit to systematically upgrade those Interstates in order to reduce fatal and injury crashes. As mentioned earlier, no systematic review of the design of these highways to safely sustain this higher speed limit was completed before it was posted. We believe this review and upgrading will help stem the increase in fatalities documented on 65 MPH rural interstates and will demonstrate the virtues of superior highway design and traffic engineering.

This approach is echoed in the Administration's bill, which acknowledges the need for these mechanisms by requiring states to have in place similar management systems. Our proposals provide the detail not contained in the Administration's legislative proposal, including guidance on their content and schedules for action.

To develop federal standards for adequate maintenance of highways, a National Academy of Sciences' study should be conducted on minimum maintenance performance standards and the elements necessary for a comprehensive maintenance management system in the states.

I would like to submit a detailed copy of our proposal for the record.

**2. Reauthorize and strengthen existing highway safety programs**

The basic federal highway safety programs, such as the State and Community Highway Safety Grant Program (Section 402), have been traditionally underfunded and have been poor step-children to other federal highway programs. These efforts support basic programs promoting efforts such as safety belt and motorcycle helmet use, anti-impaired driving efforts, speed enforcement, emergency medical services, traffic safety law enforcement and pedestrian safety.

The Section 402 program was created to assist states and local communities in developing and implementing their highway safety programs. States are required to prepare a Highway Safety Plan annually, for approval by the National Highway Traffic Safety Administration (NHTSA), which outlines their programs in these areas. The distribution formula is based on population and public roadway mileage.

Funding for the basic Section 402 program has not increased in the last six years. These programs should be reauthorized at increased funding levels and, at a minimum, should grow in concert with growth in the federal highway construction and rehabilitation programs. Unfortunately, the Administration proposes doing the opposite. They seek to cut the Section 402 program by 8.7 percent and to decrease the federal match from 75 percent to 60 percent. Their proposed Section 402 program includes a set-aside provision for a new "safety bonus program," which grows from $5 million in Fiscal Year 1992 to $130 million in Fiscal Year 1996. These monies are likely to be used for construction rather than safety because of the way the program is structured.

We strongly support adequate funding for the State and Community Highway Safety Grant Program (Section 402), impaired driving deterrence programs, the Commercial Vehicle Safety Programs, and research, data collection and analysis programs.

**3. Use federal highway dollars to encourage state action on safety issues**

As mentioned earlier, the federal government has great influence over state safety activities through the provisions in federal highway programs and highway safety programs, such as sanctions for states without 21 year old minimum drinking ages. This successful provision, which is in the Administration's proposed bill, must be included in the Surface Transportation Assistance bill. Although all states currently have a minimum 21 year old drinking age law, without federal requirements these laws are vulnerable to repeal or expiration.

In the same manner, this legislation can provide leadership on the federal level to encourage all states to adopt safety belt and all-rider motorcycle helmet use laws.

We believe a variety of approaches short of sanctions can also be used to encourage state action and improve the safety of our highways, such as different matching ratios, changing the distribution of the U.S. DOT's discretionary funds, and incentive grants.

Advocates has many concerns in this legislation and would be happy to provide more details on our safety proposals. We hope that the Committee will consider our proposals to fully integrate safety into every aspect of the federal highway program. The opportunity to change the highway program to meet the mobility needs of the 21st century must also meet the public's safety needs.

Our nation is already paying an enormous, unnecessary price in dollars, family tragedy and lost productivity because of the unacceptably high numbers of deaths and injuries on our highways.

Without a new focus on safety, societal and economic costs -- such as hospital and other medical costs, short-term and long-term rehabilitation, Medicaid and other government support programs, insurance, even lost years of productivity -- will escalate further, adding to budget deficit burdens.

We urge you, this Committee and this Congress, at this critical juncture of the federal highway program, to institute a new emphasis on highway safety. Beginning with passage of the federal highway and motor vehicle safety acts in the late 1960s, we have learned that serious investments in safety are necessary, possible, and cost-effective, and that a well-balanced state-federal partnership is key to improving safety.

As the Committee develops its vision for the Surface Transportation Assistance bill, I hope it does not remain content with the "status quo" for highway safety. An investment now will reap social and economic benefits well into the next century. We urge that our new highway system be a new highway safety system.

I would be happy to answer any questions you may have. Thank you very much.

# Highway Traffic Safety Grants

## Section 402 Authorizations and Obligation Limits

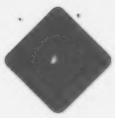
for revised fed. allocations for auto safety



**ADVOCATES**
FOR HIGHWAY
AND AUTO SAFETY

**ADVOCATES' 1991 LEGISLATIVE PROPOSALS**
**FOR THE SURFACE TRANSPORTATION ASSISTANCE BILL**

At a time of scarce federal resources, Congress must assure that federal highway monies are used for activities which are managed effectively, which includes the integration of safety throughout all programs and planning, engineering and construction processes.

I. **Include specific highway safety priorities in the Surface Transportation Assistance Bill**

A) Encouraging state motorcycle helmet and safety belt use laws by incorporating the National Highway Fatality Injury Reduction Act (Chafee-Cooper bill) into the legislation.

B) Opposing efforts to broaden adoption of the 65 MPH speed limit.

C) Opposing any efforts to increase truck sizes and weights either at the federal level or by allowing states to permit increases.

II. **Use federal highway dollars to encourage state action on safety issues:**

The federal government has the ability to influence state activities through the state-federal relationship created by this legislation. If Congress adopts major program changes increasing flexibility for the states it should not be at the expense of decreasing safety for the travelling public. Advocates proposes that any redefinition of the principal arterial system should include safety. In addition to those items mentioned in (I), Advocates supports:

A) The continuation of federal highway funding sanctions for states that do not have a 21 minimum drinking age.

B) Federal requirements for state enforcement and compliance with the 55 MPH and 65 MPH speed limits. States that do not meet the federal compliance criteria for 65 MPH highways or have a higher fatality rate than highways posted at 55 MPH should be required to reduce the posted speed to 55 MPH until adequate compliance is achieved and/or fatalities are reduced. The speed reduction should take effect for at least two years.

C) Additionally, states that are not in compliance with the 55 MPH speed limit should be penalized by all or a combination of the following actions.

- ineligibility for any discretionary highway funds.

- ineligibility for any additional obligation authority apportioned by US DOT towards the end of the fiscal year.

777 North Capitol Street, NE Suite 410 Washington, DC 20002 Tel 202/408-1711 Fax 202/408-1699

- an increase in state matching ratios for major highway programs excluding safety.

- a continuation of the current system of reducing the apportionment of federal funds in all major highway categories.

III. **Increase the role of safety in the traditional highway construction and maintenance programs**

Advocates supports strong federal oversight of highway fund expenditures to ensure the thorough integration of safety into all federal-aid highway projects. In order to achieve this Congress must require the Secretary of Transportation to do the following:

A) Require states that adopt a 65 MPH speed limit to systematically upgrade the geometric design and traffic control devices of all Interstate highways posted at 65 MPH in order to reduce fatal and injury crashes. States that wish to adopt a 65 mph speed limit in the future can do so only after systematically upgrading the geometric design and traffic control devices of such highways.

B) Ensure that every state has in place necessary management programs to assure that federal funds are being effectively spent in programs in which safety is fully integrated.

1) Provide for a comprehensive, federally approved management approach to the quality and safety of the **Interstate system** by requiring each state to have an approved Interstate management program that encompasses maintenance, pavement, highway safety strategies, and the use of improved design standards as a condition for the use of federal funds on Interstate highways. Congress should require the Secretary of Transportation to develop federal procedures for the approval of each state's management plan. Each state should have an approved and implemented plan no later than four years following the enactment of the surface transportation assistance bill.

2) Require a federally-approved, comprehensive pavement management program in each state. The **Pavement Management Plan** should integrate standards for pavement performance life, design, restoration strategies, and maintenance techniques with skid resistance safety needs. Standards should be issued by the Secretary of Transportation pursuant to the recommendations of a National Academy of Sciences' study. Congress should direct the Secretary to require states to develop a Pavement Management Plan no later than three years after the enactment of the surface transportation assistance bill.

3) Require each state to develop a comprehensive **highway safety management program** (HSMP) that must be approved by the Secretary of Transportation prior to the release of federal highway funds. A HSMP requires safety work to be performed in concert with all federal-aid reconstruction, resurfacing, restoration and rehabilitation projects. Also, require federally prescribed, improved roadside safety

and safety appurtenance design standards, update traffic control device standards, and issue new federal standards for sign legibility.

4) Provide that each state have a comprehensive **bridge management system** approved by the Secretary of Transportation. At present, only half of the states have written procedures for determining priorities in selecting bridge projects. The bridge management program should be developed by FHWA and should appropriately integrate the decision-making processes of such topics as replacement and restoration strategies, inspection intervals and techniques and overall operational safety needs. This requirement should take effect no later than four years following enactment of the new surface transportation assistance bill.

C) Request a National Academy Sciences' study of minimum maintenance performance standards and the elements necessary for a comprehensive maintenance management system on the states. Currently, there are no clear federally established standards for adequate maintenance of highways. A study by the National Academy of Sciences in consultation with FHWA and the states would lead to the development of comprehensive and uniform maintenance management programs in the states.

D) Require the development of a **highway work zone safety program** to reduce the number of unacceptable work zone deaths and fatalities. Last year, more than 750 people were killed in work zones. The program would improve work zone safety by enhancing the quality and effectiveness of traffic control devices, safety appurtenances, traffic control plans and bidding practices for traffic control devices and services. Also, require federally approved systems of training and certification for work zone safety personnel, the collection and analysis of work zone accident data, increased federal oversight of state work zone safety practices, and an annual report to Congress on the success of state efforts to reduce fatalities and injuries.

IV. **Reauthorize and strengthen existing highway safety programs**

Reauthorization of these programs at increased funding levels:
State and Community Highway Safety Grant Program (Section 402)
Impaired Driving Deterrence (Sections 408, 410)
Commercial Vehicle Safety Programs (MCSAP, CDL)
Research, Data Collection and Analysis programs

ADVOCATES
FOR HIGHWAY
AND AUTO SAFETY

FEDERAL-AID HIGHWAY ACT SAFETY PROVISIONS

1. INTERSTATE MANAGEMENT PROGRAM.

SUMMARY: PROVIDES FOR A COMPREHENSIVE, FEDERALLY APPROVED MANAGEMENT APPROACH TO THE QUALITY AND SAFETY OF THE ENTIRE INTERSTATE SYSTEM BY REQUIRING EACH STATE TO HAVE AN APPROVED INTERSTATE MANAGEMENT PROGRAM THAT ENCOMPASSES MAINTENANCE, PAVEMENT, HIGHWAY SAFETY STRATEGIES, THE USE OF IMPROVED INTERSTATE DESIGN STANDARDS, AND, WHERE APPLICABLE, AN INTERSTATE SAFETY EMPHASIS PROGRAM AS A CONDITION FOR THE USE OF I-4R FUNDS.

* Each state shall implement a unified, comprehensive management process for all aspects of the Interstate system, including pavement design and renovation strategies, inventories of identifiable safety design deficiencies, annual priority schedules for reconstructing and rehabilitating 65 mph Interstate highways to state-of-the-art design in accordance with the Interstate Safety Emphasis Program in those states where it applies, inspections and inventories of all bridges, maintenance calendars and procedures, and high geometric design and traffic control standards. The Secretary is directed to establish through proposed rulemaking, a comprehensive Interstate Management Program model, including Interstate maintenance performance standards, and standards for the reconstruction,

777 North Capitol Street, NE Suite 410 Washington, DC 20002 Tel: 202/408-1711 Fax: 202/408-1699

resurfacing, restoration, and rehabilitation of the Interstate system that will, as much as is feasible, increase its uniformity of design and its safety to maximum extent and accommodate both current and probable future traffic needs, such model and standards to be made effective no later than eighteen months following the enactment of this legislation.

The Secretary is directed to institute Federal procedures for the approval of each state's submitted IMP and each state shall have an approved and implemented IMP no later than three years following the enactment of this legislation. The Secretary shall perform an annual comprehensive review at the end of each fiscal year of the adequacy of each state's approved IMP and shall report his findings to Congress by March 31 of the following year. The Secretary's review shall include, but not necessarily be limited to, the evaluation of each state's effectiveness in implementing high design standards on each I-4R project to ensure improved safety, durability, and capacity; of its success in coordinating and implementing the maintenance, bridge, highway safety, pavement management, and, where applicable, Interstate Safety Emphasis Program elements of its comprehensive IMP; and the extent to which the state's use of a comprehensive IMP has improved the cost-effective use of Federal I-4R funds.

The Secretary is directed to withhold approval of all I-4R projects unless the state has an approved IMP.

**2. INTERSTATE SAFETY EMPHASIS PROGRAM.**

**SUMMARY: PROVIDES FOR SYSTEMATIC UPGRADING OF GEOMETRIC DESIGN AND TRAFFIC CONTROL DEVICES ON RURAL INTERSTATE HIGHWAYS POSTED AT 65 MPH IN ORDER TO REDUCE FATAL AND INJURY ACCIDENTS.**

* Each state that has posted, or intends to post, any qualifying highway at 65 mph shall implement an **Interstate Safety Emphasis Program (ISEP)** that will reconstruct or otherwise rehabilitate each such highway in a manner that elevates the alignment, cross-section, and traffic engineering features of the highway to the highest feasible level of state-of-the-art design, including, but not necessarily limited to, wider lanes and shoulders, higher design speeds with improved sight distance, better entrance and exit ramp geometry, higher levels of skid resistance, larger and brighter signs and other state-of-the-art traffic control devices and pavement markings, and safety appurtenances that respond to the needs of drivers who are elderly or who have diminished capabilities and that accommodate the needs of the entire range of vehicle sizes and types. By the start of the next fiscal year following enactment of this section, each state shall have completed an inventory of all safety deficiencies on its Interstate highways posted or intended to be posted at 65 mph and shall file with the Secretary such inventory along with a

schedule of projects establishing a priority ordering and date-of-completion calendar for reconstructing or rehabilitating each Interstate highway that is posted or which the state intends to post at 65 mph. The Secretary shall review each state's submission in conjunction with its previously approved annual programs of projects pursuant to § 105 of this Chapter to ensure that all eligible projects are transferred to the ISEP program and shall approve each state's priority schedule of ISEP projects within six months following its submission. The Secretary shall grant his/her approval of each state's inventory and priority schedule for the forthcoming fiscal year only if s/he finds that the state has sufficiently emphasized the correction of identifiable safety deficiencies in the design and operation of each candidate highway, including, but not limited to, improvement of deficient cross-section and alignment, the reconstruction or rehabilitation of ramps and entrance/exit points along the mainline, and the state-of-the-art institution or renovation of all required safety appurtenances and traffic control devices. Each proposed ISEP project shall be approved by the Secretary and shall be designed, bid, and let in as short a time as possible. Each state shall spend a portion of its annual I-4R apportionment to accomplish such projects. Advocates recommends a minimum of 5% and a maximum of 20% of annual I-4R funds as a mandated range within which each state with 65 mph

highways shall fund ISEP projects. When a state demonstrates that its remaining ISEP work falls below the minimum required fiscal year amount, it may be granted an exemption from the minimum expenditure.

Each state shall provide a certification statement and accompanying documentation to the Secretary at the conclusion of each fiscal year that verifies that it has spent dedicated I-4R ISEP funds within the mandated range for ISEP work. If the Secretary finds that any state has failed to certify properly its use of I-4R funds or, on her review, finds that any completed ISEP project has not achieved the highest feasible state-of-the-art design in its reconstruction or rehabilitation of any Interstate highway, then the Secretary shall refuse to certify that state for the completed fiscal year, shall require that the Interstate highway(s) shall be posted at 55 mph, shall withhold payment of the Federal share for such project(s), and shall require the state to correct all identified deficiencies at its expense. When the Secretary, upon his/her review, finds that the state has satisfactorily corrected all identified deficiencies in the disputed project(s), the Secretary shall certify the state's compliance with its ISEP program for the completed fiscal year in question and shall restore the payment of the original Federal share for such project(s).

**3. PAVEMENT MANAGEMENT PROGRAM.**

**SUMMARY: PROVIDES FOR A REQUIRED, FEDERALLY-APPROVED COMPREHENSIVE PAVEMENT MANAGEMENT PROGRAM IN EACH STATE THAT INTEGRATES STANDARDS FOR PAVEMENT PERFORMANCE LIFE, DESIGN, RESTORATION STRATEGIES, AND MAINTENANCE TECHNIQUES WITH SKID RESISTANCE SAFETY NEEDS BASED ON THE STANDARDS ISSUED BY THE SECRETARY PURSUANT TO THE RECOMMENDATIONS OF A NATIONAL ACADEMY OF SCIENCES STUDY.**

* Congress should direct the Secretary:
- to establish through notice-and-comment rulemaking, pavement life performance standards for new and fully reconstructed pavement and to review the need to establish longer pavement life cycles for rehabilitated pavement on all of the FA systems.
- to require comprehensive PMSs for all states, to become effective contingent upon explicit FHWA approval no later than three years after the enactment of the reauthorization bill.
- to create through notice-and-comment rulemaking within eighteen months following enactment of this legislation, an appropriately specific PMS model that will be used as the basis for FHWA approval of a state's PMS. This should include, but not necessarily be limited to, Federal specifications for type selection and design of new, reconstructed, and rehabilitated

pavements; specific analysis periods; system inventories of pavement design and condition, particularly for the purpose of being used as the basis for cost-effectiveness choices for pavement renovation; the inclusion of user costs as part of life cycle costs; a requirement for systematic skid testing; economic analyses of alternative approaches for the design for all Federally assisted pavements; and maintenance performance criteria and strategies. The provision and/or legislative history should make clear Congressional intent that any approved comprehensive PMS should effectively integrate design, type selection, and construction/reconstruction/rehabilitation methods with maintenance calendars, strategies, and techniques. No project for any purpose receiving Federal assistance shall be approved by the Secretary unless it is designed and built pursuant to a fully approved state Pavement Management System. The Secretary shall perform an annual review at the end of each fiscal year of the adequacy of each state's approved PMS and report his findings to Congress by March 31 of the following year.

* The National Academy of Sciences is directed to conduct research into the requirements for skid-resistant pavement surfaces on highways and streets. The results of such research, together with the National Academy's recommendations, shall be

provided to the Secretary no later than two years following enactment of this bill and shall form the basis of proposed rulemaking by the Secretary to establish nationally uniform standards for instituting and maintaining highly skid resistant pavement surfaces on all Federally assisted highways and streets, such standards to become effective no later than September 30, 1995.

ADVOCATES FOR HIGHWAY AND AUTO SAFETY
FEDERAL-AID HIGHWAY ACT OF 1991
PAGE 10

**4. HIGHWAY SAFETY MANAGEMENT PROGRAM**

**SUMMARY: PROVIDES FOR A UNIFIED HIGHWAY SAFETY IMPROVEMENT PROGRAM THAT INTEGRATES THE GOALS OF THE CATEGORICAL SAFETY CONSTRUCTION PROGRAMS WITH REGULAR AUTHORIZATION PROGRAM 4R PROJECTS. CREATES A COMPREHENSIVE HIGHWAY SAFETY MANAGEMENT PROCESS REQUIREMENT FOR EACH STATE THAT MUST BE APPROVED BY THE SECRETARY. ALSO REQUIRES FEDERALLY PRESCRIBED IMPROVED ROADSIDE SAFETY AND SAFETY APPURTENANCE DESIGN STANDARDS, UNIFORM TRAFFIC CONTROL DEVICE STANDARDS ISSUED AND AMENDED BY THE SECRETARY, AND NEW FEDERAL STANDARDS FOR SIGN LEGIBILITY.**

* Each state shall have a comprehensive highway safety management program approved by the Secretary within three years following enactment of this bill. Each state's program shall be based on the management principles and other requirements established by the Secretary through proposed rulemaking, such principles and requirements to become effective no later than eighteen months years following enactment of this bill. Such principles and requirements shall include, but not necessarily be limited to: provisions for an effective record system of accidents; adequate accident investigations to determine the probable causes of accidents, injuries, and deaths on all Federal-aid highways; geometric design and traffic control

standards that can ensure the highest feasible levels of operating safety; provisions for work zone safety; roadside and highway safety appurtenance design standards that ensure the highest feasible levels of safety for single-vehicle accidents by reducing both fatalities and injuries and their severity as much as possible, including crashworthiness peformance criteria for all highway roadside design features, such as drainage structures and slopes, traffic control devices and their supports, barriers, bridge railings and parapets, and impact attenuators; the safety elements of maintenance and bridge management programs; skid resistant pavement design; a system for evaluating the safety cost-effectiveness of projects completed with funding under this section; and other such principles and requirements for areas of management, design, and operation as the Secretary shall deem necessary and proper.

As part of its comprehensive safety management process, each state shall conduct a **safety needs review** of each project programmed for construction, reconstruction, or R-R-R for the purpose of selecting the most cost-effective safety countermeasures. The safety needs review shall comprise geometric design, roadside safety, and traffic engineering needs, and shall be conducted in accordance with systemwide safety needs reviews in order to avoid piecemeal decisionmaking on an ad hoc, project-by-project basis. Such systemwide reviews shall list all

hazardous locations, both potential and those verified through accident experience, and shall establish a priority schedule for correction that calendars safety improvements on projects planned for pavement renewal and increased capacity. Notwithstanding any other provision in this section or in the Act, however, if a state's safety review demonstrates a need for a specific safety countermeasure that is not part of a regular project for the reconstruction, resurfacing, restoration, or rehabilitation of any Federally assisted highway, funds authorized under this section may be used for such project.

No project for any purpose receiving Federal assistance shall be approved by the Secretary unless it is designed pursuant to a fully approved state Highway Safety Management Program (HSMP) that incorporates both an existing systemwide safety review and a project-specific safety needs evaluation.

For the purpose of establishing a comprehensive Highway Safety Management Program in each state, carrying out both systemwide and project-specific safety reviews, and correcting hazardous conditions as part of a regular reconstruction, resurfacing, restoration, or rehabilitation project, or as an independent hazard elimination project, including the installation, retrofit, replacement, or repair of traffic control devices and their supports, safety appurtenances, barriers, railings, parapets, impact attenuators, and correction of other

hazardous conditions, the Federal share payable shall be 90 percent of the cost.

The Secretary shall perform a comprehensive review at the end of each fiscal year of each state's approved HSMP and shall report its findings to Congress by March 31 of the following year. The Secretary's review shall comprise, but not necessarily be limited to, an evaluation: of the effectiveness of each state's safety needs reviews; of the safety countermeasures performed as an integral part of each reconstruction, resurfacing, restoration, and rehabilitation project; of the quality and reliability of the safety effectiveness evaluations performed by each state following completion of each project; and of the overall level of safety benefits achieved through the projects of the previous fiscal year.

* Amend § 109(a) to add a subsection (3) as follows:
"(3) that conforms to the standards and practices for the design and use of traffic control devices promulgated by the Secretary, who is directed to approve only such installations as will promote the safe and efficient utilization of the highways."

* Amend § 109(d) to read as follows:

"(d) On any highway project, the location, form and character of informational, regulatory and warning signs, curb and pavement

or other markings, other traffic control devices providing warning, delineation and channelization of traffic, and traffic signals installed or placed by any public authority or other agency, shall conform to the nationally uniform standards and practices for the design, performance, and maintenance of such signs, markings, devices, and signals, as promulgated by the Secretary and promptly revised by him from time to time to accommodate the state of the art in traffic engineering and highway safety."

* The Secretary is directed to propose rulemaking that shall establish revised legibility standards for signs that will accommodate all licensed drivers, including the elderly and other motor vehicle operators with diminished visual capabilities, to become effective no later than two years after enactment of this bill. These standards shall be appropriately coordinated with any standards adopted by the agency for minimum maintained levels of retroreflectivity. Each state shall fully comply with such standards for enhanced legibility within five years after such standards are promulgated by the Secretary. (In order to alleviate the cost burdens, the legislative history accompanying the provision should make clear that the Secretary is authorized to require compliance in a series of stages within the statutory timeframe.)

ADVOCATES FOR HIGHWAY AND AUTO SAFETY
FEDERAL-AID HIGHWAY ACT OF 1991
PAGE 15

**5. BRIDGE MANAGEMENT PROGRAM.**

**SUMMARY: PROVIDES FOR A REQUIREMENT THAT EACH STATE HAVE A COMPREHENSIVE BRIDGE MANAGEMENT SYSTEM APPROVED BY THE SECRETARY AND BASED ON A MODEL PRODUCED BY SECRETARIAL RULEMAKING THAT APPROPRIATELY INTEGRATES THE DECISIONMAKING PROCESSES OF SUCH TOPICS AS REPLACEMENT AND RESTORATION STRATEGIES, MAINTENANCE FORECASTING AND STRATEGIES, INSPECTION INTERVALS AND TECHNIQUES, AND OPERATIONAL SAFETY.**

* Each state, and other authority receiving Federal assistance for the inspection, replacement, and rehabilitation of qualifying bridges, shall implement a comprehensive bridge management system (BMS) approved by the Secretary no later than 2 years following enactment of this bill. The Secretary is directed to conduct rulemaking to establish such principles and requirements comprising a comprehensive bridge management system, to become effective no later than one year following enactment of this legislation.

The Secretary shall ensure that the BMS in each state, or other authority, shall include, at a minimum, alternative strategy evaluation for each bridge project, systemwide analysis of design choices, systemwide based cost-effectiveness selection criteria, priority ranking for rehabilitation and replacement,

the specification of rigorous inspection criteria and intervals (especially for in-water bridge supports), maintenance performance goals and procedures, and maximum attention in project design to consequent operational safety needs.

The Secretary is directed to perform a comprehensive review at the end of each fiscal year of each state's or other authority's comprehensive BMS which shall appropriately assess, among other things, the effectiveness of its BMS in establishing bridge maintenance, rehabilitation, and replacement needs through systemwide priority scheduling; the effectiveness of maintenance strategies and techniques, and their integration with bridge rehabilitation and replacement; the timeliness and effectiveness of bridge inspections, including, in particular, underwater inspections; and the effectiveness of alignment, cross-section, safety appurtenance, and traffic engineering strategies to improve operating safety. The Secretary shall report the results of such comprehensive reviews to Congress no later than March 31 of the following year.

**6. HIGHWAY MAINTENANCE MANAGEMENT PROGRAM.**

**SUMMARY: PROVIDES FOR A NATIONAL ACADEMY STUDY OF MINIMUM MAINTENANCE PERFORMANCE STANDARDS AND OF THE ELEMENTS NECESSARY FOR COMPREHENSIVE MAINTENANCE MANAGEMENT SYSTEMS IN THE STATES.**

* The National Academy of Sciences is directed to carry out a study of the need for minimum maintenance performance standards for the non-Interstate Federal-aid systems, to be concluded and provided to the Secretary no later than eighteen months after the enactment of a new authorization bill. This study shall form the basis for proposed rulemaking by the Secretary to establish such minimum maintenance performance standards to become effective no later than one year after his receipt of the National Academy study.

* The National Academy of Sciences, in appropriate consultation with the FHWA and the states, shall study the need for the states to conduct their maintenance activities under a comprehensive maintenance management system, such study to be concluded and provided to the Secretary no later than eighteen months after the enactment of a new authorization bill. Such a comprehensive maintenance management system shall include, but not necessarily be limited to, such features as systemwide pavement needs, riding

surface adequacy, shoulder integrity, drainage needs, vegetation control, traffic control device and pavement marking cleaning and repair, and the maintenance of roadside and appurtenance safety conditions. The system shall contain analytical tools and decision mechanisms for determining the most timely and cost-effective techniques for maintaining these areas and shall appropriately interface with the other major program areas of the state highway department involving design, programming, and the choice of reconstruction and R-R-R strategies. This study shall form the basis for proposed rulemaking by the Secretary to establish a model for such a comprehensive maintenance management system to become effective no later than one year after his receipt of the National Academy study.

The Secretary shall not approve any state's submitted annual program of proposed projects pursuant to 23 USC § 105 if it has failed to comply with such minimum maintenance performance standards and has not implemented a Federally approved comprehensive maintenance management system by a date certain to be determined by the Secretary.

7. HIGHWAY WORK ZONE SAFETY PROGRAM

SUMMARY: PROVIDES FOR IMPROVED WORK ZONE SAFETY BY ENHANCING THE QUALITY AND EFFECTIVENESS OF TRAFFIC CONTROL DEVICES, SAFETY APPURTENANCES, TRAFFIC CONTROL PLANS, AND BIDDING PRACTICES FOR TRAFFIC CONTROL DEVICES AND SERVICES. REQUIRES FEDERALLY APPROVED SYSTEMS OF TRAINING AND CERTIFICATION FOR WORK ZONE SAFETY PERSONNEL RESPONSIBLE FOR IMPLEMENTING AND OVERSEEING TRAFFIC CONTROL AND OPERATIONAL SAFETY. REQUIRES COLLECTION AND ANALYSIS OF APPROPRIATE WORK ZONE ACCIDENT DATA AND ADEQUATE FEDERAL OVERSIGHT OF WORK ZONE SAFETY PRACTICES IN THE STATES. REQUIRES AN ANNUAL REPORT TO CONGRESS ON THE SUCCESS OF THE STATES' EFFORTS UNDER THIS SECTION.

"(a)(1) Signs, and other temporary and permanent traffic control devices and markings, used to inform, warn, and guide motorists through the work zone, shall be as bright, conspicuous, and legible as is feasible under both day and night operating conditions. Such signs, devices, and markings shall provide the guidance and the legible symbol and word messages that meet the needs of older drivers and other vehicle operators with diminished capabilities. (2) The Secretary shall establish, through proposed rulemaking, nationally uniform standards for the conspicuity and legibility of signs and other traffic control

devices and markings to become effective no later than September 30, 1993.

(b) Each state highway department shall ensure that all work zones open to through traffic shall at all times have appropriate temporary pavement markings and other supplementary delineation of the safe travel paths through the work areas. Such markings and supplementary delineation shall, as much as feasible, replicate the state-of-the-art centerline and edgeline delineation of permanent roadways.

(c)(1) All work zone temporary traffic control devices shall be desig ıd and deployed in a manner to reduce, as much as is practicable, the potential for vehicle impact and to minimize the threat of injuries to workers, pedestrians, and vehicle occupants. (2) All traffic control devices and their supports, as well as barrier systems and impact attenuators, shall meet crashworthiness performance criteria established by the Secretary through proposed rulemaking, the final rule to become effective no later than September 30, 1993. The goal of such standards shall be to provide the highest feasible levels of crash performance.

(d) Each state highway department shall use unit pay items for providing, installing, moving, replacing, and maintaining traffic control devices and safety systems of barriers and impact attenuators.

(e)(1) A traffic control plan (TCP) shall be developed for each project and included in its plans, specifications, and estimates. The degree of detail in each TCP shall be commensurate with the highest feasible level of safety in the work zone that can be achieved for motorists, workers, and pedestrians. Each TCP shall be consistent with the requirements of this section, including the regulations that the Secretary is directed to establish pursuant to subsections (a)(1) and (c)(2) as well as with all existing policies that the Secretary has promulgated which govern work zone safety. (2) All TCPs developed by highway contractors shall be approved by each state highway department and all Interstate 4-R project TCPs shall be directly approved by the Secretary."

(f)(1) Each state highway department shall designate for each project a person trained and certified pursuant to subsection (2) who will have the authority and primary responsibility for assuring that the TCP and other safety aspects of the work zone are effectively administered, including the authority to stop work, if necessary, to ensure the safety of motorists, workers, and pedestrians and the responsibility to record all motor vehicle accidents that occur in the work zone. (2) The Secretary shall establish through a proposed rulemaking, standards for the training and certification of the persons directly responsible for temporary traffic control and project

safety in work zones, as set forth in subsection (a), such standards to become effective no later than September 30, 1993. (g)(1) Each state highway department shall collect data on all work zone accidents occurring within the state which shall include, but not necessarily be limited to, the type of accident in each instance, whether single- or multi-vehicle, and the nature and extent of the damage, injuries, or fatalities sustained; the age of the vehicle operator(s); the type of highway on which each accident has occurred; the type of work zone in which the accident has occurred (construction, maintenance, utility, etc.); and the length, duration, traffic volume, percentage of heavy trucks and other relevant design and operational characteristics of the work zone. (2) Each state highway department shall analyze and use work zone accidents and accident data to continually correct deficiencies in each work zone and to improve future TCPs. The results of such analyses shall be made available to the Secretary on a continuing basis. (3) Each state highway department shall organize these work zone accident data for each fiscal year in a format to be determined by the Secretary and shall send such data to the Secretary no later than December 31 following the close of each fiscal year."

(h)(1) The Secretary is directed to conduct annual reviews of work zone safety, including on-site inspections of temporary traffic control conditions at selected sites in each state and a

review of each state's TCPs and other work zone safety procedures and policies. (2) The Secretary shall also make an annual assessment, both state-by-state and on a national level, of the previous fiscal year's work zone accident experience in order to determine the effectiveness of each state's work zone safety practices. The results of such state-by-state and overall national inspections, reviews, and assessments shall be annually reported to the Congress by March 31 of each year.

(i)(1) If any on-site inspection, TCP review conducted pursuant to subsection (h), or other information demonstrates inadequate traffic safety conditions in any highway project work zone, the Secretary shall promptly notify the state in writing to take immediate corrective action to conform its work zone traffic safety practices to the requirements of this section and other applicable provisions of this Act and Federal regulations. (2) Any state that has been notified by the Secretary of deficiencies in work zone traffic safety shall:
(A) correct all identified deficiencies on projects within five days of the receipt of such notice; (B) review all other similar projects in the state for comparable deficiencies and correct those deficiencies within ten days of the receipt of the notice from the Secretary; and, (C) certify immediately to the Secretary in writing that necessary corrective actions on all affected projects have been completed. (3)(A) The Secretary

shall withhold final approval for projects in any state that fails to comply with any portion of subsections (a) through (h). (B) The Secretary shall withhold final approval for any project(s) under subsections (i)(2)(A) and (i)(2)(B) which has not been certified by the State in accordance with subsection (i)(2)(C). (4) The Secretary shall promulgate regulations to assure prompt and timely implementation of this subsection."

* Amend 23 U.S.C. § 120(d) to read as follows:

"(d) The Federal share payable on account of any project for the elimination of hazards of railroad-highway crossings, as more fully described and subject to the conditions and limitations set forth in Section 130 of this title, and for any project for traffic control signalization or for pavement marking or for commuter carpooling and vanpooling or for installations of traffic signs, or for temporary traffic control devices, markings, and safety appurtenances for guiding, warning, and protecting traffic, workers, and pedestrians in highway work zones, highway lights, guardrails, or impact attenuators, may amount to 100 per centum of the cost of construction of such projects . . ."

ADVOCATES
FOR HIGHWAY
AND AUTO SAFETY

FEDERAL-AID HIGHWAY ACT SAFETY PROVISIONS
SUMMARY

INTERSTATE MANAGEMENT PROGRAM (IMP)

The current Interstate maintenance guidelines do not contain performance standards for vital aspects of the system such as pavement durability, skid resistance, and traffic control device condition and performance. The design policy proposal currently being considered by FHWA for rulemaking would essentially allow any existing designs for reconstruction and R-R-R work to be approved for federal assistance.

The IMP is a comprehensive approach which requires each state to have an approved Interstate management program that encompasses maintenance, pavement, highway safety strategies, the use of improved design standards and, where applicable, an Interstate Safety Emphasis Program as a condition for the use of federal funds on Interstate highways.

Program includes:

* Each state required to have a unified, comprehensive maintenance management program for all aspects of Interstate highways.

* FHWA establishes IMP model in 18 months through rulemaking, including maintenance performance standards and reconstruction, resurfacing, restoration, and rehabilitation (4R) design standards.

* FHWA approval of each state's IMP 3 years after enactment.

* Annual FHWA review and Congressional report.

* I-4R projects not approved by FHWA if state does not have federally approved IMP.

777 North Capitol Street, NE Suite 410 Washington, DC 20002 Tel: 202/408-1711 Fax: 202/408-1699

INTERSTATE SAFETY EMPHASIS PROGRAM (ISEP)

Rural Interstate highways that have been posted at 65 MPH have produced disproportionate and unacceptable increases in fatalities and injuries. ISEP requires that all Interstate highways posted, or proposed to be posted, at 65 MPH, must be reconstructed or rehabilitated to state-of-the-art Interstate design.

Program includes:

* Projects will elevate the alignment, cross-section, and traffic engineering features of the highway to the highest feasible level of state-of-the-art design. These improvements will enhance the capability of the highway to accommodate elderly drivers with slower reaction-perception times and vehicles with inferior performance, such as large trucks.

* Each state to inventory and set priorities on Interstate highways posted or to be posted at 65MPH. Other I-4R projects are to be reviewed and, if eligible, transferred to ISEP program.

* Each state's inventory and priority schedule to be approved by FHWA.

* All ISEP projects to be approved by FHWA.

* I-4R spending basement and ceiling of 5% and 20% to be used for ISEP projects, respectively.

* Highways not upgraded are to revert to 55 MPH.

* Exemption allowed from minimum expenditure upon state showing.

* State submits certification statement of compliance to Secretary each year. If a state does not comply, certification is denied until deficiencies are corrected at the state's expense. The federal payment will be restored once deficiencies corrected and state's compliance certified.

PAVEMENT MANAGEMENT PROGRAM (PMP)

The current federal rule does not ensure that only long-lived, durable pavement with good surface safety properties will be subsidized with federal funds. Also, no performance standards for skid-resistance on federal-aid highways exist in federal regulation. The PMP requires a federally-approved, comprehensive pavement management program in each state.

Program includes:

* All states required to have comprehensive Pavement Management Systems (PMS).

* FHWA establishes PMS model through rulemaking within 18 months after enactment.

* Each state's PMS approved by FHWA no later than 3 years after enactment.

* FHWA directed to establish pavement life performance standards for both new and fully reconstructed pavement.

* FHWA directed to review need for longer pavement life cycles for rehabilitated pavement.

* PMS must integrate design, type selection, and 4R methods with maintenance.

* FHWA must perform annual review and report to Congress.

* Projects must be designed and built according to the state's approved PMS to receive FHWA approval.

* National Academy of Sciences (NAS) directed to conduct research into skid-resistance needs.

* NAS report forms basis for nationally uniform skid resistance standards.

45-155 O—91——54

HIGHWAY SAFETY MANAGEMENT PROGRAM (HSMP)

The effectiveness of current safety categorical programs is limited because of problems such as the lack of coordination with regular construction programs. The Federal Manual of Uniform Traffic Control Devices (MUTCD) has insufficient statutory basis and is applied poorly outside of the federal-aid systems.

The HSMP requires each state to develop a comprehensive highway safety management program (HSMP) that must be approved by the Secretary of Transportation prior to the release of federal highway funds. A HSMP requires safety work to be performed in concert with all federal-aid reconstruction, resurfacing, restoration and rehabilitation projects. The HSMP also requires federally prescribed, improved roadside safety and safety appurtenance design standards, updated traffic control device standards, and issuance of new federal standards for sign legibility.

Program includes:

* Each state must have a unified highway safety improvement program within 3 years following enactment that integrates categorical safety construction program goals with regular 4R projects.

* FHWA must establish management principles and other safety program requirements through rulemaking within 18 months following enactment. (See specific elements of federal HSMP model in "Federal-Aid Highway Act Safety Provisions," p. 10-11.)

* Each state must get FHWA approval of its comprehensive highway safety management process.

* Each state required to perform safety needs review of each construction or 4R project based on systemwide safety needs review.

* States must have priority schedule for projects.

* Special safety projects that are not part of 4R projects are permitted.

* FHWA cannot approve any federally assisted project unless designed pursuant to federally approved HSMP.

* 90% federal funding.

* FHWA performs comprehensive review of each state's HSMP each year and reports to Congress.

* FHWA traffic control standards are elevated to statutory mandate.

* FHWA rulemaking required to revise legibility standards of highway signs to accommodate all licensed drivers.

* State compliance with new legibility standards within 5 years after FHWA Final Rule.

BRIDGE MANAGEMENT PROGRAM (BMP)

More than 40% of the nation's 577,000 bridges are structurally deficient or functionally obsolete. Yet only half of the states have written procedures for determining priorities in selecting bridge projects and few states have a priority selection process that takes preservation activities into account in a systematic way.

The BMP requires each state to have a comprehensive bridge management system approved by the Secretary of Transportation. FHWA is to develop the bridge management program to appropriately integrate the decision-making processes of such topics as replacement and restoration strategies, inspection intervals and techniques and overall operational safety needs.

Program includes:

* Requires each state to have comprehensive Bridge Management System (BMS) within 2 years of enactment.

* FHWA must conduct rulemaking within one year after enactment to establish BMS model for states.

* Each BMS must include specific elements as set forth in federal model. (see specifications of these in "Federal-Aid Highway Act Safety Provisions," p. 15-16)

* FHWA must perform an annual comprehensive review of each state's BMS. (see specific elements listed in "Federal-Aid Highway Act Safety Provisions," p. 16)

* FHWA must report results of reviews to Congress each year.

HIGHWAY MAINTENANCE MANAGEMENT

Currently, no federally established standards exist for adequate maintenance of highways built, reconstructed or rehabilitated with federal assistance.

A National Academy Sciences (NAS) study of minimum maintenance performance standards and the elements necessary for a comprehensive maintenance management system on the states should be required in the Surface Transportation Assistance bill.

* NAS is to carry out study within 18 months after enactment of need for minimum maintenance performance standards for non-Interstate federal-aid systems.

* NAS study forms the basis for FHWA rulemaking within one year to establish minimum maintenance performance standards.

* NAS is also to carry out study within 18 months of enactment of need for comprehensive state maintenance management systems. (see features of maintenance management system in "Federal-Aid Highway Act Safety Provisions," p. 17-18)

* FHWA can not approve annual state program of proposed projects pursuant to 23 USC § 105 if any state fails to comply with minimum maintenance performance standards and/or has not implemented federally approved comprehensive maintenance management system.

HIGHWAY WORK ZONE SAFETY PROGRAM

Last year, more than 785 people were killed in work zones. The highway work zone safety program would improve work zone safety by enhancing the quality and effectiveness of traffic control devices, safety appurtenances, traffic control plans and bidding practices for traffic control devices and services. The program would also require federally approved systems of training and certification for work zone safety personnel, the collection and analysis of work zone accident data, increased federal oversight of state work zone safety practices, and an annual report to Congress on the success of state efforts to reduce fatalities and injuries.

Program includes:

* Requires state-of-the-art traffic control devices (TCDs) to accommodate all drivers.

* Requires FHWA to establish TCD conspicuity and legibility standards by 9/30/93.

* Requires states to have full-standards pavement markings in all work zones.

* Requires FHWA to establish TCD safety and crashworthiness criteria through rulemaking by 9/30/93.

* Requires state unit pay items for work zone TCDs, barriers, and attenuators.

* Requires Plans, Specifications, and Estimates inclusion of project-specific traffic control plans (TCPs).

* Contractor TCPs must be approved by state highway departments.

* I-4R TCPs must be approved by FHWA.

* Requires state highway department designation for each project of trained and certified work zone traffic control supervisor.

* FHWA must establish standards through rulemaking by 9/30/93 for training and certification standards.

* States must collect all work zone accidents by specified categories. (see elements required in work zone data, "Federal-Aid Highway Act Safety Provisions," p. 22)

* States must analyze all work zone accidents and data in order to improve work zone traffic control.

* States are to provide annual fiscal year report to FHWA of work zone accident data.

* Requires FHWA annual reviews of work zone safety.

* FHWA must annually assess work zone accident experience and report to Congress by 3/31 of each year.

* FHWA must set up system of notification to states of inadequate work zone safety.

* If notified, state must correct all deficiencies within 5 days, review other state projects for similar deficiencies, and certify to FHWA that corrections have been made.

* FHWA must withhold final project approval for projects that fail to comply with all foregoing requirements.

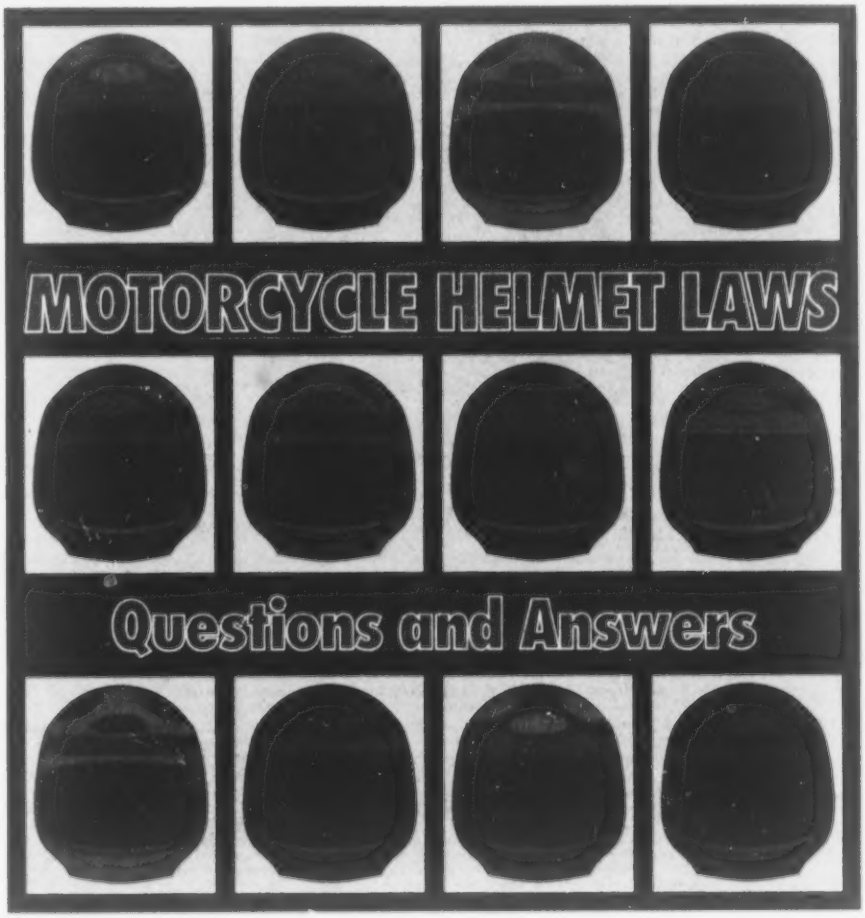
* FHWA must conduct rulemaking to implement these requirements.

* 100% federal funding for work zone TCDs and safety appurtenances through amending 23 USC § 120(d).

Injury Prevention Network

— NEWSLETTER—

Spring 1991 Volume 8 • No. 1



## Thanks to the Advocates for Highway and Auto Safety . . .

A mini-grant from the *Advocates for Highway and Auto Safety* to the Trauma Foundation assisted in the preparation and printing of this newsletter.

*Advocates for Highway and Auto Safety* is a broad-based alliance of citizen groups, insurers, safety and law enforcement groups, recently formed to reduce deaths, injuries and economic loss associated with motor vehicle crashes, fraud and auto theft. The co-Chairs of its Board are Joan Claybrook, President of Public Citizen and Gerald Maatman, President and CEO of Kemper Insurance. Judith Stone is Executive Director. Andrew McGuire of the Trauma Foundation serves on its Board.

*Advocates'* goals are to promote legislative and regulatory priorities; increase public awareness; and provide new support and energy to existing constituencies. *Advocates'* principal focus is the passage of effective federal and state highway safety legislation, and the adoption and implementation of regulations and policies to reduce car crash deaths and injuries, and to initiate practical programs to contain auto thefts and other loss costs.

*Advocates'* legislative priorities on the federal level include NHTSA's reauthorization bill, the Safety Belt and Motorcycle Helmet Use legislation (Chafee/Cooper bill), highway safety appropriations, highway program reauthorization, auto crash parts legislation and auto theft legislation. Regulatory issues include: side impact crash protection for passenger vehicles, passive restraints for vans and light trucks, 5 MPH bumper standards, upgraded van and light truck standards, pedestrian safety / child restraint / rollover protection standards, and speed advertising. On the state level, issues include: motorcycle helmet laws, seat belt and child restraint laws, speed limits, roadside sobriety checkpoints, administrative license suspension legislation, and bumper quality disclosure laws.

*Advocates' 1990 press conference on the Cooper/Chafee bill in Washington, D.C. Left foreground to right background: survivors Michael Gemma and Tony Lineberry, Actor Doug Barr, Mary Price and Rep. Jim Cooper (D-TN).*

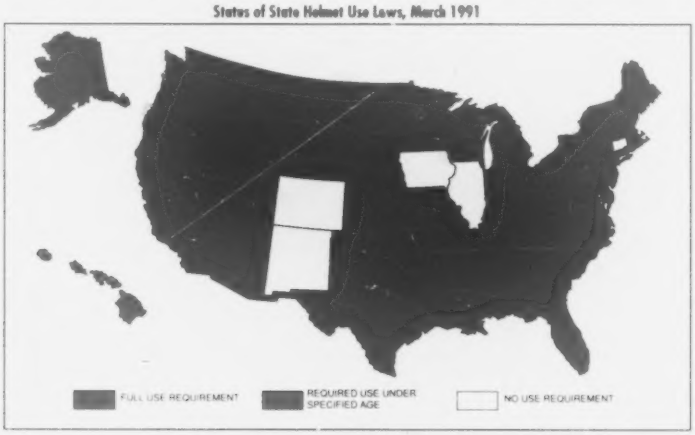
# MOTORCYCLE HELMET LAWS

## WHAT STATES HAVE WHICH HELMET LAWS?

**As of March, 1991, 23 states, the District of Columbia and Puerto Rico have full-use laws, 23 states have partial use laws and four states (Colorado, Iowa, Illinois and Connecticut) have no law.** States with partial use laws require those younger than 18 years to wear helmets with the following exceptions: California (under 15 1/2 years of age), Delaware (under 19 must wear helmets and helmets must be in the possession of other riders, even though use is not required), Maine (under 15 years of age, all learners and for one year after licensure), Ohio (first year novices and their passengers), Rhode Island (only passengers), South Carolina (under 21 years), Wisconsin (those with instructional permits), Wyoming (under 19 years).

**Status of State Helmet Use Laws, March 1991**



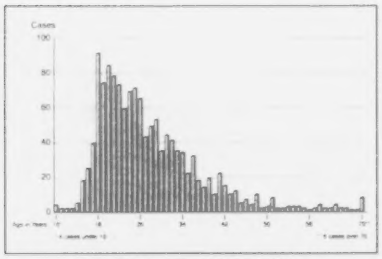
## WHAT IS THE LEGISLATIVE HISTORY OF STATE HELMET LAWS?

**In the late 60's most states enacted full-use laws; in the 70's about half of these states weakened their laws; in the 80's and 90's states are reenacting full-use laws.** The Highway Safety Act of 1966 strongly encouraged the states to enact mandatory motorcycle helmet use laws. The Act stated that the Department of Transportation would withhold 10% of Federal highway construction funds and all Federal highway safety funds from States that were not implementing an approved highway safety program. Under the Department's implementing regulations, a State's highway safety program would not be approved unless its law provided that motorcycle operators and passengers wore an approved safety helmet. By 1975 the District of Columbia and 47 States required all motorcyclists to use helmets.

In 1976, Congress passed another Highway Safety Act which withdrew the Department's authority to withhold highway funds from states. Between 1976 and 1983, 28 states either repealed their helmet use laws or weakened them to require only younger riders to wear helmets. Since 1981, five states have reinstated full use helmet laws: Louisiana (1981), Oregon (1988), Texas and Nebraska (1989) and Washington (1990).

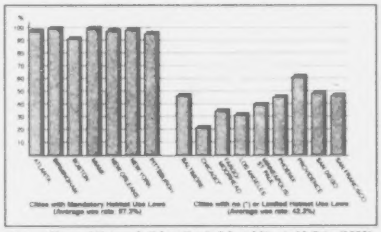
## WHAT IS WRONG WITH HELMET LAWS WHICH REQUIRE ONLY YOUNGER RIDERS TO WEAR HELMETS?

**The majority of motorcyclists who die are not younger than 18 years.** Most states with these partial-use laws require only younger riders (mostly those under 18 years) to wear helmets. However, since 1981, over 90% of the motorcycle fatalities nationwide have been older than 18 years of age (1986, NHTSA) (see graph below for age distribution of fatally injured motorcyclists in California, 1987-88 Source: Romano, McLoughlin, 1991).



Motorcyclist Age at Death, California, 1987-88

**Partial laws are not enforced and therefore are not effective.** More than half of all motorcyclists in these states do not wear helmets. Police are reluctant to enforce partial-use laws, and without enforcement, there is little compliance. A NHTSA 1989 helmet survey in selected cities found a 97.3% use rate in "law" cities and a 42.3% use rate in "no-or-limited-law" cities (1989, NHTSA) (see graph below). Three of the cities in the observational study changed from limited to full helmet use law during or since 1989; their use rate in 1989 is between those observed in the "law" and "no law" states: Dallas (58.0%), Houston (62.8%) and Seattle (59.5%).



Percent Observed Motorcycle Helmet Use At Selected Sites In 19 Cities (1989)

## IF YOU MAKE RIDERS SAFER, WON'T THEY JUST TAKE MORE RISKS?

**Probably not; at least there is little evidence that they will.** An often-used argument by those who resist supporting automatic protection is termed "risk compensation." It states that people will become careless or take more risks if they believe that they are automatically protected from injury. For example, nineteenth century railroad owners fought against automatic signal systems because they "would breed dependence and carelessness in employees" (Robertson, 1983, p. 145).

This "risk compensation" argument has been made about motorcycle helmets. A proponent of this view states that "the added sense of security provided by the helmet, and by the safety propaganda promoting the use of helmets, might lead riders to take more risks" (Adams, 1983). He challenges NHTSA's methodology and conclusions about the negative effects of repeal of helmet laws and then suggests "risk compensation" as an explanation why helmeted riders might crash more. *This argument fails to consider that the majority of crashes involving a motorcycle and another vehicle were the fault of the other driver, not of the motorcyclist* (Hurt, 1981). Other arguments against applying risk compensation theory to helmet use laws are provided by NHTSA (April, 1980, NHTSA, page IV-21). Adams does not challenge the fact that helmets do protect motorcyclists in crashes.

"Risk compensation" is an element of economic theory and should be considered when designing ways to prevent injuries. However, even if one accepts that helmeted riders take more risks (and there is little evidence to support this), the protection provided in a crash far outweighs the marginal increase in an already very risky mode of transportation.

## IS ALCOHOL A RISK FACTOR IN FATAL MOTORCYCLE CRASHES?

Yes. Of the 900 motorcycle crashes investigated by Hurt, et al (1981), 11% involved a rider who had been drinking. Of the 54 fatal crashes in that series, over 40% involved a drinking rider. A study of the 1,191 California motorcycle drivers who died in crashes in 1987 and 1988 found that 48% had a positive test for blood alcohol concentration, and 34% were legally intoxicated (BAC >0.10) (Romano, McLoughlin, 1991).

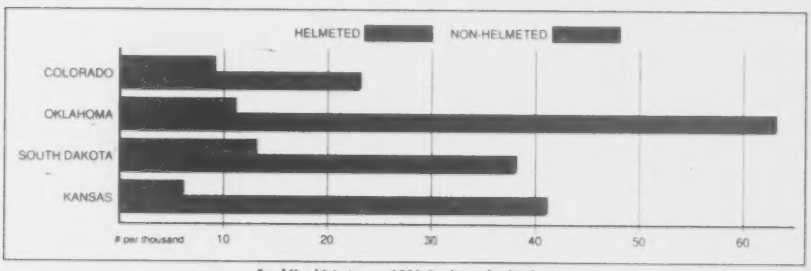
## DO DRINKING RIDERS WEAR HELMETS?

**Only half as often as sober riders wear helmets.** The Hurt study shows that riders who have been drinking are far less likely to wear helmets than those who have not been drinking. The Romano-McLoughlin study found that fatally injured motorcyclists with positive BAC tests were approximately half as likely to wear a helmet as those with negative tests. Evidence from states with full use laws suggests that a helmet requirement increases helmet use among all riders, drinking and non-drinking alike.

## WHAT KILLS MOTORCYCLISTS?

**Head injuries kill motorcyclists.** A head injury was specified in 42% of the death certificates for the 1,353 California motorcycle drivers and passengers who died in crashes in 1987 and 1988 (Romano, McLoughlin, 1991). The second most commonly recorded injury was to the chest (14%). Many more of these motorcyclists could have sustained a head injury, but 39% of the death certificates recorded the code for "multiple trauma" without indicating any specific injury. It is likely that a large proportion of these multiply-injured motorcyclists also sustained a head injury. Only 27% of these motorcyclists were wearing a helmet at the time of their crash.

NHTSA found that non-helmeted riders are at much higher risk of fatal head injury than are helmeted riders. In their study of the effect of helmet law repeal in four states, they found that non-helmeted riders were two and a half to five times more likely than helmeted riders to sustain a fatal head injury should a crash occur (April 1980, NHTSA — see graph below).



**Fatal Head Injuries per 1000 Crash-Involved Riders (Helmeted vs. Non-helmeted)**

## HOW MUCH PROTECTION DOES A STANDARD HELMET OFFER?

Most state helmet use laws require the wearing of helmets which meet existing standards. There are three motorcycle helmet standards recognized in the United States: the U.S. Department of Transportation (DOT) standard FMVSS 218; the American National Standards Institute (ANSI) standard Z90.1; and Snell Memorial Foundation standard M-85 (SNELL). The Snell standard, first proposed in 1959 for racing crash helmets and revised five times since then, is the most demanding of the three. Information about this standard can be obtained from the Snell Memorial Foundation, P.O. Box 493 Flowerfield, Bldg #1 Ste 6C, Mills Pond Road, St James, NY 11780.

Below in extremely simplified form are the basic requirements of the Department of Transportation Motorcycle Helmet Standard, from the Code of Federal Regulations: Transportation (49): Section #571.218.

**The helmet must "cushion" the blow to the rider's head when the helmet strikes a barrier.**

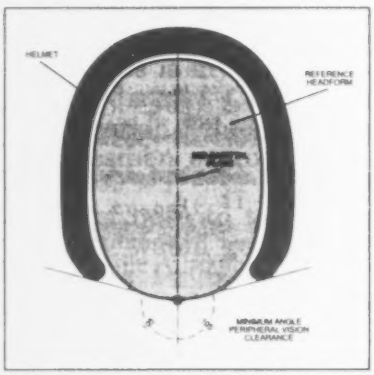
The tests use an instrumented headform as a proxy. In a series of tests, the helmet is dropped in a guided free fall upon fixed hemispherical and flat steel anvils from the heights of 54.5 inches and 72 inches. Measurements on the headform must meet the following requirements:

a) Peak accelerations shall not exceed 400g;
b) Accelerations in excess of 200g shall not exceed a cumulative duration of 2.0 milliseconds; and
c) Accelerations in excess of 150g shall not exceed a cumulative duration of 4.0 milliseconds.

The "foreign object" in the test is a 6 pound, 10 ounce pointed "striker" (point has included angle of 60, a cone height of 1.5 inches, a tip radius of 0.5 millimeter radius). The "striker" is twice dropped in a guided free fall of 118.1 inches, and "the striker shall not contact the surface of the test headform."

**The helmet's straps must stay fastened when stressed.**

The test applies static tensile load to the straps, or "retention assembly." First, a 50-pound load is applied for 30 seconds, then an additional 250-pound load is applied for 120 seconds. The straps must not separate, and the adjustable portion cannot move more than one inch when the additional load is applied.



**The helmet must not obstruct vision.**

Each helmet must provide "peripheral vision clearance of at least 105 degrees to each side of the midsagittal plane," or in other words, provide 210 degree angle of vision for the wearer (see left).

**The helmet must be labeled.**

Each helmet must be permanently and legibly labeled with several items of information, including the symbol "DOT," the manufacturer's certification that the helmet conforms to the standard.

## WHAT IS THE PERIPHERAL VISION OF THE HUMAN EYE AND HOW DOES THAT RELATE TO WHAT A STANDARD HELMET PROVIDES?

**The peripheral vision of normal human eyes ranges between 200-220 degrees.** According to a visual fields textbook, the normal visual field of a single eye is a slightly irregular oval, measuring from fixation approximately 60° upward and 60° inward, 70 to 75° downward and 100 to 110° outward (Harrington, 1976). Combining the range of both eyes, the normal eye sees across approximately 200 to 220° in width.

The DOT standard requires that the helmet provide a visual field of 210° in width. When one considers that over 90% of all motorcycles in crashes hit something that is within 80° of straight ahead or within a range of 160° (Hurt, 1981, see graphic on facing page), it is clear that standard helmets do not obstruct critical or even potential vision. Without doubt, motorcyclists must turn their heads to scan the whole road in traffic, which is no different from what all motorists do.

## WHAT ARE THE FACTS, NOT MYTHS, ABOUT MOTORCYCLE HELMETS?

**FACT ONE: Helmets do not obstruct critical vision.**

The figure at right shows where the crash hazards were located from the rider's point of view during the pre-crash phase in the 900 motorcycle crashes investigated by the USC Traffic Safety Center. For example, a car straight ahead would be at the 12 o'clock location. Seventy-nine percent of the hazards were at the 11, 12 and 1 o'clock positions. Over 90 percent fell within the 10 to 2 o'clock locations. The DOT standard requires no restriction of peripheral vision as far back as the 4 and 8 o'clock positions. The visual problem is not restriction of peripheral vision. Instead, it is a matter of watching what is directly in front of the motorcycle and protecting one's eyes to assure full visual acuity (Ouellet, 1987).

**FACT TWO: Helmets do not interfere with critical hearing.**

Any sound loud enough to be heard over the noise of the motorcycle and the wind will be loud enough to be heard inside the helmet. Motorcycles create noise in the range of 85-95 decibels. Helmets reduce the loudness of both the sound of interest (e.g., a car's horn) and the motorcycle noise by an equal amount, but do not alter the ability to hear one over the other. No case of the 900 on-scene, in-depth investigations in the USC study revealed a failure to detect critical traffic sounds, for helmeted or unhelmeted riders (Hurt, 1981).

**FACT THREE: Helmets do not build up dangerous temperatures inside the helmet.**

Motorcyclists are less likely to wear helmets voluntarily in very hot weather. However, the USC researcher testified that temperature readings inside helmets show that temperatures stabilize slightly above body temperature. The insulation of the helmet makes its interior more subject to body heat than to outside temperatures (Ouellet, 1987).

**FACT FOUR: Helmets do not cause fatigue which causes crashes.**

The USC study of 900 motorcycle crashes found that 50% of the crashes occurred within six minutes from the start of the trip and over 90% occurred in less than one hour of the start of the trip (Hurt, 1981).

## WHY REQUIRE HELMET USE AND NOT MOTORCYCLIST TRAINING?

**Proven strategies deserve priority, and helmets work.** Research indicates that helmet laws do reduce the likelihood of fatal and severe head injuries to motorcyclists. To date there exists little evidence of the effectiveness of motorcycle training programs to reduce the likelihood of crashes.

In early 1979, NHTSA decided to fund a large scale evaluation of the crash reduction effectiveness of revised motorcycle operator training and licensing programs and materials. After competitive bidding, the contract for the evaluation was given to the New York Department of Motor Vehicles. Investigators randomly assigned over 26,000 persons to one of four groups: 1) standard NYS program, 2) revised program including new knowledge and skill test, 3) revised program with a three hour training program, and 4) revised program with a 20 hour training program. They then examined crash records for these persons for five exposure periods (3,6,12,18, and 24 months) after application for a motorcycle operator's permit.

The basic conclusions of the study completed in 1987 are stated as follows (Buchanan, 1987):

*"These analyses found no significant differences between the motorcycle accident rates of subjects assigned to the present New York State licensing system (control group) and those assigned to the new,*

*experimental licensing system, either for all subjects from the point of motorcycle permit application date or for licensed subjects from the point of view of licensure date. In other words, the study was not able to document a crash reduction benefit for either the rider education programs or the improved licensing systems."*

These are disappointing results for riders and trainers whose personal experience convinces them of the benefits of training, but these findings must enter the public policy debate. In recent legislative debate, opponents of the helmet bill argue that training rather than mandatory helmet use is the answer to the problem of motorcyclist deaths and injuries. The data do not support this choice.

## ARE HELMETS PROTECTIVE IN MOTORCYCLE CRASHES WHERE THE RIDER HITS NOTHING BUT PAVEMENT?

**Yes, dramatically so.** The pavement is the most common surface struck by motorcyclists. A helmet is extremely effective in cushioning the head as it hits the pavement. In many of the crashes studied by USC, the pavement was the only surface the rider hit. USC investigators found that none of the helmeted riders had any brain injury above the "minor" level. In contrast, riders without head protection suffered a total of 65 brain injuries per 1000 crashes, at all levels of brain injury severity, as a result of pavement-only strikes (Ouellet, 1987).

## HOW MANY LIVES AND DOLLARS COULD BE SAVED BY A HELMET LAW?

**A lot, with the amount of savings depending on each state's crash and injury statistics.** The National Highway Traffic Safety Administration has developed a way to estimate economic savings from increased motorcycle helmet use in individual states. Determine the number of deaths and injuries among motorcyclists and the percentage of riders who wear helmets in a state. Then "plug in the numbers" to determine what decreases in deaths and injuries could be expected and what economic savings could be anticipated after passage of a full-use helmet law (1988, NHTSA).

The NHTSA formula incorporates the following assumptions into its model. While a full-use helmet law will increase helmet use by 99.5% of motorcyclists over-all, motorcyclists most likely to be in fatal crashes will have a use rate of only 90%. Helmets are 27% effective against fatalities, 13% effective against moderate to critical injuries and 8% effective against minor injuries. Each death results in $420,500 of "lost productivity," while the average cost of moderate to severe injuries is $19,300 and $2,200 for minor injuries. The NHTSA formula to determine the decrease in fatalities and injuries is:

$$IR = \frac{U_{n+1} - U_n}{(1/E) - U_n}$$

where IR = fatality or injury reduction rate
E = helmet effectiveness
$U_n$ = current helmet use rate
$U_{n+1}$ = assumed use rate after helmet law

Calculations for California will illustrate the use of this model. In 1989, the California Highway Patrol reports that 620 motorcyclists died, and only 20% were wearing a helmet when they crashed. The adjusted estimated helmet use in potentially fatal crashes in California is 25.5%. (This adjustment takes into account the number of helmeted riders who died in 1989.) Approximately 7,200 motorcyclists sustained moderate to severe non-fatal injuries and an additional 12,300 sustained less severe injuries. Only 23% of these riders wore a helmet at the time of the crash.

**Fatalities:** $IR = \frac{.90 - .255}{(1/.27) - .255} = \frac{.645}{3.4487} = .187$ x 620 deaths = 116 lives saved
(116 x $420,500) = $48.8 million saved

**Serious Injuries:** $IR = \frac{.995 - .23}{(1/.13) - .23} = \frac{.765}{7.4623} = .103$ x 7,200 injuries = 740 injuries prevented
(740 x $19,300) = $14.3 million saved

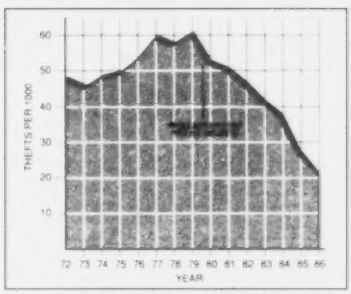
**Minor Injuries:** $IR = \frac{.995 - .23}{(1/.08) - .23} = \frac{.765}{12.27} = .062$ x 12,300 injuries = 763 injuries prevented
(763 x $2,200) = $1.7 million saved

**Total Cost Savings for California = $64.8 million**

## DO HELMET LAWS STOP MOTORCYCLE THEFTS?

**Apparently, they do.** The Insurance Institute for Highway Safety reports that motorcycle thefts dropped dramatically in three countries with the introduction of laws that fined motorcyclists for failure to wear helmets (IIHS, 1989). In London, England, where a helmet law was enacted in 1973, motorcycle thefts fell 24%. Two years later in the Netherlands, a similar law reduced thefts by 36%. In West Germany where on-the-spot fines were introduced in 1980, motorcycle thefts plummeted 60%.

Researchers in England and the Netherlands first noticed the effect of helmet legislation on motorcycle thefts almost in passing. Analysts concluded that "these declines were presumably the result of opportunistic thefts being made more difficult by the need for the thief to have a crash helmet in his possession; otherwise, he would quickly be noticed and suspected of stealing the motorbike." (IIHS, 1989)



Motorcycle Thefts per 1000 Registrations, Fed. Rep. of Germany, 1972-86

## DO NON-HELMETED RIDERS JUST DIE IN CRASHES AND THEREFORE NOT HAVE TO LIVE WITH SERIOUS DISABILITIES?

**Not really.** Some people argue that helmets are counterproductive, permitting severely injured motorcyclists to survive crashes but leaving them with serious disabilities. Two studies from the Pacific Northwest suggest the opposite.

Doctors at Emanuel Hospital in Portland, Oregon found that non-helmeted riders were more likely to die, but also were more likely to live with serious brain damage (Bachulis et al, 1988). They reviewed records of 367 injured motorcyclists admitted during a four and one half year period. Of these, 132 (36%) wore a helmet and 235 (64%) did not wear a helmet at the time of the crash. Over one-third of the patients sustained some brain injury, but this was not evenly distributed among all riders; 45% of the non-helmeted and 24% of the helmeted riders sustained brain injury. Nine percent of the patients sustained severe brain injury, but this was less evenly distributed (13% of the non-helmeted and only 2% of the helmeted riders). Among the non-helmeted severely brain-injured riders, 14 died and 17 survived with severe brain damage. By comparison, among the helmeted severely brain-injured riders, 2 died and 1 survived with severe brain damage.

Doctors at the Harborview Injury Prevention Research Center in Seattle studied all injured motorcyclists admitted to any hospital in Washington State whose crash reports were found in 1989 police records (Rivara, written communication, 1991). They identified 400 motorcyclists, of whom 154 (39%) wore a helmet and 176 (44%) did not wear a helmet at the time of the crash. (Helmet use was not known for 17% of the patients.) The distribution of head injuries was similar to the Oregon study (50% of the non-helmeted and 29% of the helmeted riders.) A higher proportion of individuals who were non-helmeted were transferred to a skilled nursing or intermediate care facility (4%) compared to helmeted individuals (0.65%).

## IF MOTORCYCLISTS ARE JUST HURTING THEMSELVES, WHY NOT LEAVE THEM ALONE?

**They are not just hurting themselves, they are hurting taxpayers as well.** The issue of individual liberty versus the public good was clearly examined in an exchange of articles in the *American Journal of Public Health* (Baker, 1980; Perkins, 1981; Baker and Teret, 1981). The issue was also fought out in the courts. In a case in Massachusetts which challenged the constitutionality of the motorcycle helmet use law, a lower

court wrote an opinion which the United States Supreme Court upheld in 1972. The opinion reads in part:

*"While we agree with plaintiff that the act's only realistic purpose is the prevention of head injuries incurred in motorcycle mishaps, we cannot agree that the consequences of such injuries are limited to the individual who sustains the injury . . . The public has an interest in minimizing the resources directly involved. From the moment of the injury, society picks the person up off the highway; delivers him to a municipal hospital and municipal doctors; provides him with unemployment compensation if, after recovery, he cannot replace his lost job, and, if the injury causes permanent disability, may assume the responsibility for his and his family's subsistence. We do not understand a state of mind that permits plaintiff to think that only he himself is concerned."*

Simon vs. Sargent, 396 F. Supp. 277, 279 (D. Mass. 1972) Affirmed, 409 US 1020 (1972).

## WHO PAYS THE MEDICAL COSTS FOR INJURED MOTORCYCLISTS?

**The taxpayer picks up a big part of the bill.** Most motorcyclists who are injured do not have sufficient health insurance to cover their hospital costs. Studies conducted in Washington, California, Massachusetts, Maryland and Rhode Island indicate the extent of the burden on taxpayers.

**63% of costs of trauma care for injured motorcyclists in 1985 was paid for by public funds in Seattle, Washington.** In Seattle's Harborview Medical Center, 63.4% of the cost for care of injured motorcyclists was paid by public funds, with Medicaid accounting for more than half of all charges. Total direct costs for 105 motorcyclists injured in 1985 and followed for approximately 20 months after discharge, were more than $2.7 million, with an average of $25,764 per patient. Only 60% of the direct costs were accounted for by the initial hospital care; 23% of costs were for rehabilitation care or readmission for treatment of acute problems (Rivara et al, 1988).

**82% of the costs to treat orthopedic injuries sustained by motorcyclists in 1980-83 was paid for by public funds in Sacramento, California.** At the University of California, Davis, Medical Center, 82% of the hospital charges for 51 motorcyclists admitted to the orthopedic service were paid by public funds. The average hospital charges for these patients was $17,704. 75% of these patients carried no health insurance of any kind (Bray et al, 1985).

**Over 6.4 million dollars in public funds were expended to cover the acute hospitalization of non-helmeted motorcyclists in San Diego, California.** The San Diego County Trauma Registry reports that over $16 million dollars were spent in fiscal years 1988/89 and 1989/90 to care for injured motoryclists who were not wearing a helmet at the time of their crash. $1.1 million (7%) was paid by military health care reimbursement; $5.3 million (33%) was paid by Medicare/Medi-Cal/CMS; $5.3 million (33%) was paid by third party/HMO and $1.4 million (9%) was paid by other sources or is still pending. In addition, 21% was not reimbursed, and public and private hospitals had to absorb these costs. If all public funding were combined (military: $1.1 million, Medicare $5.3 million), the taxpayer would pick up $6.4 million or 39% of the total cost of medical care for non-helmeted motorcyclists (San Diego County Trauma Registry, 1991).

**46% of the motorcyclists treated at the Massachusetts General Hospital in 1982-83 were uninsured in Boston, Massachusetts.** 47 injured motorcyclists were treated at the MGH. The mean hospital charges were $15,114. The total hospital charges were nearly $700,000, not counting surgeons' fees, readmissions, or rehabilitation; 16% of the charges were uncollectable, and 46% were uninsured (Bach, Wyman, 1986).

**40% of injured motorcyclists without helmets were uninsured, compared with only 25% of those with helmets in Baltimore, Maryland.** Acute care costs for non-helmeted riders average three times that of helmeted motorcyclists (Shankar et al, 1990). Taxpayers pay $1.2 million and insurers $2.1 million each year in acute care costs. Over 10% of injured motorcyclists have spent down their insurance coverage by the time they leave the acute care facility. In 1988, the state spent $7.1 million on inpatient rehabilitation for Medicaid-eligible motorcyclists and uncompensated care. The Developmental Disabilities Administration currently is paying an average of $62,500 annually for each of 18 former motorcyclists who require lifelong day and residential services. "Lifelong" may be 20 to 30 years (Office of Health Care Policy, Finance and Regulation, Maryland Department of Health and Mental Hygiene).

**Long-term care for injured motorcyclists is provided in public hospitals in Rhode Island.** Currently in Rhode Island public long term care facilities there are five head-injured patients who were not wearing helmets when their motorcycles crashed. The median age at admission is 23, and the average length of stay for these patients is seven years. One non-helmeted head-injured motorcyclist currently cared for at the General Hospital was injured in 1960 (RI Department of Health, 1990).

## DO OTHER COUNTRIES HAVE MOTORCYCLE HELMET USE LAWS? DO THEY WORK?

**Yes, and yes.** Italy implemented a helmet use law in 1986. A study of motorcyclists admitted to a hospital in Cagliari, Italy found that there were 53% fewer motorcyclists with head injuries admitted in the five months after the law, compared to the corresponding five months before the law. These patients spent fewer days on average in the hospital (before: 6.4 days; after: 2.5 days). Nine patients died of head injuries before the law, compared with only one after the law (Nurchi et al, 1987). In Malaysia, the risk of death to motorcyclists decreased by 30% after a law was passed (Supramaniam et al, 1984). In Britain, helmet use was widespread by the time the law was passed in 1973. However, an earlier study indicated that helmet use decreased the risk of fatal injury by 25% in "built-up areas" and by half in "non-built-up areas" (*BMJ*, 1979). In Victoria, Australia, from 1975 to 1980, bicyclists were not required to wear crash helmets, but motorcyclists were (McDermott, Klug, 1982). Although motorcyclist casualities overall outnumbered bicyclist casualities two to three times, twice as many bicyclists as motorcyclists had head injuries as their only injury.

## IS IT TRUE THAT "NO LAW" STATES HAVE LOWER FATALITY RATES THAN "LAW" STATES?

**This is not true for motorcyclists dying with head injuries, and no one claims that helmets protect against life-threatening chest, abdominal or orthopedic injuries.** A recent study by investigators at the Centers for Disease Control with data from 1979-1986 concluded that "population-based [head injury death] rates adjusted for age, sex, and race in states with partial or no helmet-use laws were almost twice those in states with comprehensive helmet-use laws" (Sosin et al, 1990). Head injury death rates based on motorcycle registrations were also lowest in states with full helmet use laws.

However, comparing rates among states has built-in problems. Cold winters make for short riding seasons, which is true of the four "no law" states (Connecticut, Illinois, Iowa and Colorado). States also differ in quality of road, speed limits, and availability of emergency medical systems and trauma care. That is why the most important comparison is the "before-after" one within individual states. Louisiana strengthened its law from partial to full use in 1981 and had a decline in its death rate of 44%. South Carolina and Wyoming weakened their laws from full to partial use and had increases in motorcycle-related head injury death rates of 184% and 73% respectively. Indiana changed from no law to partial law, and in the years that followed, it showed a 15% increase in deaths, consistent with the trend for all other partial law states.

## HOW EFFECTIVE IS THE NEW TEXAS HELMET LAW?

The Texas Transportation Institute released in early March 1991 its preliminary findings of the evaluation of the Texas helmet law which went into effect September 1, 1989:

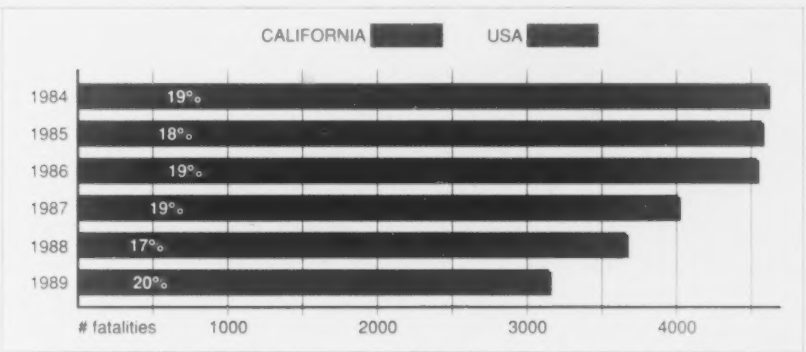
- Helmet use by motorcycle operators in August 1989 averaged 44 percent across 18 Texas cities. By September, the proportion of helmeted operators increased to over 91 percent. Ten months later, in June 1990, 96 percent of all motorcycle operators were helmeted.
- The proportion of riders who suffered a head injury was more than twice as high in the pre-law period (29 percent) as in the post-law period (14 percent). Similarly, head injuries represented a correspondingly higher proportion of total injuries in the pre-law (15 percent) as in the post-law period (9 percent).
- Increased compliance with license requirements may be an indirect benefit of mandatory helmet legislation. After the Texas law went into effect, 61% of those motorcyclists injured in crashes had valid licenses. In contrast, a study of California's motorcycle fatalities in the years 1985-86 found that only 33% of those California motorcyclists involved in crashes had a valid motorcycle driver's license (Kraus et al, 1991).

## IF THE MOTORCYCLE DEATH RATE KEEPS GOING DOWN WITHOUT A NATIONAL HELMET LAW, WHY DO WE NEED ONE?

**Too many motorcyclists still die or are severely injured, and helmets can prevent many of these injuries.** It is true that, nationally, the number of motorcyclists who die from crashes has gone down every year for the past six years, from 4,608 deaths in 1984 to 3,143 deaths in 1989. But then, there are fewer motorcycles registered, down from 5.4 million in 1984 to 4.2 million in 1989. There are not as many young males in the 15-24 year old age group as there were in the late 70's and early 80's.

One way to find out if motorcycle riding is as risky now as in earlier years is to review the annual rates of deaths per 10,000 motorcycle registrations. These rates have not shown as consistent a trend. They increased from 8.2 deaths per 10,000 registrations in 1984 to 9.0 deaths in 1986, then have decreased annually to 7.4 deaths per 10,000 registrations in 1989.

But how many deaths on our highways are few enough? Deaths per vehicle miles traveled by passenger cars have consistently decreased over the past decade, but seat belt laws and the requirement for airbags and other passive restraints in new cars are imposed to make sure that the trend continues. If occupants of passenger cars are required to wear seat belts, motorcyclists should be required to wear the comparable protective device, a helmet.



**Motorcyclist fatalities (1984-89) for the United States and California (California deaths as percentage of total USA deaths)**

Source: Annual Reports, Fatal Accident Reporting System, US Department of Transportation, National Highway Traffic Safety Administration (NHTSA).

## WHAT IS CALIFORNIA'S CONTRIBUTION TO THE MOTORCYCLIST DEATH PROBLEM AND WHAT ARE CALIFORNIANS DOING ABOUT IT?

**It's big, and they are working to reduce it.** The helmet law battle rages fiercest in California, the home of the Easy Rider. This one state accounts for approximately one-fifth of all motorcycle fatalities in the USA while accounting for only 12% of the US population. In 1989, only 20% of those killed in motorcycle crashes wore helmets.

Currently California requires only that motorcycle riders under 15.5 years of age wear a helmet. Since one has to be older than 15.5 years of age to get an instruction permit to drive a motorcycle, there is really no helmet law for motorcyclists in California.

In 1985, Mary Price's 18 year old son was killed while riding a motorcycle without a helmet. She decided to fight for a helmet law. She went to the Capitol, banged on legislators' doors in Sacramento and found

Assemblyman Richard Floyd willing to work with her. In both 1988 and 1989, the California legislature passed Floyd's mandatory helmet bill, only to have it vetoed by Governor Deukmejian. In both his veto messages, the Governor affirmed his support for a law mandating helmet use for those younger than 21 years. He held this position despite his own California Highway Patrol (CHP) data that fewer than one quarter of all fatally injured motorcyclists were younger than 21 years. (In the most recent CHP data, for 1989, only 22% of the 620 fatally injured motorcyclists were under 21 years of age.)

*California Assemblyman Richard Floyd (D-Gardena), author of AB7, surrounded by motorcycle police officers at a press conference at the San Francisco General Hospital.*

Assemblyman Richard Floyd has reintroduced the helmet bill (AB 7) into the current legislative session. California has a new governor, Pete Wilson, who as a United States Senator actively supported mandatory helmet legislation. Mary Price, the California Medical Association and a coalition of law enforcement officers, health professionals, city and county supervisors, insurers and other concerned organizations and people are working in and out of Sacramento to achieve passage of the helmet bill, to deliver it to the desk of a governor who is committed to sign it into law.

## WHAT LIABILITY DOES CALIFORNIA AND ITS MUNICIPALITIES BEAR FOR INJURIES SUSTAINED IN MOTORCYCLE CRASHES?

The librarian at the Trauma Foundation examined *Jury Verdicts Weekly*, a weekly Santa Rosa, CA publication which reports on civil jury trials in California for trial lawyers and insurance adjusters. In the period from 1975 to 1989 there were 293 motorcycle crashes where the plaintiff obtained a jury award.

**There were 27 awards against California government entities. $9 million dollars were awarded against the state and municipalities in this period, for an average award of $337,600.**

The total amount awarded in that period, regardless of defendant, was $67.5 million, for an average award of $230,500. The total amount awarded for the 26 severe head injuries (defined as any head injury resulting in loss of consciousness) was over $24 million, for an average award of $928,000. Separating these injuries means that the average award for the remaining 267 injuries drops to $167,600. Helmet use or nonuse was rarely noted in these records, probably because legal reasons prohibited its introduction.

These numbers represent a "lower limit" to the amount of liability associated with motorcycle crashes. *Jury Verdicts Weekly* is not an official record of trials. It is a service publication generated by the input of plaintiffs' and defense attorneys. It does not usually report the vast number of settlements arrived at in civil action by mutual agreement of the parties without a trial. It does not include settlement of insurance claims without trial or workers' compensation awards. This report does not include the sister publication *Judicial Arbitrations Weekly* which covers binding judicial arbitration as it did not exist at the beginning of the study period.

---

*"The enactment and enforcement of laws requiring the use of protective safety helmets by all motorcycle operators and passengers when operating on any public roadway (emphasis in the original) is considered the single most effective action that a State can take to reduce motorcyclists' deaths and serious injuries.*

March 1980, NHTSA.

## WHAT IS HAPPENING ON THE NATIONAL LEVEL ABOUT HELMET LAWS?

The National Highway Fatality and Injury Reduction Act will be reintroduced by Senator John Chafee (R, RI) and Representative Jim Cooper (D, TN). This legislation encourages states to adopt safety belts and all-rider motorcycle helmet use laws. The legislative provisions have not been finalized, but are expected to include both incentives to states in the form of grants and disincentives to states, such as redirecting Federal highway dollars.

Supporters of this legislation will also be looking for opportunities to include this initiative in the Surface Transportation Assistance bill which Congress is scheduled to complete by this fall. Senator Chafee and Representative Cooper are seeking cosponsors for their legislation, especially among members of the Senate Environment and Public Works Committee and the House Committee on Public Works and Transportation.

Those interested in working for passage of this legislation are encouraged to contact Carol Stroebel at Advocates for Highway and Auto Safety (202/408-1711). Legislative aides working on the bill include: Jean Lauver, Senate Environment and Public Works Committee (202/224-7863) and Anand Raman, Office of Representative Jim Cooper (202/225-6831).

*Leadership for helmet laws: Senator John Chafee (R-RI) and Mary Price (founder of Californians for Safe Motorcycling). Sen. Chafee is co-author with Congressman Jim Cooper (D-TN) of the federal "National Highway Fatality and Injury Reduction Act" which will encourage states to pass full-use helmet laws*

## SLIDE ORDER FORM

*An Advocates' Guide to Motorcycle Helmet Laws* is a scripted slide show including 30 slides developed by the Trauma Foundation and Contra Costa County Prevention Department, and funded in part by the Centers for Disease Control and California Office of Traffic Safety.

Please send _____ set(s) of the color slide show *An Advocates' Guide to Motorcycle Helmet Laws* to:

Name: _____

Agency: _____

Address: _____

City: _____ State: _____ Zip: _____

Country: _____

Phone: _____

My check or purchase order for $85.00 per slide show is included. (California residents please include sales tax.)

Please clip this form and mail to:

Lynne Olivier
Trauma Foundation
Building One, Room 306
San Francisco General Hospital
San Francisco CA 94110

Statement of

JAMES GOETZ

on behalf of the

National Association of Truck Stop Operators

on

Commercialization of Interstate Rights-of-Way

Before the

Subcommittee on Surface Transportation

of the

Committee on Public Works and Transportation

House of Representatives

Washington, D.C.

April 18, 1991

Mr. Chairman, members of the committee, on behalf of the National Association of Truck Stop Operators (NATSO) I thank you for the opportunity to offer testimony as you consider the reauthorization of the federal aid highway programs.

I am a truck stop operator in South Central Wisconsin. I built my facility in 1986. I am also a former Lieutenant Governor for the State of Minnesota. I make that point because I want the committee to understand that my comments are not only those of one involved in the business of surface transportation, but also those of one who has been elected to leadership in state government.

The National Association of Truck Stop Operators is the only trade association representing the truck stop and travel plaza industry. Our membership accounts for the vast majority of full service truck stops and travel plazas located in the United States. NATSO members are credited with pumping approximately two-thirds of the diesel fuel sold at retail in the United States each year, and a significant amount of the gasoline sold to Interstate motorists.

Although a few NATSO member facilities are owned by larger corporations, most are owned and operated by small businessmen and women. NATSO member facilities exist almost exclusively at the Interstate interchanges, serving not only the commercial driver, but also the general motoring public.

I am here today to bring to your attention a provision within the Administration's proposed Surface Transportation Assistance Act which up until this time may have been considered minor or insignificant by some in Congress and the Administration. I am referring to that provision which for the first time would allow the establishment of commercial facilities on the rights-of-way of the non-toll portions of the Interstate system, Section 306 of H.R. 1351, amending Section 111 of Title 23, United States Code.

In the mid 1950's, at the height of the Congressional debate on the establishment of the federal Interstate system, a number of forward thinking Members of Congress, and ultimately the majority of Congress, recognized two important factors needed for an effective system. The first was controlled and limited access, and the second was healthy competition among those who would provide the

goods and services to the Interstate traveler. Controlled and limited access was achieved and free enterprise was fostered by writing into the law a prohibition on the establishment of commercial activities between the interchanges on the land referred to as the rights-of-way.

Congress recognized that allowing commercial facilities to be developed on the rights-of-way could inhibit the desired goal of controlled and limited access. It further recognized the greater likelihood of monopolies being created if the facilities providing goods and services to the motoring public were located on government owned or controlled land as opposed to privately owned land at the interchanges. That recognition was based in large part on the experience of what had already taken place on the major toll roads of the Northeast. Congress acted clearly and decisively to prevent the Interstate system from being burdened by monopoly operations and excessive ingress and egress problems. Public policy prohibiting commercialization on the rights-of-way was established, and this policy has served the public well for thirty-five years.

Today, however, there is an effort underway to reverse this policy. A coalition of state transportation officials and at least one major corporation were successful in convincing the Administration to include language in the President's proposed surface transportation bill which would allow commercial activities on the Interstate rights-of-way. NATSO opposes this proposal and believes the Congress should as well. As a former state official I can tell you that simply because a group of state transportation officials sees merit in a proposal does not mean that their state governments or the people do also.

Though probably well intended, this seemingly insignificant proposal will have devastating effects on small businesses and rural communities across the Nation. Those who wish to change current law cite three primary reasons for doing so: 1) relief to the states of the cost of operating and maintaining Interstate rest areas; 2) new revenue for state departments of transportation through leasing agreements for facilities to be developed on the public rights-of-way, and; 3) development of facilities in those areas where there currently are none.

Each of these arguments may sound worthwhile, which is probably why the proposal was included in the Administration's bill. None of them, however, holds up to careful scrutiny.

The first argument, that of "privatizing" the operation and maintenance of state owned Interstate rest areas, sounds wonderful. If there are private enterprises which would like to assume the costs of operating these facilities, they should have the opportunity to do so. In fact, the current federal law does not prohibit this. The problem is that no business is going to assume the costs for an operation which provides no revenue. Rest areas do not generate revenue. They were never intended to, and if the state departments of transportation decide that in their current form rest areas are obsolete, then the most effective way to eliminate the operating and maintenance costs may be to close them. NATSO does not at this time suggest that this should be done. Non-commercial rest ares continue to serve that portion of the public which desires to make their Interstate stops in a non-commercial setting.

The proposal to turn the operations of Interstate rest areas over

to private enterprise would only be possible, therefore, if the federal ban on commercial activities were to be lifted. Commercial activities would provide the means for generating the revenue to cover the costs and presumably provide a profit. It is that potential for profit which we believe has led the state highway departments to view this proposal as a source of new revenue -- their second argument. What they have failed to remember is that state and local governments currently derive a significant amount of revenue from those businesses located at the interchanges. It would appear that the state transportation departments believe that all at once, new commercial facilities could be developed on the rights-of-way, that those facilities would be profitable to the company operating them, that the states would take a cut off the top under the leasing agreement and then a share of the revenue through the various taxes charged, and in addition, the state and local governments would continue to receive the tax revenue currently generated by the small businesses at the interchanges.

Well it will not happen. It cannot happen. If the current ban on commercialization were to be lifted, not one more gallon of motor fuel would be sold. Not one more meal would be served. No

additional automotive repairs would be made. Goods and services would simply be offered at new locations. The proximity of these new locations to the motorists would most likely cause the facilities at the interchanges to lose business and eventually close. The States may realize revenue from a new source, but they will most definitely lose it from an old one. And certainly, the economic impact on the States as a result of the loss of jobs must also be considered.

That reality is the most disturbing aspect of the Administration's proposal. When the Interstate system was established there was no well developed industry to meet the demands of the Interstate traveler. One might even argue that the Congress gambled in prohibiting commercial activities on the rights-of-way. The decision, however, paid off. Your predecessors in Congress encouraged private enterprise to meet the demands of the Interstate traveler for goods and services. Small businessmen and women, such as me, have risen to the occasion by collectively investing billions of dollars in the numerous facilities you find at almost every Interstate interchange today. In fact the only places where you do not find well developed interchanges are on the toll roads

where state toll authority supported monopolies exist, and in those areas where traffic volume is not sufficient to support a business.

To propose now that state governments be allowed to sponsor large corporations in unfair competition with small business flies in the face of the American system of free enterprise. Michael J. Boskin, Chairman of the President's Council of Economic Advisors, stated in comments relating to the 1991 Economic Report of the President that the "government's role in the economy should be limited, and where government is involved, it should be done in a cost-effective and target-effective way, relying as much as possible on market and market-type mechanisms." NATSO believes that the type of government intervention being proposed in this case is neither cost-effective nor target-effective. I am truly surprised and disappointed that this Administration would offer such a proposal, and I do not want to believe that the Congress will go along with it.

The third and final argument that the proponents for a revised commercialization policy make is that of providing services where there currently are none. This a curious argument to those of us

in the truck stop and travel plaza industry. We pay very close attention to changes in traffic volume along the various portions of the Interstate system. We do so first to ensure the efficiency of our current facilities, and secondly to be prepared to open new facilities should demand in a given area increase so as to make such a move prudent. Mr. Chairman, I can promise you and this committee that if there is a sufficient demand for goods and services at any location along the Interstate system, private businesses will supply those goods and services without any change in current federal law just as they have for the past thirty-five years.

Just last week, during a presentation to a group of NATSO members, an official of the Federal Highway Administration indicated that he had been on plenty of stretches of Interstate where he wished there had been greater facilities for the traveler. He was asked where those locations were. It turns out he is a former official with a southwestern state Department of Public Safety and the locations he had in mind were in the middle of the desert, miles from any population center. My point is that the Congress could lift the commercialization ban, and not one facility would be built by big

business or small business in an area that cannot support it. All the incentives you could imagine are not going to entice a business to build a facility in the middle of the desert, or anywhere for that matter, where traffic volume is light and where an employment base and community services do not exist. The new right-of-way facilities would be located, therefore, in areas where motorist demand is currently being met by interchange facilities. The right-of-way facility would simply rely upon its superior location to "steal" the business away from the interchanges.

I have attempted to show this committee that a change in the current federal law will serve only the best interest of those large corporations which, for whatever reason, choose not to invest at the interchanges, but instead put their resources into lobbying efforts designed to change an effective policy. The States will not receive any financial advantage, and the Interstate traveler will not be better served. In fact, anyone who has ever visited one of the big business monopoly facilities on a toll road would probably argue that the travelers would be worse off. Lacking the healthy competition which currently exists at the interchanges, prices at the right-of-way facilities would be higher and service

would suffer. Small businesses also would suffer. Small businesses located at the Interstate interchanges could not compete with the state sponsored monopoly facilities located on the more convenient public rights-of-way.

As you consider the consequences of the proposal to change the policy on commercialization, I ask you to consider more than simply the impact on businessmen like me. Beyond the services they provide to the Interstate traveler, businesses at the interchanges like mine serve another important role. There are rural communities across the country which depend upon the commerce at the Interstate interchanges. Many of those communities exist because of that commerce, and many of them would suffer dramatically if the businesses did not survive. It is often the case that the truck stop at the interchange is the largest employer in town. Close the truck stop and the town folds. It will happen time and time again if Congress changes the law as is being requested.

There is one final point I would like to make, and it is in response to the statements I have heard Administration officials

45-155 O—91——55

and various Congressional staff make. I have been told that the proposed change in the law is not one which would mandate that the States develop new right-of-way facilities. Rather, it simply would provide the States the option, or as the Administration is fond of saying, the flexibility to do so. I have thought about that, again as a former state official and also as one who has some Federalist tendencies. What I cannot forget, however, and I ask you not to forget, is that the Interstate system is a federal asset. It has been built and will be maintained primarily by federal funds. It is a system which was established for national defense purposes and it is a system vital to the interstate commerce of this country. The federal government -- the Congress and the Administration -- is the only government which should determine how the Interstate system will be utilized and maintained.

Section 111 of Title 23, U.S.C. is good public policy. It is as appropriate and effective today as it was thirty-five years ago. When it ceases to serve the public interest is when it should be repealed or altered. Until that time, it should be left alone.

Statement of Robert E. Harmon,

Chairman, Railway Progress Institute

before the

Surface Transportation Subcommittee

of the

Committee on Public Works and Transportation,

U.S. House of Representatives

April 18, 1991

I am Robert E. Harmon, Chairman of the Board and Chief Executive Officer of Harmon Industries, Inc., of Blue Springs, Missouri.

I appear before you as Chairman of the Railway Progress Institute, the international trade association of the railroad and rail rapid transit industries. Our association's members are well over 100 companies that provide everything that goes into making and operating railroads and rail rapid transit systems.

We greatly appreciate this opportunity to present our views on legislation to reauthorize the highway program.

Our industry has supplied much of the new product development that has helped the railroads compete. (In current railroading, I speak particularly of computer-designed, lightweight flat cars for transporting intercontinental freight containers; more fuel-efficient locomotives; and our current work toward developing components of an Advanced Train Control System that can permit far more intensive and efficient use of existing rights-of-way.)

We also provide the grade crossing warning devices and surface materials that have made your rail/highway grade crossing safety program the most successful highway safety program in the nation.

All told, ours is a 5.7-billion-dollar ($5,710,000,000)

industry employing some 150,000 individuals.

Mr. Chairman, for your Committee's consideration, I have brought two white papers. Both deal with aspects of the legislation before you. They are attached to my full statement, and I ask that the Committee accept these for the record so I may summarize. (WHEN THE COMMITTEE AGREES) Thank you.

(I will note parenthetically that our Committee on Passenger Transportation has submitted for your record a statement opposing the Administration's wish for authority to waive Buy America requirements.)

Mr. Dempsey has enumerated the projected impact of LCVs nationwide upon the railroads' earnings; the public's subsidies for trucks; the dangers inherent in longer, heavier trucks; and the higher maintenance costs that would result from their use. We wholeheartedly support his comments.

Let me address the matter of LCVs from our industry's point of view.

Cast your minds back if you will to the 1970s, before Congress gave us the Staggers Rail Act of 1980. While it's hard to believe now, just a little more than a decade ago many railroads were in bankruptcy and their trackwork was so deteriorated that some freight cars derailed while standing still. That's what happens when profits disappear and the railroads cannot afford to maintain their rights-of-way.

Clearly, for the RPI member companies that supply the

ballast, ties, and rails, the nationwide advent of longer combination vehicles, the LCVs, would be a most devastating problem.

Suppliers' R&D would disappear. So, I fear, would the Transportation Test Center at Pueblo, Colorado, created by the Federal Railroad Administration—with significant help from railway suppliers, by the way—and now being managed by the Association of American Railroads.

The market for our car makers' container cars, one of the brightest spots in our industry over many, many dry years, would disappear.

In fact, we believe that intermodal traffic would end, and this would spill most of six million containers, now moving by rail, out onto the highways.

While I could continue this litany, time is short. Let me point out a severe adverse impact that is not as obvious as the ones I have cited.

Deteriorating rights-of-way would degrade the speed and punctuality of Amtrak, the nation's only cross-country railroad passenger service, as well as the commuter railroads that serve 11 metropolitan areas[1] of the United States. Those rail passenger systems run over the freight railroads' rights-of-way. Consequently, the financial health of the freight railroads is

---

[1]. Baltimore, Boston, Chicago, Connecticut communities, New Jersey communities, New York, Orange County, Philadelphia, San Francisco, Southern Florida communities, and Washington, DC.

important to the passengers and to our member companies who sell equipment and supplies to those systems.

Speaking of rail passenger transportation, Mr. Chairman, we have long advocated a balanced transportation system. We urge the Congress to provide a five-year, reliable funding program that will allow the infrastructure to accommodate increasing demands for urban public passenger transportation.

Earlier I alluded to the rail/highway grade crossing safety program, which you and we know as the Section 130 program.

Surely, records of your committee document the success of the Section 130 program, and I need not dwell on that here.

I do wish to state our position that categorical funding is essential. One of our member companies surveyed 163 state highway officials close to this program and 23 railroad officials on their view of block grants versus dedicated categorical funding. Eighty-three percent replied. Only 25 respondents favored a block grant approach; the remaining 129 favor dedicated categorical funding.

What's wrong with the block grant idea?

The vast majority of those favoring categorical funding said they foresaw severe cutbacks in the rail/highway grade crossing safety program. As you have heard, grade crossing needs would frequently lose out to more traditional highway needs such as capacity improvement and maintenance.

Now let me draw this to a close.

Insofar as the rail/highway grade crossing safety program is concerned, we recommend that

- Section 130 be reauthorized.
- Authorized funds be earmarked specifically for the Section 130 grade crossing safety program.
- The authorized funding level be high enough to continue the excellent improvements in safety.
- Existing permission for states to transfer up to 40 percent of Section 130 funds to other safety programs be eliminated.
- Operation Lifesaver, Inc., continue to receive support from the Highway Trust Fund.

As to the longer combination vehicles issue, Mr. Chairman, I have noted that their advent would devastate our industry.

Now let me speak as the person at the wheel of our car when my family goes on trips. I believe the majority of Americans join me in my fear of being tailgated or passed in rain and snow by the 40-ton rigs that are out there on the highway right now. Trucks are long enough, heavy enough, and dangerous enough as they are.

Segments of the trucking industry hope to use trucks weighing 131,000 pounds. That is 65½ tons. Mr. Chairman, the Abrams main battle tank that our military used in Operation Desert Storm weighs 2½ tons less than that.

Please don't allow the trucking equivalent of the Abrams tank out on the highways with us—and with you and your families.

Thank you for the Committee's time and attention, Mr. Chairman. I will be pleased to respond to any questions.

**RAILWAY PROGRESS INSTITUTE**

ROBERT E. HARBOR, CHAIRMAN • B.J.E. BELL, VICE CHAIRMAN • ROBERT A. MATTHEWS, PRESIDENT

# Most Successful Highway Safety Program Is Expiring and Should Be Reauthorized

SUMMARY

For nearly two decades, the U.S. Congress has earmarked a portion of the Federal highway budget to enhance safety at public rail-highway grade crossings. The result has become the nation's most successful highway safety program.

Grade crossing accidents have been brought down from a high of 11,999 in 1978 to 5,773 in 1989. This has been accomplished even though vehicular miles traveled per year have increased by 34.5 percent.

Authorization for the program, codified as Section 130 of Title 23 of the U.S. Code, expires this year. The Grade Crossing Safety Committee of the Railway Progress Institute recommends that:

- Section 130 be reauthorized.
- Authorized funds be earmarked specifically for the Section 130 grade crossing safety program.
- The authorized funding level be high enough to continue the excellent improvements in safety.
- Existing permission for states to transfer up to 40 percent of Section 130 funds to other safety programs be eliminated.
- Operation Lifesaver, Inc., continue to receive Section 130 funding.

## Background

Today's Section 130 program had its inception in 1970, when Congress directed the U.S. Secretary of Transportation to study the rail-highway grade crossing situation and to make recommendations for improving safety at ground-level crossings.

Totally Dedicated Since 1906 to the Progress of the Railroads and the Membership
700 North Fairfax Street, Alexandria, Va. 22314-2098
Phone: (703) 836-2332 FAX: (703) 548-0058

Based upon the Secretary of Transportation's recommendations, Congress established a categorical safety program for the elimination of hazards at rail-highway crossings. Section 203 (predecessor to today's Section 130 program) of the Highway Safety Act of 1973 authorized funds specifically for crossing improvements and established the Federal share of the costs at 90 percent.

The program has been funded each year since at varying amounts, and the beneficial impact may be seen in the tables of this white paper. A change in accident reporting criteria in 1974 makes it impossible to compare today's figures with those of the program's inception. Comparisons are of course possible for years following the change.

## The Exposure Index

Raw totals, in and of themselves, do not present a complete picture of grade crossing safety improvements. The potential for grade crossing accidents has risen markedly, and that must be taken into consideration.

The potential is quantified through an exposure index, obtained by multiplying annual train miles by annual vehicle miles traveled, with the product then being divided by 10 to the 18th power.

The exposure index for 1975 was 711.40, when there were 10,925 accidents with 788 fatalities at public rail-highway grade crossings. This compares with an exposure index of 1,074.97 for 1989 when, preliminary figures show, there were 5,773 accidents resulting in 682 fatalities. In other words, although the exposure index increased more than 50 percent, fatalities dropped a significant 13 percent and accidents were reduced by 47 percent.

## Enhancing Safety at Crossings

Since 1973, Federal highway funds have been invested in the following grade crossing safety features:

- Installation of standard signs and pavement markings.
- Installation or replacement of active warning devices.
- Upgrading active warning devices, including track circuit improvements and interconnections with highway traffic signals.
- Crossing illumination.
- Crossing surface improvements.
- General site improvements.

Through Fiscal Year 1989, 24,500 projects[1] have been completed using $2.15-billion in obligated funds. In August, 1990, the Railroads, Utilities, and Programs Branch of the Federal Highway Administration reported a dramatic drop of 67 percent in fatal and non-fatal accidents at Section 130-funded projects evaluated. The Branch's conclusion is that more than 30,000 casualties have been averted because of the program.

The Railroad-Highway Grade Crossing Accident Picture
Indexed*

| Year | Accidents | Injuries | Fatalities |
|---|---|---|---|
| 1975 | 100.0 | 100.0 | 100.0 |
| 1976 | 112.6 | 109.3 | 97.0 |
| 1977 | 98.2 | 113.0 | 99.0 |
| 1978 | 100.9 | 97.8 | 93.9 |
| 1979 | 77.5 | 93.5 | 85.2 |
| 1980 | 78.4 | 85.8 | 75.3 |
| 1981 | 70.3 | 75.1 | 67.4 |
| 1982 | 67.6 | 68.2 | 64.0 |
| 1983 | 60.4 | 65.2 | 56.8 |
| 1984 | 60.4 | 63.8 | 51.5 |
| 1985 | 54.1 | 59.1 | 49.5 |
| 1986 | 54.1 | 52.2 | 43.4 |
| 1987 | 52.3 | 48.0 | 39.7 |
| 1988 | 51.4 | 44.1 | 36.1 |
| 1989 | 56.8 | 47.6 | 34.9 |

* Each index is derived through a two-step process. First, an annual ratio is obtained by dividing the annual fatalities, injuries, or accidents by the annual exposure index. The annual ratio is then divided by the base year ratio and the result is multiplied by 100 to yield the annual index.

The Railroad-Highway Grade Crossing Accident Picture
Totals

| Year | Accidents | Injuries | Fatalities |
|---|---|---|---|
| 1975 | 10,925 | 3,600 | 788 |
| 1976 | 11,700 | 4,343 | 978 |
| 1977 | 11,849 | 4,455 | 846 |
| 1978 | 11,999 | 4,120 | 929 |
| 1979 | 11,108 | 4,019 | 727 |
| 1980 | 9,422 | 3,534 | 708 |
| 1981 | 8,232 | 3,020 | 623 |
| 1982 | 6,882 | 2,417 | 526 |
| 1983 | 6,272 | 2,372 | 483 |
| 1984 | 6,370 | 2,597 | 543 |
| 1985 | 6,093 | 2,395 | 480 |
| 1986 | 5,620 | 2,227 | 507 |
| 1987 | 5,626 | 2,239 | 533 |
| 1988 | 5,820 | 2,344 | 594 |
| 1989 (prelim.) | 5,773 | 2,615 | 682 |

---

[1]. A project may include more than one crossing.

## Future Funding Requirements

Congress directed the Department of Transportation in 1987 to study rail-highway grade crossings to develop facts concerning crossing improvement and maintenance needs.

DOT concluded (in Publication No. FHWA-SA-89-001) that, through Year 2005:

- A total of $114-million will be required per year to replace obsolete signal types, deteriorated crossbucks, signs, and pavement markings.
- Incorporating state-of-the-art equipment when replacing obsolete signal types as well as installing modern train detection and roadway user warning systems at problem grade crossings will require another $71-million per year.
- Approximately $45-million will be required annually for grade crossing surfaces at crossing improvement projects.
- A further reduction of from 15 to 20 percent in accidents by the year 2005 can be achieved with an expenditure of an additional $30-million annually. The program for spending this would concentrate on improved active warning systems, with perhaps a small added investment in structures.

Thus the Federal government's own study shows a need for $260-million per year.

## Categorical vs. Block Funding

When Congress addresses the many aspects of reauthorizing the Federal aid highway program, it will hear recommendations from the U.S. Department of Transportation and others that the Section 130 program funds be folded into a block grant safety program.

In March of 1990, one RPI member company surveyed highway officials close to the grade crossing safety program as well as railroad officials on the subject of block grants. The response rate was 83 percent. What follows is a summary of those responses.

| | State | Railroad | Total |
|---|---|---|---|
| Surveys sent (49 states, 17 railroads) | 163 | 23 | 186 |
| Replies received | 143 | 11 | 154 |
| Number of states represented in replies | 44 | -- | 44 |

Question 1: What method of safety funding do you prefer?

| | |
|---|---|
| a. Dedicated categorical funding | 129 |
| b. Block grant | 25 |
| | 154 |

Question 2: If all safety programs were consolidated and funded as a single block grant, what would happen to the Rail-Highway Grade Crossing Safety Program in your state?

| | | |
|---|---|---|
| a. | Continue at present level | 23* |
| b. | Reduced by 25-50 percent | 18 |
| c. | Reduced by 50-75 percent | 60 |
| d. | Reduced by more than 75 percent | 49 |
| | Unknown or no indication | 4 |
| | | 154 |

* - Thirteen of these included one or more of the following comments:

- Assuming funding at the same level.
- Assuming funds are made available.
- Depending on spending priorities.
- If railroads cooperate.
- Would do fewer signals and more surface projects.
- If funds allocated to crossing safety.
- Projects would be weighed on merit.

Implicit in these responses is the background knowledge that, with block grant funding, demands for highway dollars would overwhelm the relatively small sum committed for crossing improvements.

The RPI Grade Crossing Safety Committee asserts that motorists are equally entitled to expect Federally provided grade crossing safety enhancements as they are entitled to expect Federally mandated standards for highway construction and maintenance. Therefore, the Section 130 program should be continued as a categorical grant program; it should not lose its identity in a bundle of other safety programs.

## Transferability of Funds

Under the current program, states may, at their own discretion, transfer up to 40 percent of their annual allocation of funds to other highway safety programs. Over the life of this program, some $160-million that should have been spent on crossing improvements has been transferred out.

This provision of present law should be eliminated so that all Section 130 funds go to crossing improvements. Money not used by states should be made available to other states who have used their entire allotment of funds and can show need for further funding.

## Grade Crossing Safety Employment

Approximately 10,000 employees rely upon Section 130 funding for employment in firms that provide supplies, equipment, and surfaces used in upgrading and maintaining grade crossings.

## Operation Lifesaver

Operation Lifesaver is an established, successful nationwide public education program devoted to grade crossing safety. Since 1988, Operation Lifesaver has received $250,000 per year in Section 130 funding for its public information program. (In the past decade, RPI member companies have donated significant amounts of time, effort, and money to Operation Lifesaver, and RPI was one of the organizations that helped establish the program as a separate entity when it was dropped by the National Safety Council in June of 1986.)

## Conclusion

The Grade Crossing Safety Committee of the Railway Progress Institute recommends that:

- Section 130 be reauthorized.
- Authorized funds be earmarked specifically for the Section 130 grade crossing safety program.
- The authorized funding level be high enough to continue the excellent improvements in safety.
- Existing permission for states to transfer up to 40 percent of Section 130 funds to other safety programs be eliminated.
- Operation Lifesaver, Inc., continue to receive Section 130 funding.

--Issued March 19, 1991, by the RPI Committee on Grade Crossing Safety

ROBERT E. HARMON, CHAIRMAN • B.F.E. BELL, VICE CHAIRMAN • ROBERT A. MATTHEWS, PRESIDENT

## Impact of Longer, Heavier Trucks Upon the Railway Supply Industry

### Introduction

The nation's railroads build very little of the equipment and machines that they use. They rely upon the railway supply industry, which comprises some 1,100 firms. These range in size from extremely small to such major firms as the Electro-Motive Division of General Motors Corporation and the General Electric Company, both builders of diesel-electric railroad locomotives.

Firms in the railway supply industry provide such items as rails, ties, switches, signaling equipment, locomotives, rolling stock, maintenance-of-way equipment, automated freight train classification yards, rail-highway grade crossing surfaces and warning devices, and passenger cars for Amtrak, subway systems, and light rail systems. The industry also includes firms that lease rolling stock.

### The Supply Industry's Economic Health

The economic health of these firms is directly related to the profitability of railroading. One indicator of the railway supply industry's economic health is the number of freight cars built in a year. In 1979, just before the recession of the early 1980s struck, annual freight car orders reached almost 90,000. By 1983, car deliveries had dropped to 5,700, their lowest point since the Great Depression of the 1930s.

Recovery from that low point consumed the remainder of the 1980s. Examples: Freight locomotives--200 built new in 1983, 131 built new in 1987, and 735 built new in 1989. Freight cars--5,800 built new in 1983; 22,500 in 1988, and almost 30,000 in 1989. A similar total, approximately three-fifths of total domestic capacity, was expected for 1990.

### The Threat

The possibility of Congress's permitting twin 48-foot trailers and perhaps triple 28-foot trailers on highways nationwide -- or even much heavier trucks in their present configurations -- is a direct threat to the freight railroads and to their suppliers.

A reliable indicator of the scope of the threat is to be found in the Intermodal Competition Model created by the Association of American Railroads and validated by Gerard J. McCullough, Deputy Director of the Center for Transportation Studies at the Massachusetts Institute of Technology.

Totally Dedicated Since 1908 to the Progress of the Railroads and the Membership
700 North Fairfax Street, Alexandria, Va. 22314-2098
Phone: (703) 836-2332 FAX: (703) 548-0058

The model shows that, had twin 48-foot trailers been in use nationwide in 1988, the railroads would have lost 19.4 percent of gross revenue from intermodal operations, or $710 million. Other diversions from rail to truck would have been as follows:

| | |
|---|---|
| Motor vehicles . . . . . | $786 million. |
| Paper products . . . . . | $439 " |
| Chemicals . . . . . | $398 " |
| Lumber . . . . . | $326 " |
| Food products . . . . . | $298 " |

These are only primary loss figures for the freight railroads. Secondary ramifications would be severe as well:

> Some marginal short line and regional railroads would fail, depriving the major railroads of additional rail traffic.
>
> Railroads would be forced to drop rates on traffic that could be captured by heavier, larger trucks using publicly-subsidized highways, making it difficult to cover the railroads' fixed costs. Therefore rates on commodities that trucks cannot handle would have to be raised.
>
> Rail passenger traffic would be jeopardized on 22,400 miles of Amtrak routes, operated over freight railroad tracks outside of the Northeast Corridor, and on many commuter train routes, because railroad maintenance would be deferred. One can foresee a return to the 1970s, when fully one-quarter of all railroad trackage was in bankruptcy and rights-of-way were in such poor condition that freight and Amtrak passenger trains were subjected to many slow orders.

## The Consequences

The impact of losses such as these on the railway supply industry would be devastating. New car orders, particularly those for tank cars, intermodal cars (trailers and/or containers on flat cars), and auto rack cars, would disappear. So would orders for locomotives, as there would be little railroad freight traffic except for bulk commodities.

There could be little demand for the sophisticated advanced train control systems now being developed to help the railroads move more traffic more efficiently over existing rights-of-way. Sales of ballast, rails, ties, and equipment used to rehabilitate trackage and maintain it at highest quality would disappear. Permitting larger, heavier truck "trains" on the nation's highways would result in severe economic damage to the railroads,

which are clearly more fuel-efficient than trucks, and would drive the railway supply industry back once more into recession -- if not another Great Depression.

--Issued October 28, 1990

STATEMENT OF
RICHARD L. HOWARD, SECRETARY OF TRANSPORTATION,
STATE OF SOUTH DAKOTA
Before The
SUBCOMMITTEE ON SURFACE TRANSPORTATION
UNITED STATES HOUSE OF REPRESENTATIVES
Washington, D.C.
April 18, 1991

Mr. Chairman and Members of the Subcommittee:

I am Richard L. Howard, Secretary of Transportation of the State of South Dakota. I appear today to present testimony on behalf of my own State and advise that our prepared testimony has been concurred in by the Transportation or Highway Departments of the States of Montana, Nevada, North Dakota, Washington, Wyoming, Alaska, Utah, Hawaii, and New Mexico.

We appreciate the opportunity to present testimony at this important point in the legislative process. The focus of our testimony today will be the future of the highway program; we offer not only general positions, but specific recommendations.

Mr. Chairman, we would measure any Federal highway legislation by whether it meets the following major objectives:

(1) increasing the program's funding to meet the nation's growing needs;

(2) preserving the roads on current Federal-aid systems;

(3) maintaining a balance which serves both rural and urban areas;

(4) increasing the States' flexibility to customize the program to meet national as well as unique needs; and

(5) retaining the current Federal match ratios to minimize the burden on already hard pressed state and local governments.

To achieve these objectives, we support the proposed Transportation Improvement Act of 1991, introduced this Tuesday in the Senate by Senators Reid and Baucus along with Senators Pressler and Daschle from my State, Senators Burns, Bryan, Conrad, Stevens, Gorton, Hatch and Murkowski. We seek positive change but in a balanced way

which reflects, as Senator Reid has said, that it is our highways, not so much our highway laws, which are crumbling and in need of repair.

This legislation would continue program categories for Interstate 4R, for primary, secondary, and urban highways, for bridges, and for hazard elimination and railroad/highway crossings. The bill makes these familiar categories work better, however, by providing significantly increased funding and greatly expanded transferability between distinct categories. And we believe that the bill's apportionment formula allows fair distribution of funds between the programs and among the states when adequate transferability is provided.

Under that bill, thirty percent of a highway category's funds could be transferred to another highway category and thirty percent of urban system funds could be transferred to transit with no FHWA review. An additional 20 percent of highway funds from any category could be transferred to other highway categories or to transit with FHWA approval. This major transferability initiative will allow each State to significantly customize its program while maintaining a general framework that ensures balanced service in urban and rural areas. It also establishes clear funding commitments to Interstate preservation and safety projects.

In contrast to the Administration's bill (H.R. 1351), the Transportation Improvement Act does not propose a narrow "National Highway System" (NHS) but rather stresses the importance of improving the entire Federal-aid highway system. Many states think the "illustrative" NHS, which the Administration would like to make a reality, shows disregard for years of careful planning and functional classification. It would drastically weaken national connectivity by including too few miles. The VMT factor which was used to determine the mileage allotted to each State does not measure national significance, and time-tested funding categories and allocation formulas would be cast aside for new programs which are not well defined.

The Adminsitration's bill includes a number of good features. We particularly commend the Administration for including a low density formula factor in its apportionment scheme and for including a one-half percent minimum apportionment in the urban and rural program. These are among the appropriate ways of recognizing that low population density States cannot be asked to finance, on their own, construction and upkeep of long stretches of Interstate and primary highways which serve national, not just local traffic.

We also agree with their proposed allocation formula, which considers the extent of the system as well as its use by adding land area and public road miles as factor for funding distribution. We are very concerned, however, about the inadequate funding levels; the small size of the proposed NHS; the lack of flexibility for States to transfer funds from the NHS to projects on other roads; and the increased State matching share. Accordingly, we do not recommend H.R. 1351 to Congress as the best point of departure for the overall structure of the next highway bill.

If H.R. 1351 is used as the starting point, however, we want to clearly state the changes we would make to it. Those changes should include:

1. increased funding;
2. a larger NHS;
3. greater transferability between systems;
4. significant transferability without FHWA approval;
5. some assurance of balance between urban and rural funding of non-NHS highways; and
6. maintenance of existing match ratios in all categories.

In the balance of my testimony today, I will explain in greater detail why we support the Transportation Improvement Act. For the Committee's ready reference, a summary table attached to this testimony compares the major provisions of the Administration's proposal to the Transportation Improvement Act.

1. INCREASING FUNDING

We agree with you, Mr. Chairman, and with Chairman Roe, Representatives Hammerschmidt, Shuster, and others on the Committee who advocate increased investment in our transportation system. The views and estimates which you recently sent to the House Budget Committee demonstrated your understanding of the problem. Increased transportation investment is needed across the nation, both in rural and metropolitan areas, to make our nation more competitive in today's tough global marketplace.

We ask that Congress annually:

(1) spend all income into the Highway Account of the Trust Fund, both current taxes and interest on the balance in the Account; and,

(2) draw down the balance in the Account over a reasonable period of time.

The funding levels within the Transportation Improvement Act of 1991 would meet these tests, both as to authorizations and obligations. It would increase the authorizations for the ongoing program (excluding Interstate Completion and Substitution) beyond the $12.7 billion in the Administration's bill to $14.4 billion. It would also set a higher obligation ceiling which will allow States to work down current balances and gradually reduce the balance in the Highway Account. While under the Administration's proposal, the Highway Account balance would continue to increase through 1996, according to the Congressional Budget Office.

Also, Mr. Chairman, while we are aware of the competition for increased spending within the budget process, highway users have just had their taxes increased. That should be a strong consideration when the Congress decides which domestic programs should have increased funding. Last fall's 5 cents per gallon motor fuel tax increase dedicated 2½ cents per gallon to deficit reduction. We hope the proceeds of at least the other 2½ cents of the tax increase will be reflected in increased spending for transportation

programs under the reauthorization legislation, as well as further increases to draw down Trust Fund balances.

In short, because of critical highway needs and the recent user tax increase, we urge the Committee to adopt funding levels well above the those in H.R. 1351.

2. PRESERVING THE SYSTEM: THE SYSTEM MUST BE BROADER THAN THE NHS

Today's Federal-aid highways comprise roughly 20 percent of the nation's road mileage, but generate over 80 percent of vehicle miles traveled. We think that this and functional classification demonstrate that the existing Federal-aid system is nationally significant.

However, the "illustrative" NHS program would arbitrarily shift 700,000 or 82 percent of the Federal-aid miles into the turnback, urban-rural program. There has not been any change in highway conditions or uses to justify this more narrow definition of national interest highways or that those highways deserve less Federal support.

If the Administration's NHS is accepted by Congress, you will have effectively empowered the FHWA to designate the NHS and dictate to each State which of its primary highways are most important. We believe the States are capable of choosing which primary highways within their borders require greatest attention. However, if Congress approves FHWA's proposition, this implies that Congress is saying that much of today's Federal-aid system does not warrant significant Federal support. We urge Congress to disagree.

Addressing the Problems With an NHS as Proposed in H.R. 1351

If Congress decides to reauthorize the highway program with an NHS, we recommend that you leave in place the Administration's proposed funding formula for the NHS and its proposed 2-1 split in funding between NHS and the urban/rural program. But, we would increase the size of the NHS to include the entire Interstate and primary

systems, allow more transferability from the NHS to other programs, provide transferability without FHWA review or approval, and lower the State match.

Several of these changes are interrelated. For example, the less transferability Congress allows from the NHS to an urban/rural program, the more critical to expand the miles on the NHS. If greater transferability is provided, then the NHS mileage would not have to be as extensive. However, without these changes, the funds would be restricted from use on many important primary highways, highways which are clearly in the national interest.

3. MAINTAINING CONTINUITY AND BALANCE — INTERSTATE 4R, PRIMARY, SECONDARY, URBAN, AND BRIDGE CATEGORIES

We recommend that new highway legislation continue existing categories and matching ratios for Interstate 4R, primary, secondary, urban, and bridge categories, and keep hazard elimination and railroad/highway crossing programs. For apportioned funds other than Interstate completion, we suggest a mix of 35 percent of funding for I-4R, 29 percent for primary, 17.5 percent for bridge, 9 percent for the urban system, 6.5 percent for secondary highways, and the remaining 3 percent for hazard removal and railroad/highway grade crossings. These percentages are based upon an increased program level and the percentages and funding amounts maintain the proper balance. We would also complete the Interstate System.

The Administration offers a three part program, 57 percent NHS, 30 percent urban/rural and 13 percent bridge, plus completion of the Interstate System.

Compared to the Administration's bill, the traditional funding system proposed by our bill will better address the needs on our nation's highways. It would preserve:

- the Interstate;
- the entire Primary System; and,
- the existing Urban and Secondary systems.

It would also establish a well defined safety program and allow States to customize all the categorical programs to address their own needs by transferring funds between categories. Let us elaborate.

Urban and Secondary Program

The Adminsitration's bill would required States to divide urban/rural funds between urban and rural areas "fairly and equitably," which could mean virtually anything. We would preserve all the categories already mentioned and allow significant transferability between them, ensuring that at least some funding would go to urban areas and some to rural areas, while allowing individual States to customize the funding levels to address their unique local circumstances.

The Committee is probably aware that, as a matter of practice today, the "State" match for projects on highways on the urban and secondary systems is often paid for by local units of government. As currently proposed, the Administration's proposal may pit rural counties and cities against each other and against the States to retain their share of the funding. In addition, as a matter of overall balance in the legislation, the preservation of a rural secondary program is particularly important considering that funding under transit programs has been dedicated virtually entirely to metropolitan areas.

Interstate 4R

HR 1351 gives inadequate attention to the preservation of the Interstate and 60 percent of the primary system. The GAO testified before this Committee last year on the deterioration of our Interstate Highways, citing USDOT studies that there are $4.7 to $6.1 billion in annual needs on the Interstate System for Interstate 4R projects, not counting road widening. To expand capacity, estimates indicate thousands of new lane miles are needed on Interstate Highways in metropolitan areas to alleviate congestion problems.

However, the Adminsitration's bill includes no funds specifically dedicated to I-4R. NHS funds could be spent on I-4R or they could be spent largely, or perhaps in some years, entirely, on the primary highways on the NHS. The Administration's bill would explicitly require USDOT to regulate States to ensure maintenance of adequate Interstate condition. However, administering that kind of provision may require many decisions in very "gray" areas. It could result in disputes between FHWA and State governments regarding Interstate condition and where NHS funds could be spent.

Our recommended structure would respond to the clearly documented need on the Interstate System with a separate category for Interstate 4-R funding.

Primary System

We would also continue categorical funding for the primary highway system. The primary system connects our towns and cities and other traffic generators to the Interstate System, providing an economic link for rural and urban areas. Only 100,000 miles, or 40 percent of the existing primary system (other than Interstate Highways) would be a part of the "illustrative" NHS. Thus, the NHS proposal may be fairly viewed not as creating a new category, but as chopping down a present one. It we relabel the NHS program more accurately as a "primary system reduction plan," I doubt it would have the same level of support. We would, instead, continue to support the primary system.

Interstate Completion

Although Interstate completion will remain a significant funding component of the next highway bill, there is broad agreement that this reauthorization bill should be the last one to apportion funds for "completion" of the Interstate System. The question is how.

The Transportation Improvement Act would authorize the same amount of Interstate construction apportionments as the Administration's bill, but over 6 rather than 4 years. This extended schedule would more likely meet States' cash flow

constraints. We believe this approach would correctly "reward" the majority of States which have already completed construction of the Interstate System by allowing them to participate in a larger portion of non-Interstate apportionments.

Specifically, the larger the amount apportioned for Interstate completion, the smaller the amount available for other categories. A large amount apportioned to Interstate completion will leave less available to a large group of States which have already completed their Interstates. These States deserve commendation, not a penalty. Thus, the approach of the Transportation Improvement Act is reasonable.

The Administration would also amend current law by eliminating the present statutory right of States which have completed their Interstate highway programs to receive a one-half percent allocation of $1.4 billion ($7 million) in Interstate construction funds for FY 1993 (See Sections 102(c) and 104 of the Surface Transportation and Uniform Relocation Assistance Act of 1987). We recommend that Congress make any changes prospectively and leave untouched that $7 million to which 26 States are entitled by present law.

Bridge

The Transportation Improvement Act recognizes the bridge crisis on our nation's highways by expending a higher portion of categorical apportionments on bridges than the Administration's bill, 17.5 percent compared to 13 percent. This is an appropriate response to deteriorating bridge conditions.

We also note that the Administration has proposed a change in the bridge funding formula which is based upon "level of service," a concept which has not been explained. We will reserve judgment and comment later, when more information on this new formula is available.

Safety

The three major funding categories identified in the Administration's bill do not set aside funds for specific safety construction projects like hazard elimination, railroad/highway crossing, and safety construction programs. The Administration's bill does state that at least 10 percent of total apportionments for NHS, urban/rural, and bridge programs be obligated "for projects that have specific and significant safety benefits." If this provision requires 10 percent of funds to be earmarked for safety projects, as traditionally defined, within each program, this may be too much. On the other hand, this provision may also be satisfied by projects which would be undertaken anyway, such as bridge repair and, therefore, there would be no explicit emphasis on safety. If such a provision is intended to cause States to change their project selection priorities to accelerate projects which have specific safety benefits compared to other projects which do not, the result will be increased FHWA regulation of State project selection. Compared to present law, the Administration's proposal may have too much opportunity for FHWA regulation.

Federal Lands

Compared to present law, the Administration would increase funding for the forest highway, parkway, and Indian reservation road programs, but abolish the public lands highways category. All of these Federal lands programs have been seriously underfunded for years and represent a unique Federal responsibility. The Transportation Improvement Act correctly increases forest highway, parkway and Indian reservation road funding to a greater extent than would the Adminsitration and correctly retains and increases the public lands category.

4. INCREASING FLEXIBILITY

The proposed Transportation Improvement Act correctly would allow States to respond to particular needs, and make better utilization of funds by adding greater flexibility to transfer funds between categories. That bill would authorize 30 percent transfer between highway categories and 30 percent transfer between urban system funds and mass transit without FHWA approval. An additional 20 percent transferability is available between categories and to transit with FHWA approval. In contrast, the Administration's bill only provides for transfer of up to 15 percent from the NHS to the urban/rural program, but only with FHWA approval. It provides less transferability between categories than present law, even though it allows the urban/rural category to be used for transit.

Altogether, the Transportation Improvement Act provides greater authority for transfers to transit than the Administration's bill. While it is true that the Administration would have fewer categories, their program still has insufficient flexibility. That lack of flexibility will seriously impede the ability of States to make the program work.

5. RETAINING THE CURRENT MATCH RATIOS

One aspect of H.R. 1351 which we strongly oppose is its proposal to increase State matching shares. The major way this proposal would impact States is by reducing the Federal share of all projects on the urban/rural system from today's 75 percent to 60 percent. This effectively doubles the State and local match requirement. The Adminsitration's proposal would also reduce the Federal share for Interstate lane additions under the 4R program from 90 to 75 percent and the Federal share of bridge projects from 80 to 75 percent.

There are a number of reasons why the Adminsitration's matching ratios should be rejected. State and local governments already contribute the vast majority (over 80 percent) of all government funds spent on highways. Those non-Federal funds are used to support both the States' share of Federally assisted projects on Federal-aid highways and to support projects on State and local roads off the Federal-aid system.

Requiring States and local governments to pay a higher share of Federally assisted projects would result in fewer State and local projects, loss of Federal-aid due to the inability to match funds, raising non-Federal taxes to make up the difference, or some combination of these responses. This should not be done, especially while the Highway Account balance is so large.

## OTHER IMPORTANT CONSIDERATIONS

### New Formula Factors

We recommend to the Committee a number of innovative formula factors proposed in the Transportation Improvement Act to address national interest concerns. In addition to a low population density formula factor similar to that correctly proposed by the Administration, three new factors would be used to modify overall apportionments to qualifying States. Let me say that such an approach is not new. The present minimum allocation provision is, in effect, such a factor. The other three factors would compensate States for (1) a high level of effort, (2) adverse weather, and (3) extensive federal lands.

### High Level of Effort Factor

Many States expend more per person on highway improvement and maintenance than others. This effort deserves Federal recognition. The Federal government needs to encourage and reward infrastructure investment, not discourage it. By providing an apportionment bonus to States making the largest per capita efforts, this provision rewards initiative.

Adverse Weather Factor

This provision compensates States which face higher highway costs due to the need to build or repair pavement to withstand extreme heat or a large average number of days which are not frost free.

Federal Lands Factor

A number of States are impacted by the inability to tax extensive Federal land holdings. Yet, they have the responsibility to provide access to or through these Federal lands. The Federal lands factor responds with a modest apportionment adjustment.

The Donor/Donee Relationship

We have seen comments that, under the current system for allocating highway funds, certain States are "donors" to the Federal highway program and others are "donees", as if those labels mean the program should be changed. We reject that terminology as overlooking the important fact that all citizens, both those in rural and metropolitan areas, are beneficiaries of a well developed highway system stretching across our country. This basic concept must continue if we are to have a national highway system which serves national interests.

Further, we note that the present law already significantly accommodates the so-called donor States with a minimum allocation program. We have no objection to continuing the present 85 percent minimum allocation program, even though most Federal programs have no minimum allocation provisions.

Let me amplify by discussing the transit program, though the general points apply to non-transportation programs as well. We believe that continued Federal support for transit is in the national interest, though most of the States I am representing today do not participate significantly in that program. We believe the nation is adversely affected if urban congestion makes our metropolitan areas less productive. However, as a price for our agreement that there is a national interest in transit, we do not insist that there

must be an 85 percent minimum allocation to each State of highway user taxes dedicated to transit. The point is that there are many reasons why there is a donor/donee relationship in a Federal highway program and it is the role of the Federal government to recognize and act upon those reasons.

National and Regional Interconnectivity

For the record, let me briefly note some of the reasons why the Federal-aid highway program must continue to invest in roads in rural areas. One is because efficient highway travel across those areas provides tremendous benefits to the citizens of major population centers and the nation as a whole. Rural States and rural areas within States function as "bridges," providing connecting links between distant metropolitan areas such as the Great Lakes and Pacific Northwest, or the Northeast and California.

Consider, for example, the amount of fuel tax that might be collected in Nevada from a truck moving manufactured goods from Cleveland to San Francisco. The highways used by that truck helped create a market for the goods moved, a market needed by the people in the metropolitan areas to support their companies and jobs. So highways in rural areas allow manufactured and raw products, tourists, business people, moving vans and our nation's military to travel efficiently throughout the country.

Further, a fair and balanced national transportation program is vital to the nation's overall system for moving nationally significant commodities such as agricultural products, timber, and other natural resources from producing areas to national and international markets (as well as manufactured products back to rural areas).

Those movements are more important than many might realize. The Commerce Department keeps statistics on how the nation's trade deficit breaks out on a State by State basis. In recent years, those statistics show that many of our agricultural and natural resource producing States are the most internationally competitive. Now is not the time to weaken the transportation system which supports those sectors.

In addition, Mr. Chairman, with changes in the world economic order, the United States is now receiving a great influx of tourists from other developed countries. Many of the prime destinations for these valued visitors are the wonders of our national parks and monuments. The locations of these national treasures warrants continued attention to roads in rural areas if this foreign trade is to be increased.

High Level of Effort Made By Most Donee States

Let me also emphasize that the highways in donee States such as mine also deserve strong Federal support due to the high level of effort that our citizens make to maintain and improve the highways within their borders. Most of the States I am representing today spend far more per capita on highways than the national average, in part to support the national interest in roads across our States.

Based on the latest data which I have seen compiled, Mr. Chairman, citizens in my State of South Dakota spend $338 annually per capita on highways, nearly 50 percent more than the national average of $226. So, we are making a very big effort to carry our share of the load. This is not, by the way, strictly a regional phenomenon. States as diverse as New York, Virginia, Montana, New Mexico, and Connecticut exceed the national per capita effort.

And, Mr. Chairman, we believe highway legislation would be improved if a formula factor were enacted which would reward States which make above average per capita investments in highways. That factor is in the Transportation Improvement Act.

So, Mr. Chairman, while I know you understand these issues, we want to clarify that so-called "donees" are not getting a free ride. To the contrary, the citizens of those States are doing more per capita than the national average to support the national program.

45-155 O—91——56

CLOSING REMARKS

Modern research on global competitiveness concludes that although highway investment alone will not produce development, development without highways is virtually impossible. In other words, highway investment does not guarantee growth, but is a prerequisite to it. And we need a better highway system in this country to make our nation more internationally competitive.

To achieve this, we recommend that the new highway program should take a moderate approach in changing the existing major program categories, but invigorate them with more funding and flexibility. Those programs have delivered the best transportation system in the world. Our States believe the new highway program should:

- Enhance economic competitiveness for all areas of the nation
- Emphasize preservation of the entire Federal-aid highway system
- Retain attractive portions of the existing highway program
- Increase funding for all highways

We recognize that addressing urban congestion also is important to our country's economic progress and our ability to compete in the global marketplace. However, one way to slow the increase in urban congestion is to maintain a healthy rural economy. The risk of weakening rural America's ability to compete, by reducing access and continuity, is that it may precipitate economic demise and increase out-migration to urban areas. This economic imbalance will aggravate the existing congestion problem and not help our nation compete.

CONCLUSION

Mr. Chairman, in conclusion, we support a larger, more balanced program than proposed in H.R. 1351. While that bill's approach to distributing funds yields a balanced

and sound distribution among the States, there are considerable weaknesses in H.R. 1351 -- the small size of the NHS (the "primary system reduction plan"), the lack of transferability between programs, the vagueness of the urban/rural program, and the inadequate funding. And, the Federal share reduction proposal is simply not appropriate.

Today, by supporting the Transportation Improvement Act, we have offered a very serious alternative to H.R. 1351, one which will preserve yet modernize the entire Federal-aid system. The attached funding comparison chart demonstrates that this is a proposal that offers a lot to all regions of the country.

While we believe the Congress should begin its drafting from the approach we have recommended, if it does not, we urge the Committee to incorporate as many of our concepts as possible into the approach it pursues.

That concludes our testimony, Mr. Chairman, and we thank you for the opportunity to appear before you today.

NATIONAL OFFICE

STATEMENT OF

MILO KIRK

VICE PRESIDENT
MOTHERS AGAINST DRUNK DRIVING

BEFORE THE

HOUSE COMMITTEE ON PUBLIC WORKS AND TRANSPORTATION

SUBCOMMITTEE ON SURFACE TRANSPORTATION

APRIL 18, 1991

Mr. Chairman, members of the Subcommittee, it is a pleasure to appear before this Committee to discuss the subject of drunk driving and the federal government's role in helping to rid our highways of drunk drivers. As the co-founder of the Dallas, Texas Chapter of MADD, I am pleased to note the long-standing commitment of this Committee in combating drunk driving.

To come before this committee is to come before old friends. Over the course of MADD's ten years as a grass roots advocacy organization combating drunk driving, the House Committee on Public Works and Transportation has been the venue for many of our most significant advances. This Committee developed the NHTSA 408 Alcohol Incentive Grant program in 1982, known as the Howard-Barnes bill, named for the late chairman of this subcommittee and full committee, Rep. James Howard of New Jersey, who is sorely missed by those of us fighting drunk driving and promoting highway safety. In 1984, this committee led the way in the fight to raise the minimum drinking age nationwide to 21. With the support of this committee and Rep. Glenn Anderson in 1988, the Drunk Driving Prevention Act, now known as the NHTSA 410 program, became law.

MADD has been proud of our association with these legislative victories for the victims of drunk driving and we look forward to making further progress this year as Congress extends and modifies the highway safety provisions of the Surface Transportation Assistance Act.

My purpose in being here today is to urge the Committee and this Congress to revise and extend the provisions of the NHTSA 408 and 410 anti-drunk driving incentive grant programs, consolidating these programs into a single program devoted exclusively to combating drunk driving.

Let me also make clear that while MADD wishes to maintain an anti-drunk driving program which is authorized and appropriated as a discreet program, we will also support separate programs designed to advance an agenda of highway safety initiatives.

There will be those who would say that drunk driving is but one of many problems on our nation's highways and that now is the time for the adoption of a generic highway safety bill. While MADD recognizes that safety belt laws, motorcycle helmet statutes and other measures are important, we would emphatically maintain that more than 22,000 Americans lost their lives last year in alcohol-related highway crashes. This is no time to diminish the concentration on drunk driving as a national problem of tragic proportions.

Today, in existing law, we have two programs developed since 1982, the NHTSA 408 and 410 programs. In Fiscal Year 1991, $15 million has been appropriated for Section 408 and $5 million for Section 410. $4 million in Fiscal Year 1990 funds remains available for Section 410.

In early drafts of its modifications to these programs, the Bush Administration suggested the consolidation of the 408 and 410 programs into one program. MADD thinks it was a suggestion well taken. We have learned a substantial amount since 1982 about what works and what does not in combating drunk driving. MADD believes

it is time to consolidate and streamline the two incentive grant programs in existing law in the interest of targeting our efforts on those countermeasures which have demonstrated the greatest ability to save lives.

MADD believes that not all countermeasures are equal. While many may be useful, some are of more immediate importance than others. That is why we suggest a continuation of a feature found in Section 408 and 410: the separation of countermeasures into two tiers, a set of criteria which would qualify a state for a basic grant and a set of supplemental criteria, which, once basic eligibility is achieved, would provide additional support for the adoption of additional countermeasures.

Mr. Chairman, MADD would urge you to adopt a program which includes the following basic criteria: administrative license revocation, a .08 BAC per se definition of intoxication, the use of sobriety checkpoints, mandatory 48 hours incarceration for a repeat offenders and self-sufficient STOP-DWI programs.

MADD activists across the country have been working in state capitols urging adoption of administrative license revocation, designed to deliver swift and certain punishment to drunk drivers and safer roads for all. In 1988, the Insurance Institute for Highway Safety found a 9% decrease in nighttime fatal crashes in those states which adopted administrative revocation. NHTSA in a separate study confirmed this decrease.

Administrative revocation is legally sound, it works and it saves lives. MADD has been working with a coalition of insurance and auto safety groups convened by the National Transportation Safety Board and NHTSA dedicated to making advances on administrative revocation across the country. We are encouraged by results to date.

The major new item which we hope you will put on your agenda is the adoption of .08 BAC as the per se definition of intoxication in every state. California, so often a bellwether state, has adopted .08. Three other states have also moved to .08 and we believe, on the basis of what we see around the country, that .08 is the next major advance to be made in combating drunk driving across the country. Congress has set the intoxication level for pilots and commercial truck drivers at .04. There is ample scientific evidence which shows that impairment occurs as low as .02 BAC and virtually all drivers are impaired at .08. It is clearly time to move to .08 nationwide.

Mr. Chairman, MADD strongly favors the inclusion of .08 among basic criteria employed in any new incentive grant program. However, to avoid making states ineligible for grants while they revamp their BAC level, we would suggest that states be given two years to adopt .08 during which time they would qualify for a basic grant provided they met the other basic criteria.

In the aftermath of the Supreme Court's finding in 1990 that sobriety checkpoints were a constitutional means of deterring and apprehending drunk drivers, MADD favors a major push to have this very effective countermeasure employed by the states. MADD also continues to support the development of self-sufficient programs at the state level which provide ongoing support for STOP-DWI efforts.

MADD would suggest continuing the practice of awarding a state 30% of its 402 allocation if it qualifies for a basic grant.

MADD has been listening, Mr. Chairman, to many state highway safety representatives who argue that federal programs are often too rigid and do not give enough credit for performance as opposed to the achievement of certain criteria devised in Washington. We think the states make a good point in this regard and are prepared to see performance rewarded. We would therefore suggest that any state which achieves a 5% average reduction in alcohol-related fatalities over the 5 year period prior to their application for an incentive grant be given credit for that performance and have one of the basic criteria waived. A state so charac erized would therefore have to meet only four basic criteria, not five.

Mr. Chairman, once a state is eligible for a basic grant, MADD believes that the state should continue to show progress in order to remain eligible. MADD therefore suggests additional supplemental criteria, namely, mandatory BAC testing in the case

of crashes which result in death or serious injury; prohibitions on open containers and the confiscation of license plates of those who drive under a revoked or suspended license. For each supplemental criterion adopted, MADD suggests that the state receive an additional 5% of its 402 allocation.

MADD suggests that a state could be eligible for a five-year period if it achieved basic eligibility and adopted at least two supplemental criteria during its period of eligibility. Basic eligibility alone should be for a maximum of three years. The intent here is to provide an incentive for states to maintain momentum.

Mr. Chairman, MADD would urge the committee to provide adequate funding for the effort to combat drunk driving which will send a signal to the states and the general public that, as a nation, we are serious about this effort. MADD would suggest a $25 million authorization for Fiscal Year 1992 for a consolidated 408 and 410 program rising to $50 million in Fiscal Year 1993 and $75 million in Fiscal Year 1994. The source of funding for this program should be the Highway Trust Fund; the money should remain available until expended.

In summary, Mr. Chairman, I would like to touch on the Administration's proposal and the use of highway funding sanctions versus incentive grants.

MADD enjoys excellent working relationships with the Department of Transportation. Secretary Skinner has been steadfastly accessible to MADD and supportive of our cause. I should add that President Bush has been equally supportive and has used the authority of the Presidency to advance the cause of saving lives on our highways.

We are, however, disappointed with the product offered by the Department of Transportation as regards modifications to existing federal law designed to combat drunk driving.

As noted earlier, we see no justification for lumping drunk driving in with a host of other highway safety initiatives. The concentration on drunk driving under existing law in a separate and focused program is warranted by the facts facing us on our nation's highways. Indeed a Gallup poll currently underway for MADD shows that the public considers drinking and driving a far greater highway safety problem than poor highways or highway construction. This is no time to let down our guard on drunk driving.

Secondly, we see no justification for holding alcohol safety incentive grants constant at $25 million per year, while construction-related grants grow steadily over five years. There are ample funds available for "safety" under the Federal Highway Administration program today. Why the Federal Highway Administration needs to encroach on the resources of the much smaller NHTSA program has not been adequately justified.

Mr. Chairman, we at MADD have often been asked why, if highway funding sanctions have worked so well in achieving a uniform minimum drinking age of 21, we have not employed this withholding tactic in areas such as administrative license revocation.

There are at least two differences between "21" and the countermeasures we have outlined today. One is that the adoption of 21 at the state level represented no particular financial burden to a state. That is not the case with administrative license revocation where there are initial startup costs. Secondly, and more importantly, the federal action on "21" occurred at a time when the states were simply not adopting 21; the momentum at the state level had halted. Today, we see progress at the state level on administrative revocation and .08 as well as other countermeasures.

Having said this, let me assure you that MADD as an advocacy organization has no philosophical aversion to highway funding sanctions. Whether to use funding sanctions or incentive grants is a tactical question; the goals are the same and the results are what we are interested in. Mr. Chairman, we look to you and other members of Congress to define the tactics to be employed in pursuit of saving lives, a goal long supported by MADD and this Committee.

It has been a pleasure to appear before you this morning and I would be pleased to answer any questions you might have.

Thank you.

The Highway Users Federation is a national coalition of businesses, industries and associations working to improve the safety and efficiency of America's highway transportation system. Our membership consists of more than 400 companies and associations representing 27 industrial and commercial categories, 63 state and local highway user conferences, and 2,000 individual members. Our members, in turn, speak for more than 30 million commercial and private users of the nation's highway system.

The Federation's members comprise the largest group of users and suppliers of highway transportation services and products in America. By their highway usage, this group also represents the primary source of income for the Highway Trust Fund. In other words, our members are the principal payers of state and federal highway user taxes.

The February release of the Administration's reauthorization proposal culminated a very successful effort by the Department of Transportation (DOT) to survey the nation's transportation concerns and develop a long-term proposal which would address those concerns within the confines of the Federal budget and administration policies. The DOT proposal is a good package and the Federation fully supports the vast majority of the provisions and proposals it contains. We applaud the leadership provided by Secretary Skinner and the creative efforts of the DOT staff to draft such an agreeable package.

Of course, there are elements of the Administration proposal which we would hope to enhance or improve. We believe there are portions of the administration proposal which were tempered by political or budgetary considerations which were unduly restrictive. Therefore, we would like to briefly review the Federation's highway proposal and suggest certain areas where we feel additional attention is needed. The following table provides a brief comparison between HUF's reauthorization recommendations with the Administration proposal.

## Comparison of DOT Highway Reauthorization Proposal and HUF Position

| Administration Position (HR 1351) | Federation Position |
|---|---|
| 3 component program<br>National Highway System<br>Urban/Rural Program<br>Separate Bridge Program | 5 component program<br>Interstate program<br>National Arterial Program<br>Flexible metropolitan program<br>Flexible rural program<br>Separate Bridge program |
| Five year highway bill | HUF Supports |
| Complete authorized Interstate segments and substitute projects | HUF Supports |
| Interstate apportionments transferable to NHS projects | Interstate apportionments transferable only to states with remaining interstate mileage to complete |
| Maintain identity of Interstate system but fund through the NHS | Maintain specific identity and funding for Interstate system. Establish specific performance goals for NHS |
| Discretionary funding for high cost bridges, support for bridge management systems | HUF Supports |
| Continues Emergency Relief program | HUF Supports |
| National Highway System of 150,000 miles with an additional 15,000 miles in reserve at Secretary's discretion | National highway System limited to 4% of all public road mileage, approx. 200,000 miles |
| Flexible program allowing use of funds for roads or transit at option of state & local government | HUF Supports |
| Combined Urban/Rural program, applies to areas with population levels of 200,000 | Separate Urban program for areas over 50,000 population, specific Rural program for urban and rural areas of less than 50,000 population |
| Establishes National Truck Network on the NHS system | HUF Supports |
| Advance Right-of-Way access provisions | HUF Supports |
| Strengthen Highway Safety programs | HUF Supports |

Comparison of DOT Highway Reauthorization Proposal and HUF Position

| | |
|---|---|
| Focus on Highway Research & Development and IVHS, continue long-term pavement performance program | HUF Supports |
| Strong requirements and funding for coordinated planning by state and local governments | HUF Supports a larger program |
| Highway Tax Evasion demonstration project | HUF Supports |
| Scenic Byways eligible for NHS & Urban/Rural funds, special two year set-aside for scenic byways development | HUF Supports, but encourages a larger program for public lands and scenic highways |
| Required bridge, pavement, safety and congestion management programs | HUF Supports |
| Privatisation of Rest Areas | HUF Opposes |
| Ability to transfer revenues from Federally-aided toll facilities to other uses | HUF Opposes |
| Congestion Pricing Demonstration | HUF Opposes |

The Federation 9-point program proposal

The Federation proposal was developed to reflect the concerns expressed by the highway users and managers in 65 public forums. It looks to new approaches and technologies that address both today's problems and those we expect in the future. We would like to briefly review the program.

The Federation proposes a five-year reauthorization with average annual funding of $22.9 billion for federal-aid highways and transit through 1995. We believe these funding levels can be supported without an immediate increase in user taxes if Highway Trust Fund revenues are used for their intended purpose. This would include fully utilizing the new revenues accruing to the trust fund from the gas tax increase imposed by the 1990 budget agreement, and dedicating the final 2.5 cents of the fuel tax increase to highway uses in and after 1996. Most of our members will not support added highway user taxes as long as excessive balances exist in the Highway Trust Fund.

The budget agreement of 1990 has placed severe constraints on new outlays in FY's '92 and '93. We support these constraints and recognize that they must be considered in developing the funding figures, and yet, the nation's economy rests on an efficient surface transportation system! We strongly recommend that maximum possible funding be provided under the budget constraints in 1992 and 1993, increasing in FY's '94 and '95, and stepped up further in FY 1996. We note that the Congressional Budget Office (CBO) testified before the Senate last month that current trust fund revenues and the 1990 budget agreement permit over $5 billion in additional funding during the legislative period, and that the House Budget Committee has approved a budget resolution which would raise the highway spending for 1992 by more than $1 billion.

1. Protect the Interstate System

Over the past 35 years, the United States has invested more than $133 billion to create the Interstate Highway System. Interstate highways carry more than 22 percent of all travel, though they consist of about one percent of the nation's road system. Our members give highest priority to protecting this system.

The physical and operational condition of the Interstate System must be kept to the highest possible level through an ongoing program of restoration, rehabilitation, resurfacing and reconstruction.

The DOT package would combine the Interstate program into the National Highway System. We believe that the core Interstate program should retain a specific identity and we urge the committee to make sure that the condition of the Interstate System is not allowed to deteriorate. We see this as one of the highest continuing federal priorities, calling for average annual expenditures over the course of this legislation of $4 billion per year. If the Interstate 3R program is subsumed into a larger National Highway System, we would urge the Committee to provide sufficient safeguards written into the program to assure that Interstate System performance will not be compromised by other competing needs. Although we support state flexibility in project selection, we would not if it resulted in neglecting Interstate System needs.

2. Create a National Arterial System

Another three to four percent of the nation's highway system carries another 30 percent of vehicle travel. A program is needed to upgrade these priority routes with safer designs, controlled access and additional lanes where needed and bypasses and arterial roadways in growth areas.

In light of the DOT proposal to combine the Interstate and primary programs into a National Highway System, the Federation believes that the total system mileage should be closer to 200,000 miles than the DOT proposal for a 150,000 mile system (up to 165,000 at the Secretary's discretion). The two-year period provided in this bill for joint State-Federal selection of the system is a sound approach, but Congress should establish selection criteria and some overall mileage limitation.

The Federation urges the maximum use of new engineering techniques to make travel on this National Arterial System safer and more energy efficient, help to reduce traffic congestion and help to improve urban air quality. The Federation recommends an average annual federal-aid budget of $6 billion for this program, with a higher matching ratio to encourage beneficial use of access limits wherever feasible.

3. Restore Metropolitan Mobility

The Federation proposes a five-fold increase in the federal commitment to helping people "get around town" through a Metropolitan Mobility Program for areas with populations over 50,000. We support the Administration concept that this program allow local authorities greater flexibility to spend the funds on any surface transportation capital investment, highways or transit. We urge Congress to assure that all investments fit into a 10-year development plan developed locally and approved by the state. This is a new position for us: supporting highway user support for mass transit projects. Our only conditions are that the funds be distributed equitably and be available at state and local discretion for the full range of highway or transit capital use.

The Federation recommends average annual federal funding of $4 billion for these efforts from the Highway Trust Fund, coupled with $3 billion per year from general funds for high cost transit programs such as subway systems. The latter program should be distributed on a discretionary basis to effectively target these large projects.

4. Connect Rural America

Access to major highways is critical to millions of Americans living on farms and in small cities and towns. Although daily traffic mileage on these non-arterial roads is small, the total sum of rural road mileage is large. These roads, vital to the distribution of products from the nation's agricultural sector to consumers throughout the country, deserve to share in Federal highway user derived revenues.

Local governments cannot provide for our rural mobility needs alone; major assistance is needed to keep rural roads and bridges safe and serviceable. The administration proposal notes the importance of rural roads but provides too little, we believe, in specific funding. Rural concerns would be addressed through the Administration's Urban/Rural program at the state's discretion, a prospect which causes some rural interests concern since they would be competing for attention with the state's urban regions.

The Federation recommends the establishment of a Rural/Small City Program which does not compete with Urban programs, to support highway or public transportation improvements in rural areas and cities with populations below 50,000. The projects should be selected by state and local officials, following state-approved long-range improvement plans. Federal-aid funding for this program should average $2 billion annually.

It is our belief that a single, consolidated urban/rural program would lead to unhealthy competition for funds at the state level. We continue to strongly recommend two separate categories, with the overall division of the funds to be established by Congress.

5. Keep Bridges Safe

Bridges are vital to all our road systems and the members of this Subcommittee are very familiar with the vast number of America's bridges which are outmoded, obsolete and increasingly unsafe.

The Federation proposes a state-managed bridge program which would use federal-aid funds to ensure that all highway bridges receive proper inspection, maintenance and rehabilitation or replacement, regardless of what system they might be on. The DOT package would establish such a bridge management program. The Federation supports the Administration's proposal but recommends average funding levels of $2.5 billion per year.

6. Improve Traffic Safety

The United States has the lowest highway fatality rate for travel of any industrialized nation in the world: 2.2 deaths per 100 million miles of travel. The number of traffic fatalities, exceeding 45,500 in 1989, is still too high.

The administration proposal would provide greatly increased funding for roadway safety programs through set-asides from the NHS, Urban/Rural and bridge programs. Notwithstanding this very commendable concern for safety, the Federation believes highway safety efforts merit specific and explicit funding. The Federation proposes annual average funding of $945 million for projects selected through the safety management program to reduce accidents in the most cost-effective manner.

While the DOT proposal would significantly increase funding available for highway safety construction, it provides little or no growth in "soft safety" efforts such as safety belt and child safety system use, alcohol and drugged driving countermeasures, driver education, traffic law enforcement and the regulation of commercial vehicles. A bonus incentive safety program would be established to induce states to improve their efforts in these areas. We commend the DOT's effort to reward states for positive action rather than punishing them through highway funding sanctions, but feel that this portion of the proposal should be strengthened.

7. Research and Development

Research can provide major dividends in better highway operations and safety. We realize it is not possible in all cases to address traffic congestion through the addition of more lanes; traffic capacity must be increased by the use of new technologies which allow the road system to be used more efficiently and make it safer for all drivers.

The Federation recommends the establishment of a 10-year public/private development program to assure U.S. leadership in putting smart cars on smart roads, which will provide drivers with electronic aids to warn of hazards, give locations and provide destination headings in all weather and traffic conditions. The focus of this program should include the research and development of new technologies but also place as much emphasis on the implementation of current technology wherever possible.

The Administration package acknowledges the need for greater investment in research and development, including the use of Intelligent Vehicle Highway Systems. We differ with the DOT stance only on the level of funding. DOT proposed $50 million annually while we recommend an annual federal budget of $100 million per year for the smart car-smart road program, to be matched by the commitments of private industry in a 10 year program. We also support the proposed increase in overall FHWA research programs.

8. Develop Scenic and Public Lands Roads

Millions of acres of scenic and public lands should be opened to the American public and foreign visitors through the environmentally-sensitive development of recreational highways.

Tourism is a major source of income for many states and we recommend that the existing programs for the development of park, parkway, public land and scenic/recreational routes be closely coordinated with our suggested rural and arterial highway programs. The nation needs a coordinated program of scenic roadways to enhance tourism. Greater access to the nation's mineral, livestock and timber resources is also needed through the development of ecologically benign roads to remote areas. The Federation recommends $300 million in annual federal funding for the federal lands access efforts. The scenic roads program should be eligible for all regular federal-aid programs, and should be encouraged through a special grant program coordinated with public lands road development.

9. Assure Better Planning

The average annual $22.9 billion in total federal expenditures recommended under the Federation program demands more and better coordination of transportation and private development decisions to assure that both support community goals. This coordination process has failed too often in the past. It must be improved without eroding the rights of local citizens to decide their own development futures.

State and local planning should be strengthened by this proposal: Federal-aid transportation projects should have to conform to an established long-range plan meeting specific, locally-set development goals and priorities. The DOT package has strong requirements for coordinated planning between the states, local governments and metropolitan planning organizations. We fully support this focus in the DOT bill and urge that it be strengthened to require a 10-year plan. The Federation supports the Administration's funding levels.

Matching Ratios

While recommending higher expenditures to meet existing and future highway needs, the Federation is not suggesting a change in the historical proportions of federal, state and local funding; that is, roughly, 25 percent from the federal government, 50 percent from state governments, and 25 percent from local governments.

In recent years the actual Federal share of highway spending has been falling. We strongly urge the Subcommittee to provide matching ratios which restore the historic Federal proportion of highway spending.

We believe any proposals to increase federal highway user taxes should be deferred until the current excessive Trust Fund balances are drawn down, and the funds productively used for their intended purposes. State and local governments could use this five-year "window" to reexamine and adjust their user fees if necessary to fund their portion of an expanded program.

The Federation recommends a major simplification of the existing requirements for state matching funds on highway projects. We would establish a standard 25 percent state (or local) matching requirement with the following exceptions: limited access projects (15% state/85% federal), safety activities (100% federal), and safety construction projects (10% state/90% federal). Matching requirements in states with large federal land holdings should be reduced, as is the current practice.

The Federation recommends that funds continue to be apportioned to the states on the basis of simple and equitable formulas, and that states be guaranteed to receive no less than 90 percent of the funds their citizens contribute to the Highway Trust Fund.

Other Considerations

The Federation calls to the Subcommittee's attention a more detailed breakdown of our suggestions and recommendations regarding elements of the Administration package, contained in Attachment , following this statement.

We congratulate you, Mr. Chairman, and members of the Subcommittee, for your efforts to preserve transportation fees for transportation purposes in last year's budget debates. We urge you to continue your efforts to reclaim the fuel tax revenues diverted to the General Fund and we would be happy to assist your efforts in any way we can.

Transportation 2020

The Federation's highway program proposal has been based on information drawn from our participation in major consensus-building efforts -- Transportation 2020, the Advisory Committee on Highway Policy (ACHP), and the Transportation Alternatives Group (TAG). You will find our proposals fairly consistent with the positions developed in these and other efforts. The transportation community, while continuing to differ on specific program details, is more closely allied on the major federal priorities than have been seen in previous years. This should strengthen your support as you develop sound legislation before the October 1 deadline.

The Transportation 2020 process, led by the American Association of State Highway and Transportation Officials (AASHTO) and the Federation, sought citizen input to the surface transportation policies that the national economy will need in the year 2020. This effort consisted of a series of 65 public forums, conducted throughout the U.S. in 1987 and 1988, involving thousands of participants.

The Advisory Committee on Highway Policy (ACHP), a subgroup of Transportation 2020, including more than 100 organizations interested in transportation, was established to conduct the public forums, evaluate policy options, and build consensus on policy issues. Responses to a group survey in late 1989 (reported to the subcommittee last year in a document entitled "Is Consensus Possible?") indicates the success of this process.

The Federation also participated in the Transportation Advisory Group (TAG), a coalition of public and private interest groups which developed consensus policy recommendations for Congress' consideration in the reauthorization process.

The Need For Early, Effective Action on the Highway Bill

The nation is poised to move forward in protecting and enhancing our surface transportation system. We are very pleased to see the reauthorization process underway. But we also are concerned that other issues pending or already before Congress may delay or defer consideration and approval of the highway reauthorization.

We offer you the full cooperation and resources of the Highway Users Federation in the coming months. We are actively working to heighten the nation's awareness of highway needs at many levels, from individual drivers to the officers of corporate America.

The Federation has undertaken a public information campaign on the importance of the highway system to our membership. Our intent is for our members to use this information in informing their members and employees on the worth of good transportation systems and on our frequently overlooked reliance on safe and convenient highway travel.

We know that all Americans are all dependent on safe and reliable transportation for our health and welfare and a growing economy and we are trying to spread that message as far as possible.

Mr. Chairman, we appreciate this opportunity to review the Federation's highway program proposal with you and we would be pleased to answer any questions you might have.

Attachment 1 - Page 1

SPECIFIC HUF COMMENTS ON ADMINISTRATION HIGHWAY BILL

**Authorizations**

The Administration proposes $104.7 billion from the Highway Trust Fund for 5 years with obligation ceilings for highways totaling $86.27 billion and about $16.62 billion additionally authorized for transit from HTF.

Total HTF income including interest and all fuel tax in 1996 = $109.1 (CBO 3/5/91).

The Federation proposes a 5-year program level for highways, safety, transit and emergency relief of $109 billion from the Highway Trust Fund plus a general fund contribution to new transit starts of $15 billion -- see transit proposal later.

**Highway Tax Evasion Projects**

Federation commends

**Unobligated Balances**

Unobligated balances of Interstate 4R authorizations would be transferred to the National Highway Program.

HUF Opposes, transfers should be permitted only if the Secretary finds there are no deficient Interstate segments in the State.

**Interstate Completion**

The Federation oppose provisions (e) permitting transfer of Interstate Completion funds under any circumstances. Unused funds should be transferred to states with remaining completion costs to reduce total cost to complete.

New definition of construction omits many activities related to traffic operation and traffic safety which are desirable to retain. The Federation recommends that the current definition of "construction" be retained.

**(h) Highway Safety Improvements**

Definition should be modified to require that highway safety improvements be "selected and" designed to accomplish designated safety purposes.

**Section 102 National Highway Program**

**(a) The National Highway System defined**

The Federation recommends that the currently designated Interstate System be continued as a distinct system with separate funding to assure that high standards of physical and operational service is maintained. The Highway Users Federation does not believe that States should have the option to under-invest in this system under any circumstances.

The Federation recommends that the National Highway System be limited to 4% of the public road mileage of the United States and territories excluding Federal lands highways.

The Federation recommends that Congress establish specific goals and dates for bringing routes on the National Highway System up to desirable levels of safety and service.

**(d) Activities Eligible for Funding**
(11)(A) The Federation recommends that traffic management and control activities on the Interstate and National Highway Systems and adjacent arterials be eligible for Federal expenditure without time limit.

**(h) Beltways and Bypasses (and other related sections)**
The Federation recommends that all urbanized areas (over 50,000 population) be treated the same in this and other sections. The distinction at population 200,000 is artificial.

**Section 104 Urban and Rural Program**
**(a) Establishment**
To assure equitable treatment of all areas and to avoid urban/rural contention the Federation recommends that Congress establish and separately fund two programs: for urbanized areas and for rural areas and urban areas of under 50,000 population. Transfers of funds between these two programs should be prohibited except with the concurrence of affected local officials.

**(c) Eligible Projects**
We recommend that all projects in these programs be required to conform to locally adopted 10-year plans which are coordinated with land use and development plans of the community and can't be changed without state permission until substantially (75%) completed.

Urban plans should include system operation and transit components and, in areas of over 500,000 population, congestion management and pedestrian safety. Rural plans should include transit and scenic/recreational driving components.

We recommend that transit capital projects funded by these highway user funds be limited to upgrading existing rail or bus systems. New rail transit systems, because of their very high costs, should be funded by a discretionary rather than apportioned program, and the source of these funds should be the general treasury since the benefits are so broadly shared.

We recommend that the rural program be available for transit operating as well as capital costs and for roads of scenic and recreational value regardless of their functional classification.

**(d) Innovative Bonus Projects**
We believe that this is an unnecessary funding category since the activities described would be or could be made to be eligible for funding under the basic programs. If this program is authorized, the planning requirements recommended under (c) should be applied to assure the projects' long range effectiveness.

**Section 105 Toll Roads, Bridges, Tunnels and Ferries**
**(c) National Highway Program and Bridge Program Funds**
If tolls are to be applied to a new facility, or one which was constructed with Federal-aid funds, the provisions of 105(g) should apply except that tolls (at appropriate levels) can be continued for maintenance, operation and upgrading of that specific facility. Otherwise Federal funds should be repaid as provided under (h), below.

**(d) Urban and Rural Program and Territorial Highway Program**
See recommendations under (c).

**(h) Option of Continuing Tolls**
States should not be permitted to use Federal funds to create a toll facility and later divert the revenues generated therefrom to the benefit of other roads, facilities, and parts of the state. Should a state wish to continue tolls for such purposes, it should be required to repay with interest the Federal funds invested in the facility.

**Section 106 Bridge Program**
**(d) Eligible Activities**
We recommend that expenditures of Federal-aid funds on toll bridges or bridges on toll roads be governed by the provisions of Sec 105(g).

**Section 109 Federal Lands Highways Programs**
The Highway Users Federation recommends that Congress establish a grant program under this section to encourage and provide funding for the improvement of routes of particular scenic value on Federal lands and in other portions of the United States. Routes would be selected and designated jointly with state and local officials. Suggested language is attached. This provision would supersede proposed Section 118.

**Section 119 Congestion Pricing**
The Highway Users Federation does not believe that systems to control the use of public highways through arbitrary or punitive pricing schemes is currently feasible nor desirable. To the extent that research in and operational tests of various highway toll facilities are desirable, they can be undertaken under the research programs authorized in Section 115(b).

**Section 202 Apportionment**
The Highway Users Federation does not propose specific apportionment formulas. We believe that:
(1) Factors used should be verifiable from independent sources.
(2) The result should apportion funds in reasonable conformity with the highway use and highway improvement needs of each area.
(3) Each State should be assured that at least 90% of the funds contributed to the Highway Trust Fund from that State would be returned thereto, and
(4) No state should receive in each of the first five years an amount less than received in 1991, less funds for Interstate completion or substitution.

**(c)(1)(G) Transfer to Urban and Rural Program**
The Highway Users Federation does not support the transfer of funds from the National Highway (or Interstate) Systems to other programs unless the Secretary finds that physical and operational conditions on those systems are satisfactory for the traffic served.

**(f) Projects That Have Safety Benefits**
The Federation believes that this provision is too vague to accomplish its desired purpose, although we enthusiastically support a separate program for safety improvements. We recommend that Congress authorize and direct a specific program to inventory roadway safety needs, establish priorities and engage in a regular and continuous roadway safety improvement program on all systems. We recommend $500 million/year. Suggested language is attached.

**Section 204 Federal Share Payable**

The Federation recommends that Congress establish a system of matching ratios which approximates the current 80/20 overall ratio, as follows:

Interstate Completion -- 90%

Interstate 4R, National Highway System, Rural Program, Urban Program, Bridge Program, safety construction:

full access controlled projects -- 85%

non-access controlled projects -- 75%

other safety activities -- 100%

**Section 301 Management Systems; Traffic Monitoring System**

The Highway Users Federation fully supports these provisions.

**Section 306 Right-of-Way Agreements**

**(b) Commercial Use of Rest Areas**

The Federation does not support the proposal that commercial activities be franchises on public rights-of-way.

We believe that more study is required and that a pilot project should be evaluated before such broad legislative change is authorized.

**Policy Reports and Studies**

Congress frequently asks the Department of Transportation and others agencies to review and analyze certain policy issues prior to the consideration of amendatory language. This practice often clarifies an issue, leading to better legislation.

There are several policy issues which the Highway Users Federations believes should be reviewed for possible legislative changes. We recommend that authorizations for the following studies and reports be included in the highway reauthorization:

A. Evaluation of donor-donee status of states, to review the methods by which the departments of Treasury or Transportation calculate trust fund revenues from individual states.

B. Continue to call for biennial reports from the DOT on highway and bridge system condition and performance, more specifically tied to the impact on the U.S. economy.

C. Biennial estimates of state and local system needs, to update data developed for the Transportation 2020 project.

D. A thorough review of Federal procedural requirements, to see if some can be eliminated or deferred to comparable state requirements.

E. Review ways by which future user fees should be collected. The current package is a mixture of use and excise taxes, some of which may be less dependable due to technology changes or other external factors. The ideal would be to develop a collection method which is fair, equitable, enforceable and administratively easy.

F. Review ways in which Federal funds might participate in advance acquisition of rights-of-way needed for future facilities, to protect against unforeseen development.

G. Review how increases in the value of real or other property resulting from highway improvements might be used to offset highway development costs.

H. Review trends in population aging, and determine ways for the highway program to better respond to the particular needs of older Americans.

I. Review potential future technological advances, and investigate ways to modify the highway program to take advantage on new capabilities.

J. Require full policy oriented review of highway program performance by DOT every five years, together with suggestions for legislative modification.

K. Review ways by which technological or other new developments may change the way in which directional information is transmitted to drivers, and recommend alternatives to today's outdoor advertising control regulations.

**Section 121 -- Obligation Ceiling**

The Federation recommends that obligation ceilings be applied to Highway Trust Fund authorizations only through the period 1992-1995 to conform to the Omnibus Budget Reconciliation Act of 1990, but that thereafter the provisions of the Byrd Amendment be allowed to control and assure that the Highway Trust Fund remains solvent.

**TITLE II -- HIGHWAY SAFETY ACT OF 1991**

**Section 202 --Authorization of Appropriation**

The Federation supports the provisions of Title II but recommends the average annual funding of $945 million for projects selected through the safety management program.

The Federation also supports the recommendation of the Transportation Research Board (TRB) that a National Monitoring System be established within the DOT to collect truck accident and travel data from states and Federal agencies. According to TRB, existing data systems are inadequate for effective regulatory, enforcement and planning uses, and a centralized system within DOT could be very helpful in providing timely and accurate assessments of safety problems, progress and whether operational changes are having the desired effects.

**TITLE III -- MOTOR CARRIER ACT OF 1991**

The Federation supports the proposals under this Title.

**TITLE IV -- FEDERAL MASS TRANSIT ACT OF 1991**

The Federation supports an integration of local planning and decision making on highway and mass transit spending and the use of income from highway user fees in combination with transit user fees (fares) and broad based taxes to support highway related transit capital (and in some cases, operating) expenses. We believe that major, heavy rail transit projects should receive Federal support, but that the benefits of these investments are so broadly spread within the community that they should be supported by broad-based taxes.

The Federation believes that programs supported by taxes on highway users should not be prohibited from use on road projects that benefit highway users, and, would therefore support greater flexibility in both directions between highway and transit program funds.

**TITLE V – HIGHWAY REVENUE ACT OF 1991**

The Federation recommends that the Highway Trust Fund be made permanent along with the tax revenues presently transferred to it. We further recommend that the Byrd Amendment be allowed to operate in the future as the most effective control assuring solvency of the Highway Trust Fund after 1995.

The Federation recommends that the increases in fuel taxes enacted in 1990 be continued permanently and that the proceeds be transferred to the Highway Trust Fund for highway purposes.

Testimony of

**AMERICAN ROAD AND TRANSPORTATION BUILDERS ASSOCIATION**

*Presented By*
J. C. Lanford, Chairman

Before
Subcommittee on Surface Transportation
Committee on Public Works and Transportation
U.S. House of Representatives

April 18, 1991

501 School Street, S.W., Eighth Floor, Washington, D.C. 20024-2713 • (202) 488-2722 • FAX (202) 488-3631

Testimony Of

**AMERICAN ROAD AND TRANSPORTATION BUILDERS ASSOCIATION**

The American Road and Transportation Builders Association (ARTBA), with 3,500 members nationwide, appreciates this opportunity to present its views on the reauthorization of surface transportation programs to the subcommittee.

Our first comment must be one of commendation for the leadership of the Committee on Public Works and Transportation. Chairman Roe of the full Committee and Chairman Mineta of the Subcommittee on Surface Transportation have in recent weeks called for an increase of five cents-per-gallon in the federal motor fuels tax and its expenditure on vitally needed transportation programs.

Together with Speaker Thomas S. Foley, members of this Committee have exhibited the courage to seek the additional funding needed for federal activities to reverse the pattern of recent years and make a major commitment to enhancing our national transportation infrastructure.

ARTBA endorses your actions and offers its support to gain enactment this year of additional fuel taxes dedicated to transportation.

For the past two years, we have actively advocated an increase in federal highway user fees to finance a $40 billion annual federal/state highway program. At this point, a 10 cents-per-gallon increase in the federal motor fuel excise tax appears necessary to reach that goal. Again, we commend and encourage members of this Committee who have taken the important first step in the direction of substantially increased highway funding.

ARTBA has a long history of support for aggressive efforts to develop and maintain the national highway system, our country's most important transportation network and the backbone of its commerce.

Our organization was formed in 1902 as the American Road Makers, an offshoot of the League of American Wheelmen. In separating from a group devoted to the bicycle, ARTBA established itself as a forward-looking body. ARTBA was present at the birth of the automobile age and saw that vastly better roads would be needed if the internal combustion engine was to power the economic growth and personal mobility that has characterized the United States in the 20th Century.

As we approach the 21st Century, our nation is again -- literally -- at a transportation crossroads. For several years, many of us have anticipated arrival at this point. The Interstate Highway System, often called the largest public works project in history, has been the principal focus of highway development for the past 35 years.

Today, new construction on the original Interstate System plan is virtually complete. Now, we must assess what we have accomplished. We must examine the role of an efficient national highway system in contemporary society and the U.S. economy. We must make our best evaluation of the mobility needs of America in the years ahead. Then we must join together to fashion a surface transportation program that will meet the multiple demands of our country for the foreseeable future.

Thus, the Surface Transportation Assistance Act of 1991 assumes an importance beyond that of transportation legislation of the recent past.

While completion of initial construction of the Interstate System is indeed a milestone, it does not signal that we can end, or even cut back, the federal highway program. The Interstate System was the major preoccupation for the past generation, but there was a highway program for many years before 1956. The present program, in fact, is carried out under the basic law, though much modified, that was enacted in 1916.

The focus today may be different, reflecting changing conditions and needs, but a vigorous federal highway program is still essential.

The Bush Administration has submitted legislation to implement its vision of the future. It is a comprehensive blueprint containing many worthwhile suggestions. It also contains some proposals we cannot endorse.

Members of Congress and many organizations, including ARTBA, have their own plans. All will contribute to the evolution of a new surface transportation act.

Nearly two years ago, ARTBA first adopted its legislative recommendations for the federal highway program reauthorization in 1991. Following Congressional enactment of the comprehensive deficit reduction package last fall, we reviewed our program and concluded that our fundamental objectives remain sound.

The ARTBA plan addresses the full range of highway issues, but there are a few basic features that any reauthorization bill must contain if it is to properly and adequately address our nation's transportation needs:

- Enactment prior to September 30, 1991. We cannot afford to break the continuity of the highway program. This would result in project delays,

uncertainty within state transportation departments and economic hardship on the thousands of small businesses that comprise the transportation construction industry.

A reauthorization period of five years. Some consideration has been given to a two-year bill so that a longer authorization could be developed after the initial impact of the budget agreement is better known. ARTBA believes a far better approach is to lock-in the parameters of the program now for the next five years.

Dedication to the Highway Trust Fund of the 2.5 cents-per-gallon federal fuel tax that now goes into the general treasury. Such action would restore the concept that the gasoline and diesel excises are user charges applied only to transportation programs. Equally important, this action would increase the funds available for highway improvements.

Make the entire five cents-per-gallon motor fuels tax increase approved in 1990 permanent and proceeds available for immediate obligation.

Authorize spending of the current balances in the Highway Trust Fund and concurrently raise the federal highway user fees effective in fiscal year 1992 to the level necessary -- equivalent to about 10 cents-per-gallon -- to meet the highway capital needs on the federal-aid system that has been identified by the U.S. Department of Transportation.

It is no accident our proposals deal almost exclusively with funding. Structural and operational refinements can be made to the highway program, but unless there is a substantial commitment of additional funds, our highways and bridges will continue to deteriorate at the expense of improved mobility, economic expansion, job creation, safety and pollution reduction.

The highway transportation system can no longer be viewed as performing a single function -- moving people and goods from one place to another. This basic transportation network must be developed and managed with broader objectives in mind: economic strength, environmental enhancement, improved public health and energy efficiency being the most important.

ARTBA's legislative recommendations would move the program toward these goals. They are based on the 1989 findings of the Department of Transportation that an annual Federal-aid Highway program of $40 billion is needed to meet the "full constrained needs" of the national highway network.

Lest there be confusion, the term "full constrained needs" does not imply a "gold-plated" highway system with no problems. It simply means meeting most of the existing and anticipated deficiencies through the year 2005. It means bringing the entire system up to "minimum condition engineering standards," according to the DOT report.

The national highway system is so crucial to the future social and economic well-being of the nation that ARTBA strongly urges the Congress to move the federal-aid program toward the $40 billion annual level. At the same time, Federal highway user fees -- primarily the gasoline and diesel tax -- should be increased by 10 cents-per-gallon to support the expanded program.

If $40 billion a year sounds frightening, then consider that DOT also concluded that a federal highway program of $26 billion yearly is required just to maintain 1985 standards. That is about $10 billion more than this year's investment. In 1988, almost a third of the bridges on the Federal-aid system were classified as "structurally deficient" of "functionally obsolete." More than 40 percent of the pavement on the system was in imminent need of repair.

ARTBA finds itself in the unique position of being one of the few organizations -- perhaps the only one -- advocating a tax increase in this year of fiscal austerity. But we are convinced that a modern highway system is absolutely essential to the future social and economic well-being of the United States and that Americans will support a gas tax increase so long as they know it will be dedicated solely to transportation improvements.

In March of this year ARTBA commissioned a national opinion poll to test public sentiment in the aftermath of the federal fuels tax increase imposed last December. The survey was conducted by Penn & Schoen Associates. The results confirm that most Americans -- 81 percent -- remain adamantly opposed to using federal motor fuel taxes for non-transportation purposes.

The survey also demonstrates that Americans perceive a strong link between the condition of our highways and bridges and the nation's economic health. Fifty-three percent feel the future economic well-being of the nation is threatened by traffic congestion and poorly maintained roads, highways and bridges.

Despite the recent federal fuel tax hike, about half of those surveyed said they would support another increase this year if it were dedicated to transportation improvements. Sixty-nine percent of those who would support a gas tax increase endorse a five cents-per-gallon boost in the federal tax, while 60 percent looked with favor on a 10-cent increase.

The Penn & Schoen survey also reflected the concern of Americans over highway safety. When asked "What could be done to our nation's highways to make you feel safer as a motorist?", 23 percent said "fix the roads and bridges." Another nine percent indicated specific construction-related

improvements like "better road signs" (five percent), "better lighting" (two percent) and "improved lanes and shoulders" (two percent).

Recent evaluations of the importance of transportation to the economy have focused on the return that could be possible from additional investment in the national highway network. One of the first of these was a study commissioned by ARTBA, conducted last year by Dr. Richard Mudge, former chief of the Congressional Budget Office's Public Investment Unit, and Dr. David A. Aschauer, then a senior economist for the Federal Reserve Bank of Chicago.

Mudge and Aschauer predict that an additional -- and sustained -- $25 billion annual investment in the federal highway program would lead to a $250 annual increase in productivity for each American worker within the program's first five years. Within 20 years, it would cause a $3,200 increase in annual output per worker.

By 2012, Aschauer and Mudge believe, these productivity gains for American business would generate an additional $29 billion per year in corporate profit and $35 billion per year in private investment.

Closely related is the job-creation impact of a larger commitment to transportation infrastructure. Traditionally, correlations between public works spending and jobs concentrated on direct, on-the-job employment.

Last winter ARTBA decided to examine the broader implications of an increased highway improvement program. We asked Apogee Research Inc., of Bethesda, Maryland, to project the job-creation results of a long-term commitment to greater transportation investments.

The results were startling.

The Apogee study shows that an additional $25 billion per year in federal highway and bridge capital spending would generate 943,000 new American jobs during the program's peak year. Within 24 months, the expanded program would produce nearly 450,000 jobs throughout the economy.

More than 25,000 new jobs, the study says, would be created in 12 states: California, Texas, Florida, New York, Ohio, Pennsylvania, Illinois, Michigan, Georgia, New Jersey, North Carolina and Virginia.

These are not short-term, "make-work" jobs. The backlog of highway and bridge needs is such that it will take many years to rebuild and improve the national transportation system.

Nor are these exclusively jobs in the construction industry. The demonstrated ripple effect of improved transportation would be felt everywhere, with increased employment in such fields as real estate, food manufacturing and sales, clothing, hotels and banking.

Substantially increased highway investment would also help the nation meet energy and air quality goals.

Revision of the federal Clean Air Act last year brought new attention to the environmental situation in major cities. Most of them have air pollution levels far above those acceptable for good health. Serious efforts are required to lower them.

Traffic congestion contributes to poor air quality in many urban areas. Congestion also is a drag on the economy costing huge sums annually. It is

estimated that 1.4 billion hours and 1.5 billion gallons of gasoline are wasted every year because of congestion on urban limited-access highways.

A substantial fuel tax increase dedicated to highway and bridge improvements would greatly contribute to reducing this problem. The resulting higher cost of fuel could depress consumption. The net effect is greater income to the Highway Trust Fund to finance needed roadway improvements and capacity expansion to ease congestion.

Continued low-cost fuel and a stagnant highway program are not the answer to urban congestion and air pollution problems. To the extent that public transportation is part of the solution, it must be remembered that the great majority of transit systems in the United States operate over roads and streets. Buses forced to compete with other vehicles in traffic jams will not lure many people from their cars.

## Background of Legislation

To develop or comment on any legislative proposal, we first must look at the existing situation.

Cumulative federal spending on transportation seems impressive. The Interstate System alone will have cost about $130 billion when it is completed. But gross figures can be misleading.

For some years, spending on public infrastructure has not kept pace with growing needs. That's true of water and sewer systems and airports, just as it is of highways and mass transit.

In the 1960s, public investments in transportation began a relative decline. At that time total public spending for roads and bridges was 1.4 percent of the Gross National Product. Today it is .5 percent.

Inflation has also been a hidden factor. In 1959, the federal gas excise -- the primary source of federal highway funding -- was four cents-per-gallon. If, to maintain its construction purchasing power, that excise had been indexed to keep pace with inflation as measured by the Consumer Price Index, the excise would be 20.3 cents-per-gallon in 1991. However, only 10.25 cents-per-gallon of the federal fuel tax is now available for highway and bridge improvements. (An additional 1.25 cents-per-gallon is used for federal mass transit funding; 2.5 cents-per-gallon has been diverted to deficit reduction.)

Assuming a moderate future inflation rate of just four percent-per-year, the federal motor fuels user fee would have to increase to 29 cents-per-gallon by 2000 just to maintain its 1959 purchasing power.

In addition to inflation, government actions to achieve a variety of national goals have affected funding for the highway program. The partial tax exemption for gasohol (5.4 cents-per-gallon), for instance, currently reduces Highway Trust Fund revenues by an estimated $500 million or more per year.

Fuel efficiency standards, first required in 1978, have resulted in some revenue losses to the Trust Fund. Tightening of the requirements, as now under consideration, would result in further reduction of Trust Fund revenues through greater economy in general and a potential move to alternate fuels which are not now taxed. ARTBA has examined the potential effect on Trust Fund revenues of more stringent fuel economy standards. Our preliminary findings suggest that the lower levels of fuel consumption they would produce would significantly reduce Trust Fund income.

Requirements of the Clean Air Act as amended last year are likely to generate extensive use of non-traditional fuels. Other environmental and energy conservation initiatives, many with laudable objectives, could in the near future result in motor vehicles powered by such fuels as electricity and natural gas. An unintended consequence almost surely would be reduced income for the Highway Trust Fund at a time when additional funding is needed.

This is an issue which the Congress must examine. Maintenance of a healthy federal transportation program depends on a stable source of funding. The Trust Fund has provided an assured revenue source in the past. The tax structure that supports it, however, should be carefully reviewed for possible revisions that will maintain the viability of the Trust Fund in the future.

ARTBA strongly recommends that the Congress, through the reauthorization legislation, direct that a study be made of the effect on the Highway Trust Fund of expected changes in both the quantity and types of motor fuels that will be used in the future. The study also should recommend ways of taxing these fuels so as to provide adequate sources for transportation programs.

Changing demographics also have contributed to the continuing need for a vigorous federal highway program.

As the nation's population grew, so did the number of motor vehicles. And the population shifted increasingly to the suburbs and to the Sun Belt, creating new demand for roads and streets.

Motor vehicle use shot up dramatically. The number of licensed drivers increased from 80 million to 163 million between 1960 and 1988. The number of

vehicles grew from 75 million to 183 million during the same period. And annual vehicle miles traveled nearly tripled.

While demands on roads increased, investment by the federal government actually declined. The congressional Office of Technology Assessment reported last year that, in terms of constant dollars, federal highway expenditures remained virtually static between 1980 and 1988.

In its 1989 report, the Department of Transportation said that 40 percent of the pavement on the Interstate System was below minimum standards and that nearly a third of the Interstate bridges are "structurally deficient" or "functionally obsolete." On all federal highways, 238,000 highway bridges -- 40 percent of the national total -- are similarly classified.

Clearly, highway needs are great. This year's surface transportation bill is the place to get the job started.

Secretary of Transportation Samuel Skinner and the Federal Highway Administrator, Dr. Thomas Larson, have devoted considerable thought, time and energy to developing the Administration's legislative proposal for highway and mass transit programs. The bill they have submitted is a serious effort to reshape highway and transit programs to respond to the challenges of the late 20th Century and beyond.

Unlike other years, the Administration bill was not declared "dead on arrival" on Capitol Hill. Indeed, the bill appears likely to be the starting point for Congressional actions.

ARTBA prepared an extensive analysis of the Administration proposals. It has been distributed to all members of Congress as well as to governors and others involved in transportation activities.

There are several features of the Administration bill with which ARTBA agrees. As previously observed, we strongly endorse the multi-year approach to reauthorization. The concept of a newly-defined National Highway System has considerable merit, although we have some thoughts on how it can be improved. We support the idea of encouraging public/private ventures in transportation development.

We also agree that the new revenues made available to the Highway Trust Fund last year should be spent, although we believe the spending should start immediately, not several years from now.

## The Administration Bill

The following is our view of the main features of the Administration bill.

Funding levels--As stated earlier, ARTBA believes a substantially larger highway program is needed. We take issue with the characterization of the Administration proposal as providing a 39 percent funding increase over five years. Our analysis, confirmed by the Congressional Budget Office, reveals that when adjusted for inflation, spending levels recommended by the Administration essentially show no increase.

More important than the rate of increase, however, is the amount actually invested in the highway system. The Administration proposes reaching an annual program level of $20.3 billion, but not until 1996. That figure is even inadequate for 1992 if we are serious about realistically addressing highway needs.

Furthermore, under the Administration plan, the balance in the Highway Account of the Highway Trust Fund will continue to grow. By the end of Fiscal Year 1996, it will be nearly $15 billion.

ARTBA recognizes the constraints on spending imposed by last year's reconciliation act, especially during fiscal years 1991-93. We believe, though, that even under these restrictions, a larger program than that proposed by the Administration can be supported.

The gap between needs and program level can be closed even further with the enactment of additional revenue for the trust fund. Higher user fees should be approved this year and be effective in fiscal year 1992. This would be compatible with the 1990 Reconciliation Act's pay-as-you-go provisions.

Meanwhile, the full five cents-per-gallon tax increase adopted in 1990 should be deposited in the trust fund and made immediately available for obligation for transportation purposes.

National Highway System--ARTBA agrees that this is the right time to restructure highway networks. A realignment is necessary to accommodate demographic and other changes that have taken place since construction of the Interstate System was initiated in 1956.

We are concerned, though, that the proposed 150,000-mile system is too small. If the National Highway System (NHS) is to be the system of prime national interest, it should be more comprehensive.

As proposed, the NHS would consist of 150,000 miles, of which 44,000 would be the Interstate System and the remainder taken from the present Primary System. Only about 40 percent of the Primary System (now 259,000 miles) would

be incorporated into what is seen as the main national and inter-regional roadway network.

And there are some practical problems. States with small populations and large areas could find themselves with an excess of funds for their relatively small segments of the NHS and a shortage for other roads.

Urban/Rural Program--The proposed Urban/Rural Program would combine the existing Secondary and Urban Systems with that portion of the Primary System not included in the NHS.

Our major concern with this approach is the proposed flexibility that is intended to allow states to meet their most pressing needs, regardless of where they are located and whether they are highway or transit related. There is a strong likelihood that the challenge of relieving urban congestion would draw most of this program's funds. Rural areas and small communities would be relegated to the category of second-class citizens without federal assistance to meet their needs.

ARTBA strongly recommends retention of separate Urban and Secondary Systems.

Bridge Program--The Department of Transportation estimates it would cost more than $50 billion to bring deficient bridges on the federal highway system up to standard.

The modest funding level proposed in the Administration bill is wholly inadequate to meet this crucial problem. The 1991 authorization for the bridge program is $1.63 billion. The bill recommends $1.82 billion for next year, an

almost insignificant increase in terms of the cost of bridge replacement and repair.

In the last two years of the Administration's bill, bridge funding is increased somewhat, but still too little and too late.

Matching Ratios--The drastic reduction proposed in the federal share for most activities would all but guarantee unintended results.

Of great concern is the financial burden imposed on states, many of which already are facing substantial budget shortfalls. Although a reduced federal share is intended to produce a larger overall program, the opposite could result if states were unable to match federal funds.

Some states, in fact, already are questioning whether more federal dollars are worth what it will cost them as matching ratios are changed. A Senator from one hard-pressed state calculated that while his state will get $2 million more in federal funds next year under the Administration plan, it must come up with $12 million additional matching of its own to qualify.

Another state -- one with a small tax base -- estimates that it will have to more than double its own outlay if the matching ratios are changed.

The different federal shares proposed could induce states to locate projects where the cost to them is least rather than where the need is greatest. For instance, Interstate 3-R activities, at 90 percent federal money, could be favored over other work on the NHS where the federal share is only 70 percent, even though the need may be greater.

In addition, projects on the other systems where the federal share is even lower also could find themselves well down on the priority list.

ARTBA believes these potential problems would be alleviated if the federal share for National Highway System and the bridge program is set at 90 percent; and the retained secondary and urban programs at 75 percent.

Public/private ventures--The Administration is on the right track in advocating a greater private participation in transportation development. We have, in fact, provided significant national leadership by establishing a new division in our organization to encourage and facilitate public/private ventures in transportation. We have also sponsored several successful national conferences and educational forums to further develop this emerging field.

Highway Safety--The Administration's proposal to require 10 percent of apportioned highway dollars for the NHS and the Urban/Rural Program to be generally committed to safety is an excellent concept. However, the two existing safety construction categories -- Hazard Elimination and and Rail-Grade Crossings -- should be specifically retained.

Mass Transit--Just as we advocate spending the balances in the highway account of the Highway Trust Fund, ARTBA believes the balances in the Mass Transit account must be utilized. We also believe an increased level of federal funding for mass transit capital improvements is needed. We oppose a reduction in the federal share for transit. We support the continued use of both Trust Fund and General Fund resources for mass transit activities, with Trust Fund resources used only for capital improvements.

The ARTBA Highway Program

ARTBA's own legislative agenda consists of recommendations in all of the major areas relating to the Federal-aid Highway Program.

Funding--As stated earlier, we believe adequate financing is the key to meeting the capital needs on the Federal-aid system.

A $40 billion per year federal-state program should be initiated to address needs identified by the Department of Transportation in its 1989 report to the Congress.

To establish and maintain a program of that magnitude, the Congress should (1) Authorize the obligation of balances in the Highway Trust Fund; (2) Approve additional revenues for the Trust Fund through a 10 cents-per-gallon increase in the federal fuels tax; (3) Remove the Trust Fund from the unified budget to preclude future impoundments; (4) Prohibit the imposition of artificial spending ceilings on the highway program; (5) Assign that portion of the federal fuels tax now credited to the general fund to the Highway Trust Fund; (6) End the 5.4 cents-per-gallon exemption from the fuels tax for gasohol; and (7) Make the Highway Trust Fund permanent.

These actions would generate the resources required to establish and maintain the highway program needed for America to occupy a position of strength in the new global economy.

ARTBA recommends the allocation of its proposed $40 billion annual program as follows:

**ARTBA Recommendations**

**Federal Highway Program Annual Funding**

**(Per Fiscal Year)**

| | |
|---|---|
| Interstate Construction | $ 1.0 Billion |
| Highway System of National Significance | $13.0 Billion |
| Bridge Rehabilitation & Replacement | $ 5.0 Billion |
| Metropolitan Area Assistance Program | $ 4.5 Billion |
| New Transportation Corridors | $ 3.5 Billion |
| Secondary/Rural System | $ 5.0 Billion |
| Highway Safety | $ 2.0 Billion |
| Federal Highway Research Programs | $ 2.0 Billion |
| Minimum Allocation Program | $ 2.0 Billion |
| Federal Lands Program | $ 1.5 Billion |
| Emergency Relief | $ 0.5 Billion |
| TOTAL | $40.0 Billion |

Program Categories--As discussed earlier, ARTBA endorses a realignment of highway categories and the assigning of most of those roads of paramount national and regional importance to the National Highway System. This nationwide network can be expected to carry a proportion of traffic far beyond its size. It must be supported, therefore, by sufficient funds. A federal share of 90 percent is necessary for the NHS to assure that the system is properly developed and maintained.

The same matching share should be available for protecting and enhancing the massive investments of the past through repair, resurfacing, renovation and reconstruction.

The existing Urban and Secondary categories should be retained and supplemented with that part of the Primary System not assigned to the NHS. Separate categories will assure attention to the needs of both urban and rural areas. A federal share of 75 percent for these categories will provide the necessary level of support. A degree of flexibility also should be incorporated in the urban and secondary programs so that state and local officials can allocate resources to meet urgent demands.

ARTBA would rename the Urban Program the "Metropolitan Transportation Assistance Program" in recognition of the need to look at a more comprehensive approach to meeting urban transportation problems. We recommend a funding level of $4.5 billion per year to help achieve the goal of reducing urban congestion.

In addition to maintaining our investment in the current highway system, attention should be given to problems faced by rapidly growing areas. Those communities which are not currently served by Interstate-quality highways but have experienced rapid economic development demand better highway access. ARTBA proposes to use the program increases recommended to fund a program of highway upgrading to better serve these communities.

Since the federal bridge program was established 20 years ago, it has never received adequate financial support to carry out the massive task of upgrading and replacing the national inventory of deficient bridges. ARTBA strongly believes new emphasis must be given to the bridge program by a large infusion of money provided at a 90 percent federal share. An annual allotment of $5 billion would not be excessive for this crucial activity.

Highway Safety--Over half of all accidental deaths in this country are transportation related. More than 45,000 fatalities occur annually on our nation's highways. Almost five million injuries occur each year as a result of motor vehicle accidents and nearly two million of these require extended periods of hospitalization.

Highway safety is a matter of paramount concern to both this committee and to ARTBA.

The number of facilities per vehicle mile driven has been steadily declining since 1980. We believe much of this reduction can be attributed to programs initiated by this committee. For example, the 1990 "Report of the Secretary (DOT) to the U.S. Congress" on highway safety states that the Hazard Elimination Program has prevented over 18,000 deaths and a half-million injuries in the past 16 years.

This report goes on to state that, "the Rail-Highway Crossings program continues to show the greatest percentage of accident rate reductions" with the prevention of over 6,000 fatalities and 25,000 injuries over the past 16 years.

ARTBA supports the continuation of categorical funding for all safety construction programs such as the Hazard Elimination and Rail-Highway Grade Crossing programs. The trend is toward fewer fatalities per vehicle mile driven. These programs have proven their value and should not be terminated.

Now is not the time to retreat from an aggressive effort to improve highway safety. A safe highway accommodates all drivers and common sense tells us that a safe highway is more forgiving to the older driver. Our nation's population is aging and we must plan now for the highway safety needs of the older driver.

Further, ARTBA supports an increase in overall federal highway safety funding to $2 billion a year.

We recommend and encourage each state to develop and implement a program that will lead to the systematic upgrading and maintenance of all traffic safety devices, including pavement marking, signing, impact attenuators and guide rails.

We support increased funding for the training, education and certification of all personnel responsible for traffic control and safety in highway construction and maintenance work zones.

ARTBA recommends that products and services that enhance safety and improve traffic operations be included in criteria for all federal programs with particular emphasis on the "3-R" and "4-R" programs.

We support the continuation and increased funding of the FHWA and NHTSA 402 safety programs.

Finally, we strongly recommend that that the Congress prohibit the further transfer of safety funding to non-safety programs.

Public/Private Ventures--ARTBA recognizes the need for private sector involvement in the development and management of the nation's transportation infrastructure. This need is especially critical when transportation projects are unable to go forward because federal and/or state funding is not available.

While we believe that federal and state funding is the preferred method of financing transportation construction projects, the public interest can be

served through public/private ventures when adequate public funds are not available.

ARTBA recommends that:

1. When public/private venture projects involve new and/or existing toll roads, tunnels, ferries and bridges on the Federal-aid System, states should be authorized to contract with private firms to finance, design, construct and/or operate them.

2. When and to the extent that public funding is involved, public/private projects should be constructed in cooperation with federal and state transportation agencies and in accordance with all relevant laws, including the open competitive bidding process for construction contracting to ensure the maximum level of participation by local transportation-related firms.

3. Federal funds of up to 35 percent of the cost may be provided for building and/or renovating highways, tunnels, ferries and bridges through a public/private venture.

4. When feasible, private transportation facilities should be allowed to share federally-financed rights-of-way and air space at no cost.

5. Private entities involved in transportation-related public/private ventures should be provided access to the tax-exempt bond market and accelerated depreciation.

Disadvantaged Business Enterprise Program--ARTBA supports a federal initiative for a program of assistance, but believes the current Disadvantaged Business Enterprise (DBE) Program should be revised to ensure that it is aiding

firms that are truly in need of assistance. A meaningful DBE program should adequately address management training, technical assistance, bonding and graduation requirements, among others.

In addition to properly certifying disadvantaged firms, ARTBA believes the program should determine if participating firms have the capability to carry out the work they certify they can perform. By determining the capability of eligible firms, an effective DBE participation level can be established.

ARTBA supports the language in the Administration bill that would continue a single-goal program.

Standard Contract Clauses--Standard contract clauses pertaining to site conditions, suspensions of work and material changes for Federal-aid highway projects were mandated for such projects in the 1987 highway act.

Inadvertantly, the standard clauses were not mandated for Federal-aid "certification acceptance" projects. This oversight has created a hardship for transportation contractors in several states.

ARTBA believes the law should be amended to permit the use of the standard clauses on certification acceptance projects, and we strongly oppose the Administration's proposal to repeal the standard contract clauses.

Prejudgement Interest--During the course of many construction contracts, claims are often submitted which in effect would amend a contract. From the time a claim is submitted, to the time it is resolved in favor of the contractor, the contractor now must incur the expense of financing any money due on the claim.

ARTBA believes legislation should be enacted to ensure that contractors on federally-funded transportation contracts receive compensation for carrying the cost associated with financing a claim. The compensation may be calculated in a manner akin to interest, at the prime rate or any higher rate. It should further be statutorily recognized that the contractor incurs the expense of financing beginning on the date the contractor should have been paid under the payment provisions of the contract.

Truck Weights--ARTBA's focus on truck weights deals with specialty hauling vehicles (SHVs). SHVs are single or combination dump trucks and ready-mix concrete trucks which have short wheelbases and approach maximum allowable federal weights when empty. This is attributable to the structural design necessary to move the heavy materials carried and to the specialized equipment necessary for safe operation of these vehicles. Because of these functionally-necessary characteristics, SHVs often cannot meet federal truck weight standards, particularly the current bridge formula, without sacrificing safety and/or productivity.

In recognition of this problem, Section 158 of STURAA of 1987 directed the Transportation Research Board to conduct a study and recommend appropriate treatment for SHVs. The TRB Truck Weight Study Committee found the current federal bridge formula "to be unnecessarily restrictive when applied to shorter vehicles on Interstate highways. Accordingly, some relief, either in the form of liberalization of the formula or a special permit program that would allow SHVs to exceed the formula, would be appropriate for vehicles that have difficulty operating under the current formula."

The TRB committee recommended that the current bridge formula be replaced with the TTI-HS20 bridge formula. ARTBA has long supported this formula and urges that it be adopted. ARTBA also supports a special permit program for

SHVs which would permit them to exceed federal axle weight limitations and be exempt from bridge formula requirements when operating on the Interstate System, as long as they do not exceed 80,000 pounds.

Finally, with regard to truck weights, ARTBA fully supports the continuation of grandfather rights for states under the current law. Removing grandfather rights would create severe economic impacts on the transportation construction industry due to reduced productivity and safety.

ARTBA again thanks the Subcommittee for the opportunity to present its views on surface transportation reauthorization legislation. We stand ready to be of any assistance as the legislative process moves forward.

Attached to this statement are a series of graphs depicting points made in this statement concerning highway needs and the ARTBA legislative recommendations.

We also submit copies of our analysis of the Bush Administration proposal, as well as two studies, "Enhancing U.S. Competitiveness Through Highway Investment: A Strategy for Economic Growth" and "The Jobs Impact of an Expanded Federal Highway Program" and ask that they be included in the hearing record.

## How Meeting America's Highway & Bridge Capital Needs Would Affect Employment

# The Jobs Impact Of An Expanded Federal Highway Program

Apogee Research, Inc.
For The
American Road & Transportation Builders Association

February 1991

# Employment Impact of A Sustained $25 Billion Increase in Federal Highway Investment

## Executive Summary

- New research shows that investment in highways and bridges provides duel economic benefits: first, by creating immediate jobs and second, by providing the long-term economic base needed to develop a more productive economy. Both effects are vital at this time in our nation's economic history. The first effect will provide help during the current recession. The second, will help make the U.S. a more productive economy. Economic productivity is the key to national economic growth and competitiveness. A sound and efficient transport system is, in turn, the key to a more productive economy.

- America's national transportation network is in disrepair due to inadequate investment. According to the U.S. Department of Transportation, a third of the bridges on the Federal-aid Highway System are "structurally deficient" or "functionally obsolete." [1] Forty percent of the pavement on the Interstate Highway System is in imminent need of repair.[2]

- The U.S. Department of Transportation's most recent report on the condition of the nation's highways and bridges concludes that meeting existing capital needs on the federal-aid system will require a sustained annual investment of nearly $40 billion -- about $25 billion per year more than was authorized by Congress for the Federal Highway Program in FY91.[3]

- New research shows that an additional $25 billion per year in federal highway and bridge capital spending would generate 942,926 American jobs in the peak year of the program. More than 87,000 jobs would be created within the first 12 months of increased investment of this magnitude. Within 24 months, the program will have generated over 448,000 American jobs.

- These are not short-term, "make work" jobs. The backlog of needed highway and bridge repair is such that it will take many years to rebuild the nation's transportation system. Over the first five years of the expanded program, 3.2 million man-years of employment are created.

- An expanded federal highway and bridge improvement program would create the most new jobs in the depressed construction and manufacturing industries -- 137,400 in construction and 98,700 in manufacturing during the first 24 months. In December 1990, the construction unemployment rate registered 14.0 percent, more than double the all-industry average of 6.3 percent. In December 1990, 870,000 construction workers were unemployed. Because of this excess capacity, the impact on inflation should be small.

- An increase in infrastructure capital spending of this magnitude would generate more than 25,000 jobs during the peak year of the program in 12 states: California (100,384), Texas (73,278), Florida (46,860), New York (45,772), Ohio (41,002), Pennsylvania (39,693), Illinois (38,660), Michigan (32,886), Georgia (31,765), New Jersey (29,194), North Carolina (27,819) and Virginia (25,414).

- In the peak year of the expanded program, 125,998 construction craftsmen would be employed. As spending spreads through the economy, the program would also generate employment in a number of other occupations, including 112,000 managers and administrators, 107,000 operatives, 99,800 personal service workers, 89,000 other craftsmen, 69,000 laborers, and 11,400 engineers.

- During the peak year of the program, each $1 million of federal highway investment would create 40.6 jobs across all U.S. industries due to the "ripple" effect of new construction activity on the economy.

- Research conducted in 1990 by Drs. David Alan Aschauer, former senior economist with the Federal Reserve Bank of Chicago, and Richard Mudge, former director of the Congressional Budget Office Public Investment Unit, shows that a sustained $40 billion per year Federal Highway Program would have other long-term positive effects on the U.S. economy that would greatly increase America's competitiveness. Aschauer and Mudge found that after 20 years of increased investment, national labor productivity would be 7.7 percent higher than would have been achieved without the program. This gain in productivity of $3,200 per American worker, would generate an additional $10 billion per year in corporate profit and $35 billion per year in private investment.[4]

- Additional highway investment would not only improve the mobility and safety of all Americans, but also help the nation meet energy and air quality goals by helping alleviate traffic congestion in urban/suburban areas.

- The American Road & Transportation Builders Association has proposed that Congress finance a $40 billion per year Federal Highway Program by taking the following actions: (1) Increase the federal motor fuels excise by at least 10 cents-per-gallon, effective in FY92; (2) Authorize spending of the 2.5 cents-per-gallon federal motor fuels excise currently earmarked for non-transportation uses for highway and bridge improvements; (3) Authorize a drawdown of the cash balance in the federal Highway Trust Fund (currently $9.8 billion); and (4) Eliminate the federal tax subsidy (6 cents-per-gallon) on the sale of gasohol.

- Congress has a golden opportunity to meaningfully address the nation's serious transportation infrastructure crisis AND create long-term employment in industries hardest hit by the current recession when it reauthorizes the Federal Highway Program during 1991.

# Determining The Employment Impact Of A Sustained $25 Billion Increase In Annual Federal Highway Investment

This analysis, prepared by Apogee Research, Inc., of Bethesda, Maryland, for the American Road & Transportation Builders Association, estimates the number of *new* jobs that would be created by the association's proposal to increase annual federal highway investment by $25 billion -- the amount the U.S. Department of Transportation says is necessary to meet identified capital needs.

The analysis utilizes the highly-respected national input/output econometric model created by the Regional Science Research Institute. The RSRI model is based on data collected by the U.S. Department of Commerce.

The model forecasts the number of direct and indirect jobs that are created by a given level of highway expenditures. It quantifies the principle that every direct job created in highway construction (or any other industry) generates additional jobs in other employment sectors as the funds are re-spent throughout the economy.

The financial assumptions made about highway spending follow the general assumptions used by the Congressional Budget Office in its reports:

- New authorizations are obligated one-half in the first year and one-half in the second year.
- Once obligations are made, outlays are spread over six years with the largest amount occurring in the second year.
- The month-by-month spend-out rate is based on historical rates collected by the Federal Highway Administration and used by the Congressional Budget Office.

The estimates presented here do not include U.S. jobs that are generated by the current level of federal highway funding. The effect of state matching funds is also not included in the analysis on the assumption that the states, as a whole, would not increase local funding for the program, but rather reprogram existing highway monies to obtain federal dollars.

Table 1 shows the estimated gain in jobs that would be generated on a state-by-state basis. The distribution of the increase in jobs is proportional to the state increase in federal grants that would occur under the current formula used by the Federal Highway Administration. The formula is established by Congress and subject to possible revision. The distribution of jobs across the state will also vary according to the state's economic structure.

Graph A illustrates the total annual employment generated by the program above baseline year level.

Graph B shows the states that would gain at least 25,000 new jobs during the program's peak year.

Tables 2 and 3 show the yearly job gains by industry sector and by selected industries, respectively.

Table 4 shows the job impact on selected occupations.

Table 5 presents the month-by-month outlays generated by authorizing an additional $25.6 billion per year for highway spending. Based on past history, it has taken two years for highway authorizations to be obligated and about six years for obligations to be converted to outlays. This may be conservative. The historical data was obtained from the Congressional Budget Office.

Table 6 shows the increase in annual federal funds that each state would receive under a $40 billion per year Federal Highway Program if current funding formulas and matching ratios are maintained.

Graphs C and D illustrates the condition of the bridges and pavement on the federal system, according to U.S. Department of Transportation data.

Graph E provides general highway trends over the 20-year period 1969-1989 including capital outlays, vehicle miles traveled, automobile registrations, the number of licensed drivers, fuel consumption, population and road mileage.

Graph F shows the effects a sustained $25 billion per year increase in federal highway investment would have on the U.S. economy in terms of productivity, corporate profit and private investment.

In should be noted that this analysis only covers the first five years of a greatly expanded capital improvement program. One must realize, however, that the money that is authorized over five years would continue to flow into the construction "pipeline," providing a positive employment effect well beyond the five years detailed here.

This analysis was conducted under the direction of Dr. Richard Mudge, president of Apogee Research, Inc. Questions may be directed to Dr. Mudge by calling (301) 652-8444.

**Graph A: Total U.S. Employment Created Above Baseline Year By A Sustained $25.6 Billion Increase In Annual Federal Highway Investment**

| JOB IMPACT BY FISCAL YEAR | | | | |

# *Enhancing U.S. Competitiveness Through Highway Investment:*

## *A Strategy for Economic Growth*

## Preface

In January 1990, the American Road and Transportation Builders Association (ARTBA) commissioned Apogee Research, Inc., of Bethesda, Maryland, to conduct research to project the long-term economic impacts of ARTBA's proposed $40 billion per year Federal-aid Highway Program.

This paper reflects the personal views of its authors, Drs. Richard Mudge and David Alan Aschauer. Dr. Mudge, former chief of the Congressional Budget Office's Public Investment Unit, is president of Apogee Research. Dr. Aschauer is a senior economist with the Federal Reserve Bank of Chicago and a senior associate with Apogee Research.

This paper should not be interpreted as reflecting Federal Reserve Bank policy.

## Executive Summary

Transportation infrastructure investment is most often justified based on its effects on short-term job creation, the fact that spending has not kept pace with economic growth, or shortfalls in physical conditions relative to some engineering or safety standard. While real, these arguments miss the vital, long-term economic role that transport services play in a developed economy.

Recent research provides evidence of the far-reaching importance an effective transportation system has for the nation's economic performance. This report summarizes the first use of Dr. David Aschauer's research to explore the broad economic effects of a major increase in public investment.

As an example, we have simulated the likely economic effects of a significant increase in federal highway spending -- roughly equivalent to the $40 billion per year federal program that has been proposed by the American Road and Transportation Builders Association in response to highway capital needs that have been identified by the U.S.

Department of Transportation. Specific measures examined include the impact of this increased investment on nation-wide labor productivity, private investment, and corporate profit.

*The simulation indicates that an increase in highway investment of this magnitude will lead to a $250 annual increase in productivity for each American worker within the program's first five years, and a $3,200 increase in annual output per worker within 20 years of the program's onset (all in 1990 dollars).*

These increases are the additional output per worker that can be expected compared to a baseline scenario that assumes a continuation of current highway expenditure policies. These results imply a reversal in the nation's stagnant rate of labor productivity, with productivity growth reaching half a percentage point or more above the baseline forecast. *After 20 years of sustained highway investment at the proposed level, national labor productivity would be 7.7% higher than without the program.*

These impacts affect the entire economy and are not small. *By early in the next century, labor productivity would be growing at 2.75% per year versus an expected 2.2% per year -- a 23% higher rate of growth.*

In addition, the simulations suggest that once the new highway program has had time to influence corporate decisions, the *productivity gains will lead to an improvement in corporate profit margins -- by up to 10% within 20 years.*

Even without adjusting for a larger economy, *annual corporate profits would be likely to increase by more than $10 billion per year within five years following the increased highway investment, and nearly $30 billion per year within 20 years of the program's initiation*.

The increase in public investment is likely to cause a short-term negative impact on private investment, as funds will be diverted from the private to the public sector. Within 10 years, however, this effect will be reversed, with growing corporate profits generating new sources for private investment. In fact, *by 2012 there would be a $35 billion per year increase in annual private investment above the baseline projection.*

The program analyzed in this report is not inexpensive, with annual costs for the average driver of about $60 to $70 in higher motor fuel user fees. The potential gains identified by these simulations affect the entire United States economy, and will have benefits that far outweigh the cost.

## Potential Improvement in Broad Economic Measures That Could Be Derived Through Implementation of the Proposed ARTBA Highway Investment Program

***Labor Productivity***

| | percentage increase in rate of growth in productivity | increase in output per worker |
|---|---|---|
| 1997 | +9.3 | +$250 |
| 2012 | +23.0 | +$3,200 |

***Corporate Profit***

| | percentage increase in profit rate | increase in annual corporate profits |
|---|---|---|
| 1997 | +4.3 | +$12 billion |
| 2012 | +9.9 | +$29 billion |

***Private Investment***

| | percentage increase in private investment | change in annual private investment |
|---|---|---|
| 1997 | -5.2 | -$19 billion |
| 2012 | +11.2 | +$35 billion |

# Introduction

The United States enters the 1990s facing serious economic challenges and competition from both Western Europe and the Far East. The signs are everywhere: "EC '92" is a reality... A united Germany is in the offing... England will soon be linked by surface transportation to the rest of Europe... Markets in Eastern Europe are opening to the West for the first time in over three decades... Japan continues to exhibit its prowess in exploiting market opportunities... Korea, Hong Kong and China are all following courses designed to make them major world economic players.

Simply put, in this decade, the ability of the United States to compete in world markets will be strongly put to the test.

The decline in our economic competitiveness is also obvious and a frequent topic of news media analysis and political rhetoric. Our economic "track record" entering 1990 shows a serious gap between productivity growth in the United States and other industrial nations, record trade deficits, and a growing dependence on foreign capital.

What's wrong? Is the American worker lazy? Can all of our economic problems be laid on the federal deficit? The answer to those questions is certainly "no." The search for answers -- and solutions -- to our competitiveness problems must go beyond what appears to be the "obvious." We need to begin looking for the common threads that can be found in the past economic success of this country -- and the current inroads being made by others.

At least one major thread that winds through every economic success story is an efficient surface transportation network.

It is an observable fact that countries which sustain a high level of public investment relative to output experience higher productivity growth than other countries. For example, during the past two decades, Japan has invested about 5.1% of its output in public works and achieved productivity growth of 3.1% per annum. The United States, meanwhile, has maintained a low public investment ratio of 0.3% and seen inferior productivity growth of 0.6% per year. [1]

Part of the explanation of the decline in the competitive position of the United States may be found in the low rate at which it has added to its stock of ports, highways, airports and other facilities that aid in the production and distribution of goods and services. [2]

In the *1990 Economic Report of the President*, Michael Boskin, chairman of the Council of Economic Advisers, writes that "inadequate government infrastructure can impede improvements in productivity growth" and that "taking advantage of productive opportunities to maintain and improve the infrastructure is an important part of

Federal, State and local government policies to raise economic growth."

Yet physical capital investment slid from 24.3% of total federal outlays in 1960 to 11% in 1990 and is scheduled to fall to 10.7% in 1991. Similarly, total federal investment has slumped from 34.1% of total public investment in 1960 to 19.4% in 1990 and, if the president's proposed budget were adopted, would decrease to 19.2% in 1991.

For the past two decades, growth in the private sector capital stock has far outpaced growth in the nonmilitary public capital stock. Between 1968 and 1988, the private sector's net stock of equipment and structures rose from just over $4 trillion in 1982 dollars to $7.3 trillion, while the public sector's net nonmilitary capital stock climbed from a little over $1.2 trillion to $1.7 trillion. As a result, the ratio of public to private fixed capital stocks dropped from more than 30% in 1968 to around 23% by the end of 1988.

These divergent trends in private and public capital accumulation attract attention when they reveal themselves in dramatic failings, such as when a bridge collapses. But the fact is, America's transportation infrastructure has not been keeping pace with the growth of the U.S. economy.

The U.S. Department of Transportation's 1989 report to Congress on the state of the nation's highways and bridges should disturb anyone with an interest in moving goods and services or a role in determining national economic policy. Forty percent of the nation's bridges are deficient. More than 40% of the pavement on the Federal Highway System is in "fair" or "poor" condition. [3]

At one time, the link between infrastructure and overall economic growth was obvious and had wide acceptance. Today, a more sophisticated and skeptical public requires more systematic evidence of what was once largely taken for granted.

Recent research by Dr. David Alan Aschauer of the Federal Reserve Bank of Chicago and Dr. Alicia Munnell of the Federal Reserve Bank of Boston provides persuasive evidence that the slowdown in public works investment in this country over the past quarter century may well be the most significant single force behind the relative decline in U.S. productivity. [4]

This paper utilizes Dr. Aschauer's work to quantify the potential economic effects of implementing the $25 billion per year increase in federal highway and bridge investment that has been proposed by the American Road and Transportation Builders Association.

## ARTBA's Proposed Highway Investment Program

The U.S. Congress has already begun public hearings on reauthorization of the Federal Highway Program. Current authorizations are scheduled to expire on October 1, 1991. This could be the most significant transportation legislation since 1956, when the federal Highway Trust Fund was established and the Interstate Highway Construction Program began in earnest. With new construction on the original Interstate Highway System nearly complete, this legislation has the potential to establish the structure and level of federal highway spending into the 21st Century.

In recognition of this potentially historic event, virtually every group interested in highways and transportation has worked at developing a consensus program for the future. The proposals prepared by most of these groups have focused on improving the effectiveness of existing programs and developing the maximum level of spending that could be supported within existing resources -- excise tax revenues plus the more than $17 billion "checkbook balance" in the Mass Transit and Highway Accounts of the federal Highway Trust Fund.

The American Road and Transportation Builders Association (ARTBA), however, has proposed a bolder approach. In response to calls for the doubling of capital investment by the National Council on Public Works Improvement [5] and analytic work done by the Federal Highway Administration [6] that indicates a 20-year, annual investment of up to $40 billion is necessary to meet existing capital needs on the federal system, ARTBA recommends that Congress authorize a $40 billion per year Federal Highway Program effective in Fiscal Year 1992. [7] This would represent about a $25 billion per year increase above the current level of federal highway investment.

ARTBA proposes that the expanded investment be accomplished primarily through a concurrent spend-down of the Highway Trust Fund balance and an increase in federal gasoline, diesel and truck user fees.

## Guide to Rest of Paper

Since this paper uses the results from Dr. Aschauer's most recent analytic efforts to simulate the long-term economic effects of the national highway program proposed by ARTBA, its focus is on broad economic impacts, including overall economic productivity, private-sector profitability, and the level of private-sector investment.

This differs from the more traditional analyses of transportation investment proposals, which have tended to focus on the immediate,

first-order effects of improved physical conditions: greater safety, reduced travel time, and greater reliability of transportation infrastructure improvements. We have also not considered the jobs generated during construction.

A 20-year time frame is used for our analysis to provide enough time to focus on the long-term economic growth implications of an improved national highway network.

The next section explains how -- and why -- transportation infrastructure plays a key role in encouraging greater private sector productivity.

After a brief description of the major assumptions made concerning ARTBA's proposed highway program and a summary of the simulation model that has been used, the paper describes our findings, and discusses their policy implications.

A *Technical Appendix* provides background on the econometric estimates that underlie our forecasts and the detailed simulation results.

## THE ECONOMIC IMPORTANCE OF IMPROVED HIGHWAYS & BRIDGES

### Highways and Economic Growth

Past motivations for highway spending have been driven by "needs" studies that reflect the failure of investment to keep pace with demand. By themselves, however, estimates of needs bear little relationship to economic and social returns from increased investment. Thus, they have had limited influence beyond the transportation community.

In some cases, economic arguments have been used, but most of these have relied on the short-term jobs created by construction spending. This view is misleading since the number and types of short-term jobs created vary little from one type of public capital spending to another. Also, in the near term, these impacts may be largely offset by reduced economic activity due to increased user fees or a general diversion of dollars away from the private sector.

Investment decisions about highways and bridges should not be based on their short-term effects alone. These structures have a productive life that can be measured in decades of service and thus should be evaluated on their likely long-term effects. Indeed, in an open and dynamic economy, significant improvements to the transportation

network should also affect the organization and structure of the nation's economy and of its industrial productivity.

Long-term economic impacts are much harder to isolate. When long-term effects have been examined in the past, they have usually been based on changes in specific transportation corridors and have emphasized the gains for transportation firms and closely related industries. [8]

Further, in many cases, some variation on the input-output model forms the basis for the analysis. While these models generate detailed results, they are of little use in projecting system-wide changes to a transportation network or impacts on a dynamic economy. [9]

The United States has a developed economy, with few untapped resources and an extensive transportation network already in place. As such, the broad economic importance of individual infrastructure projects is much harder to show. The effect on private industry must compete with many other forces and thus may seem to be more diffuse. Nonetheless, it is real.

Unlike during the 19th Century, the economic frontier today is no longer confined by geographic location. It must include the production processes of our firms and their competition -- both domestic and foreign.

As is now the case with virtually every developed economy, the United States can expect only slow population and labor force growth in the near future and no significant increase in its natural resources. As a result, future economic growth will depend increasingly on how well we use our available capital and labor -- that is, economic productivity will grow in importance as a force for economic growth.

This paper shows the tangible effect on productivity and thus the future economic well-being resulting from a more extensive and productive transport system.

## The Value of Highways to the Private Sector

In their simplest models, economists explain economic output as the product of capital and labor inputs. For example, to deliver an overnight package, Federal Express requires labor -- truck drivers, airplane pilots, mail sorters -- and physical capital -- the associated trucks airplanes, computers and the "Octopus" (Federal Express's mechanical mail sorting machine).

Oddly, it is conventional for economists to include in the physical capital concept only private plant and equipment and to neglect public capital such as roads, airports and other infrastructure facilities that these firms rely heavily on to do business.

As the Federal Express example makes clear, however, this neglect can be grossly misleading. What kind of product would Federal Express have were it not for the streets on which it drives its trucks? What level of profit would Federal Express experience without the availability of a general transportation infrastructure for the use of its customers and employees?

While the choice of Federal Express as an example is admittedly extreme, a moment's reflection can provide numerous examples of how the availability of efficient highways and bridges support nearly every productive activity in the economy. Consider, for example, that the Interstate Highway System provides truck access to virtually every large- and medium-sized market and major port in the United States.

Good highways serve multiple functions, allowing for just-in-time inventory management, as well as reliable shipment to local, national, and international customers. Without good public infrastructure, private production would be a difficult -- and in some cases, impossible -- task.

**Our transportation infrastructure supports more effective private business by:**

- **Reducing bottlenecks in production and management;**
- **Adding flexibility to what gets produced and how this is accomplished;**
- **Improving access to labor and other key inputs;**
- **Permitting greater specialization of corporate functions; and**
- **Providing access to new and larger markets.** [10]

While the detailed effects vary across industries, individual impacts can be summed as national aggregates. Without question, a limited, or inefficient national highway network can act as a drag on overall private economic activity. This reduces profits, which, in turn, restrains private investment and hampers growth in overall productivity. In particular, **an inadequate transportation system**:

- **Lowers the rate of profit for private firms.** Recent empirical research shows that a one percent decrease in the stock of public infrastructure is capable of lowering the average profit rate for private firms by about one-tenth of one percentage point. Very simply, a deficient infrastructure raises the costs of production for private firms; [11]

• **Depresses private investment.** As lower public investment reduces corporate profits, managers will respond by cutting back on some planned additions to private capacity; and

• **Depresses productivity growth directly and indirectly.** Less capital per worker means that workers will be able to produce less output in any given period of time. Thus, a lower public capital stock pushes down productivity directly. A deficient public capital stock also depresses profits, causing private investment to contract, thereby detracting from growth in private capital stock.

### Returns To Public Investment

Over time, the relative economic returns from public versus private capital should shift, depending on the nation's economic structure and the degree to which we may have under (or over) invested in one versus the other. Indeed, one logical explanation for the dramatic results found by Munnell and Aschauer is that the nation has been under-investing in public works for some time. As a result, many productive public investments have been missed or, at best, deferred.

This means that the economic returns from additional public investment in transportation and other public works should be unusually high for at least the foreseeable future. Even if there is a gap between spending and demand, however, we still must take care to avoid individual projects that are not cost effective.

Most analytic techniques designed to measure the economic, social or financial effects of alternative transportation investments use average data, such as that found in an input-output table, to describe changes by industry.

To truly understand these forces, however, requires a systems approach rather than a link-by-link analysis of the costs and benefits of individual improvements. Indeed, one implication of the macro-based analyses of Aschauer and Munnell is that merely adding up the effects of individual transport links understates the economic importance of highway investment. From a national perspective, there is more to transportation benefits than can be derived from a summation of cost-benefit studies.

## ASSUMPTIONS AND SCENARIOS

### Underlying Baseline Economic Assumptions

The analytic approach taken here is first to build a baseline economic scenario that continues recent trends in economic performance and current policy toward highway and bridge investment. The effect of

alternative levels of highway program investment on the economy can then be investigated by incorporating proposed changes into the scenario, tracing the resulting changes, and then comparing them to the baseline scenario.

The baseline assumptions for the non-highway portions of the economy call for a steady state based on conditions through 1988. No attempt is made to forecast future economic downturns or upturns and no assumption is made about potential dramatic shifts in the nation's economic structure or the rate of growth in overall efficiency from that of the late 1980s. The purpose here is to focus on the long-term effects of a significant change in the level of highway investment.

The baseline policy path we have chosen assumes:

- Growth in the basic level of productive efficiency of one percent per year (arising from current levels of public and private investment, from a better-educated labor force, more efficient allocations of labor and capital, and from research and development); and

- Growth in the labor force of approximately one percent per year.

In addition, the baseline highway investment assumption is that the highway stock grows at a rate of 0.7 of a percent per year, its growth rate during 1987. This is a very conservative assumption since it is somewhat higher than the rate of change in the late 1970s and the early 1980s.

## Underlying Highway Program Assumptions

The two key components of any major new highway program, of course, are the level of spending contemplated and the source of funds.

We assume that the expanded program is financed by an increase in the federal motor fuel and truck user fees. (While a user fee increase could be phased in over several years to match the actual buildup in outlays, ARTBA has proposed that a 15 cents-per-gallon increase be initiated in Fiscal Year 1992.) [12]

We further assume that the states will provide the matching funds for the new federal grants by first reprogramming their existing highway capital spending. This is a conservative assumption in the sense that we assume no increase in capital investment beyond that of the new federal program. In particular, if the federal share of the highway program financing remains in the 75 to 80 percent range, the states would have little leeway to substitute federal for state funds. Depending on the level of federal-to-state match required by the new program, a few states would have to increase local user fees slightly in order to generate additional funds. [13]

45-155 O—91——59

This spending will not occur instantaneously. States will have to step-up their design and engineering activities and the construction industry will have to adjust to the increased level of demand. Within a few years, the level of capital spending will have adjusted to a steady state.

### Economic Simulations

The economic simulations presented in this section and described in the "Technical Appendix" build upon Dr. Aschauer's recent empirical findings to determine the likely effect of three distinct future highway investment policies:

A **"Baseline/Status Quo Policy"** in which the growth rate of highway stock remains constant through the period 1988 to 2012 at the level attained in 1987;

A **"Sustained Investment Policy"** in which the growth rate of highway stock is raised during a 10-year period starting in 1992 by 0.5 of one percent over the 1987 level and stabilized at that higher level; and

A **"Transitory Investment Policy"** in which the growth rate in highway stock is raised during a 10-year period starting in 1992 by 0.5 of one percent over the 1987 level until the year 2002. After 2002 it is assumed that the growth rate of highway stock returns gradually to its 1987 level by 2012.

The "Sustained Investment Policy" scenario assumes that the purchasing power of the Federal Highway Program is maintained throughout the 20-year period. The "Transitory Investment Policy" scenario assumes that after 10 years the level of federal highway spending decreases. Once the recent period of underinvestment in highways has been reversed, a different balance between public and private capital might be called for.

## Research Findings

In presenting the results of our econometric simulations, it should be remembered that the results show changes across the whole economy. A change in average productivity would apply to the 124 million workers in the United States as a whole. Similarly, increases in profit returns and private investment levels apply to the entire economy. Thus, even though the percent changes presented may appear to be quite small, when put in context, they represent very significant -- and substantial -- effects on the economy as a whole.

## The Long-Term Effect of a Sustained Increase In Highway Investment on U.S. Productivity

Figure 1 (page 16) graphically illustrates the likely impacts of the three scenarios previously discussed on future productivity growth in the United States' economy.

### "Baseline/Status Quo Policy"

Productivity growth falls over the period 1992-1995 and then begins a very slow but steady rise until it reaches 2.2 percent per year by 2012. The fall is due to declining investment until 1995. After 1996, there is a sustained increase in the private capital/labor ratio and, consequently, in productivity growth as well.

It should be noted, however, that although national productivity improves under this scenario, it remains below post-World War II levels attained in the United States and well below the levels currently being attained by Japan and West Germany. For context, the labor productivity growth rate in the United States averaged 2.8% per year over the 20-year period 1950-1970. Recent growth has averaged less than 2% per year.

### "Sustained Investment Policy"

Implementing a Federal Highway Program of the magnitude proposed by ARTBA, should generate a $250 increase in productivity per American worker within the first 5 years of the program's initiation, in 1990 dollars. By 2012, the cumulative additional productivity achieved in the economy will result in a $3,200 (in 1990 dollars) increase in annual output per American worker, per year.

The additional public sector highway investment beginning in 1992 generates a modest improvement in productivity growth until 1995. A more substantial improvement begins in 1996. By 2002, productivity growth of 2.75% per year has been attained -- a return to post-World War II levels. This growth level remains constant for the next 10 years.

These results imply a reversal in the nation's stagnant rate of labor productivity, with productivity growth reaching half a percentage point or more above the baseline forecast of maintaining essentially a status-quo highway program. After only 10 years, national productivity would have increased to a level 2.4% higher than it otherwise would have been without the increased highway investment. After 20 years of sustained investment, productivity would have risen 7.7% above baseline projections.

To put a productivity gain of that magnitude in context, consider that a 7.7% increase in American productivity in 1990 would have resulted in $400 billion worth of additional output above that of 1989.

After 20 years of sustained highway investment at the proposed level, national productivity would be 7.7% higher than without the program. These impacts affect the entire economy and are not small. Labor productivity would be growing at 2.75% per year versus 2.2% per year without the program -- a 23% higher rate of growth.

Put another way, a large-scale, 20-year highway program such as proposed here *could add nearly $400 billion to the Gross National Product in a single year once the investment was complete.*

**"Transitory Investment Policy"**

Under this scenario, productivity growth peaks in 2003 at 2.6% per year and then falls back to the baseline path. This is because the transitory policy assumes that highway investment returns to its original level by 2012.

Even under the transitory policy, the 20-year total cumulative gain in U.S. productivity over the period 1992-2012 would be a very significant 5.7%.

To put a productivity gain of that magnitude in context, consider that in 1989 dollars a 5.7% increase in productivity would equal *an additional $2,300 in output per U.S. worker per year by 2012.* Applied to America's 124 million-person labor force, *it equals an additional $300 billion in GNP annually by the end of the first decade of the 21st Century.*

## The Long-Term Effect of a Sustained Increase In Highway Investment on Private Sector Profitability

Figure 2 (page 16) illustrates the long-term impact of the three highway investment policies on annual corporate profits.

**"Baseline/Status Quo Policy"**

Following a status quo highway investment policy, the rate of return to capital would rise only slightly over the 20-year period, 1992-2012. However, the equivalent of a $25 billion per year increase in highway investment -- either sustained or transitory -- improves this forecast markedly.

**"Sustained Investment Policy"**

Implementing and sustaining a long-term highway investment strategy over the period 1992-2012, the profit rate on private capital would have increased by 1997 from 7.9% to 8.3%. By 2012, it would have increased to 8.8%, roughly 10% better than under a baseline forecast.

In dollar terms, implementing and sustaining *this highway investment strategy would generate a $12 billion annual increase in corporate profits by 1997, and a $29 billion per year increase in corporate profits by 2012.*

**"Transitory Investment Policy"**

Implementing the proposed highway investment strategy in 1992 would cause the profit rate on private capital to rise gradually to 8.8% -- by 2003. After 2003, it gradually returns to the baseline path if highway investment were to return to its pre-1992 level.

*Figure 1*

## Highway investment and productivity

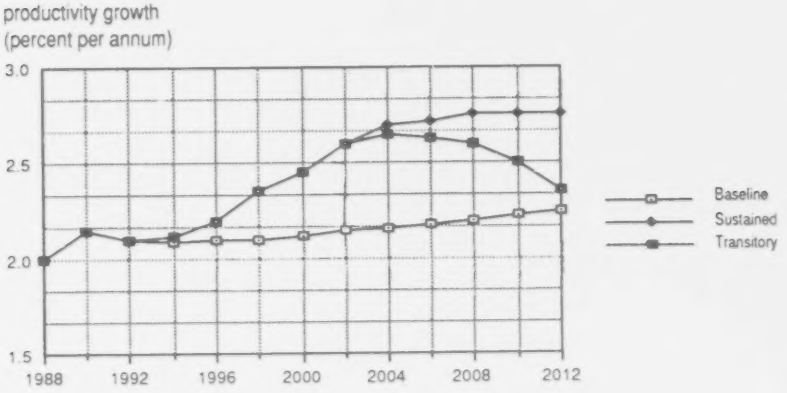

*Figure 2*

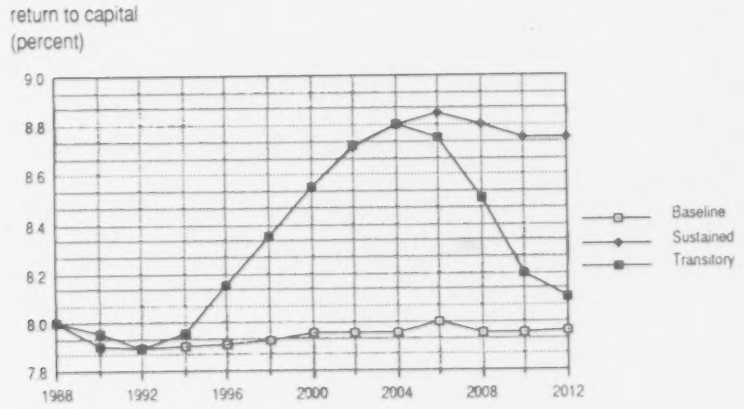
## Highway investment and profitability



## The Long-Term Effect of a Sustained Increase In Highway Investment on U.S. Private Investment

Figure 3 (page 18) depicts the likely effect of the three highway investment scenarios on private investment in plant and equipment.

### "Baseline/Status Quo Investment Policy"

Private investment could be expected to remain relatively constant during the period 1992-2012 under an extension of current highway spending level. Private investment, measured as a percent of capital stock, would remain around 3% per year. It should be noted at the outset that a negative short-term effect on private capital investment is likely regardless of how the increase in public investment is financed. For our purposes, however, one implicit assumption is that the increased public spending on highways is not financed by diverting existing public investment, but through increased highway user fees.

### "Sustained Investment Policy"

Implementing a significant increase in highway spending would depress private investment until the year 2000. In effect, the increased public spending on highways would be expected to "crowd out" some private investment. Over time, however, the expected growth in productivity and profitability will generate additional resources, thus making it possible for private investment to expand to higher levels. Starting in 2001, private investment would expand for about six years as a result of the rise in the profit rate on private capital. After 2006, the growth rate of the private capital stock levels off at approximately 3.5% per year. By 2012, however, private investment would have increased 14.8% above the baseline projection, leading to a positive $35 billion increase in annual private investment.

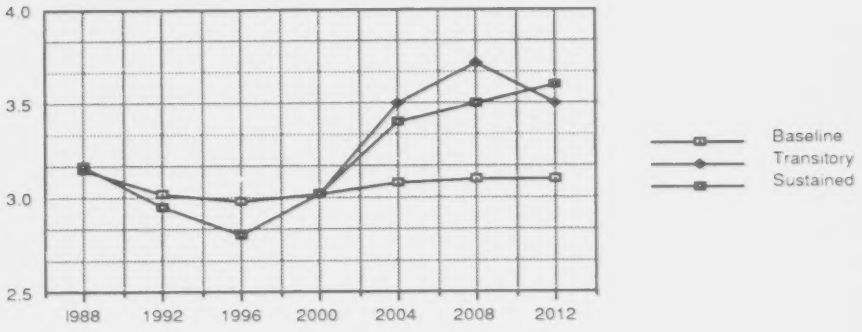
### "Transitory Investment Policy"

Under this policy scenario, private investment would be initially depressed until the year 2000. Starting in 2001, however, private investment would expand for about six years as a result of the rise in the profit rate on private capital, with the growth rate in the private capital stock reaching approximately 3.8% in 2007. After 2007 the growth rate of the private capital stock would begin a gradual return to the baseline level.

*Figure 3*

## Highway investment and private investment

(percent of capital stock)



## Policy Implications

As is the case with any application of such new results, some caution should be considered. For example, the magnitude of the effect may be smaller than that found by Aschauer. Indeed, while of the same order of magnitude, Munnell's results show somewhat less dramatic effects. Still, even if the magnitude of the effects were reduced by one half, the proposed increase in highway investments would be expected to lead to a substantial improvement in national labor productivity.

The analysis implicitly assumes that investments can continue to be found that are at least as productive as investments made in recent years. This assumption need not necessarily be true. If such investments can not be found, the projected improvements in labor productivity and corporate profits may be lower. This would affect, however, all projections (baseline, sustained and transitory). The total effect of a relaxation of this assumption cannot be assessed within the framework of this report.

This study focuses on the long-term effects of highway investments. The results ignore the short-term effects of construction spending on jobs and other industries, as these spendings ripple through the economy. It is conceivable that these short-term effects, however, may mitigate to some extent the short-term deleterious effects of the proposed program on private investment. The overall outcome may be more positive in the short-run than implied by the results of this study.

The simulation results of this study have two direct implications. One, they show the potential gains that can be obtained by redressing the two decades of underinvestment in the nation's highways and bridges. Two, they show that an effective transportation system has economic importance well beyond the immediate benefits of improved transport services.

While the focus of this paper is on the nation's highway system, the policy implications are much broader than highways and bridges. First, the results show the importance of focusing the debate over national highway (or other transportation) policy on the long-term economic impact of an adequate national infrastructure. Indeed, the effect on long-term economic health and productivity are the real reasons we should be concerned with any type of public investment.

Second, with the increasing concern over federal budget cuts and possible tax increases, it is important to remember that not all spending is equal if one considers their long-term effect on the nation's economic -- and budgetary -- strength. In particular, the results of the simulations highlight the importance of basic infrastructure for the nation's economic growth -- a fact often overlooked in annual budget discussions.

More importantly, the results of this study highlight the need to analyze the links between public and private capital formation. In particular, this study shows the importance of public capital for the profitability of private firms. This finding may have implications for tax policies (who shall pay for public infrastructure) as well as for budget allocations.
